## Dialectic

### Or the Conjugate Binary Pair of Every Possible System of Grammar

Edited by John Clark

# About

*If one think to ask their computer, or the definition of a thing, or even their own biology, one might come to understand that every possible system of grammar is a form of binary recursion. This idea can be traced as far back as the Judeo-Christian Scriptures by summing up the story of Adam and Eve: Adam and Ever are a Conjugate Binary Pair, whereby, Complete Induction and Deduction produce the human race: this story is in intelligible metaphor which the Bible repeatedly tells the reader that it will only be solved at a certain time in man's evolution. Binary recursion is the only product one can acquire even from the definition of any thing as a relative difference constrained by correlatives.*

*This gives a mind a Grammar Matrix by which to process all information: Common Grammar, Arithmetic, Algebra and Geometry.*

*To trace out the evolution of the human mind, one locates and studies those sources which recognized that grammar is factually a system of binary recursion. I find the* JCS, Dialogs *of Plato, and* Elements *of Euclid. To these I add my work in grammar which can be found in* The Art of Prophecy.

*Plato was an advanced grammar teacher. That grammar he called Dialectic, grammar taught in accordance with the definition of a thing, i.e. as an* ***intelligible*** *binary which is* ***perceptibly*** *expressed as grammar. Today, people use the word Dialectic, but are wholly ignorant as to its meaning: it means speech, or grammar, in accordance with the two elements of anything, i.e. binary recursion.*

*For Plato this work contains the works of five translation sets; Thomas Taylor, the Bohn Library, Benjamin Jowett, 3rd edition, Cooper, Bollinger, along with a number of separate works by translators.*

*Xenophon was actually an eyewitness, a friend of Socrates who wrote what he remembered. To Xenophon's knowledge, he never heard Socrates that he claimed to teach philosophy.*

*For Xenophon's Memories of Socrates this work contains six translation sets*: 1722 Byshhe, 1762 Fielding, 1875 Watson, 1897 Dakyns, 1923 Marchant, 1994 Bonnette: Each edited and reformatted for this comparative anthology.

This work contains over 220 translations. All notes, introductions, footnotes removed, just the translations without dress. The aim is to focus on the Plato's presentation of Dialectic and not the pedantry accumulated by those who imagined that they comprehended the Plato. Every Dialog that was not in Standard Dialog Format, explained by Plato in Theaetetus, has been edited and put into that format. This makes them easier to read and follow and easily converted for machine reading.

# Editing Liberties

One of the editing liberties I took on these translations of Xenophon and Dialogs of Plato were name changes as translators often get confused as to which are the Roman god names, and which the Greek. So Jupiter becomes Zeus, and Juno becomes Hera per the dictionary. I do believe that any self-respecting Greek of Plato's age would have rather not spoken at all then to use barbarian names for their own gods. Not every translators of either Plato or Xenophon make this mistake, one might first become aware of it in Thomas Taylor's translations and those who relied heavily on his work to claim their own translation. Those who promote his mysticisms as revelations, I just ask them, well Huck, if he is a man, why don't he talk like a man? Why could he not even distinguish the difference in the names of the so-called gods?

Another is spelling, I have been educated in America and it seems to me that many spellings in British English are reminiscent of the silkiness of French, trying to learn English has been a life-long goal of mine.

Another is solemn style of spelling, I try not to tolerate it, it hurts my tongue trying to pronounce it and it reminds me of some kind of affectation, I am almost sure, no Greek in Plato's time was subjugated to it. No self-respecting Greek of Plato's era would embrace lisping without having first been injured.

Also, it appears the original translations of some text were done at a time when there was some kind of paper shortage, so I have done my best to expand the interlocutors to their own particular lines. It makes it easier to mentally switch characters. It is also hard to imagine that those who republish these become afflicted with that very same want of paper, especially virtual paper. I hear it is almost impossible to find a virtual forest to cut down and make virtual paper with.

John Clark.

XENOPHON.

# Xenophon and Plato

Saturday, October 2, 2021

What may be predicated of anything is wholly determined by the definition of that thing. We are a mind which means a biological product. A mind is one of the life support systems of the human body, as such, it has a well defined biologically determined and well defined physically determined job to perform. We first learn our job by examples, and so, we search for, and find the best examples that we can, and we find the best examples in history to ponder about: Such a one was Socrates.

We do our job via grammar systems, this is called reasoning. At the heart of reasoning is the awareness of what a thing is; it is some material difference within limits: these two parts are called a conjugate binary pair. A Conjugate Binary Pair is that which everything is. It is the simple form and the material within a form which comprises every possible thing. It is a unit. A unit is also called a Standard of Behavior. These memories of Xenophon, and the *Dialogs* of Plato actually form such a pair. Xenophon will present Socrates from his own memory and the memories of Socrates' closest friends. Thus, Xenophon presents us with the perceptible, the particular, Socrates, Plato, an intelligible, a metaphorical example, which people have yet to comprehend. Xenophon presented a memory of Socrates, as other's had done, while Plato was using the metaphor of Socrates to present lessons in Dialectic, binary information processing which governs every possible grammar. Plato was presenting the biological standard of human behavior via grammar systems.

> "By the Gods, replied Socrates, the discovery will be most useful! The *standard of right and wrong* once fixed; all difference of opinion

> among the judges;—all sedition among the people;—all law-suits between citizens;—all wars and contentions among communities, must be at an end! and truly it would grieve me to leave you, Hippias, without knowing what this inestimable secret may be that you say you have discovered.” Xenophon, *Memorabilia*, Fielding.

It is most correct to view someone who was not only a familiar of Socrates, but had a mind trained for memory. Xenophon fits that bill very nicely. Xenophon not only indicates his direct experience, but also repeats from close associates of Socrates who were also very close associates with him. However, this is important, although Xenophon was very familiar with Plato and his family, he never resorts to Plato for any information about Socrates. Xenophon resorted to people more mature than Plato was at that time. It should become very clear that the real Socrates, and the dialogs Plato constructed were not the same perceptible person. Plato, as a grammar teacher, was presenting binary information processing used by a mind to show not only Socrates, but a Socrates, one could say, on mental steroids.

> For I never heard Socrates say that he taught philosophy; neither did I know any whoever did hear him: Xenophon, *Memorabilia*, Fielding.

> Xenophon at first sight appears to be replying here to a speech actually delivered for the prosecution. But, as we have just seen, this cannot be the case. To whom, then, and to what is he replying? The correct solution of this problem was first given by Cobet, and it has been supported by a series of indisputable proofs by several subsequent scholars. The man Socrates had died in 399 B.C., and had left nothing written. But his ardent and gifted disciples—especially Antisthenes, a fanatical admirer, and a little later Plato—very soon began to publish works about Socrates, especially dialogues in which Socrates appeared as the chief interlocutor. One of these earlier Socratic works is, of course, the Apology by Plato. And so it came about that a literary Socrates grew into being—a figure that retained much, doubtless, of the historical man, but was not identical with him, and might be variously represented by

> the different authors, and even by the same author in different works. Introduction to Xenophon, Marchant
>
> “Socrates: Is it your opinion, Euthydemus, that a man must learn to be just, and good, in like manner as he learns to write, and read.?” Xenophon, *Memorabilia*, Fielding.

Xenophon was actually a longstanding friend of Socrates, who had a very keen and well trained memory.

Socrates became a metaphor which used the name of a living man. If one reference other known people in Plato’s dialogs, they will find the same pattern, these were not the real people.

As I do not know anyone who even guessed that dialectic means binary information processing which effects every possible grammar, critics and translators have missed another point: Socrates was very grammatically concise and spoke metaphorically in both versions of him by Xenophon and Plato. Most people process information perceptibly, arithmetic information processing, while geometric, or metaphorical information processing wholly escapes them. In other words, they cue off the perceptible while being blind to the intelligible. This observation is even deliberately noted as the blindness of mankind. Judge not by appearance but by… the intelligible, or the similar idea in the many examples. It is probable that both Socrates and Plato were real prophets. Socrates presenting the perceptible while Plato demonstrating the intelligible.

One thing one can notice in the Platonic Dialogs, many of them specifically target a point made by Socrates in the works of Xenophon. Xenophon although having a mind fined tuned for the military life, was certainly not a grammarian.

So, here is what has been missed. A pearl of great price, one is willing to spend all they have, their entire life, to possess it. One conclusion which Marchant and others seem not to have considered, the lack of Xenophon from even having read a Platonic dialog even though he was very familiar with Plato and his family, is because Plato not only first had experience with Socrates, but at the time he was too young and he also got a lot of factual information and ideas from others familiar with Socrates, and possibly even Xenophon's work. Plato saw something extraordinary in Socrates, the correct use of grammar to effect human behavior, and Plato set out to learn and master it. This is the essence of what Socrates was teaching. At Socrates death, Plato was not a grammarian, he was a young man. He eventually became a grammar teacher and set up his School specifically in order to try and teach people to become a living Socrates.

Xenophon gave a very accurate perceptible description of Socrates. In fact, although Xenophon's descriptions are exacting, he too does not seem to comprehend the full extent of the intelligible expressions Socrates used. Plato came to teach a living intelligible Socrates. No greater love has a man than one who is willing to lay down his life for a friend. Plato laid his life down, to learn and teach the living mind of Socrates, dialectic, the immortal soul of Socrates. Those who still read Plato today, read him as an illiterate child, looking for quotes and perceptible patterns, their mind still not processing the metaphors, still not seeing that history itself is trying to make a man with a functionally correct mind. The method Socrates used was not the Socratic Method, it was correct grammatical usage to effect personal behavior, a mental behavior which reflected in one's social behavior.

As Xenophon, Socrates, Plato and his family, were all familiar with each other, I ask, why would anyone even imagine that Plato ever presented a factual perceptible Socrates at all, he was a grammar teacher, not an historian? The above quote of Xenophon testifies to the fact that Xenophon had never even heard Plato claim that Socrates taught philosophy. Xenophon's work on Socrates was completed before Plato wrote his Dialogs is the only conclusion which is supported by the facts as far as I know them. Plato tells his readers in Phaedrus why he wrote these dialogs, for the preservation not of the memory of Socrates specifically, but for the preservation of a science. Plato could not have been more than 29 years old at Socrates death, way too young to have developed the art of dialectic which he teaches throughout all of his dialogs. Secondly, Plato fictionalized if not every character he used, even though based on real names, then almost every one of them.

Therefore, I would imagine that the correct order of learning a grammar, is to examine the life of a man who used grammar to effect his behavior, even though that person never left anything in writing. Then one goes to the next stage, a grammar teacher who can explain that behavior precisely. Both of these works tell the reader, Philosophy does not have a single thing whatsoever to do with the mindless dribble we find in those called philosophers, or those who look for arithmetic correspondences in words and deed, but correct grammar which is wholly metaphorical, and how we effect our behavior by it. Plato and Socrates both defined Philosophy in exactly the same way, yet today man still insists on mindless dribble, using a name they have no idea of what it means.

# INTRODUCTION.

This translation of Xenophon’s “Memorabilia of Socrates” was first published in 1712, and is here printed from the revised edition of 1722. Its author was Edward Bysshe, who had produced in 1702 “The Art of English Poetry,” a well-known work that was near its fifth edition when its author published his translation of the “Memorabilia.” This was a translation that remained in good repute. There was another edition of it in 1758. Bysshe translated the title of the book into “The Memorable Things of Socrates.” I have changed “Things” into “Thoughts,” for whether they be sayings or doings, the words and deeds of a wise man are alike expressions of his thought.

Xenophon is said to have been, when young, a pupil of Socrates. Two authorities have recorded that in the flight from the battle of Delium in the year 424, when Xenophon fell from his horse, Socrates picked him up and carried him on his back for a considerable distance. The time of Xenophon’s death is not known, but he was alive sixty-seven years after the battle of Delium.

When Cyrus the Younger was preparing war against his brother Artaxerxes Mnemon, King of Persia, Xenophon went with him. After the death of Cyrus on the plains of Cunaxa, the barbarian auxiliaries fled, and the Greeks were left to return as they could from the far region between the Tigris and Euphrates. Xenophon had to take part in the conduct of the retreat, and tells the story of it in his “Anabasis,” a history of the expedition of the younger Cyrus and of the retreat of the Greeks. His return into Greece was in the year of the death of Socrates, 399, but his association was now with the Spartans, with whom he fought, 394, at Coroneia. Afterwards he settled, and lived for about twenty years, at Scillus in Eleia with his wife and children. At Scillus he wrote probably his “Anabasis” and some other of his books. At last he was driven out by the Eleans. In the battle of Mantineia the Spartans and Athenians fought as allies, and Xenophon’s two sons were in the battle; he had sent them to Athens as fellow-combatants from Sparta. His banishment from Athens was repealed by change of times, but it does not appear that he returned to Athens. He is said to have lived, and perhaps died, at Corinth, after he had been driven from his home at Scillus.

Xenophon was a philosophic man of action. He could make his value felt in a council of war, take part in battle—one of his books is on the duties of a commander of cavalry—and show himself good sportsman in the hunting-field. He wrote a book upon the horse; a treatise also upon dogs and hunting. He believed in God, thought earnestly about social and political duties, and preferred Spartan institutions to those of Athens. He wrote a life of his friend Agesilaus II., King of Sparta. He found exercise for his energetic mind in writing many books. In writing he was clear and to the point; his practical mind made his work interesting. His “Anabasis” is a true story as delightful as a fiction; his “Cyropædia” is a fiction full of truths. He wrote “Hellenica,” that carried on the history of Greece from the point at which Thucydides closed his history until the battle of Mantineia. He wrote a dialogue between Hiero and Simonides upon the position of a king, and dealt with the administration of the little realm of a man’s household in his “Œconomicus,” a dialogue between Socrates and Critobulus, which includes the praise of agriculture. He wrote also, like Plato, a symposium, in which philosophers over their wine reason of love and friendship, and he paints the character of Socrates.

But his best memorial of his old guide, philosopher, and friend is this work, in which Xenophon brought together in simple and direct form the views of life that had been made clear to himself by the teaching of Socrates. Xenophon is throughout opposing a plain tale to the false accusations against Socrates. He does not idealize, but he feels strongly, and he shows clearly the worth of the wisdom that touches at every point the actual conduct of the lives of men.

H. M.

# BOOK I.

## CHAPTER I.

### SOCRATES NOT A CONTEMNER OF THE GODS OF HIS COUNTRY, NOR AN INTRODUCER OF NEW ONES.

I have often wondered by what show of argument the accusers of Socrates could persuade the Athenians he had forfeited his life to the State. For though the crimes laid unto his charge were indeed great—"That he did not acknowledge the gods of the Republic; that he introduced new ones"—and, farther, "had debauched the youth;" yet none of these could, in the least, be proved against him.

For, as to the first, "That he did not worship the deities which the Republic adored," how could this be made out against him, since, instead of paying no homage to the gods of his country, he was frequently seen to assist in sacrificing to them, both in his own family and in the public temples?—perpetually worshipping them in the most public, solemn, and religious manner.

What, in my opinion, gave his accusers a specious pretext for alleging against him that he introduced new deities was this—that he had frequently declared in public he had received counsel from a divine voice, which he called his Demon. But this was no proof at all of the matter. All that Socrates advanced about his demon was no more than what is daily advanced by those who believe in and practice divination; and if Socrates, because he said he received intelligence from his genius, must be accused of introducing new divinities, so also must they; for is it not certain that those who believe in divination, and practice that belief, do observe the flight of birds, consult the entrails of victims, and remark even unexpected words and accidental occurrences? But they do not, therefore, believe that either the birds whose flight they observe or the persons they meet accidentally know either their good or ill fortune—neither did Socrates—they only believe that the gods make use of these things to presage the future; and such, too, was the belief of Socrates. The vulgar, indeed, imagine it to be the very birds and things which present themselves to them that excite them to what is good for them, or make them avoid what may hurt them; but, as for Socrates, he freely owned that a demon was his monitor; and he frequently told his friends beforehand what they should do, or not do, according to the instructions he had received from his demon; and they who believed him, and followed his advice, always found advantage by it; as, on the contrary, they who neglected his admonitions, never failed to repent their incredulity. Now, it cannot be denied but that he ought to have taken care not to pass with his friends either for a liar or a visionary; and yet how could he avoid incurring that censure if the events had not justified the truth of the things he pretended were revealed to him? It is, therefore, manifest that he would not have spoken of things to come if he had not believed he said true; but how could he believe he said true, unless he believed that the gods, who alone ought to be trusted for the knowledge of things to come, gave him notice of them? and, if he believed they did so, how can it be said that he acknowledged no gods?

He likewise advised his friends to do, in the best manner they could, the things that of necessity they were to do; but, as to those whose events were doubtful, he sent them to the oracles to know whether they should engage in them or not. And he thought that they who design to govern with success their families or whole cities had great need of receiving instructions by the help of divinations; for though he indeed held that every man may make choice of the condition of life in which he desires to live, and that, by his industry, he may render himself excellent in it, whether he apply himself to architecture or to agriculture, whether he throw himself into politics or economy, whether he engage himself in the public revenues or in the army, yet that in all these things the gods have reserved to themselves the most important events, into which men of themselves can in no wise penetrate. Thus he who makes a fine plantation of trees, knows not who shall gather the fruit; he who builds a house cannot tell who shall inhabit it; a general is not certain that he shall be successful in his command, nor a Minister of State in his ministry; he who marries a beautiful woman in hopes of being happy with her knows not but that even she herself may be the cause of all his uneasinesses; and he who enters into a grand alliance is uncertain whether they with whom he allies himself will not at length be the cause of his ruin. This made him frequently say that it is a great folly to imagine there is not a Divine Providence that presides over these things, and that they can in the least depend on human prudence. He likewise held it to be a weakness to importune the gods with questions which we may resolve ourselves; as if we should ask them whether it be better to take a coachman who knows how to drive than one who knows nothing of the matter? whether it be more eligible to take an experienced pilot than one that is ignorant? In a word, he counted it a kind of impiety to consult the oracles concerning what might be numbered or weighed, because we ought to learn the things which the gods have been pleased to capacitate us to know; but that we ought to have recourse to the oracles to be instructed in those that surpass our knowledge, because the gods are wont to discover them to such men as have rendered them propitious to themselves.

Socrates stayed seldom at home. In the morning he went to the places appointed for walking and public exercises. He never failed to be at the hall, or courts of justice, at the usual hour of assembling there, and the rest of the day he was at the places where the greatest companies generally met. There it was that he discoursed for the most part, and whoever would hear him easily might; and yet no man ever observed the least impiety either in his actions or his words. Nor did he amuse himself to reason of the secrets of nature, or to search into the manner of the creation of what the sophists call the world, nor to dive into the cause of the motions of the celestial bodies. On the contrary, he exposed the folly of such as give themselves up to these contemplations; and he asked whether it was, after having acquired a perfect knowledge of human things, that they undertook to search into the divine, or if they thought themselves very wise in neglecting what concerned them to employ themselves in things above them? He was astonished likewise that they did not see it was impossible for men to comprehend anything of all those wonders, seeing they who have the reputation of being most knowing in them are of quite different opinions, and can agree no better than so many fools and madmen; for as some of these are not afraid of the most dangerous and frightful accidents, while others are in dread of what is not to be feared, so, too, among those philosophers, some are of opinion that there is no action but what may be done in public, nor word that may not freely be spoken before the whole world, while others, on the contrary, believe that we ought to avoid the conversation of men and keep in a perpetual solitude. Some have despised the temples and the altars, and have taught not to honor the gods, while others have been so superstitious as to worship wood, stones, and irrational creatures. And as to the knowledge of natural things, some have confessed but one only being; others have admitted an infinite number: some have believed that all things are in a perpetual motion; others that nothing moves: some have held the world to be full of continual generations and corruptions; others maintain that nothing is engendered or destroyed. He said besides that he should be glad to know of those persons whether they were in hopes one day to put in practice what they learned, as men who know an art may practice it when they please either for their own advantage or for the service of their friends; or whether they did imagine that, after they found out the causes of all things that happen, they should be able to cause winds and rains, and to dispose the times and seasons as they had occasion for them; or whether they contented themselves with the bare knowledge without expecting any farther advantage.

This was what he said of those who delight in such studies. As for his part, he meditated chiefly on what is useful and proper for man, and took delight to argue of piety and impiety, of honesty and dishonesty, of justice and injustice, of wisdom and folly, of courage and cowardice, of the State, and of the qualifications of a Minister of State, of the Government, and of those who are fit to govern; in short, he enlarged on the like subjects, which it becomes men of condition to know, and of which none but slaves should be ignorant.

It is not strange, perhaps, that the judges of Socrates mistook his opinion in things concerning which he did not explain himself; but I am surprised that they did not reflect on what he had said and done in the face of the whole world; for when he was one of the Senate, and had taken the usual oath exactly to observe the laws, being in his turn vested with the dignity of Epistate, he bravely withstood the populace, who, against all manner of reason, demanded that the nine captains, two of whom were Erasinides and Thrasilus, should be put to death, he would never give consent to this injustice, and was not daunted at the rage of the people, nor at the menaces of the men in power, choosing rather not to violate the oath he had taken than to yield to the violence of the multitude, and shelter himself from the vengeance of those who threatened him. To this purpose he said that the gods watch over men more attentively than the vulgar imagine; for they believe there are some things which the gods observe and others which they pass by unregarded; but he held that the gods observe all our actions and all our words, that they penetrate even into our most secret thoughts, that they are present at all our deliberations, and that they inspire us in all our affairs.

It is astonishing, therefore, to consider how the Athenians could suffer themselves to be persuaded that Socrates entertained any unworthy thoughts of the Deity; he who never let slip one single word against the respect due to the gods, nor was ever guilty of any action that savored in the least of impiety; but who, on the contrary, has done and said things that could not proceed but from a mind truly pious, and that are sufficient to gain a man an eternal reputation of piety and virtue.

## CHAPTER II.

### SOCRATES NOT A DEBAUCHER OF YOUTH.

What surprises me yet more is, that some would believe that Socrates was a debaucher of young men! Socrates the most sober and most chaste of all men, who cheerfully supported both cold and heat; whom no inconvenience, no hardships, no labors could startle, and who had learned to wish for so little, that though he had scarce anything, he had always enough. Then how could he teach impiety, injustice, gluttony, impurity, and luxury? And so far was he from doing so, that he reclaimed many persons from those vices, inspiring them with the love of virtue, and putting them in hopes of coming to preferment in the world, provided they would take a little care of themselves. Yet he never promised any man to teach him to be virtuous; but as he made a public profession of virtue, he created in the minds of those who frequented him the hopes of becoming virtuous by his example.

He neglected not his own body, and praised not those that neglected theirs. In like manner, he blamed the custom of some who eat too much, and afterwards use violent exercises; but he approved of eating till nature be satisfied, and of a moderate exercise after it, believing that method to be an advantage to health, and proper to unbend and divert the mind. In his clothes he was neither nice nor costly; and what I say of his clothes ought likewise to be understood of his whole way of living. Never any of his friends became covetous in his conversation, and he reclaimed them from that sordid disposition, as well as from all others; for he would accept of no gratuity from any who desired to confer with him, and said that was the way to discover a noble and generous heart, and that they who take rewards betray a meanness of soul, and sell their own persons, because they impose on themselves a necessity of instructing those from whom they receive a salary. He wondered, likewise, why a man, who promises to teach virtue, should ask money; as if he believed not the greatest of all gain to consist in the acquisition of a good friend, or, as if he feared, that he who, by his means, should become virtuous, and be obliged to him for so great a benefit, would not be sufficiently grateful for it. Quite different from Socrates, who never boasted of any such thing, and who was most certain that all who heard him and received his maxims would love him forever, and be capable of loving others also. After this, whosoever says that such a man debauched the youth, must at the same time say that the study of virtue is debauchery.

But the accuser says that Socrates taught to despise the constitution that was established in the Republic, because he affirmed it to be a folly to elect magistrates by lots; since if anyone had occasion for a pilot, a musician, or an architect, he would not trust to chance for any such person, though the faults that can be committed by men in such capacities are far from being of so great importance as those that are committed in the government of the Republic. He says, therefore, that such arguments insensibly accustom the youth to despise the laws, and render them more audacious and more violent. But, in my opinion, such as study the art of prudence, and who believe they shall be able to render themselves capable of giving good advice and counsel to their fellow-citizens, seldom become men of violent tempers; because they know that violence is hateful and full of danger; while, on the contrary, to win by persuasion is full of love and safety. For they, whom we have compelled, brood a secret hatred against us, believing we have done them wrong; but those whom we have taken the trouble to persuade continue our friends, believing we have done them a kindness. It is not, therefore, they who apply themselves to the study of prudence that become violent, but those brutish intractable tempers who have much power in their hands and but little judgment to manage it.—He farther said that when a man desires to carry anything by force, he must have many friends to assist him: as, on the contrary, he that can persuade has need of none but himself, and is not subject to shed blood; for who would rather choose to kill a man than to make use of his services, after having gained his friendship and goodwill by mildness?

The accuser adds, in proof of the ill tendency of the doctrine of Socrates, that Critias and Alcibiades, who were two of his most intimate friends, were very bad men, and did much mischief to their country. For Critias was the most insatiable and cruel of all the thirty tyrants; and Alcibiades the most dissolute, the most insolent, and the most audacious citizen that ever the Republic had. As for me, I pretend not to justify them, and will only relate for what reason they frequented Socrates. They were men of an unbounded ambition, and who resolved, whatever it cost, to govern the State, and make themselves be talked of. They had heard that Socrates lived very content upon little or nothing, that he entirely commanded his passions, and that his reasonings were so persuasive that he drew all men to which side he pleased. Reflecting on this, and being of the temper we mentioned, can it be thought that they desired the acquaintance of Socrates, because they were in love with his way of life, and with his temperance, or because they believed that by conversing with him they should render themselves capable of reasoning aright, and of well-managing the public affairs? For my part, I believe that if the gods had proposed to them to live always like him, or to die immediately, they would rather have chosen a sudden death. And it is easy to judge this from their actions; for as soon as they thought themselves more capable than their companions, they forsook Socrates, whom they had frequented, only for the purpose I mentioned, and threw themselves wholly into business.

It may, perhaps, be objected that he ought not to have discoursed to his friends of things relating to the government of the State, till after he had taught them to live virtuously. I have nothing to say to this; but I observe that all who profess teaching do generally two things: they work in presence of their scholars, to show them how they ought to do, and they instruct them likewise by word of mouth. Now, in either of these two ways, no man ever taught to live well, like Socrates; for, in his whole life, he was an example of untainted probity; and in his discourses he spoke of virtue and of all the duties of man in a manner that made him admired of all his hearers. And I know too very well that Critias and Alcibiades lived very virtuously as long as they frequented him; not that they were afraid of him, but because they thought it most conducive to their designs to live so at that time.

Many who pretend to philosophy will here object, that a virtuous person is always virtuous, and that when a man has once come to be good and temperate, he will never afterwards become wicked nor dissolute; because habitudes that can be acquired, when once they are so, can never more be effaced from the mind. But I am not of this opinion; for as they who use no bodily exercises are awkward and unwieldy in the actions of the body, so they who exercise not their minds are incapable of the noble actions of the mind, and have not courage enough to undertake anything worthy of praise, nor command enough over themselves to abstain from things that are forbid. For this reason, parents, though they be well enough assured of the good natural disposition of their children, fail not to forbid them the conversation of the vicious, because it is the ruin of worthy dispositions, whereas the conversation of good men is a continual meditation of virtue. Thus a poet says,

"By those whom we frequent, we're ever led:
Example is a law by all obeyed.
Thus with the good, we are to good inclined,
But vicious company corrupts the mind."

And another in like manner:

"Virtue and vice in the same man are found,
And now they gain, and now they lose their ground."

And, in my opinion, they are in the right: for when I consider that they who have learned verses by heart forget them unless they repeat them often, so I believe that they who neglect the reasonings of philosophers, insensibly lose the remembrance of them; and when they have let these excellent notions slip out of their minds, they at the same time lose the idea of the things that supported in the soul the love of temperance; and, having forgot those things, what wonder is it if at length they forget temperance likewise?

I observe, besides, that men who abandon themselves to the debauches of wine or women find it more difficult to apply themselves to things that are profitable, and to abstain from what is hurtful. For many who live frugally before they fall in love become prodigal when that passion gets the mastery over them; insomuch that after having wasted their estates, they are reduced to gain their bread by methods they would have been ashamed of before. What hinders then, but that a man, who has been once temperate, should be so no longer, and that he who has led a good life at one time should not do so at another? I should think, therefore, that the being of all virtues, and chiefly of temperance, depends on the practice of them: for lust, that dwells in the same body with the soul, incites it continually to despise this virtue, and to find out the shortest way to gratify the senses only.

Thus, whilst Alcibiades and Critias conversed with Socrates, they were able, with so great an assistance, to tame their inclinations; but after they had left him, Critias, being retired into Thessaly, ruined himself entirely in the company of some libertines; and Alcibiades, seeing himself courted by several women of quality, because of his beauty, and suffering himself to be corrupted by soothing flatterers, who made their court to him, in consideration of the credit he had in the city and with the allies; in a word, finding himself respected by all the Athenians, and that no man disputed the first rank with him, began to neglect himself, and acted like a great wrestler, who takes not the trouble to exercise himself, when he no longer finds an adversary who dares to contend with him.

If we would examine, therefore, all that has happened to them; if we consider how much the greatness of their birth, their interest, and their riches, had puffed up their minds; if we reflect on the ill company they fell into, and the many opportunities they had of debauching themselves, can we be surprised that, after they had been so long absent from Socrates, they arrived at length to that height of insolence to which they have been seen to arise? If they have been guilty of crimes, the accuser will load Socrates with them, and not allow him to be worthy of praise, for having kept them within the bounds of their duty during their youth, when, in all appearance, they would have been the most disorderly and least governable. This, however, is not the way we judge of other things; for whoever pretended that a musician, a player on the lute, or any other person that teaches, after he has made a good scholar, ought to be blamed for his growing more ignorant under the care of another master? If a young man gets an acquaintance that brings him into debauchery, ought his father to lay the blame on the first friends of his son among whom he always lived virtuously? Is it not true, on the contrary, that the more he finds that this last friendship proves destructive to him, the more reason he will have to praise his former acquaintance. And are the fathers themselves, who are daily with their children, guilty of their faults, if they give them no ill example? Thus they ought to have judged of Socrates; if he led an ill life, it was reasonable to esteem him vicious; but if a good, was it just to accuse him of crimes of which he was innocent?

And yet he might have given his adversaries ground to accuse him, had he but approved, or seemed to approve those vices in others, from which he kept himself free: but Socrates abhorred vice, not only in himself, but in everyone besides. To prove which, I need only relate his conduct toward Critias, a man extremely addicted to debauchery. Socrates perceiving that this man had an unnatural passion for Euthydemus, and that the violence of it would precipitate him so far a length as to make him transgress the bounds of nature, shocked at his behavior, he exerted his utmost strength of reason and argument to dissuade him from so wild a desire. And while the impetuosity of Critias' passion seemed to scorn all check or control, and the modest rebuke of Socrates had been disregarded, the philosopher, out of an ardent zeal for virtue, broke out in such language, as at once declared his own strong inward sense of decency and order, and the monstrous shamefulness of Critias' passion. Which severe but just reprimand of Socrates, it is thought, was the foundation of that grudge which he ever after bore him; for during the tyranny of the Thirty, of which Critias was one, when, together with Charicles, he had the care of the civil government of the city, he failed not to remember this affront, and, in revenge of it, made a law to forbid teaching the art of reasoning in Athens: and having nothing to reproach Socrates with in particular, he labored to render him odious by aspersing him with the usual calumnies that are thrown on all philosophers: for I have never heard Socrates say that he taught this art, nor seen any man who ever heard him say so; but Critias had taken offence, and gave sufficient proofs of it: for after the Thirty had caused to be put to death a great number of the citizens, and even of the most eminent, and had let loose the reins to all sorts of violence and rapine, Socrates said in a certain place that he wondered very much that a man who keeps a herd of cattle, and by his ill conduct loses every day some of them, and suffers the others to fall away, would not own himself to be a very ill keeper of his herd; and that he should wonder yet more if a Minister of State, who lessens every day the number of his citizens, and makes the others more dissolute, was not ashamed of his ministry, and would not own himself to be an ill magistrate. This was reported to Critias and Charicles, who forthwith sent for Socrates, and showing him the law they had made, forbid him to discourse with the young men. Upon which Socrates asked them whether they would permit him to propose a question, that he might be informed of what he did not understand in this prohibition; and his request being granted, he spoke in this manner: "I am most ready to obey your laws; but that I may not transgress through ignorance, I desire to know of you, whether you condemn the art of reasoning, because you believe it consists in saying things well, or in saying them ill? If for the former reason, we must then, from henceforward, abstain from speaking as we ought; and if for the latter, it is plain that we ought to endeavor to speak well."

At these words Charicles flew into a passion, and said to him: "Since you pretend to be ignorant of things that are so easily known, we forbid you to speak to the young men in any manner whatever."

"It is enough," answered Socrates; "but that I may not be in a perpetual uncertainty, pray prescribe to me, till what age men are young."

"Till they are capable of being members of the Senate," said Charicles: "in a word, speak to no man under thirty years of age."

"How!" says Socrates, "if I would buy anything of a tradesman who is not thirty years old am I forbid to ask him the price of it?"

"I mean not so," answered Charicles: "but I am not surprised that you ask me this question, for it is your custom to ask many things that you know very well."

Socrates added: "And if a young man ask me in the street where Charicles lodges, or whether I know where Critias is, must I make him no answer?"

"I mean not so neither," answered Charicles.

Here Critias, interrupting their discourse, said: "For the future, Socrates, you must have nothing to do with the city tradesmen, the shoemakers, masons, smiths, and other mechanics, whom you so often allege as examples of life; and who, I apprehend, are quite jaded with your discourses."

"I must then likewise," replied Socrates, "omit the consequences I draw from those discourses; and have no more to do with justice, piety, and the other duties of a good man."

"Yes, yes," said Charicles; "and I advise you to meddle no more with those that tend herds of oxen; otherwise take care you lose not your own." And these last words made it appear that Critias and Charicles had taken offence at the discourse which Socrates had held against their government, when he compared them to a man that suffers his herd to fall to ruin.

Thus we see how Critias frequented Socrates, and what opinion they had of each other. I add, moreover, that we cannot learn anything of a man whom we do not like: therefore if Critias and Alcibiades made no great improvement with Socrates, it proceeded from this, that they never liked him. For at the very time that they conversed with him, they always rather courted the conversation of those who were employed in the public affairs, because they had no design but to govern.—The following conference of Alcibiades, in particular, which he had with Pericles, his governor—who was the chief man of the city, whilst he was yet under twenty years of age—concerning the nature of the laws, will confirm what I have now advanced.

"Pray," says Alcibiades, "explain to me what the law is: for, as I hear men praised who observe the laws, I imagine that this praise could not be given to those who know not what the law is."

"It is easy to satisfy you," answered Pericles: "the law is only what the people in a general assembly ordain, declaring what ought to be done, and what ought not to be done."

"And tell me," added Alcibiades, "do they ordain to do what is good, or what is ill?"

"Most certainly what is good." Alcibiades pursued: "And how would you call what a small number of citizens should ordain, in states where the people is not the master, but all is ordered by the advice of a few persons, who possess the sovereignty?"

"I would call whatever they ordain a law; for laws are nothing else but the ordinances of sovereigns."

"If a tyrant then ordain anything, will that be a law?"

"Yes, it will," said Pericles.

"But what then is violence and injustice?" continued Alcibiades; "is it not when the strongest makes himself be obeyed by the weakest, not by consent, but by force only?"

"In my opinion it is."

"It follows then," says Alcibiades, "that ordinances made by a prince, without the consent of the citizens, will be absolutely unjust."

"I believe so," said Pericles; "and cannot allow that the ordinances of a prince, when they are made without the consent of the people, should bear the name of laws."

"And what the chief citizens ordain, without procuring the consent of the greater number, is that likewise a violence?"

"There is no question of it," answered Pericles; "and in general, every ordinance made without the consent of those who are to obey it, is a violence rather than a law."

“And is what the populace decree, without the concurrence of the chiefs, to be counted a violence likewise, and not a law?”

“No doubt it is,” said Pericles: “but when I was of your age, I could resolve all these difficulties, because I made it my business to inquire into them, as you do now.”

“Would to God,” cried Alcibiades, “I had been so happy as to have conversed with you then, when you understood these matters better.” To this purpose was their dialogue.

Critias and Alcibiades, however, continued not long with Socrates, after they believed they had improved themselves, and gained some advantages over the other citizens, for besides that they thought not his conversation very agreeable, they were displeased that he took upon him to reprimand them for their faults; and thus they threw themselves immediately into the public affairs, having never had any other design but that. The usual companions of Socrates were Crito, Chaerephon, Chaerecrates, Simmias, Cebes, Phædon, and some others; none of whom frequented him that they might learn to speak eloquently, either in the assemblies of the people, or in the courts of justice before the judges; but that they might become better men, and know how to behave themselves towards their domestics, their relations, their friends, and their fellow-citizens. All these persons led very innocent lives; and, whether we consider them in their youth or examine their behavior in a more advanced age, we shall find that they never were guilty of any bad action, nay, that they never gave the least ground to suspect them of being so.

But the accuser says that Socrates encouraged children to despise their parents, making them believe that he was more capable to instruct them than they; and telling them that as the laws permit a man to chain his own father if he can convict him of lunacy, so, in like manner, it is but just that a man of excellent sense should throw another into chains who has not so much understanding. I cannot deny but that Socrates may have said something like this; but he meant it not in the sense in which the accuser would have it taken: and he fully discovered what his meaning by these words was, when he said that he who should pretend to chain others because of their ignorance, ought, for the same reason, to submit to be chained himself by men who know more than he. Hence it is that he argued so often of the difference between folly and ignorance; and then he plainly said that fools and madmen ought to be chained indeed, as well for their own interest as for that of their friends; but that they who are ignorant of things they should know, ought only to be instructed by those that understand them.

The accuser goes on, that Socrates did not only teach men to despise their parents, but their other relations too; because he said that if a man be sick, or have a suit in law, it is not his relations, but the physicians, or the advocates who are of use to him. He further alleged that Socrates, speaking of friends, said it was to no purpose to bear goodwill to any man, if it be not in our power to serve him; and that the only friends whom we ought to value are they who know what is good for us, and can teach it to us: thus, says the accuser, Socrates, by persuading the youth that he was the wisest of all men, and the most capable to set others in the right road to wisdom, made them believe that all the rest of mankind were nothing in comparison with him. I remember, indeed, to have heard him sometimes talk after this manner of parents, relations, and friends; and he observed besides, if I mistake not, that when the soul, in which the understanding resides, is gone out of the body, we soon bury the corpse; and even though it be that of our nearest relation, we endeavor to put it out of our sight as soon as decently we can. Farther, though every man loves his own body to a great degree, we scruple not nevertheless to take from it all that is superfluous, for this reason we cut our hair and our nails, we take off our corns and our warts, and we put ourselves into the surgeons' hands, and endure caustics and incisions; and after they have made us suffer a great deal of pain, we think ourselves obliged to give them a reward: thus, too, we spit, because the spittle is of no use in the mouth, but on the contrary is troublesome. But Socrates meant not by these, or the like sayings, to conclude that a man ought to bury his father alive, or that we ought to cut off our legs and arms; but he meant only to teach us that what is useless is contemptible, and to exhort every man to improve and render himself useful to others; to the end that if we desire to be esteemed by our father, our brother, or any other relation, we should not rely so much on our parentage and consanguinity, as not to endeavor to render ourselves always useful to those whose esteem we desire to obtain.

The accuser says further against Socrates, that he was so malicious as to choose out of the famous poets the passages that contained the worst instructions, and that he made use of them in a sly manner, to inculcate the vices of injustice and violence: as this verse of Hesiod,

"Blame no employment, but blame idleness."

And he pretends that Socrates alleged this passage to prove that the poet meant to say that we ought not to count any employment unjust or dishonorable, if we can make any advantage of it. This, however, was far from the thoughts of Socrates; but, as he had always taught that employment and business are useful and honorable to men, and that idleness is an evil, he concluded that they who busy themselves about anything that is good are indeed employed; but that gamesters and debauched persons, and all who have no occupations, but such as are hurtful and wicked, are idle. Now, in this sense, is it not true to say:—

"Blame no employment, but blame idleness"?

The accuser likewise says that Socrates often repeated, out of Homer, a speech of Ulysses; and from thence he concludes that Socrates taught that the poet advised to beat the poor and abuse the common people. But it is plain Socrates could never have drawn such a wild and unnatural inference from those verses of the poet, because he would have argued against himself, since he was as poor as anyone besides. What he meant, therefore, was only this, that such as are neither men of counsel nor execution, who are neither fit to advise in the city nor to serve in the army, and are nevertheless proud and insolent, ought to be brought to reason, even though they be possessed of great riches. And this was the true meaning of Socrates, for he loved the men of low condition, and expressed a great civility for all sorts of persons; insomuch that whenever he was consulted, either by the Athenians or by foreigners, he would never take anything of any man for the instructions he gave them, but imparted his wisdom freely, and without reward, to all the world; while they, who became rich by his liberality, did not afterwards behave themselves so generously, but sold very dear to others what had cost them nothing; and, not being of so obliging a temper as he, would not impart their knowledge to any who had it not in their power to reward them. In short, Socrates has rendered the city of Athens famous throughout the whole earth; and, as Lychas was said to be the honor of Sparta, because he treated, at his own expense, all the foreigners who came to the feasts of the Gymnopaedies, so it may, with much greater reason, be said of Socrates that he was the glory of Athens, he who all his life made a continual distribution of his goodness and virtues, and who, keeping open for all the world the treasures of an inestimable wealth, never sent any man out of his company but more virtuous, and more improved in the principles of honor, than formerly he was. Therefore, in my opinion, if he had been treated according to his merit, they should have decreed him public honors rather than have condemned him to an infamous death. For against whom have the laws ordained the punishment of death? Is it not for thieves, for robbers, for men guilty of sacrilege, for those who sell persons that are free? But where, in all the world, can we find a man more innocent of all those crimes than Socrates? Can it be said of him that he ever held correspondence with the enemy, that he ever fomented any sedition, that he ever was the cause of a rebellion, or any other the like mischiefs? Can any man lay to his charge that he ever detained his estate, or did him or it the least injury? Was he ever so much as suspected of any of these things? How then is it possible he should be guilty of the crimes of which he was accused; since, instead of not believing in the gods, as the accuser says, it is manifest he was a sincere adorer of them? Instead of corrupting the youth, as he further alleges against him, he made it his chief care to deliver his friends from the power of every guilty passion, and to inspire them with an ardent love for virtue, the glory, the ornament, and felicity of families as well as of states? And this being fact (and fact it is, for who can deny it?), is it not certain that the Republic was extremely obliged to him, and that she ought to have paid him the highest honors?

## CHAPTER III.

### HOW SOCRATES BEHAVED THROUGH THE WHOLE OF HIS LIFE.

Having, therefore, observed myself that all who frequented him improved themselves very much in his conversation, because he instructed them no less by his example than by his discourses, I am resolved to set down, in this work, all that I can recollect both of his actions and words.

First, then, as to what relates to the service of the gods, he strictly conformed to the advice of the oracle, who never gives any other answer to those who inquire of him in what manner they ought to sacrifice to the gods, or what honors they ought to render to the dead, than that everyone should observe the customs of his own country. Thus in all the acts of religious worship Socrates took particular care to do nothing contrary to the custom of the Republic, and advised his friends to make that the rule of their devotion to the gods, alleging it to be an argument of superstition and vanity to dissent from the established worship.

When he prayed to the gods he besought them only to give him what is good, because they know better than we do what things are truly good for us; and he said that men who pray for silver, or for gold, or for the sovereign authority, made as foolish requests as if they prayed that they might play or fight, or desired any other thing whose event is uncertain, and that might be likely to turn to their disadvantage.

When he offered sacrifices he did not believe that his poverty rendered them despicable in the presence of the gods; and, while he offered according to his ability, he thought he gave as much as the rich, who load the altars with costly gifts, for he held that it would be an injustice in the gods to take more delight in costly sacrifices than in poorer ones, because it would then follow that the offerings of the wicked would for the most part be more acceptable to them than the gifts of the good; and that, if this were so, we ought not to desire to live one moment longer: he thought, therefore, that nothing was so acceptable to the Deity as the homage that is paid him by souls truly pious and innocent. To this purpose he often repeated these verses:—

“Offer to heaven according to thy pow’r:
Th’ indulgent gracious gods require no more.”

And not only in this, but in all the other occasions of life, he thought the best advice he could give his friends was to do all things according to their ability.

When he believed that the gods had admonished him to do anything, it was as impossible to make him take a contrary resolution as it would have been to have prevailed with him in a journey to change a guide that was clear-sighted for one that knew not the way, and was blind likewise. For this reason he pitied their folly, who, to avoid the derision of men, live not according to the admonitions and commands of the gods; and he beheld with contempt all the subtitles of human prudence when he compared them with divine inspirations.

His way of living was such that whoever follows it may be assured, with the help of the gods, that he shall acquire a robust constitution and a health not to be easily impaired; and this, too, without any great expense, for he was content with so little that I believe there was not in all the world a man who could work at all but might have earned enough to have maintained him. He generally ate as long as he found pleasure in eating, and when he sat down to table he desired no other sauce but a sound appetite. All sorts of drink were alike pleasing to him, because he never drank but when he was thirsty; and if sometimes he was invited to a feast, he easily avoided eating and drinking to excess, which many find very difficult to do in those occasions. But he advised those who had no government of themselves never to taste of things that tempt a man to eat when he is no longer hungry, and that excite him to drink when his thirst is already quenched, because it is this that spoils the stomach, causes the headache, and puts the soul into disorder. And he said, between jest and earnest, that he believed it was with such meats as those that Circe changed men into swine, and that Ulysses avoided that transformation by the counsel of Mercury, and because he had temperance enough to abstain from tasting them.

As to love, his advice was to avoid carefully the company of beautiful persons, saying it was very difficult to be near them and escape being taken in the snare; and, having been told that Critobulus had given a kiss to the son of Alcibiades, who was a very handsome youth, he held this discourse to Xenophon, in the presence of Critobulus himself.

“Tell me, Xenophon, what opinion have you hitherto had of Critobulus? Have you placed him in the rank of the temperate and judicious; or with the debauched and imprudent?”

“I have always looked upon him,” answered Xenophon, “to be a very virtuous and prudent man.”

“Change your opinion,” replied Socrates, “and believe him more rash than if he threw himself on the points of naked swords or leapt into the fire.”

“And what have you seen him do,” said Xenophon, “that gives you reason to speak thus of him?”

“Why, he had the rashness,” answered Socrates, “to kiss the son of Alcibiades, who is so beautiful and charming.”

“And is this all?” said Xenophon; “for my part, I think I could also willingly expose myself to the same danger that he did.”

“Wretch that you are!” replied Socrates. “Do you consider what happens to you after you have kissed a beautiful face? Do you not lose your liberty? Do you not become a slave? Do you not engage yourself in a vast expense to procure a sinful pleasure? Do you not find yourself in an incapacity of doing what is good, and that you subject yourself to the necessity of employing your whole time and person in the pursuit of what you would despise, if your reason were not corrupted?”

“Good God!” cried Xenophon, “this is ascribing a wonderful power to a kiss forsooth.”

“And are you surprised at it?” answered Socrates. “Are there not some small animals whose bite is so venomous that it causes insufferable pain, and even the loss of the senses?”

“I know it very well,” said Xenophon, “but these animals leave a poison behind them when they sting.”

“And do you think, you fool,” added Socrates, “that kisses of love are not venomous, because you perceive not the poison? Know that a beautiful person is a more dangerous animal than scorpions, because these cannot wound unless they touch us; but beauty strikes at a distance: from what place soever we can but behold her, she darts her venom upon us, and overthrows our judgment. And perhaps for this reason the Loves are represented with bows and arrows, because a beautiful face wounds us from afar. I advise you, therefore, Xenophon, when you chance to see a beauty to fly from it, without looking behind you. And for you, Critobulus, I think it convenient that you should enjoin yourself a year’s absence, which will not be too long a time to heal you of your wound.”

As for such as have not strength enough to resist the power of love, he thought that they ought to consider and use it as an action to which the soul would never consent, were it not for the necessity of the body; and which, though it be necessary, ought, nevertheless, to give us no inquietude. As for himself, his continence was known to all men, and it was more easy for him to avoid courting the most celebrated beauties, than it is for others to get away from disagreeable objects.

Thus we see what was his way of life in eating, drinking, and in the affair of love. He believed, however, that he tasted of those pleasures no less than they who give themselves much trouble to enjoy them; but that he had not, like them, so frequent occasions for sorrow and repentance.

## CHAPTER IV.

### SOCRATES PROVES THE EXISTENCE OF A DEITY.

If there be any who believe what some have written by conjecture, that Socrates was indeed excellent in exciting men to virtue, but that he did not push them forward to make any great progress in it, let such reflect a little on what he said, not only when he endeavored to refute those that boasted they knew all things, but likewise in his familiar conversations, and let them judge afterwards if he was incapable to advance his friends in the paths of virtue.

I will, in the first place, relate a conference which he had with Aristodemus, surnamed the Little, touching the Deity, for he had heard that he never sacrificed to the gods; that he never addressed himself to them in prayer; that he never consulted the oracles, and even laughed at those that practiced these things, he took him to talk in this manner:—

“Tell me, Aristodemus, are there any persons whom you value on account of their merit?”

He answered, “Yes, certainly.”

“Tell me their names,” added Socrates.

Aristodemus replied: “For epic poetry I admire Homer as the most excellent; for dithyrambics, Melanippides; Sophocles for tragedy; Polycletes for statuary; and Zeuxis for painting.”

“Which artists,” said Socrates, “do you think to be most worthy of your esteem and admiration: they who make images without soul and motion, or they who make animals that move of their own accord, and are endowed with understanding?”

“No doubt the last,” replied Aristodemus, “provided they make them not by chance, but with judgment and prudence.”

Socrates went on: “As there are some things which we cannot say why they were made, and others which are apparently good and useful, tell me, my friend, whether of the two you rather take to be the work of prudence than of hazard.”

“It is reasonable,” said Aristodemus, “to believe that the things which are good and useful are the workmanship of reason and judgment.”

“Do not you think then,” replied Socrates, “that the first Former of mankind designed their advantage when he gave them the several senses by which objects are apprehended; eyes for things visible, and ears for sounds? Of what advantage would agreeable scents have been to us if nostrils suited to their reception had not been given? And for the pleasures of the taste, how could we ever have enjoyed these, if the tongue had not been fitted to discern and relish them? Further, does it not appear to you wisely provided that since the eye is of a delicate make, it is guarded with the eyelid drawn back when the eye is used, and covering it in sleep? How well does the hair at the extremity of the eyelid keep out dust, and the eyebrow, by its prominence, prevent the sweat of the forehead from running into the eye to its hurt. How wisely is the ear formed to receive all sorts of sounds, and not to be filled with any to the exclusion of others. Are not the fore teeth of all animals fitted to cut off proper portions of food, and their grinders to reduce it to a convenient smallness? The mouth, by which we take in the food we like, is fitly placed just beneath the nose and eyes, the judges of its goodness; and what is offensive and disagreeable to our senses is, for that reason, placed at a proper distance from them. In short, these things being disposed in such order, and with so much care, can you hesitate one moment to determine whether it be an effect of providence or of chance?"

"I doubt not of it in the least," replied Aristodemus, "and the more I fix my thoughts on the contemplation of these things the more I am persuaded that all this is the masterpiece of a great workman, who bears an extreme love to men."

"What say you," continued Socrates, "to this, that he gives all animals a desire to engender and propagate their kind; that he inspires the mothers with tenderness and affection to bring up their young; and that, from the very hour of their birth, he infuses into them this great love of life and this mighty aversion to death?"

"I say," replied Aristodemus, "that it is an effect of his great care for their preservation."

"This is not all," said Socrates, "answer me yet farther; perhaps you would rather interrogate me. You are not, I persuade myself, ignorant that you are endowed with understanding; do you then think that there is not elsewhere an intelligent being? Particularly, if you consider that your body is only a little earth taken from that great mass which you behold. The moist that composes you is only a small drop of that immense heap of water that makes the sea; in a word, your body contains only a small part of all the elements, which are elsewhere in great quantity. There is nothing then but your understanding alone, which, by a wonderful piece of good fortune, must have come to you from I know not whence, if there were none in another place; and can it then be said that all this universe and all these so vast and numerous bodies have been disposed in so much order, without the help of an intelligent Being, and by mere chance?"

"I find it very difficult to understand it otherwise," answered Aristodemus, "because I see not the gods, who, you say, make and govern all things, as I see the artificers who do any piece of work amongst us."

"Nor do you see your soul neither," answered Socrates, "which governs your body; but, because you do not see it, will you from thence infer you do nothing at all by its direction, but that everything you do is by mere chance?"

Aristodemus now wavering said, "I do not despise the Deity, but I conceive such an idea of his magnificence and self-sufficiency, that I imagine him to have no need of me or my services."

"You are quite wrong," said Socrates, "for by how much the gods, who are so magnificent, vouchsafe to regard you, by so much you are bound to praise and adore them."

"It is needless for me to tell you," answered Aristodemus, "that, if I believed the gods interested themselves in human affairs, I should not neglect to worship them."

"How!" replied Socrates, "you do not believe the gods take care of men, they who have not only given to man, in common with other animals, the senses of seeing, hearing, and taste, but have also given him to walk upright; a privilege which no other animal can boast of, and which is of mighty use to him to look forward, to remote objects, to survey with facility those above him, and to defend himself from any harm? Besides, although the animals that walk have feet, which serve them for no other use than to walk, yet, herein, have the gods distinguished man, in that, besides feet, they have given him hands, the instruments of a thousand grand and useful actions, on which account he not only excels, but is happier than all animals besides. And, further, though all animals have tongues, yet none of them can speak, like man's; his tongue only can form words, by which he declares his thoughts, and communicates them to others. Not to mention smaller instances of their care, such as the concern they take of our pleasures, in confining men to no certain season for the enjoying them, as they have done other animals.

"But Providence taketh care, not only of our bodies, but of our souls: it hath pleased the great Author of all, not only to give man so many advantages for the body, but (which is the greatest gift of all, and the strongest proof of his care) he hath breathed into him an intelligent soul, and that, too, the most excellent of all, for which of the other animals has a soul that knows the being of the Deity, by whom so many great and marvelous works are done? Is there any species but man that serves and adores him? Which of the animals can, like him, protect himself from hunger and thirst, from heat and cold? Which, like him, can find remedies for diseases, can make use of his strength, and is as capable of learning, that so perfectly retains the things he has seen, he has heard, he has known? In a word, it is manifest that man is a god in comparison with the other living species, considering the advantages he naturally has over them, both of body and soul. For, if man had a body like to that of an ox the subtlety of his understanding would avail him nothing, because he would not be able to execute what he should project. On the other hand, if that animal had a body like ours, yet, being devoid of understanding, he would be no better than the rest of the brute species. Thus the gods have at once united in your person the most excellent structure of body and the greatest perfection of soul; and now can you still say, after all, that they take no care of you? What would you have them do to convince you of the contrary?"

"I would have them," answered Aristodemus, "send on purpose to let me know expressly all that I ought to do or not to do, in like manner as you say they do give you notice."

"What!" said Socrates, "when they pronounce any oracle to all the Athenians, do you think they do not address themselves to you too, when by prodigies they make known to the Greeks the things that are to happen, are they silent to you alone, and are you the only person they neglect? Do you think that the gods would have instilled this notion into men, that it is they who can make them happy or miserable, if it were not indeed in their power to do so? And do you believe that the human race would have been thus long abused without ever discovering the cheat? Do you not know that the most ancient and wisest republics and people have been also the most pious, and that man, at the age when his judgment is ripest, has then the greatest bent to the worship of the Deity?

“My dear Aristodemus, consider that your mind governs your body according to its pleasure: in like manner we ought to believe that there is a mind diffused throughout the whole universe that disposes of all things according to its counsels. You must not imagine that your weak sight can reach to objects that are several leagues distant, and that the eye of God cannot, at one and the same time, see all things. You must not imagine that your mind can reflect on the affairs of Athens, of Egypt, and of Sicily, and that the providence of God cannot, at one and the same moment, consider all things. As, therefore, you may make trial of the gratitude of a man by doing him a kindness, and as you may discover his prudence by consulting him in difficult affairs, so, if you would be convinced how great is the power and goodness of God, apply yourself sincerely to piety and his worship; then, my dear Aristodemus, you shall soon be persuaded that the Deity sees all, hears all, is present everywhere, and, at the same time, regulates and superintends all the events of the universe.”

By such discourses as these Socrates taught his friends never to commit any injustice or dishonorable action, not only in the presence of men, but even in secret, and when they are alone, since the Divinity hath always an eye over us, and none of our actions can be hid from him.

## CHAPTER V.

### THE PRAISE OF TEMPERANCE.

And if temperance be a virtue in man, as undoubtedly it is, let us see whether any improvement can be made by what he said of it. I will here give you one of his discourses on that subject:—

“If we were engaged in a war,” said he, “and were to choose a general, would we make choice of a man given to wine or women, and who could not support fatigues and hardships? Could we believe that such a commander would be capable to defend us and to conquer our enemies? Or if we were lying on our deathbed, and were to appoint a guardian and tutor for our children, to take care to instruct our sons in the principles of virtue, to breed up our daughters in the paths of honor and to be faithful in the management of their fortunes, should we think a debauched person fit for that employment? Would we trust our flocks and our granaries in the hands of a drunkard? Would we rely upon him for the conduct of any enterprise; and, in short, if a present were made us of such a slave, should we not make it a difficulty to accept him? If, then, we have so great an aversion for debauchery in the person of the meanest servant, ought we not ourselves to be very careful not to fall into the same fault? Besides, a covetous man has the satisfaction of enriching himself, and, though he take away another’s estate, he increases his own; but a debauched man is both troublesome to others and injurious to himself. We may say of him that he is hurtful to all the world, and yet more hurtful to himself, if to ruin, not only his family, but his body and soul likewise, is to be hurtful. Who, then, can take delight in the company of him who has no other diversion than eating and drinking, and who is better pleased with the conversation of a prostitute than of his friends? Ought we not, then, to practice temperance above all things, seeing it is the foundation of all other virtues; for without it what can we learn that is good, what do that is worthy of praise? Is not the state of man who is plunged in voluptuousness a wretched condition both for the body and soul? Certainly, in my opinion, a free person ought to wish to have no such servants, and servants addicted to such brutal irregularities ought earnestly to entreat Heaven that they may fall into the hands of very indulgent masters, because their ruin will be otherwise almost unavoidable.”

This is what Socrates was wont to say upon this subject. But if he appeared to be a lover of temperance in his discourses, he was yet a more exact observer of it in his actions, showing himself to be not only invincible to the pleasures of the senses, but even depriving himself of the satisfaction of getting an estate; for he held that a man who accepts of money from others makes himself a servant to all their humors, and becomes their slave in a manner no less scandalous than other slaveries.

## CHAPTER VI.

### THE DISPUTE OF SOCRATES WITH ANTIPHON, THE SOPHIST.

To this end it will not be amiss to relate, for the honor of Socrates, what passed between him and the sophist Antiphon, who designed to seduce away his hearers, and to that end came to him when they were with him, and, in their presence, addressed himself to him in these words:—"I imagined, Socrates, that philosophers were happier than other men; but, in my opinion, your wisdom renders you more miserable, for you live at such a rate that no footman would live with a master that treated him in the same manner. You eat and drink poorly, you are clothed very meanly—the same suit serves you in summer and winter—you go barefoot, and for all this you take no money, though it is a pleasure to get it; for, after a man has acquired it, he lives more genteelly and more at his ease. If, therefore, as in all other sorts of arts, apprentices endeavor to imitate their masters, should these who frequent your conversation become like you, it is certain that you will have taught them nothing but to make themselves miserable."

Socrates answered him in the following manner:—"You think, Antiphon, I live so poorly that I believe you would rather die than live like me. But what is it you find so strange and difficult in my way of living? You blame me for not taking money; is it because they who take money are obliged to do what they promise, and that I, who take none, entertain myself only with whom I think fit? You despise my eating and drinking; is it because my diet is not so good nor so nourishing as yours, or because it is more scarce and dearer, or lastly, because your fare seems to you to be better? Know that a man who likes what he eats needs no other ragoût, and that he who finds one sort of drink pleasant wishes for no other. As to your objection of my clothes, you appear to me, Antiphon, to judge quite amiss of the matter; for, do you not know that we dress ourselves differently only because of the hot or cold weather, and if we wear shoes it is because we would walk the easier? But, tell me, did you ever observe that the cold hath hindered me from going abroad? Have you ever seen me choose the cool and fresh shades in hot weather? And, though I go barefoot, do not you see that I go wherever I will? Do you not know that there are some persons of a very tender constitution, who, by constant exercise, surmount the weakness of their nature, and at length endure fatigues better than they who are naturally more robust, but have not taken pains to exercise and harden themselves like the others? Thus, therefore, do not you believe that I, who have all my life accustomed myself to bear patiently all manner of fatigues, cannot now more easily submit to this than you, who have never thought of the matter? If I have no keen desire after dainties, if I sleep little, if I abandon not myself to any infamous amour, the reason is because I spend my time more delightfully in things whose pleasure ends not in the moment of enjoyment, and that make me hope besides to receive an everlasting reward. Besides, you know very well, that when a man sees that his affairs go ill he is not generally very gay; and that, on the contrary, they who think to succeed in their designs, whether in agriculture, traffic, or any other undertaking, are very contented in their minds. Now, do you think that from anything whatsoever there can proceed a satisfaction equal to the inward consciousness of improving daily in virtue, and acquiring the acquaintance and friendship of the best of men? And if we were to serve our friends or our country, would not a man who lives like me be more capable of it than one that should follow that course of life which you take to be so charming? If it were necessary to carry arms, which of the two would be the best soldier, he who must always fare deliciously, or he who is satisfied with what he finds? If they were to undergo a siege who would hold out longest, he who cannot live without delicacies, or he who requires nothing but what may easily be had? One would think, Antiphon, that you believe happiness to consist in good eating and drinking, and in an expensive and splendid way of life. For my part, I am of opinion that to have need of nothing at all is a divine perfection, and that to have need but of little is to approach very near the Deity, and hence it follows that, as there is nothing more excellent than the Deity, whatever approaches nearest to it is likewise most near the supreme excellence."

Another time Antiphon addressed himself to Socrates: "I confess you are an honest, well-meaning man, Socrates; but it is certain you know little or nothing, and one would imagine you own this to be true, for you get nothing by your teaching. And yet, I persuade myself, you would not part with your house, or any of the furniture of it, without some gratuity, because you believe them of some small value; nay, you would not part with them for less than they are worth: if, therefore, you thought your teaching worth anything you would be paid for it according to its value; in this, indeed, you show yourself honest, because you will not, out of avarice, cheat any man, but at the same time you discover, too, that you know but little, since all your knowledge is not worth the buying."

Socrates answered him in this manner:—"There is a great resemblance between beauty and the doctrine of philosophers; what is praiseworthy in the one is so in the other, and both of them are subject to the same vice: for, if a woman sells her beauty for money, we immediately call her a prostitute; but if she knows that a man of worth and condition is fallen in love with her, and if she makes him her friend, we say she is a prudent woman. It is just the same with the doctrine of philosophers; they that sell it are sophists, and like the public women, but if a philosopher observe a youth of excellent parts, and teaches him what he knows, in order to obtain his friendship, we say of him, that he acts the part of a good and virtuous citizen. Thus as some delight in fine horses, others in dogs, and others in birds; for my part all my delight is to be with my virtuous friends. I teach them all the good I know, and recommend them to all whom I believe capable to assist them in the way to perfection. We all draw together, out of the same fountain, the precious treasures which the ancient sages have left us; we run over their works, and if we find anything excellent we take notice of it and select it: in short, we believe we have made a great improvement when we begin to love one another." This was the answer he made, and when I heard him speak in this manner I thought him very happy, and that he effectually stirred up his hearers to the love of virtue.

Another time when Antiphon asked him why he did not concern himself with affairs of State, seeing he thought himself capable to make others good politicians? He returned this answer:—"Should I be more serviceable to the State if I took an employment whose function would be wholly bounded in my person, and take up all my time, than I am by instructing everyone as I do, and in furnishing the Republic with a great number of citizens who are capable to serve her?”

# CHAPTERVII.

## IN WHAT MANNER SOCRATES DISSUADED MEN FROM SELF-CONCEIT AND OSTENTATION.

But let us now see whether by dissuading his friends from a vain ostentation he did not exhort them to the pursuit of virtue. He frequently said that there was no readier way to glory than to render oneself excellent, and not to affect to appear so. To prove this he alleged the following example:—

“Let us suppose,” said he, “that anyone would be thought a good musician, without being so in reality; what course must he take? He must be careful to imitate the great masters in everything that is not of their art; he must, like them, have fine musical instruments; he must, like them, be followed by a great number of persons wherever he goes, who must be always talking in his praise. And yet he must not venture to sing in public: for then all men would immediately perceive not only his ignorance, but his presumption and folly likewise. And would it not be ridiculous in him to spend his estate to ruin his reputation? In like manner, if anyone would appear a great general, or a good pilot, though he knew nothing of either, what would be the issue of it? If he cannot make others believe it, it troubles him, and if he can persuade them to think so he is yet more unhappy, because, if he be made choice of for the steering of ships, or to command an army, he will acquit himself very ill of his office, and perhaps be the cause of the loss of his best friends. It is not less dangerous to appear to be rich, or brave, or strong, if we are not so indeed, for this opinion of us may procure us employments that are above our capacity, and if we fail to effect what was expected of us there is no remission for our faults. And if it be a great cheat to wheedle one of your neighbors out of any of his ready money or goods, and not restore them to him afterwards, it is a much greater impudence and cheat for a worthless fellow to persuade the world that he is capable to govern a Republic.”

By these and the like arguments he inspired a hatred of vanity and ostentation into the minds of those who frequented him.

# BOOK II.

## CHAPTER I.

### A CONFERENCE OF SOCRATES WITH ARISTIPPUS CONCERNING PLEASURE AND TEMPERANCE.

In the same manner, likewise, he encouraged his hearers by the following arguments to support hunger and thirst, to resist the temptations of love, to fly from laziness, and inure themselves to all manner of fatigues. For, being told that one of them lived too luxuriously, he asked him this question:

"If you were entrusted, Aristippus, with the education of two young men, one to be a prince and the other a private man, how would you educate them? Let us begin with their nourishment, as being the foundation of all."

"It is true," said Aristippus, "that nourishment is the foundation of our life, for a man must soon die if he be not nourished."

"You would accustom both of them," said Socrates, "to eat and drink at a certain hour?"

"It is likely I should?"

"But which of the two," said Socrates, "would you teach to leave eating before he was satisfied, to go about some earnest business?"

"Him, without doubt," answered Aristippus, "whom I intended to render capable to govern, to the end that under him the affairs of the Republic might not suffer by delay."

"Which of the two," continued Socrates, "would you teach to abstain from drinking when he was thirsty, to sleep but little, to go late to bed, to rise early, to watch whole nights, to live chastely, to get the better of his favorite inclinations, and not to avoid fatigues, but expose himself freely to them?"

"The same still," replied Aristippus. "And if there be any art that teaches to overcome our enemies, to which of the two is it rather reasonable to teach it?"

"To him to," said Aristippus, "for without that art all the rest would avail him nothing."

"I believe," said Socrates, "that a man, who has been educated in this manner, would not suffer himself to be so easily surprised by his enemies as the most part of animals do. For some perish by their gluttony, as those whom we allure with a bait, or catch by offering them to drink, and who fall into the snares, notwithstanding their fears and distrust. Others perish through their lasciviousness, as quails and partridges, who suffer themselves to be decoyed by the counterfeit voice of their females, and blindly following the amorous warmth that transports them, fall miserably into the nets."

"You say true," said Aristippus.

"Well, then," pursued Socrates, "is it not scandalous for a man to be taken in the same snares with irrational animals? And does not this happen to adulterers, who skulk and hide themselves in the chambers and closets of married women, though they know they run a very great risk, and that the laws are very strict and rigorous against those crimes? They know themselves to be watched, and that, if they are taken, they shall not be let go with impunity. In a word, they see punishment and infamy hanging over the heads of criminals like themselves. Besides, they are not ignorant, that there are a thousand honorable diversions to deliver them from those infamous passions, and yet they run hand over head into the midst of these dangers, and what is this but to be wretched and desperate to the highest degree?"

"I think it so," answered Aristippus.

"What say you to this," continued Socrates, "that the most necessary and most important affairs of life, as those of war and husbandry, are, with others of little less consequence, performed in the fields and in the open air, and that the greatest part of mankind accustom themselves so little to endure the inclemency of the seasons, to suffer heat and cold? Is not this a great neglect? And do you not think that a man who is to command others ought to inure himself to all these hardships?"

"I think he ought," answered Aristippus.

"Therefore," replied Socrates, "if they who are patient and laborious, as we have said, are worthy to command, may we not say that they who can do nothing of all this, ought never to pretend to any office?"

Aristippus agreed to it, and Socrates went on.

"Since then you know the rank which either of these two sorts of men ought to hold, amongst which would you have us place you?"

"Me!" said Aristippus; "why truly, not amongst those that govern; for that is an office I would never choose. Let those rule who have a mind for it; for my part, I envy not their condition. For, when I reflect that we find it hard enough to supply our own wants, I do not approve of loading ourselves, besides, with the necessities of a whole people; and that being often compelled to go without many things that we desire, we should engage ourselves in an employment that would render us liable to blame, if we did not take care to supply others with everything they want: I think there is folly in all this. For republics make use of their magistrates as I do of my slaves, who shall get me my meat and drink, and all other necessaries, as I command, and not presume to touch any of it themselves; so, too, the people will have those, who govern the State, take care to provide them with plenty of all things, and will not suffer them to do anything for their own advantage. I think, therefore, that all who are pleased with a hurry of affairs, and in creating business for others, are most fit to govern, provided they have been educated and instructed in the manner we mentioned. But, for my part, I desire to lead a more quiet and easy life."

"Let us," said Socrates, "consider whether they who govern lead more happy lives than their subjects: among the nations that are known to us in Asia, the Syrians, the Phrygians, and the Lydians, are under the empire of the Persians. In Europe, the Mæotians are subject to the Scythians; in Africa, the Carthaginians reign over the rest of the Africans. Which now, in your opinion, are the most happy? Let us look into Greece, where you are at present. Whose condition, think you, is most to be desired, that of the nations who rule, or of the people who are under the dominion of others?”

“I can never,” said Aristippus, “consent to be a slave; but there is a way between both that leads neither to empire nor subjection, and this is the road of liberty, in which I endeavor to walk, because it is the shortest to arrive at true quiet and repose.”

“If you had said,” replied Socrates, “that this way, which leads neither to empire nor subjection, is a way that leads far from all human society, you would, perhaps, have said something; for, how can we live among men, and neither command nor obey? Do you not observe that the mighty oppress the weak, and use them as their slaves, after they have made them groan under the weight of oppression, and given them just cause to complain of their cruel usage, in a thousand instances, both general and particular? And if they find any who will not submit to the yoke, they ravage their countries, spoil their corn, cut down their trees, and attack them, in short, in such a manner that they are compelled to yield themselves up to slavery, rather than undergo so unequal a war? Among private men themselves, do not the stronger and more bold trample on the weaker?”

“To the end, therefore, that this may not happen to me,” said Aristippus, “I confine myself not to any republic, but am sometimes here, sometimes there, and think it best to be a stranger wherever I am.”

“This invention of yours,” replied Socrates, “is very extraordinary. Travelers, I believe, are not now so much infested on the roads by robbers as formerly, deterred, I suppose, by the fate of Sinnis, Scyron, Procrustes, and the rest of that gang. What then? They who are settled in their own country, and are concerned in the administration of the public affairs, they have the laws in their favors, have their relations and friends to assist them, have fortified towns and arms for their defense: over and above, they have alliances with their neighbors: and yet all these favorable circumstances cannot entirely shelter them from the attempts and surprises of wicked men. But can you, who have none of these advantages, who are, for the most part, travelling on the roads, often dangerous to most men, who never enter a town, where you have not less credit than the meanest inhabitant, and are as obscure as the wretches who prey on the properties of others; in these circumstances, can you, I say, expect to be safe, merely because you are a stranger, or perhaps have got passports from the States that promise you all manner of safety coming or going, or should it be your hard fortune to be made a slave, you would make such a bad one, that a master would be never the better for you? For, who would suffer in his family a man who would not work, and yet expected to live well? But let us see how masters use such servants.

“When they are too lascivious, they compel them to fast till they have brought them so low, that they have no great stomach to make love, if they are thieves, they prevent them from stealing, by carefully locking up whatever they could take: they chain them for fear they should run away: if they are dull and lazy, then stripes and scourges are the rewards we give them. If you yourself, my friend, had a worthless slave, would you not take the same measures with him?”

"I would treat such a fellow," answered Aristippus, "with all manner of severity, till I had brought him to serve me better. But, Socrates, let us resume our former discourse."

"In what do they who are educated in the art of government, which you seem to think a great happiness, differ from those who suffer through necessity? For you say they must accustom themselves to hunger and thirst, to endure cold and heat, to sleep little, and that they must voluntarily expose themselves to a thousand other fatigues and hardships. Now, I cannot conceive what difference there is between being whipped willingly and by force, and tormenting one's body either one way or the other, except that it is a folly in a man to be willing to suffer pain."

"How," said Socrates, "you know not this difference between things voluntary and constrained, that he who suffers hunger because he is pleased to do so may likewise eat when he has a mind; and he who suffers thirst because he is willing may also drink when he pleases. But it is not in the power of him who suffers either of them through constraint and necessity to relieve himself by eating and drinking the moment he desires it? Besides, he that voluntarily embraces any laborious exercise finds much comfort and content in the hope that animates him. Thus the fatigues of hunting discourage not the hunters, because they hope to take the game they pursue. And yet what they take, though they think it a reward for all their toil, is certainly of very little value. Ought not they, then, who labor to gain the friendship of good men, or to overcome their enemies, or to render themselves capable of governing their families, and of serving their country, ought not these, I say, joyfully to undertake the trouble, and to rest content, conscious of the inward approbation of their own minds, and the regard and esteem of the virtuous? And to convince you that it is good to impose labors on ourselves, it is a maxim among those who instruct youth that the exercises which are easily performed at the first attempt, and which we immediately take delight in, are not capable to form the body to that vigor and strength that is requisite in great undertakings, nor of imprinting in the soul any considerable knowledge: but that those which require patience, application, labor, and assiduity, prepare the way to illustrious actions and great achievements. This is the opinion of good judges, and of Hesiod in particular, who says somewhere—

'To Vice, in crowded ranks, the course we steer,

The road is smooth, and her abode is near;

But Virtue's heights are reached with sweat and pain,

For thus did the immortal powers ordain.

A long and rough ascent leads to her gate,

Nor, till the summit's gained, does toil abate.'

And to the same purpose Epicharmus:—

"The gods confer their blessings at the price

Of labor—."

Who remarks in another place—

"Thou son of sloth, avoid the charms of ease,

Lest pain succeed—."

"Of the same opinion is Prodicus, in the book he has written of the life of Hercules, where Virtue and Pleasure make their court to that hero under the appearance of two beautiful women. His words, as near as I can remember, are as follows:—

"'When Hercules,' says the moralist, 'had arrived at that part of his youth in which young men commonly choose for themselves, and show, by the result of their choice, whether they will, through the succeeding stages of their lives, enter into and walk in the path of virtue or that of vice, he went out into a solitary place fit for contemplation, there to consider with himself which of those two paths he should pursue.

"'As he was sitting there in suspense he saw two women of a larger stature than ordinary approaching towards him. One of them had a genteel and amiable aspect; her beauty was natural and easy, her person and shape clean and handsome, her eyes cast towards the ground with an agreeable reserve, her motion and behavior full of modesty, and her raiment white as snow. The other wanted all the native beauty and proportion of the former; her person was swelled, by luxury and ease, to a size quite disproportioned and uncomely. She had painted her complexion, that it might seem fairer and ruddier than it really was, and endeavored to appear more graceful than ordinary in her mien, by a mixture of affectation in all her gestures. Her eyes were full of confidence, and her dress transparent, that the conceited beauty of her person might appear through it to advantage. She cast her eyes frequently upon herself, then turned them on those that were present, to see whether anyone regarded her, and now and then looked on the figure she made in her own shadow.

"'As they drew nearer, the former continued the same composed pace, while the latter, striving to get before her, ran up to Hercules, and addressed herself to him in the following manner:—

"I perceive, my dear Hercules, you are in doubt which path in life you should pursue. If, then, you will be my friend and follow me, I will lead you to a path the most easy and most delightful, wherein you shall taste all the sweets of life, and live exempt from every trouble. You shall neither be concerned in war nor in the affairs of the world, but shall only consider how to gratify all your senses—your taste with the finest dainties and most delicious drink, your sight with the most agreeable objects, your scent with the richest perfumes and fragrancy of odors, how you may enjoy the embraces of the fair, repose on the softest beds, render your slumbers sweet and easy, and by what means enjoy, without even the smallest care, all those glorious and mighty blessings.

"And, for fear you suspect that the sources whence you are to derive those invaluable blessings might at some time or other fail, and that you might, of course, be obliged to acquire them at the expense of your mind and the united labor and fatigue of your body, I beforehand assure you that you shall freely enjoy all from the industry of others, undergo neither hardship nor drudgery, but have everything at your command that can afford you any pleasure or advantage."

“‘Hercules, hearing the lady make him such offers, desired to know her name, to which she answered, “My friends, and those who are well acquainted with me, and whom I have conducted, call me Happiness; but my enemies, and those who would injure my reputation, have given me the name of Pleasure.”

“‘In the meantime, the other lady approached, and in her turn accosted him in this manner:—“I also am come to you, Hercules, to offer my assistance; I, who am well acquainted with your divine extraction and have observed the excellence of your nature, even from your childhood, from which I have reason to hope that, if you would follow the path that leads to my residence, you will undertake the greatest enterprises and achieve the most glorious actions, and that I shall thereby become more honorable and illustrious among mortals. But before I invite you into my society and friendship I will be open and sincere with you, and must lay down this as an established truth, that there is nothing truly valuable which can be purchased without pains and labor. The gods have set a price upon every real and noble pleasure. If you would gain the favor of the Deity you must be at the pains of worshipping Him; if you would be beloved by your friends you must study to oblige them; if you would be honored by any city you must be of service to it; and if you would be admired by all Greece, on account of your probity and valor, you must exert yourself to do her some eminent service. If you would render your fields fruitful, and fill your arms with corn, you must labor to cultivate the soil accordingly. Would you grow rich by your herds, a proper care must be taken of them; would you extend your dominions by arms, and be rendered capable of setting at liberty your captive friends, and bringing your enemies to subjection, you must not only learn of those that are experienced in the art of war, but exercise yourself also in the use of military affairs; and if you would excel in the strength of your body you must keep your body in due subjection to your mind, and exercise it with labor and pains.”

“‘Here Pleasure broke in upon her discourse—“Do you see, my dear Hercules, through what long and difficult ways this woman would lead you to her promised delights? Follow me, and I will show you a much shorter and easier way to happiness.”

“Alas!” replied the Goddess of Virtue, whose visage glowed with a passion made up of scorn and pity, “what happiness can you bestow, or what pleasure can you taste, who would never do anything to acquire it? You who will take your fill of all pleasures before you feel an appetite for any; you eat before you are hungry, you drink before you are athirst; and, that you may please your taste, must have the finest artists to prepare your viands; the richest wines that you may drink with pleasure, and to give your wine the finer taste, you search every place for ice and snow luxuriously to cool it in the heat of summer. Then, to make your slumbers uninterrupted, you must have the softest down and the easiest couches, and a gentle ascent of steps to save you from any the least disturbance in mounting up to them. And all little enough, heaven knows! For you have not prepared yourself for sleep by anything you have done, but seek after it only because you have nothing to do. It is the same in the enjoyments of love, in which you rather force than follow your inclinations, and are obliged to use arts, and even to pervert nature, to keep your passions alive. Thus is it that you instruct your followers—kept awake for the greatest part of the night by debaucheries, and consuming in drowsiness all the most useful part of the day. Though immortal, you are an outcast from the gods, and despised by good men.

Never have you heard that most agreeable of all sounds, your own praise, nor ever have you beheld the most pleasing of all objects, any good work of your own hands. Who would ever give any credit to anything that you say? Who would assist you in your necessity, or what man of sense would ever venture to be of your mad parties? Such as do follow you are robbed of their strength when they are young, void of wisdom when they grow old. In their youth they are bred up in indolence and all manner of delicacy, and pass their old age with difficulties and distress, full of shame for what they have done, and oppressed with the burden of what they are to do, squanderers of pleasures in their youth, and hoarders up of afflictions for their old age.

“On the contrary, my conversation is with the gods, and with good men, and there is nothing excellent performed by either without my influence. I am respected above all things by the gods and by the best of mortals, and it is just I should. I am an agreeable companion to the artisan, a faithful security to masters of families, a kind assistant to servants, a useful associate in the arts of peace, a faithful ally in the labors of war, and the best uniter of all friendships.

“My votaries, too, enjoy a pleasure in everything they either eat or drink, even without having labored for it, because they wait for the demand of their appetites. Their sleep is sweeter than that of the indolent and inactive; and they are neither overburdened with it when they awake, nor do they, for the sake of it, omit the necessary duties of life. My young men have the pleasure of being praised by those who are in years, and those who are in years of being honored by those who are young. They look back with comfort on their past actions, and delight themselves in their present employments. By my means they are favored by the gods, beloved by their friends, and honored by their country; and when the appointed period of their lives is come they are not lost in a dishonorable oblivion, but live and flourish in the praises of mankind, even to the latest posterity.”

“Thus, my dear Hercules, who are descended of divine ancestors, you may acquire, by virtuous toil and industry, this most desirable state of perfect happiness.”

“Such was the discourse, my friend, which the goddess had with Hercules, according to Prodicus. You may believe that he embellished the thoughts with more noble expressions than I do. I heartily wish, my dear Aristippus, that you should make such an improvement of those divine instructions, as that you too may make such a happy choice as may render you happy during the future course of your life.”

## CHAPTER II.

### SOCRATES' DISCOURSE WITH HIS ELDEST SON LAMPROCLES CONCERNING THE RESPECT DUE TO PARENTS.

Socrates observing his eldest son Lamprocles in a rage with his mother, spoke to him in this manner:—

"Come hither, my son. Have you ever heard of a certain sort of men, who are called ungrateful?"

"Very often," answered the young man.

"And do you know," said Socrates, "why they are called so?"

"We call a man ungrateful," answered Lamprocles, "who, having received a kindness, does not return the like if occasion offers."

"I think, therefore," said Socrates, "ingratitude is a kind of injustice?"

"I think so too," answered Lamprocles.

Socrates went on:—"Have you never considered of what nature this injustice is? For since it is an injustice to treat our friends ill, and on the contrary, a piece of justice to make our enemies smart for their conduct, may it be said, with like reason, that it is an injustice to be ungrateful towards our friends, and that it is just to be ungrateful towards our enemies."

"On mature consideration," answered Lamprocles, "I think it is criminal to do injustice to either of them."

"If, then," pursued Socrates, "ingratitude be an injustice, it follows that the greater the favors are which we have received, the greater is the injustice in not acknowledging them."

Lamprocles granted this consequence, and Socrates continued—"Can there be any stricter obligations than those that children are laid under to their parents? For it is they who gave them a being, and who have put them in a condition to behold all the wonders of Nature, and to partake of the many good things exhibited before them by the bounty of Providence, and which are so delightful, that there is not anything that all men more dread than to leave them; insomuch that all governments have ordained death to be the punishment of the most enormous crimes, because there is nothing can more effectually put a stop to the rage of the wicked than the apprehension of death. In the affair of marriage, it is not merely the gratification of the appetite which Nature has so strongly implanted in both sexes for their preservation that we regard; no, that passion can be satisfied in a less expensive manner, even in our streets, and other places; but when we design to enter into that state, we make choice of a woman of such a form and shape, by whom we may expect to have fine children, and of such a temper and disposition as to assure us of future happiness. When that is finished, it is then the chief care of the husband to maintain his wife, and to provide for his children things useful for life in the greatest abundance he can. On the part of the wife, many are her anxieties and troubles for the preservation of her offspring during the time of her pregnancy; she gives it then part of her nourishment and life; and after having suffered the sharpest pangs at the moment of its birth, she then gives it suck, and continues her care and love to it. All this she does to the poor helpless infant, so void of reason, that it knows not even her that is so good to it, nor can ask her for its own necessities. Full of tenderness for the welfare and happiness of her babe, her whole time, day and night, is spent in pleasing it, without the least prospect of any recompense for all her fatigue. After this, when the children are come to an age fit to be instructed, the fathers teach them all the good things they can for the conduct of their life; and if they know any man more capable to instruct them than themselves, they send them to him, without regard to the expense, thus indicating by their whole conduct, what sincere pleasure it would afford them to see their children turn out men of virtue and probity."

"Undoubtedly," answered Lamprocles, "if my mother had done all this, and an hundred times as much, no man could suffer her ill-humors?"

"Do not you think," said Socrates, "that the anger of a beast is much more difficult to support than that of a mother?"

"Not of a mother like her," said Lamprocles.

Socrates continued, "What strange thing has she done to you? Has she bit you, has she kicked you, as beasts do when they are angry?"

"She has a tongue that no mortal can suffer," answered Lamprocles.

"And you," replied Socrates, "how many crosses did you give her in your infancy by your continual bawling and importunate actions? How much trouble by night and by day? How much affliction in your illnesses?"

"At worst," answered Lamprocles, "I never did nor said anything that might make her blush."

"Alas!" said Socrates, "is it more difficult for you to hear in patience the hasty expressions of your mother, than it is for the comedians to hear what they say to one another on the stage when they fall into the most injurious reproaches? For they easily suffer it, knowing well that when one reviles another, he reviles him not with intent to injure him; and when one threatens another, he threatens not with design to do him any harm. You who are fully convinced likewise of the intentions of your mother, and who know very well that the hard words she gives you do not proceed from hate, but that she has a great affection for you, how can you, then, be angry with her? Is it because you imagine that she wishes you ill?"

"Not in the least," answered Lamprocles; "I never had such a thought."

"What!" continued Socrates; "a mother that loves you; a mother who, in your sickness, does all she can to recover your health, who takes care that you want for nothing, who makes so many vows to heaven for you; you say this is an ill mother? In truth, if you cannot live with her, I will say you cannot live at your ease. Tell me, in short, do you believe you ought to have any reverence or respect for anyone whatever? Or do you not care for any man's favor and goodwill, neither for that of a general, suppose, or of any other magistrate?"

"On the contrary," said Lamprocles, "I am very careful to gain the goodwill of all men."

"Perhaps you would endeavor to acquire the goodwill of your neighbor, to the end he might do you kind offices, such as giving you fire when you want it, or, when any misfortune befalls you, speedily relieve you?"

"Yes, I would."

"And if you were travelling with any man, either by sea or land, would you count it a matter of indifference whether you were loved by him or not?"

"No, indeed."

"Are you then so abandoned, Lamprocles," replied Socrates, "that you would take pains to acquire the goodwill of those persons, and yet will do nothing to your mother, who loves you incomparably better than they? Know you not that the Republic concerns not herself with common instances of ingratitude; that she takes no cognizance of such crimes, and that she neglects to punish those who do not return the civilities they receive? But if anyone be disrespectful to his parents there is a punishment provided for such ingratitude; the laws reject him as an outlaw, and will not allow him to be received into any public office, because it is a maxim commonly received amongst us, that a sacrifice, when offered by an impious hand, cannot be acceptable to the gods, nor profitable to the Republic. Nobody can believe, that a person of such a character can be capable to perform any great or worthy action, or to act the part of a righteous judge. The same punishment is ordained likewise for those who, after the death of their parents, neglect to honor their funerals: and this is particularly examined into in the inquiry that is made into the lives of such as stand candidates for offices.

"Therefore, my son, if you be wise, you will beseech Heaven to pardon you the offences committed against your mother, to the end that the favors of the Deity may be still continued to you, and that you may not forfeit them by an ungrateful behavior. Take care, likewise, that the public may not discover the contempt you show her, for then would you be blamed and abandoned by all the world; for, if it were suspected that you did not gratefully resent the benefits conferred on you by your parents, no man could believe you would be grateful for any kind actions that others might do you."

## CHAPTER III.

### SOCRATES RECONCILES CHAEREPHON AND CHAERECRATES, TWO BROTHERS WHO WERE FORMERLY AT VARIANCE.

Two brothers, whose names were Chaerephon and Chaerecrates, were at enmity with each other. Socrates was acquainted with them, and had a great mind to make them friends. Meeting therefore with Chaerecrates, he accosted him thus:—

"Are you, too, one of those who prefer the being rich to the having a brother, and who do not consider that riches, being inanimate things, have need of being defended, whereas a brother is himself a good defense, and, after all, that there is more money than brothers? For is it not extravagant in such men to imagine that a brother does them wrong because they enjoy not his estate? Why say they not likewise, that all the world does them wrong, because they are not in possession of what belongs to the rest of mankind? But they believe, with great reason, that it is better to live in society and to be ensured of a moderate estate than to have the sole possession of all that is their neighbors', and to be exposed to the dangers that are inseparable from solitude. Nevertheless, they are not of the same opinion as to the company of their brothers. If they are rich they buy themselves slaves to serve them, they procure themselves friends to stand by them; but for their brothers they neglect them; as if a brother were not so fit to make a friend of as another person. And yet it is of great efficacy towards the begetting and establishing of friendships to have been born of the same parents and brought up together, since even beasts, we see, retain some inclination for those who have come from the same dams, and have been bred up and nourished together. Besides, a man who has a brother is the more regarded for it, and men are more cautious to offend him."

Chaerecrates answered him thus:—

"You are indeed in the right to say that a good brother is a great happiness; and, unless there be a very strong cause of dissension, I think that brothers ought a little to bear with one another, and not part on a slight occasion; but when a brother fails in all things, and is quite the reverse of what he ought to be, would you have a man do what is impossible and continue in good amity with such a person?"

Socrates replied, "Does your brother give offence to all the world as well as to you? Does nobody speak well of him?"

"That," said Chaerecrates, "is one of the chief causes of the hatred I bear him, for he is sly enough to please others; but whenever we two happen to meet you would think his sole design were to fall out with me."

Socrates replied, "Does not this proceed from what I am going to say? When any man would make use of a horse, and knows not how to govern him, he can expect nothing from him but trouble. Thus, if we know not in what manner to behave ourselves toward our brother, do you think we can expect anything from him but uneasiness?"

“Why do you imagine,” said Chaerecrates, “that I am ignorant in what manner I ought to carry myself to a brother, since I can show him as much love and respect, both in my words and actions, as he can show me in his? But when I see a man endeavor to disoblige me all manner of ways, shall I express any goodwill for that man? No; this is what I cannot do, and will not so much as endeavor it.”

“I am astonished to hear you talk after this manner,” said Socrates; “pray tell me, if you had a dog that were good to keep your flocks, who should fawn on your shepherds, and grin his teeth and snarl whenever you come in his way, whether, instead of being angry with him, you would not make much of him to bring him to know you? Now, you say that a good brother is a great happiness; you confess that you know how to oblige, and yet you put it not in practice to reconcile yourself with Chaerephon.”

“I fear I have not skill enough to compass it.”

“I think,” said Socrates, “there will be no need of any extraordinary skill in the matter; and am certain that you have enough to engage him to wish you well, and to have a great value for you.”

“Pray,” cried Chaerecrates, “if you know any art I have to make myself beloved, let me know it immediately, for hitherto I never perceived any such thing.”

“Answer me,” said Socrates. “If you desired that one of your friends should invite you to his feast when he offered a sacrifice, what course would you take?”

“I would begin first to invite him to mine.”

“And if you would engage him to take care of your affairs in your absence on a journey, what would you do?”

“I would first, during his absence, take care of his.”

“And if you would have a foreigner entertain you in his family when you come into his country, what method would you take?”

“I would make him welcome at my house when he came to this town, and would endeavor to further the dispatch of his business, that he might do me the like favor when I should be in the city where he lives.”

“Strange,” said Socrates, “that you, who know the common methods of ingratiating yourself, will not be at the pains of practicing them. Why do you scruple to begin to practice those methods? Is it because you are afraid that, should you begin with your brother, and first do him a kindness, you would appear to be of a mean-spirited and cringing disposition? Believe me, my friend, you will never, on that account, appear such. On the contrary, I take it to be the part of an heroic and generous soul to prevent our friends with kindness and our enemies with valor. Indeed, had I thought that Chaerephon had been more proper than you to propose the reconciliation, I would have endeavored to have persuaded him to prevent you; but I take you to be more fit to manage this matter, and believe you will bring it to pass rather than him.”

“What you say is absurd and unworthy of you,” replied Chaerecrates. “Would you have me break the ice; I, who am the younger brother? Do you forget that among all nations the honor to begin is reserved to the elder?”

“How do you mean?” said Socrates. “Must not a younger brother give the precedency to the older? Must he not rise up when he comes in, give him the best place, and hold his peace to let him speak? Delay, therefore, no longer to do what I desire you; go and try to appease your brother. He will receive you with open arms; it is enough that he is a friend to honor, and of a generous temper, for as there is no readier way to gain the goodwill of the mean and poor than by being liberal to them, so nothing has more influence on the mind of a man of honor and note than to treat him with respect and friendship.”

Chaerecrates objected: “But when I have done what you say, if my brother should not be better tempered, what then?”

“What harm would it be to you?” said Socrates. “It will show your goodness, and that you love him, and make him appear to be ill-natured, and not deserving to be obliged by any man. But I am of opinion this will not happen, and when he sees that you attack him with civilities and good offices, I am certain he will endeavor to get the better of you in so kind and generous a contention. You are now in the most wretched condition imaginable. It is as if the hands which God has given us reciprocally to aid each other were employed only to hinder one another, or as if the feet, which by the divine providence were made to assist each other to walk, were busied only in preventing one another from going forward. Would it not, then, be a great ignorance, and at the same time a great misfortune, to turn to our disadvantage what was made only for our utility? Now, it is certain that God has given us brothers only for our good; and that two brothers are a greater advantage to one another than it can be to either of them to have two hands, two feet, two eyes, and other the like members, which are double in our body, and which Nature has designed as brothers. For the hands cannot at the same time reach two things several fathoms distant from one another; the feet cannot stretch themselves from the end of one fathom to another; the eyes, which seem to discover from so far, cannot, at the same time, see the fore and hind-part of one and the same object; but when two brothers are good friends, no distance of place can hinder them from serving each other.”

## CHAPTER IV.

### A DISCOURSE OF SOCRATES CONCERNING FRIENDSHIP.

I remember likewise a discourse which I have heard him make concerning friendship, and that may be of great use to instruct us by what means we ought to procure ourselves friends, and in what manner we should live with them. He said "that most men agree that a true friend is a precious treasure, and that nevertheless there is nothing about which we give ourselves so little trouble as to make men our friends. We take care," said he, "to buy houses, lands, slaves, flocks, and household goods, and when we have them we endeavor to keep them, but though a friend is allowed to be capable of affording us a far greater happiness than any or all of these, yet how few are solicitous to procure themselves a friend, or, when they have, to secure his friendship? Nay, some men are so stupid as to prefer their very slaves to their friends. How else can we account for their want of concern about the latter when either in distress or sickness, and at the same time their extreme anxiety for the recovery of the former when in the same condition? For then immediately physicians are sent for, and all remedies that can be thought of applied to their relief. Should both of them happen to die, they will regret more the loss of their slave than of their friend, and shed more tears over the grave of the former than of the latter. They take care of everything but their friends; they will examine into and take great notice of the smallest trifle in their affairs, which perhaps stand in no need of their care, but neglect their friends that do. In short, though they have many estates, they know them all; but though they have but few friends, yet they know not the number of them; insomuch that if they are desired to name them, they are puzzled immediately, so little are their friends in their thoughts. Nevertheless, there is nothing comparable to a good friend; no slave is so affectionate to our person or interest; no horse can render us so great service; in a word, nothing is so useful to us in all occasions. For a true friend supplies all the wants and answers all the demands of another, either in the conduct of his private affairs or in the management of the public. If, for instance, his friend be obliged to do a kindness to any man, he puts him in the way of it; if he be assaulted with any danger he immediately flies to his relief. At one time he gives him part of his estate, at another he assists him with the labor of his hands; sometimes he helps him to persuade, sometimes he aids him to compel; in prosperity he heightens his delight by rejoicing with him; in adversity he diminishes his sorrows by bearing a share of them. The use a man may make of his hands, his eyes, his ears, his feet, is nothing at all when compared with the service one friend may render another. For often what we cannot do for our own advantage, what we have not seen, nor thought, nor heard of, when our own interests were concerned, what we have not pursued for ourselves, a friend has done for his friend. How foolish were it to be at so much trouble in cultivating a small orchard of trees, because we expect some fruit from it, and yet be at no pains to cultivate that which is instead of a whole estate—I mean Friendship—a soil the most glorious and fertile where we are sure to gather the fairest and best of fruit!"

## CHAPTER V.

### OF THE WORTH AND VALUE OF FRIENDS.

To what I have advanced above I shall here relate another discourse of his, as far as I can remember, in which he exhorted his hearers to examine themselves, that they might know what value their friends might set upon them; for seeing a man who had abandoned his friend in extreme poverty, he asked Antisthenes this question in presence of that very man and several others:—

"Can we set a price upon friends as we do upon slaves? One slave may be worth twenty crowns, another not worth five; such a one will cost fifty crowns, another will yield a hundred. Nay, I am told that Nicias, the son of Niceratus, gave even six hundred crowns for one slave to be inspector of his silver mines. Do you think we might likewise set prices upon friends?"

"I believe we may," answered Antisthenes; "for there are some men by whom I would rather choose to be loved than to have twenty crowns; others for whose affection I would not spend five. I know some, too, for whose friendship I would give all I am worth."

"If it be so," said Socrates, "it would be well that each man should consider how much he can be worth to his friends, and that he should endeavor to render himself as valuable as he can in their regard, to the end they might not abandon him; for when I hear one complain that his friend has betrayed him; another that he, whom he thought faithful, has preferred a small gain to the preservation of his friendship, I reflect on these stories, and ask whether, as we sell a good-for-nothing slave for what we can get for him, we are not likewise tempted to get rid of an ill-friend when we are offered more for him than he is worth? Because I do not see men part with their slaves if they be good, nor abandon their friends if they be faithful."

## CHAPTER VI.

### OF THE CHOICE OF FRIENDS.

The following conversation of Socrates with Critobulus may teach us how we ought to try friends, and with whom it is good to contract friendship: —

"If we were to choose a friend," said Socrates to him, "what precaution ought we to take? Ought we not to look out for a man who is not given to luxury, to drunkenness, to women, nor to idleness? For with these vices he could never be very useful to his friend nor to himself."

"That is certain," answered Critobulus.

"Then," said Socrates, "if we found a man that loved to live great, though he had not an estate to support the expense, and who having daily occasion to employ the purses of his friends should show by his actions that whatever you lend him is so much lost, and that if you do not lend him he will take it ill of you, do you not think that such a man would be very improper to make a friend of?"

"There is no doubt of it," said Critobulus.

"And if we found another," continued Socrates, "who was saving of what he had, but who, on the other hand, was so covetous that it would be quite unfit to have anything to do with him, because he would always be very ready to receive and never to give again?"

"In my opinion," said Critobulus, "this would be a worse friend than the former."

"And if we should find a man who was so carried away with the desire of enriching himself that he applied his mind to nothing else, but getting all he could scrape together?"

"We ought not to have anything to do with him neither," answered Critobulus, "for he would be good to no man but himself."

"If we found a quarrelsome man," continued Socrates, "who was every day like to engage all his friends in new broils and squabbles, what would you think of him?"

"That he ought to be avoided," answered Critobulus.

"And if a man," said Socrates, "were free from all these faults, and were only of a humor to desire to receive kindnesses, but never to concern himself to return them, what would you think of him?"

"That neither he, too, would be proper to make a friend of:" replied Critobulus, "and indeed, after having rejected so many, I can scarce tell whom we should take."

"We ought to take," said Socrates, "a man who were the reverse of all those we have mentioned, who would be temperate in his manners, faithful in his promises, and sincere in all his actions; who would think it a point of honor not to be outdone in civilities so that it would be of advantage to have to do with him."

"But how can we be certain of all this," said Critobulus, "before we have tried him?"

“When we would give our judgment of statuaries, we have no regard,” replied Socrates, “to what they say of themselves, but consider their works; and he who has already made good statues is the person of whom we have the best opinion for those he shall make for the future. Apply this to the question you asked me, and be assured that a man who has served his former friends well will be likely to show no less affection for those that come after; as we may strongly conjecture that a groom, whom we have formerly seen dress horses very well, is capable of dressing others.”

“But,” said Critobulus, “when we have found a man worthy of our choice, how ought we to contract a friendship with him?”

“In the first place,” answered Socrates, “we must inquire whether the gods approve of it.”

“But supposing they do not dissuade us, how are we to take this precious prey?”

“Not by hunting, as we catch hares,” said Socrates; “nor in nets, as we take birds, nor by force, as we take our enemies; for it is very difficult to gain any man’s friendship against his will, or stop him by force, and detain him in prison as a slave, seeing such ill-usage would oblige him rather to wish us ill than to love us.”

“What, then, ought we to do?” pursued Critobulus.

“It is reported,” replied Socrates, “that there are some words so powerful that they who know them make themselves loved by pronouncing them, and that there are likewise other charms for the same purpose.”

“And where can one learn these words?” added Critobulus.

“Have you not read in Homer,” answered Socrates, “what the Syrens said to enchant Ulysses? The beginning of it is thus—

‘Oh, stay! oh, pride of Greece, Ulysses, stay!’

“You say true,” continued Critobulus; “but did not they say as much to the others, to stop them too?”

“Not at all,” said Socrates, “they enchanted with these words only the generous men who were in love with virtue.”

“I begin to understand you,” said Critobulus, “and seeing this charm, which is so powerful to enchant and captivate the mind, is nothing but praise, you mean that we ought to praise a man in such a manner that he may not distrust we laugh at him; otherwise, instead of gaining his affection, we shall incur his hate; for it would be insupportable to a man, who knows he is little and weak, to be praised for his graceful appearance, for being well-shaped, and of a robust constitution.”

“But do you know no other charms?”

“No,” answered Socrates; “but I have indeed heard it said, that Pericles knew a great many, by means of which he charmed the Republic, and gained the favor and esteem of all.”

Critobulus continued, “What was it that Themistocles did to make himself so esteemed?”

“He used no other charms,” said Socrates, “than the eminent services he rendered to the State.”

“Which is as much as to say,” replied Critobulus, “that to gain the friendship of the great, we must render ourselves capable to perform great actions.”

“And could you think it possible,” said Socrates, “that anyone should share in the friendship of men of merit without being possessed of one good quality?”

“Why not?” answered Critobulus; “I have seen despicable rhetoricians beloved by the most famous orators, and persons who knew nothing of war live in familiarity with great generals.”

“But have you seen men who are fit for nothing (for that is the question we speak of) get any friends of consequence?”

“I confess I have not,” answered Critobulus; “nevertheless, since it is impossible for a man of no worth whatever to have the friendship of men of condition and merit, tell me whether the man who acquires the character of worth and merit obtains, at the same time, the friendship of all who possess that excellent character?”

“The reason, I suppose, why you ask this question,” answered Socrates, “is because you frequently observe dissensions among those who equally cherish honor, and would all of them rather die than commit a base action; and you are surprised, that instead of living in friendship, they disagree among themselves, and are sometimes more difficult to reconcile than the vilest of all man.”

“This is a misfortune,” added Critobulus, “that arrives not among private men only; for dissensions, nay, even wars, will happen sometimes, to break out in the best-governed republics, where virtue is in the highest repute, and where vice is held in the utmost contempt. Now, when I revolve these considerations in my mind, I know not where to go in search of friends; for it is impossible, we see, for the wicked to cultivate a true friendship among themselves. Can there subsist a true and lasting friendship amongst the ungrateful, the idle, the covetous, the treacherous, and the dissolute? No, for persons of such a character will mutually expose themselves to hatred and contempt; to hatred, because of the hurtful effects of their vices; to contempt, on account of the deformity of them. Neither, on the other hand, can we expect, as you have well observed, to find friendship between a virtuous man and a person of the opposite character. For how can they who commit crimes be in good amity with those that abhor them? But what puzzles me most, my dear Socrates, is to see men of merit and virtue harassing one another, and endeavoring, to the utmost of their power, to crush and ruin their antagonists, when, in different interests, both are contending for the most lucrative posts of the Republic. I am quite at a loss to account for such a conduct on the principles of friendship; for when I daily observe the noblest affections of the mind rooted up by the sordid views of interest, I am in a great doubt whether there is any real friendship and affection in the world.”

“My dear friend,” replied Socrates, “this matter is very intricate; for, if I mistake not, Nature has placed in men the principles both of friendship and dissension. Of friendship, because they have need of one another, they have compassion of their miseries, they relieve one another in their necessities, and they are grateful for the assistances which they lend one another: of dissension, because one and the same thing being agreeable to many they contend to have it, and endeavor to prejudice and thwart one another in their designs. Thus strife and anger beget war, avarice stifles benevolence, envy produces hate. But friendship overcoming all these difficulties, finds out the virtuous, and unites them together. For, out of a motive of virtue they choose rather to live quietly in a mean condition, than to gain the empire of the whole earth by the calamities of war. When they are pinched with hunger or thirst, they endure them with constancy, till they can relieve themselves without being troublesome to anyone. When at any time their desires for the enjoyments of love grow violent and headstrong, then reason, or self-government, lays hold on the reins, checks the impetuosity of the passion, keeps it within due bounds, and will not allow them to transgress the great rule of their duty. They enjoy what is lawfully their own, and are so far from usurping the rights and properties of others, that they even give them part of what they have. They agree their differences in such a manner, that all are gainers, and no man has reason to complain. They are never transported with anger so far as to commit any action of which they may afterwards repent. Envy is a passion they are ignorant of, because they live in a mutual communication of what they possess, and consider what belongs to their friends as things in their own possession. From hence you see that the virtuous do not only not oppose, but that they aid one another in the employments of the Republic; for they who seek for honors and great offices, only to have an opportunity of enriching themselves, and exercising a cruel tyranny, or to live an easy and effeminate life, are certainly very wicked and unjust, nor can they ever hope to live in friendship with any man.

"But why should he who desires not any authority, but only the better to defend himself from the wicked, or to assist his friends, or be serviceable to his country; why should such a man, I say, not agree with another, whose intentions are the same with his own? Is it because he would be less capable to serve the Republic, if he had virtuous associates in the administration of affairs? If, in the tournaments and other games, the most strong were permitted to enter into a league against the weaker, they would infallibly be victors in all the courses, and win all the prizes; for which reason they are not suffered to do so. Therefore, in affairs of State, since no man is hindered from joining with whom he pleases, to do good to the Republic, is it not more advantageous, when we concern ourselves in the government, to make friendship with men of honor and probity, who are generally, too, the most knowing and capable, and to have them for our associates than to make them our adversaries? For it is manifest, that when a man is engaged in a combat, he ought to have some to assist him, and that he will have need of a great many, if those whom he opposes be valiant and powerful. Besides, he must be liberal, and give presents to those who espouse his quarrel, to encourage them to make a more resolute and vigorous defense. Now, it is beyond all dispute, that it is much better to oblige the good, though they are but a few, than the wicked, of whom there is a great number, because the former are easily gained over to your side; whereas the latter are hardly won by the best favors, and those in the greatest abundance, too, to espouse your interest.

“However it be, Critobulus, take courage, endeavor only to become virtuous, and then boldly pursue the friendship of honest men; this is a sort of chase in which I may be helpful to you, because I am naturally inclined to love. I attack briskly those I love, and lay out all my skill to make myself beloved by them. I endeavor to kindle in their minds a flame like mine, and to make them desire my company, as ardently as I long for theirs. You stand in need of this address when you would contract a friendship with anyone. Hide not, then, the secrets of your soul from me, but let me know who they are for whom you have a regard: for, having made it my study to please those who were agreeable to me, I believe that, by long experience, I have now got some considerable insight into the pursuits and ways of men.”

“I have longed a great while,” said Critobulus, “to learn this art, especially if it may be employed to gain me the friendship of those whose persons are not only comely and genteel, but whose minds are replenished and adorned with all virtue.”

Socrates replied: “But my method forbids to use violence, and I am of opinion that all men fled from the wretch Scylla, because she detained them by force: whereas the Syrens did no violence to any man, and employed only their tuneful voices to detain those who passed near them, so that all stopped to hear, and suffered themselves to be insensibly charmed by the music of their songs.”

“Be sure,” said Critobulus, “that I will use no violence to them whose friendship I would gain, and therefore delay no longer to teach me your art.”

“Will you give me your word likewise,” said Socrates, “that you will not even give them a kiss?”

“I promise you,” said Critobulus, “I will not, unless they are very beautiful persons.”

“You mistake the matter,” replied Socrates; “the beautiful permit not those liberties; but the ugly grant them freely enough, because they know very well that should any beauty be ascribed to them, it is only in consideration of that of the soul.”

“I will not transgress in this point,” said Critobulus; “only impart to me the secret you know to gain friends.”

“When you would contract a friendship with anyone,” said Socrates, “you must give me leave to tell him that you have a great esteem for him, and that you desire to be his friend.”

“With all my heart,” answered Critobulus; “for sure no man can wish ill to a man who esteems him.”

“And if I add besides,” continued Socrates, “that because you set a great value on his merit you have much affection for his person, will you not take it amiss?”

“Not at all,” said Critobulus; “for I am sensible we have a great kindness for those who bear us goodwill.”

"I may, then," said Socrates, "speak in that manner to those whom you desire to love: but will you likewise give me leave to advance that your greatest pleasure is to have good friends, that you take great care of them, that you behold their good actions with as much joy as if you yourself had performed them, and that you rejoice at their good fortune as much as at your own: that you are never weary when you are serving them, and that you believe it the glory of a man of honor to surpass his friends in benefits, and his enemies in valor? By this means I think I shall be very useful to you in procuring you good friends."

"Why do you ask me leave," said Critobulus, "as if you might not say of me whatever you please?"

"No, indeed," answered Socrates, "for I remember what Aspasia once said, that match-makers are successful in their business when they tell truth of the persons in whose behalf they court, but that the marriages made by their lies are unfortunate, because they who are deceived hate one another, and hate yet more the person that put them together. And therefore, for the same reason, I think I ought not to tell lies in your praise."

"You are then so far only my friend," replied Critobulus, "that if I have any good qualities to make myself be esteemed, you will assist me; if not, you will invent nothing in my behalf."

"And do you think," said Socrates, "that I should do you more service in giving you false praises, that are not your due, than by exhorting you to merit the praise of all men? If you doubt of this, consider the consequences of it. If, for instance, I should tell the owner of a ship that you are an excellent pilot, and he upon that should give you the conduct of the vessel, what hopes could you have that you should not perish? Or if I should say, publicly, that you are an experienced general, or a great politician, and if you, by that character which I should unjustly have obtained for you, should be promoted to the supreme magistracy, to what dangers would you expose your own life, and the fortune of the State? Or if I should make any private person believe that you were a good economist, and he should trust you afterwards with the care of his family, would not you be the ruin of his estate, and expose yourself to ridicule and contempt? Which is as much as to say, Critobulus, that the shortest and surest way to live with honor in the world is to be in reality what we would appear to be: and if you observe, you will find that all human virtues increase and strengthen themselves by the practice and experience of them. Take my advice, then, and labor to acquire them: but if you are of a different opinion, pray let me know it."

"I might well be ashamed," answered Critobulus, "to contradict you: for no good nor solid objection can be brought against so rational an assertion."

## CHAPTER VII.

### SOCRATES SHOWS ARISTARCHUS HOW TO GET RID OF POVERTY.

Socrates had an extreme tenderness for his friends, and if through imprudence they fell into any misfortune, he endeavored to comfort them by his good counsels; if they labored under poverty he did all he could to relieve them, teaching all men that they ought mutually to assist one another in necessity. I will set down some examples of his behavior in these occasions.

Meeting Aristarchus, who looked very dejected, he said to him, "I see, Aristarchus, that something troubles you, but impart the cause of your grief to your friends, and perhaps we may comfort you."

"Indeed," said he, "I am in great affliction; for since the late troubles, many persons having fled for shelter to the Piraeus, it has so fallen out that my sisters, nieces, and cousins have all thrown themselves upon me, so that I have no less than fourteen of them to maintain. You know very well that we receive no profit of our lands, the enemies being masters of the open country; our houses in the city are uninhabited, there being at present very little company in Athens; nobody will buy any goods; no man will lend money upon any interest whatever, and I believe we may as soon take it up in the middle of the streets as find where to borrow it. And I am much concerned that I shall not be able to assist my relations whom I see ready to perish, while it is impossible for me to maintain them in the present scarcity of all things."

Socrates having heard him patiently, said to him, "How comes it to pass that Ceramon, who has so many persons in his family, finds means not only to maintain them, but likewise to enrich himself by the profit he makes of them, and that you are afraid of starving to death, because you have a great many in your family?"

"The reason," answered Aristarchus, "is this, Ceramon has none but slaves to take care of, and I am to provide for persons who are free."

Socrates went on: "For which have you most esteem, for Ceramon's slaves, or for the persons who are at your house?"

"There is no comparison between them," said Aristarchus.

"Is it not then a shameful thing," replied Socrates, "that Ceramon should grow rich by means of those whom you acknowledge to be of less value, and that you should grow poor and be reduced to straits, though you keep men of condition in your house, whom you value more?"

"By no means," said Aristarchus, "there is a wide difference between the two; the slaves that Ceramon keeps follow some trades, but the persons I have with me have had a liberal education and follow none."

"May not he," replied Socrates, "who knows how to do anything that is useful be said to know a trade?"

"Yes, certainly."

"And are not," continued Socrates, "oatmeal, bread, the clothes of men and women, cassocks, coats, and other the like manufactures, things very useful?"

"Without doubt."

"And do not the persons at your house know how to make any of these things?"

"On the contrary," said Aristarchus, "I believe they know how to make all of them."

"What are you then afraid of," added Socrates? "Why do you complain of poverty, since you know how to get rich? Do not you observe how wealthy Nausicides is become, what numerous herds he is master of, and what vast sums he lends the Republic? Now what made this man so rich? Why, nothing but one of those manufactures we mentioned, that of making oatmeal. You see, too, that Cirthes keeps all his family, and lives at his ease upon what he has got by being a baker. And how does Demeas, of the village of Colyttus, get his livelihood? By making cassocks. What makes Menon live so comfortably? His cloak manufacture. And are not most of the inhabitants of Megara in good circumstances enough by the trade which they drive of coats and short jackets?"

"I grant all this," said Aristarchus, "but still there is a difference between these persons and me: for, whereas, they have with them some barbarians whom they have bought, and compel to work what brings them in gain; I, for my part, keep only ladies and gentlemen at my house, persons who are free, and some of them my own relations. Now would you have me to set them to work?"

"And because they are free and your relations," said Socrates, "do you think they ought to do nothing but eat and sleep? Do you observe that they, who live thus idle and at their ease, lead more comfortable lives than others? Do you think them more content, more cheerful, that is to say, happier than those who employ themselves in any of those manufactures we have mentioned, or in whatever else tends to the utility or convenience of life? Do you imagine that idleness and laziness contribute toward our learning things necessary; that they can enable us to retain those things we have already learnt; that they help to strengthen the body or keep it in health; that they can assist us to get riches, or keep what we have got already; and do you believe that labor and industry are good for nothing? Why did your ladies learn what you say they know. Did they believe them to be useless things, and had they resolved never to put them in practice? Or, on the contrary, was it with design to employ themselves in those matters, and to get something by them? Is it a greater piece of wisdom to sit still and do nothing, than to busy oneself in things that are of use in life, and that turn to account? And is it not more reasonable for a man to work than to be with his arms across, thinking how he shall do to live? Shall I tell you my mind, Aristarchus? Well, then, I am of opinion that in the condition you are in you cannot love your guests, nor they you for this reason, that you, on the one hand, feel they are a burden to you, and they, on the other, perceive you uneasy and discontented on their account. And it is to be feared that the discontent will increase on both sides, and that the sense of past favors will wear off; but when you set them to work you will begin to love them, because they will bring you some profit; and when they find that you regard them with more complacency they will not fail to have more love for you. The remembrance of your kindnesses will be more grateful to them, and the obligations they have to you will be the greater. In a word, you will be kinder relations and better friends. Indeed, if what they were to do was a thing worthy of blame, it would be better to die than to think of it; but what they can do is honorable, and becoming of their sex, and whoever knows how to do a thing well will acquit himself of it with honor and pleasure. Therefore defer no longer to make the proposal to them, since it will be so advantageous to all of you, and be assured they will receive it with joy and pleasure."

"Good God! What a fine scheme you have proposed! Indeed, I cannot but approve of it; nay, it has made such a wonderful impression on my mind, that whereas I was lately against borrowing money at all, because I saw that when I had spent it I should not be in a condition to repay it, I am now resolved to go try where I can take some up upon any terms, to buy tools and other materials to set ourselves to work."

What was proposed was forthwith executed. Aristarchus bought what he wanted; he laid in a provision of wool, and the ladies worked from morning to night. This occupation diverted their melancholy, and, instead of the uneasiness there was before between them and Aristarchus, they began to live in a reciprocal satisfaction. The ladies loved him as their protector, and he considered them as persons who were very useful and necessary to him.

To conclude, sometime afterwards Aristarchus came to see Socrates, and related the whole matter to him with great content, and told him the women began to complain that none but he was idle.

"Why do you not put them in mind," said Socrates, "of the fable of the dog? For, in the days when beasts could speak, according to the fable, the sheep said to her master, 'You are a strange man; we yield you wool, lambs, and cheeses, and yet you give us nothing but what we can get upon the ground; and the dog, who brings you in no profit, is kindly used, for you feed him with the same bread you eat yourself.' The dog, overhearing this complaint, answered her: 'It is not without reason that I am used so well. It is I who protect you; it is I who hinder thieves from taking you away, and wolves from sucking your blood. If I were not always keeping watch about you, you would not dare so much as to go to feed.' This answer was the reason that the sheep yielded freely to the dog the honor they pretended to before. In like manner do you also let these ladies know that it is you who are their guardian and protector, and that you watch over them for their safety with as much care as a faithful and courageous dog watches over a herd committed to his charge. Tell them that because of you no man dares hurt them, and that it is by your means that they live at ease and in safety."

## CHAPTER VIII.

### SOCRATES PERSUADES EUTHERUS TO ABANDON HIS FORMER WAY OF LIVING, AND TO TAKE HIMSELF TO SOME MORE USEFUL AND HONORABLE EMPLOYMENT.

Another time, meeting with Eutherus, one of his old friends, whom he had not seen for a great while before, he inquired of him from whence he came?

“At present,” answered Eutherus, “I come not from abroad; but towards the end of the war I returned from a voyage I had made, for, after having lost all the estate I had upon the frontiers, and my father having left me nothing in Attica, I was forced to work for my living, and I believe it better to do so than to be troublesome to others; besides, I can no longer borrow anything, because I have nothing left to mortgage.”

“And how much longer,” said Socrates, “do you think you shall be able to work for your living?”

“Alas! But a short while,” answered Eutherus.

“Nevertheless,” replied Socrates, “when you come to be old it will cost you something to maintain yourself, and yet you will not then be able to earn anything.”

“You say very true.”

“You had best, then,” continued Socrates, “employ yourself now in business that will enable you to lay by something for your old age, and get into the service of some rich man, who has occasion for an economist, to have the inspection over his workmen, to gather in his fruits, to preserve what belongs to him, that he may reward you for the service you do him.”

“I should find it very difficult,” replied Eutherus, “to submit to be a slave.”

“Yet,” said Socrates, “the magistrates in republics, and all that are in employments, are not, therefore, reputed slaves; on the contrary, they are esteemed honorable.”

“Be that as it will,” said Eutherus, “I can never think of entering into any office where I might be liable to blame, for I would not like to be censured by another.”

“But where,” said Socrates, “will you find any employment in which a man is absolutely perfect, and altogether free from blame? For it is very difficult to be so exact as not to fail sometimes, and even though we should not have failed, it is hard to escape the censure of bad judges; and I should think it a very odd and surprising thing if in that very employment wherein you say you are now engaged you were so dexterous and expert as that no man should find anything amiss.

“What you are, therefore, to observe is to avoid those who make it their business to find fault without reason, and to have to do with more equitable persons; to undertake what you can actually perform, to reject what you find yourself unfit to do; and when you have taken in hand to do anything, to accomplish it in a manner the most excellent and perfect you can. Thus you will be less subject to be blamed, will find relief to your poverty, lead an easier life, be out of danger, and will sufficiently provide for the necessities of your old age.”

## CHAPTER IX.

### IN WHAT MANNER SOCRATES TAUGHT HIS FRIEND CRITO TO RID HIMSELF OF SOME INFORMERS, WHO TOOK THE ADVANTAGE OF HIS EASY TEMPER.

One day Crito, happening to meet Socrates, complained to him that it was very difficult for a man who would keep what he had to live in Athens; “for,” said he, “I am now sued by some men, though I never did them the least injury, but only because they know that I had rather give them a little money than embroil myself in the troubles of law.”

Socrates said to him, “Do you keep dogs to hinder the wolves from coming at your flocks?”

“You need not doubt but I do,” answered Crito.

“Ought you not likewise,” replied Socrates, “to keep a man who were able to drive away all those that trouble you without cause?”

“I would with all my heart,” said Crito, “but that I fear that in the end he, too, would turn against me.”

“Why so?” said Socrates; “is it not better to serve a man like you, and to receive favors from him, than to have him for an enemy? You may be certain that there are in this city many men who would think themselves very happy to be honored with your friendship.”

After this they happened to see a certain person name Archedemus, who was a man of very good parts, eloquent, and extremely skillful in the management of affairs; but withal very poor and in a low condition, for he was not of that sordid disposition to take all he could get, by what means soever, but he was a lover of justice and of honest men, and abhorred to make rich, or to raise himself by informing and backbiting; for he held that nothing was more base than that wretched practice of those miscreants called sycophants or informers. Crito cast an eye upon him, and as often as they brought him any corn, or wine, or oil, or any other thing from his country-houses, he sent him some of it; when he offered sacrifices he invited him to the feasts, and showed him many civilities of the like nature. Archedemus, seeing the doors of that house open to him at all times, and that he always found so favorable a reception, laid aside all his former dependences, and trusted himself wholly to Crito; then he made it his business immediately to inquire into the characters of those sycophants who had slandered Crito or informed against him, and found them to be guilty of many crimes, and that they had a great number of enemies. This encouraged him to take them to task, and he prosecuted one of them for a crime which would have subjected him to a corporal punishment, or at least to a pecuniary mulct. This fellow, who knew his case to be bad, and that he could not justify himself, employed all sorts of stratagems to get rid of Archedemus, who nevertheless would not quit his hold till the other had discharged Crito, and given him money besides, in name of trouble and charges. He managed several of his affairs with like success, which made Crito be thought happy in having him; and as when a shepherd has an excellent dog, the other shepherds are glad to bring their flocks near his that they may be safe likewise, so several of Crito's friends began to make their court to him, and begged him to lend them Archedemus to defend them. He, for his part, was glad to oblige Crito; and it was observed at length that not only Crito lived undisturbed, but all his friends likewise; and if anyone reproached Archedemus that self-interest had made him his master's creature, and to adore him and be so faithful and zealous in his service he would answer him thus:—

"Which of the two do you think most dishonorable—to do services to men of quality from whom we have received favors, and to enter into their friendship to declare war against bad men, or to endeavor to prejudice men of honor, and to make them our enemies, that bad men may be our friends?" From thenceforward Crito contracted a strict friendship with Archedemus, and all his friends had likewise a great respect for him.

# CHAPTER X.

### SOCRATES ADVISES DIODORUS TO DO JUSTICE TO THE MERIT OF HERMOGENES, AND TO ACCEPT OF HIS SERVICE AND FRIENDSHIP.

Socrates, meeting one day with Diodorus, addressed him thus:—"If one of your slaves ran away, would you give yourself any trouble to find him?"

"Yes, certainly," answered he; "and I would give public notice, and promise a reward to any that brought him to me."

"And if one of them were sick, would you take care of him, and send for physicians to endeavor to save his life?"

"Without doubt I would."

"And if you saw," replied Socrates, "one of your friends—that is to say, a person who renders you a thousand times more service than a slave, reduced to extreme want—ought you not to relieve him? I speak this to you on account of Hermogenes. You very well know he is not ungrateful, and that he would scorn to receive the least favor from you and not return you the like. You know likewise that a great number of slaves are not to be valued like one man who serves willingly, who serves with zeal and affection, and who is not only capable of doing what he is desired, but who can likewise of himself think of many things that may be of service to us; who reasons well, who foresees what may happen, and from whom we may expect to receive good advice. Now, the best managers hold it as a maxim that when we find anything of value to be sold cheap we ought to buy it. Think of it, therefore, for as times now go you may procure yourself many friends at a cheap rate."

"You say right," replied Diodorus, "and therefore pray send Hermogenes to me."

"Excuse me in that," answered Socrates, "you would do as well to go to him yourself as to send for him."

This discourse was the reason that Diodorus went to Hermogenes, and for a small gratification obliged him to be his friend; after which Hermogenes took particular care to please Diodorus, and sought all opportunities of serving him and of giving him content.

# BOOK III.

## CHAPTER I.

### OF THE QUALIFICATIONS OF A GENERAL.

Let us now see how Socrates was serviceable to those who were desirous to qualify themselves for employments of trust and honor, by advising them to apply themselves diligently to the study of their duty, that they might acquire a perfect knowledge of it.

Having heard that there was arrived at Athens one Dionysodorus, who undertook to teach the art of war, he made the following discourse to one of his friends, who pretended to one of the highest posts in the army:—

"It were a scandalous thing," said Socrates to him, "for a man who aims to be chief over others, to neglect to learn how to command, when so fair an opportunity offers; nay, I think he would rather deserve to be punished, than the man who should undertake to make a statue without having learnt the sculptor's trade; for as in war the whole fortune of the Republic is trusted to the general, it is to be presumed that his good conduct will procure success, and that his faults will be followed with great losses. And, therefore, a man who should neglect to make himself capable of such an employment, and yet pretend to it, ought to be severely punished." By these reasons he persuaded this young man to get himself instructed.

After the youth had imagined that he had acquired some knowledge of the art, he returned to pay Socrates a visit, who, jesting him, addressed the company that were present in this manner:—"Do not you think, gentlemen, that as Homer, when speaking of Agamemnon, gives him the surname of venerable, we ought also to bestow the same epithet on this young man, who justly deserves to be called by that name, since, like him, he has learned how to command? For, as a man who can play on the lute is a player on that instrument, though he never touches it; and as he who is knowing in the art of physic is a physician, though he never practice; so this young man, having learned to command is become a general, though not a man of us should ever give our voice to make him so. On the contrary, it is in vain for him who knows not how to command, to get himself chosen; he will not be one jot a better general for it, no more than he who knows nothing of physic is a better physician, because he has the reputation of being one." Then turning towards the young man, he went on—"But because it may happen that one of us may have the honor of commanding a regiment or a company in the troops that are to compose your army, to the end we may not be entirely ignorant of the military art, pray tell us by what he began to instruct you."

"By what he ended," answered the young man; "for he showed me only the order that ought to be observed in an army, either in marching, encamping, or fighting."

"But what is that," said Socrates, "in comparison of the many other duties incumbent on a general? He must, besides, take care for the preparations of war; he must furnish the soldiers with necessary ammunition and provisions; he must be inventive, laborious, diligent, patient, quick of apprehension; he must be mild and rigorous together; he must be open and close; he must know to preserve his own, and take what is another's; he must be prodigal and a ravager; he must be liberal and covetous; he must be wary, and yet enterprising. I confess that he ought to know likewise how to draw up his troops in order of battle; and, indeed, order and discipline are the most important things in an army, and without them it is impossible to have any other service of the troops than of a confused heap of stones, bricks, timber, and tiles; but when everything is in its due place, as in a building, when the foundations and the covering are made of materials that will not grow rotten, and which no wet can damage, such as are stones and tiles, and when the bricks and timber are employed in their due places in the body of the edifice, they altogether make a house, which we value among our most considerable enjoyments." Here the young man, interrupting him, said:—

"This comparison puts me in mind of another thing that generals ought to observe; which is, to place their best soldiers in the first and last ranks, and the others in the middle; that those in the first rank may draw them on, and those in the last push them forward."

"He has taught you too," said Socrates, "how to know the good and the bad soldiers asunder, otherwise this rule can be of no use to you; for if you were to reckon money upon a table, and were ordered to lay the best at the two ends, and the worst in the middle, how could you do this, if you had not been shown how to distinguish between the good and the bad?"

"Indeed," replied the young man, "he did not teach me what you mention; and, I suppose, we must learn of ourselves to discern the good soldiers from the bad."

"If you please," continued Socrates, "let us consider how a general ought to govern himself in this matter. If it were to take any money, ought he not to make the most covetous march in the front? If it were an action of great peril, ought he not to send the most ambitious, because they are the men who, out of a desire of glory, rush into the midst of dangers? And as for them, you would not be much troubled to know them, for they are forward enough in discovering themselves. But tell me, when this master showed you the different ways of ordering an army, did he teach you when to make use of one way, and when of another?"

"Not at all," answered he.

"And yet," replied Socrates, "the same order is not always to be observed, nor the same commands given, but to be changed according to the different occasions."

"He taught me nothing of that," said the young man.

"Go to him, then," added Socrates, "and ask him concerning it; for if he know anything of the matter, and have ever so little honor, he will be ashamed to have taken your money and send you away so ill-instructed."

## CHAPTER II.

### THE CHARACTER OF A GOOD PRINCE.

Another time he asked a general, whom the Athenians had lately chosen, why Homer calls Agamemnon the pastor of the people? “Is it not,” said he, “because as a shepherd ought to take care of his flocks, that they be well and want for nothing; so a general ought to take care to keep his soldiers always in a good condition, to see they be supplied with provisions, and to bring to a happy issue the design that made them take arms, which is to overcome their enemies, and to live more happily afterwards? And why does the same poet praise Agamemnon likewise for being—

‘At once a gracious prince and generous warrior’?

For is it not true, that to gain a prince the character of being generous and a warrior too, it is not sufficient to be brave in his own person, and to fight with intrepidity; but he must likewise animate the whole army, and be the cause that every soldier behave himself like him? And to gain the reputation of a good and gracious prince, it is not enough to have secured his private affairs, he must also take care that plenty and happiness be seen in all places of his dominions. For kings are not chosen to take care of themselves only, but to render happy the people who choose them. All people engage in war only to secure their own quiet, and choose commanders that they may have guides to conduct them to the end which they propose to themselves. A general, therefore, ought to prepare the way of good fortune to those who raise him to that dignity; this is the most glorious success he can desire, as nothing can be more ignominious to him than to do the contrary.”

We see by this discourse that Socrates, designing to give the idea of a good prince, required scarce anything of him but to render his subjects happy.

## CHAPTER III.

### ON THE BUSINESS OF A GENERAL OF HORSE.

Socrates at another time, as I well remember, had the following conference with a general of the cavalry:—

“What was your reason,” said Socrates, “to desire this office? I cannot think it was that you might march first at the head of the troops, for the horse-archers are to march before you. Nor can I believe it was to make yourself be known, for no men are more generally known than madmen. Perhaps it was because you thought you could mend what was amiss in the cavalry, and make the troops better than they are, to the end that if the Republic should have occasion to use them, you might be able to do your country some eminent service.”

“That is my design,” answered the other.

“It were well you could do this,” said Socrates, “but does not your office oblige you to have an eye on the horses and troopers?”

“Most certainly.”

“What course will you then take,” continued Socrates, “to get good horses?”

“It is not my business to look to that,” replied the general; “every trooper must take care for himself.”

“And what,” said Socrates, “if they bring you horses whose feet and legs are good for nothing, or that are so weak and lean that they cannot keep up with the others, or so restive and vicious that it would be impossible to make them keep their ranks, what good could you expect from such cavalry? What service would you be able to do the State?”

“You are much in the right, Socrates, and I promise you I will take care what horses are in my troops.”

“And will you not have an eye likewise on the troopers?”

“Yes,” answered he.

“In my opinion then,” answered Socrates, “the first thing you ought to do is to make them learn to get a horseback.”

“No doubt of it,” replied the general, “for by that means they would the more easily escape, if they should happen to be thrown off their horses.”

Socrates went on: “You ought also to make them exercise, sometimes here, sometimes there, and particularly in places like those where the enemy generally is, that they may be good horsemen in all sorts of countries; for when you are to fight you will not send to bid the enemy come to you in the plain, where you used to exercise your horse. You must train them up, likewise, to lance the spear; and if you would make them very brave fellows, you must inspire them with a principle of honor, and inflame them with rage against the enemy.”

“Fear not,” said he, “that I will spare my labor.”

“But have you,” resumed Socrates, “thought on the means to make yourself obeyed? For without that all your brave troopers will avail you nothing.”

"It is true," said he, "but how shall I gain that point of them?"

"Know you not," said Socrates, "that in all things men readily obey those whom they believe most capable? Thus in our sickness we most willingly submit to the prescriptions of the best physicians; at sea, to the most I skillful pilot; and in affairs of agriculture, to him who has most experience in it."

"All this I grant you."

"It is then to be presumed, that in the conduct of the cavalry he who makes it appear that he understands it best will be the person whom the others will be best pleased to obey."

"But if I let them see that I am most worthy to command, will that be sufficient to make them obey me?"

"Yes, certainly," said Socrates, "if you can persuade them besides that their honor and safety depend on that obedience."

"And how shall I be able to make them sensible of this?"

"With less trouble," answered Socrates, "than it would be to prove that it is better to be virtuous than vicious."

"Then a general," added the other, "ought to study the art of speaking well?"

"Do you imagine," said Socrates, "that he will be able to execute his office without speaking a word? It is by speech that we know what the laws command us to learn for the conduct of our lives. No excellent knowledge can be attained without the use of speech; the best method to instruct is by discourse, and they who are thoroughly versed in the sciences speak with the applause of all the world. But have you observed," continued he, "that in all sorts of occasions the Athenians distinguish themselves above all the Greeks, and that no Republic can show such youths as that of Athens? For example: when we send from hence a choir of musicians to the Temple of Apollo in the Isle of Delos, it is certain that none comparable to them are sent from other cities; not that the Athenians have better voices than the others, nor that their bodies are more robust and better made, but the reason is because they are more fond of honor, and this desire of honor is what excites men to excellent actions. Do not you think, therefore, that if good care were taken of our cavalry, it would excel that of other nations, in the beauty of arms and horses, in order of good discipline, and in bravery in fight; provided the Athenians were persuaded that this would be a means to acquire them glory and renown?"

"I am of your opinion."

"Go, then, and take care of your troops," said Socrates, "make them serviceable to you, that you may be so to the Republic."

"Your advice is good," said he, "and I will immediately follow it."

## CHAPTER IV.

A DISCOURSE OF SOCRATES WITH NICOMACHIDES, IN WHICH HE SHOWS THAT A MAN SKILLFUL IN HIS OWN PROPER BUSINESS, AND WHO MANAGES HIS AFFAIRS WITH PRUDENCE AND SAGACITY, MAY MAKE, WHEN OCCASION OFFERS, A GOOD GENERAL.

Another time, Socrates meeting Nicomachides, who was coming from the assembly where they had chosen the magistrates, asked him, "of whom they had made choice to command the army?"

Nicomachides answered: "Alas! The Athenians would not chose me; me! who have spent all my life in arms, and have gone through all the degrees of a soldier; who have been first a private sentinel, then a captain, next a colonel of horse, and who am covered all over with wounds that I have received in battles" (at these words he bared his breast, and showed the large scars which were remaining in several places of his body); "but they have chosen Antisthenes, who has never served in the infantry, who even in the cavalry never did anything remarkable, and whose only talent consists in knowing how to get money."

"So much the better," said Socrates, "for then the army will be well paid."

"A merchant," replied Nicomachides, "knows how to get money as well as he; and does it follow from thence that he is fit to be a general?"

"You take no notice," replied Socrates, "that Antisthenes is fond of honor, and desirous to excel all others in whatever he undertakes, which is a very necessary qualification in a general. Have you not observed, that whenever he gave a comedy to the people, he always gained the prize?"

"There is a wide difference," answered Nicomachides, "between commanding an army and giving orders concerning a comedy."

"But," said Socrates, "though Antisthenes understands not music, nor the laws of the stage, yet he found out those who were skillful in both, and by their means succeeded extremely well."

"And when he is at the head of the army," continued Nicomachides, "I suppose you will have him to find out too some to give orders, and some to fight for him?"

"Why not?" replied Socrates, "for if in the affairs of war he take the same care to provide himself with persons skillful in that art, and fit to advise him, as he did in the affair of the plays, I see not what should hinder him from gaining the victory in the former as well as in the latter. And it is very likely that he will be better pleased to expend his treasure to obtain an entire victory over the enemy, which will redound to the honor and interest of the whole Republic, than to be at a great expense for shows, to overcome his citizens in magnificence, and to gain a victory, which can be honorable to none but himself and those of his tribe."

"We must then infer," said Nicomachides, "that a man who knows well how to give a comedy knows well how to command an army?"

"Let us rather conclude," answered Socrates, "that every man who has judgment enough to know the things that are necessary for his designs, and can procure them, can never fail of success, whether he concern himself with the stage, or govern a State, or command an army, or manage a family."

"Indeed," resumed Nicomachides, "I could never have thought you would have told me, too, that a good economist would make a good general."

"Come, then," said Socrates, "let us examine wherein consists the duty of the one and of the other, and see what relation there is between those two conditions. Must not both of them keep those that are under them in submission and obedience?"

"I grant it."

"Must not both of them take care to employ everyone in the business he is fit for? Must he not punish those who do amiss and reward those that do well? Must they not make themselves be esteemed by those they command? Ought they not alike to strengthen themselves with friends to assist them upon occasion? Ought they not to know how to preserve what belongs to them, and to be diligent and indefatigable in the performance of their duty?"

"I own," answered Nicomachides, "that all you have said concerns them equally; but if they were to fight it would not be the same as to both of them."

"Why?" said Socrates. "Have not both of them enemies?"

"They have."

"And would it not be the advantage of both to get the better of them?"

"I allow it," said Nicomachides; "but what will economy be good for when they are to come to blows?"

"It is then it will be most necessary," replied Socrates. "For when the good economist sees that the greatest profit he can get is to overcome, and that the greatest loss he can suffer is to be beaten, he will prepare himself with all the advantages that can procure him the victory, and will carefully avoid whatever might be the cause of his defeat. Thus, when he sees his army well provided with all things, and in a condition that seems to promise a good success, he will give his enemies battle; but when he wants anything he will avoid coming to an engagement with them. Thus you see how economy may be of use to him; and therefore, Nicomachides, despise not those who apply themselves to it; for between the conduct of a family and that of a State the sole difference is that of a greater or lesser number; for as to all besides there is much conformity between them. The sum of what I have advanced is this, that without men there could not be any policy or any economy, that they are often executed by the same persons, and that they who are called to the government of the Republic are the very same whom great men employ for their private affairs. Lastly, that they who make use of proper persons for their several businesses are successful in their economy and in politics; and that, on the contrary, they who fail in this point commit great faults both in one and the other."

## CHAPTER V.

A CONVERSATION BETWEEN SOCRATES AND PERICLES CONCERNING THE THEN PRESENT STATE OF THE REPUBLIC OF ATHENS, IN WHICH SOCRATES LAYS DOWN A METHOD BY WHICH THE ATHENIANS MAY RECOVER THEIR ANCIENT LUSTER AND REPUTATION.

Socrates one day being in company with Pericles, the son of the great Pericles, introduced the following discourse:—

“I hope that when you command the army the Republic will be more successful and gain more glory in their wars than formerly.”

“I should be glad of it,” answered Pericles, “but I see little likelihood of it.”

“We may bring this matter to the test,” said Socrates. “Is it not true that the Bœotians are not more numerous than the Athenians?”

“I know it.”

“Nor are they either braver or stronger?”

“True, they are not.”

“Do you believe that they agree better among themselves?”

“Quite the contrary,” said Pericles; “for there is a great misunderstanding between most of the Bœotians and the Thebans, because of the great hardships the latter put upon the former, and we have nothing of this among us.”

“But the Bœotians,” replied Socrates, “are wonderfully ambitions and obliging; and these are the qualities that naturally push men on to expose themselves for the sake of glory and of their country.”

“The Athenians,” answered Pericles, “come not short of them in either of those qualities.”

“It is true,” replied Socrates, “that there is no nation whose ancestors have done braver actions, and in greater number, than those of the Athenians. And these domestic examples excite us to courage, and create in us a true love of virtue and bravery.”

“Notwithstanding all this,” continued Pericles, “you see that after the defeat of Tolmides at Lebadia, where we lost a thousand men, and after another misfortune that happened to Hippocrates before Delium, the greatness of the Athenians is sunk so low, and the courage of the Bœotians so increased, that they, who even in their own country durst not look the Athenians in the face without the assistance of the Lacedemonians and of the other States of the Peloponnesus, now threaten Attica with their single forces. And that the Athenians, who before ravaged Bœotia when it was not defended by foreign troops, begin to fear, in their turn, that the Bœotians will put Attica to fire and sword.”

“In my opinion,” answered Socrates, “a governor ought to be well pleased to find a republic in such a condition, for fear makes a people more careful, more obedient, and more submissive. Whereas a too great security is attended with carelessness, luxury, and disobedience. This is plainly seen in men who are at sea. When they fear not anything, there is nothing in the ship but confusion and disorder; but when they apprehend that they shall be attacked by pirates, or that a tempest is hanging over their head, they not only do whatever they are commanded, but even observe a profound silence, waiting the order of their captain, and are as decent and orderly in their behavior and motions as those who dance at a public entertainment."

"We shall yield, then," replied Pericles, "that the Athenians are obedient. But how shall we do to create in them an emulation to imitate the virtue of their ancestors to equal their reputation and to restore the happiness of their age in this present one?"

"If we would have them," answered Socrates, "make themselves masters of an estate, which is in the possession of others, we need only tell them that it is descended to them from their forefathers, and they will immediately be for having it again. If we would encourage them to take the first rank among the virtuous, we must persuade them that it is their due from all antiquity, and that if they will take care to preserve to themselves this advantage they will infallibly likewise surpass others in power. We must frequently represent to them that the most ancient of their predecessors were highly esteemed on account of their great virtue."

"You would be understood," said Pericles, "to speak of the contention of two of the divinities concerning the patronage of the city of Athens, of which the citizens, in the days of Cecrops, were chosen arbitrators on account of their virtue."

"You are in the right," said Socrates; "but I would have them be put in mind likewise of the birth and nourishment of Erictheus, and of the war that was in his time against the neighboring nations; as also of that which was made in favor of the descendants of Hercules against the people of Peloponnesus, and, in short, of all the other wars that were in the days of Theseus, in which our ancestors were always reputed the most valiant men of their age. If you think fit, they may likewise be told what the descendants of these ancients and our predecessors of the last age have done. They may be represented to them as resisting sometimes with their own forces only the nations whom all Asia obeyed, whose dominions extended into Europe as far as Macedonia, and who had inherited a potent empire from their fathers, together with formidable forces, and who were already renowned for many great exploits. Sometimes you must relate to them the victories they gained by sea and land in conjunction with the Lacedemonians, who are likewise reputed a very brave people. They should be told also that great commotions being arisen among the Greeks, and the most part of them having changed their places of abode, the Athenians always continued in their country, that they have been chosen by several people to arbitrate their differences, and that the oppressed have always fled to them for protection."

"When I reflect on all this," said Pericles, "I am surprised to see the Republic so much fallen off from what it was."

"In my opinion," replied Socrates, "she has behaved herself like those persons who, for having too great advantage over their rivals, begin to neglect themselves, and grow in the end pusillanimous, for after the Athenians saw themselves raised above the other Greeks they indulged themselves in indolence, and became at length degenerate."

“What course must they take now,” said Pericles, “to regain the luster of their ancient virtue?”

“They need only call to mind,” replied Socrates, “what were the exercises and the discipline of their ancestors, and if, like them, they apply themselves to those practices, they will no doubt arrive at their perfection; or if they will not govern themselves by that example, let them imitate the nations that are now uppermost; let them observe the same conduct, follow the same customs, and be assured they will equal, if not surpass them, if they labor to do so.”

“You seem to be of opinion, my dear Socrates, that virtue is much estranged from our Republic? And, indeed, when will the Athenians respect old age as they of Sparta do, since they begin, even by their own fathers, to deride men advanced in years? When, too, will they use themselves to the manly exercises of that Republic, since they not only neglect the good disposition and activity of body, but laugh at those who endeavor to acquire them? When will they be obedient to the magistrates, they who make it a glory to despise them? When will they be in perfect unity, they who, instead of assisting, daily prejudice one another, and who envy one another more than they do all the rest of mankind? They are every day quarrelling in the public and private assemblies; they are every day suing one another, and had rather find their own advantage in the ruin of their neighbors than get an honest gain by reciprocally assisting one another. The magistrates mind not the Government of the Republic any farther than their own interests are concerned, and, therefore, they use their utmost endeavors to be in office and authority; and for this reason in the administration of the State there is so much ignorance and malice, and such animosities, and so many different parties among private persons. And I much fear that this mischief will get such a head that at length there will be no remedy against it, and that the Republic will sink under the weight of its misfortunes.”

“Fear it not,” said Socrates, “and do not believe that the Athenians labor under an incurable disease. Do you not observe how skillful and obedient they are at sea, that in the combats for prizes they exactly obey the orders of those that preside there, and in the comedies how readily they comply with what they are bid to do?”

“I see it well,” answered Pericles, “and cannot but wonder that they are so ready to obey in these and the like occasions, and that the military men, who ought to be the chosen part of the citizens, are so mutinous and refractory.”

“And what say you,” pursued Socrates, “to the Senate of the Areopagus; are they not all of them persons of great worth? Do you know any judges who discharge their office with more integrity, and who more exactly observe the laws, who more faithfully render justice to private men, and who more worthily acquit themselves of all manner of affairs?”

“I blame them not,” said Pericles.

“Despair not, then, of the Athenians,” added Socrates, “as of an untractable people.”

"But it is in war," replied Pericles, "that much discipline is required, and much modesty and obedience, and these things the Athenians wholly want in that occasion."

"Perhaps, too," continued Socrates, "they who command them know little of their own duty. Do you not take notice that no man undertakes to govern a company of musicians, or of comedians, or of dancers, or of wrestlers, unless he be capable of it; and that all who take such employments upon them can give an account where they have learnt the exercises of which they are become masters? Our misfortunes in war, then, I very much apprehend, must be owing in a great measure to the bad education of our generals.

"I know very well that you are not of this number, and that you have improved to your advantage the time you have spent in learning the art of war and other laudable exercises. I imagine, likewise, that in the memoirs of your father, the great Pericles, you have found many rare stratagems, and that by your diligence you have also collected up and down a great number of others. Nor do I doubt but that you frequently meditate on these matters, that nothing may be wanting in you that may be of use to a general. Insomuch, that if you find yourself in doubt of anything, you immediately have recourse to those that know it, and spare neither presents nor civilities to incline them to assist you and to teach you the things of which you are ignorant."

"Alas! Socrates," said Pericles, "you flatter me, and flatter me for many things that, I am afraid, I am deficient in; but by that you instruct me in my duty."

Upon this Socrates, interrupting him—"I will," said he, "give you an advice. Have you not observed that in the high mountains, which are the frontiers of Attica, and divide it from Bœotia, the roads through which you must of necessity pass to go from one country to the other are very rough and narrow?"

"Yes, I have."

"Tell me, besides, have you never heard say that the Mysians and the Pisidians, who are in possession of advantageous places where they dwell in the dominions of the King of Persia, arm themselves lightly, and make continual inroads upon the neighboring provinces, and by that means are very troublesome to that king's subjects, and preserve their own liberty?"

"I have heard so."

"It is probable, too," continued Socrates, "that if the Athenians would possess themselves of the mountains that are between Bœotia and Attica, and if they took care to send thither some young men with arms proper for inroaders, our enemies would be much prejudiced by them, and all those mountains would be as a great rampart to cover our country from their insults."

"I believe what you say," answered Pericles, "and take all the advices you have given me to be very good."

"If you think them so," replied Socrates, "endeavor, my friend, to put them in practice; for if any of them succeed you will receive the honor, and the Republic the profit; and even though they should not meet with success the Republic would have no inconvenience to apprehend, nor you the least dishonor.”

## CHAPTER VI.

### SOCRATES DISSUADES GLAUCON, A VERY FORWARD YOUTH, FROM TAKING UPON HIM THE GOVERNMENT OF THE REPUBLIC, FOR WHICH HE WAS UNFIT.

A young man whose name was Glaucon, the son of Ariston, had so fixed it in his head to govern the Republic, that before he was twenty years of age he frequently presented himself before the people to discourse of affairs of state; nor was it in the power of his relations or friends to dissuade him from that design, though all the world laughed at him for it, and though sometimes he was dragged from the tribunal by force. Socrates had a kindness for him, upon account of Plato and Charmidas, and he only it was who made him change his resolution. He met him, and accosted him in so winning a manner, that he first obliged him to hearken to his discourse. He began with him thus:—

"You have a mind, then, to govern the Republic, my friend?"

"I have so," answered Glaucon.

"You cannot," replied Socrates, "have a more noble design; for if you can accomplish it you will be absolute. You will be able to serve your friends, you will raise your family, you will extend the bounds of your country, you will be known not only in Athens but through all Greece, and perhaps your renown will fly even to the barbarous nations, as did that of Themistocles. In short, wherever you come you will be respected and admired."

These words soothed up Glaucon, and won him to give ear to Socrates, who went on in this manner:—"But it is certain, my dear friend, that if you desire to be honored, you must be useful to the State."

"Certainly," said Glaucon.

"I conjure you, then, to tell me," replied Socrates, "what is the first service that you desire to render the State?" Glaucon was considering what to answer, when Socrates continued:—"If you intended to make the fortune of one of your friends, you would endeavor to make him rich, and thus perhaps you will make it your business to enrich the Republic."

"I would," answered Glaucon.

"Would not the way to enrich the Republic," replied Socrates, "be to increase its revenue?"

"It is very likely it would," said Glaucon.

"Tell me, then, in what consists the revenue of the State, and to how much it may amount? I presume you have particularly studied this matter, to the end that if anything should be lost on one hand, you might know where to make it good on another, and that if a fund should fail on a sudden, you might immediately be able to settle another in its place."

"I protest," answered Glaucon, "I have never thought of this."

"Tell me at least the expenses of the Republic, for no doubt you intend to retrench the superfluous."

"I never thought of this neither," said Glaucon.

"You had best, then, put off to another time your design of enriching the Republic, which you can never be able to do while you are ignorant both of its expense and revenue."

"There is another way to enrich a State," said Glaucon, "of which you take no notice, and that is by the ruin of its enemies."

"You are in the right," answered Socrates; "but to this end it is necessary to be stronger than they, otherwise we should run the hazard of losing what we have. He, therefore, who talks of undertaking a war, ought to know the strength on both sides, to the end that if his party be the stronger, he may boldly advise for war, and that if it be the weaker, he may dissuade the people from engaging themselves in so dangerous an enterprise."

"All this is true."

"Tell me, then," continued Socrates, "how strong our forces are by sea and land, and how strong are our enemies?"

"Indeed," said Glaucon, "I cannot tell you that on a sudden."

"If you have a list of them in writing, pray show it me, I should be glad to hear it read."

"I never took a list of them."

"I see, then," said Socrates, "that we shall not engage in war so soon; for it is like that the greatness of the undertaking will hinder you from maturely weighing all the consequences of it in the beginning of your government. But," continued he, "you have thought of the defense of the country, you know what garrisons are necessary, and what are not; you know what number of troops is sufficient in one garrison, and not sufficient in another; you will cause the necessary garrisons to be reinforced, and will disband those that are useless?"

"I should be of opinion," said Glaucon, "to leave none of them on foot, because they ruin a country, on pretense of defending it."

"But," Socrates objected, "if all the garrisons were taken away, there would be nothing to hinder the first comer from carrying off what he pleased. But how come you to know that the garrisons behave themselves so ill? Have you been upon the place, have you seen them?"

"Not at all; but I suspect it to be so."

"When, therefore, we are certain of it," said Socrates, "and can speak upon better grounds than simple conjectures, we will propose this advice to the Senate."

"It will be very proper to do so," said Glaucon.

"It comes into my mind too," continued Socrates, "that you have never been at the mines of silver, to examine why they bring not in so much now as they did formerly."

"You say true, I have never been there."

"Indeed, they say the place is very unhealthy, and that may excuse you."

"You rally me now," said Glaucon.

Socrates added, “But I believe you have at least observed how much corn our lands produce, how long it will serve to supply our city, and how much more we shall want for the whole year, to the end you may not be surprised with a scarcity of bread, but may give timely orders for the necessary provisions.”

“There is a deal to do,” said Glaucon, “if we must take care of all these things.”

“There is so,” replied Socrates; “and it is even impossible to manage our own families well unless we know all that is wanting, and take care to provide it. As you see, therefore, that our city is composed of above ten thousand families, and it being a difficult task to watch over them all at once, why did you not first try to retrieve your uncle’s affairs, which are running to decay, that after having given a proof of your care, faithfulness, and capacity in that smaller trust, you might have taken upon you a greater? But now, when you find yourself incapable of aiding a private man, how can you think of behaving yourself so as to be useful to a whole people? Ought a man who has not strength enough to carry a hundred pound weight to undertake to carry a burden that is much heavier?”

“I would have done good service to my uncle,” said Glaucon, “if he would have taken my advice.”

“How!” replied Socrates; “have you hitherto been unable to govern your uncle, who is but one person, and do you imagine, when you have failed in that, to govern the whole Athenians, whose minds are so fickle and inconstant? Take heed, my dear Glaucon, take heed, lest a too great desire of glory should render you despised. Consider how dangerous it is to speak and employ ourselves about things we do not understand. What a figure do those forward and rash people make in the world who do so: and you yourself may judge whether they acquire more esteem than blame, whether they are more admired than contemned. Think, on the contrary, with how much honor a man is regarded who understands perfectly what he says and what he does, and then you will confess that renown and applause have always been the recompense of true merit, and shame the reward of ignorance and temerity. If, therefore, you would be honored, endeavor to be a man of true merit, for if you enter upon the government of the Republic with a mind more sagacious than usual, I shall not wonder if you succeed in all your designs.”

## CHAPTER VII.

### SOCRATES PERSUADES CHARMIDAS, A PERSON OF MERIT AND GREAT CAPACITY, BUT VERY MODEST AND DIFFIDENT OF HIMSELF, TO UNDERTAKE THE GOVERNMENT OF THE REPUBLIC.

As Socrates, who was ever watchful for the interests of his country, and consulted the good of everyone with whom he conversed, took care, on the one hand, to dissuade persons who had no capacity for it, however bent they were upon the thing, from entering upon any offices of trust, so he was ever mindful, on the other, to persuade those that were bashful and diffident to take upon themselves the government of the Republic, provided he knew they had proper talents and abilities for it. In confirmation whereof we shall here relate a conversation of his with Charmidas, the son of Glaucon. Socrates, who knew him to be a man of sense and merit, and more capable to govern the Republic than any that were then in that post, but withal a person very diffident of himself—one that dreaded the people, and was mightily averse from engaging himself in public business—addressed himself to him in this manner:—

"Tell me, Charmidas, if you knew any man who could gain the prizes in the public games, and by that means render himself illustrious, and acquire glory to his country, what would you say of him if he refused to offer himself to the combat?"

"I would say," answered Charmidas, "that he was a mean-spirited, effeminate fellow."

"And if a man were capable of governing a Republic, of increasing its power by his advices, and of raising himself by this means to a high degree of honor, would you not brand him likewise with meanness of soul if he would not present himself to be employed?"

"Perhaps I might," said Charmidas; "but why do you ask me this question?"

"Because you are capable," replied Socrates, "of managing the affairs of the Republic, and yet you avoid doing so, though in the quality of a citizen you are obliged to take care of the commonwealth."

"And wherein have you observed this capacity in me?"

"When I have seen you in conversation with the Ministers of State," answered Socrates; "for if they impart any affairs to you, I see you give them good advice, and when they commit any errors you make them judicious remonstrances."

"But there is a very great difference, my dear Socrates," replied Charmidas, "between discoursing in private and contending in a public manner before the people."

"And yet," replied Socrates, "a skillful arithmetician can calculate as well in presence of several persons as when alone; and they who can play well upon the lute in their closets play likewise well in company."

"But you know," said Charmidas, "that fear and shame, which are so natural to man, affect us more in public assemblies than in private companies."

“Is it possible,” said Socrates, “that you can converse so unconcernedly with men of parts and authority, and that you should not have assurance enough to speak to fools? Are you afraid to present yourself before dyers, shoemakers, masons, smiths, laborers, and brokers? For of such are composed the popular assemblies. This is the same thing as to be the most expert in a fencing-school, and to fear the thrust of an unskillful person who never handled a foil. Thus you, though you speak boldly in the presence of the chief men of the Republic, among whom there might perhaps be found some who would despise you, dare not, nevertheless, speak in the presence of an illiterate multitude, who know nothing of the affairs of state, and who are not capable of despising you, and you fear to be laughed at by them.”

“Do they not usually,” said Charmidas, “laugh at those who speak best?”

“So likewise,” said Socrates, “do the men of quality with whom you converse every day; and I am surprised that you have eloquence and persuasive sense sufficient to bring these to reason, and that you think not yourself capable even to approach the others. Learn to know yourself better, Charmidas, and take care not to fall into a fault that is almost general; for all men inquire curiously enough into the affairs of others, but they never enter into their own bosoms to examine themselves as they ought.

“Be no longer, then, thus negligent in this matter, consider yourself with more attention, and let not slip the occasions of serving the Republic, and of rendering it, if possible, more flourishing than it is. This will be a blessing, whose influence will descend not only on the other citizens, but on your best friends and yourself.”

## CHAPTER VIII.

### SOCRATES' DISPUTE WITH ARISTIPPUS CONCERNING THE GOOD AND BEAUTIFUL.

One day Aristippus proposed a captious question to Socrates, meaning to surprise him; and this by way of revenge, for his having before put him to a stand: but Socrates answered him warily, and as a person who has no other design in his conversations than the improvement of his hearers.

The question which Aristippus asked him was whether he knew in the world any good thing, and if Socrates had answered him that meat, or drink, or riches, or health, or strength, or courage are good things, he would forthwith have shown him that it may happen that they are very bad. He therefore gave him such an answer as he ought; and because he knew very well that when we feel any indisposition we earnestly desire to find a remedy for it, he said to him: "Do you ask me, for example, whether I know anything that is good for a fever?"

"No," said Aristippus.

"Or for sore eyes?" said Socrates.

"Neither."

"Do you mean anything that is good against hunger?"

"Not in the least," answered Aristippus.

"I promise you," said Socrates, "that if you ask me for a good thing that is good for nothing, I know no such thing, nor have anything to do with it."

Aristippus pressed him yet further, and asked him whether he knew any beautiful thing.

"I know a great many," said Socrates.

"Are they all like one another?" continued Aristippus.

"Not in the least," answered Socrates, "for they are very different from one another."

"And how is it possible that two beautiful things should be contrary one to the other?"

"This," said Socrates, "is seen every day in men: a beautiful make and disposition of body for running is very different from a beautiful make and disposition for wrestling: the excellence and beauty of a buckler is to cover well him that wears it. On the contrary, the excellence and beauty of a dart is to be light and piercing."

"You answer me," said Aristippus, "as you answered me before, when I asked you whether you knew any good thing."

"And do you think," replied Socrates, "that the good and the beautiful are different? Know you not that the things that are beautiful are good likewise in the same sense? It would be false to say of virtue that in certain occasions it is beautiful, and in others good. When we speak of men of honor we join the two qualities, and call them excellent and good. In our bodies beauty and goodness relate always to the same end. In a word, all things that are of any use in the world are esteemed beautiful and good, with regard to the subject for which they are proper."

"At this rate you might find beauty in a basket to carry dung," said Aristippus.

"Yes, if it be well made for that use," answered Socrates; "and, on the contrary, I would say that a buckler of gold was ugly if it was ill-made."

"Would you say," pursued Aristippus, "that the same thing may be beautiful and ugly at once?"

"I would say that it might be good and bad. Often what is good for hunger is bad for a fever; and what is good for a fever is very bad for hunger; often what is beautiful to be done in running is ugly to be done in wrestling; and what is beautiful to do in wrestling is ugly in running. For all things are reputed beautiful and good when they are compared with those which they suit or become, as they are esteemed ugly and bad when compared with those they do not become."

Thus we see that when Socrates said that beautiful houses were the most convenient, he taught plainly enough in what manner we ought to build them, and he reasoned thus: "Ought not he who builds a house to study chiefly how to make it most pleasant and most convenient?" This proposition being granted, he pursued: "Is it not a pleasure to have a house that is cool in summer and warm in winter? And does not this happen in buildings that front towards the south? For the beams of the sun enter into the apartments in winter, and only pass over the covering in summer. For this reason the houses that front towards the south ought to be very high, that they may receive the sun in winter; and, on the contrary, those that front towards the north ought to be very low, that they may be less exposed to the cold winds of that quarter." In short, he used to say, that he had a very beautiful and very agreeable house, who could live there with ease during all the seasons of the year, and keep there in safety all that he has; but that for painting and other ornaments, there was more trouble in them than pleasure.

He said further that retired places, and such as could be seen from afar, were very proper to erect altars and build temples in; for though we are at a distance from them, yet it is a satisfaction to pray in sight of the holy places, and as they are apart from the haunts of men, innocent souls find more devotion in approaching them.

## CHAPTER IX.

### SOCRATES RETURNS SUITABLE ANSWERS TO A VARIETY OF QUESTIONS PROPOSED TO HIM.

Another time being asked whether courage can be learnt as an art or was a gift of Nature, he answered: “In my opinion, as we see many bodies that are naturally more vigorous than others, and that better endure fatigue, so there are some souls that are naturally more brave, and look dangers in the face with greater resolution. For I see some men, who live under the same laws, who are brought up in the same customs, and who are not all equally valiant. Nevertheless, I believe that education and exercise add much to natural courage. Whence comes it to pass that the Scythians and the Thracians durst not face the Lacedemonians with pikes and targets; and, on the contrary, that the Lacedemonians would not fight against the Thracians with shields and darts, nor against the Scythians with bows? I see it to be the same in all other things, and that when some men are better inclined by nature for certain things than other men are, they very much advance and perfect themselves in those things by study and diligence. This shows that they who are most favored by Nature, as well as those to whom she has been less indulgent, ought to apply themselves assiduously to the things by which they would gain themselves a reputation.”

He allowed no difference between knowledge and temperance; and he held that he who knows what is good and embraces it, who knows what is bad and avoids it, is learned and temperate; and when he was asked whether he believed that they who know very well what ought to be done, but do quite otherwise, were learned and temperate? “On the contrary,” answered he, “they are very ignorant and very stupid, for, in my opinion, every man who, in the great number of possible things that offer themselves to him, can discern what is most advantageous for him to do, never fails to do it; but all who govern not themselves well and as they ought, are neither learned nor men of good morals.”

He said likewise that justice and every other virtue is only a science, because all the actions of justice and of the other virtues are good and honorable; and that all who know the beauty of these actions think nothing more charming; as, on the contrary, they who are ignorant of them cannot perform anyone virtuous action, or, if they attempt to do it, are sure to perform it in a wrong manner. So that the persons only who possess this science can do just and good actions; but all just and good actions are done by the means of virtue, therefore justice and virtue is only a science.

He said, moreover, that folly is contrary to knowledge, and yet he did not allow ignorance to be a folly; but that not to know oneself, or to imagine one knows what he does not know, is a weakness next to folly. And he observed that among the vulgar a man is not accused of folly for being mistaken in things that are unknown to most of the world, but for mistaking in things which no man mistakes that knows anything at all; as if any man should think himself so tall as to be obliged to stoop when he came in at the gates of the city; or if he thought himself so strong as to undertake to carry away whole houses on his back, or to do any other thing visibly impossible, the people would say that he had lost his wits, which they do not say of those who commit only some slight extravagances; and as they give the name of love to a violent affection only, so they give the name of folly only to an extraordinary disorder of the mind.

Reflecting on the nature of envy, he said that it is a certain grief of mind, which proceeds, not from the misfortune of friends or good fortune of enemies, but (which is very surprising) only from the prosperity of friends. “For,” said he, “those may be truly said to be envious who cannot endure to see their friends happy.” But, some wondering whether it were possible for a man to be grieved at the good fortune of his friend, he justified the truth of what he had advanced, by telling them plainly that there are some men so variously affected towards their friends, that, while they are in calamity and distress, they will compassionate and succor them, but when they are well and in prosperity will fret at and envy them. “But this,” he said, “is a fault from which wise and good men are free, and never to be found but in weak and wicked minds.”

As to idleness, he said that he had observed that most men were always in action, for they who play at dice, or who serve to make others laugh, are doing something, but in effect they are idle, because they might employ themselves more usefully. To which he added, that no man finds leisure to quit a good employment for an ill one, and that if he did he would deserve the greater blame, in that he wanted not something to do before.

He said likewise that the scepter makes not the king, and that princes and governors are not they whom chance or the choice of the people has raised to those dignities, nor those who have established themselves in them by fraud or force, but they who know how to command; for if it were allowed that it is the duty of a prince to command, as it is the duty of a subject to obey, he showed in consequence of it that in a ship, where there are several persons, the honor of commanding it is given to him who is most capable of it, and that all obey him, without excepting even the owner of the vessel; that likewise in husbandry, he to whom the land belongs obeys his own servants, if they understand agriculture better than himself; that thus the sick obey the physicians, and they who learn exercises, their masters; nay, that even women are masters of the men in working with the needle, because they understand it better than they; in short, that in all things which require care and industry men govern themselves when they think they are capable of doing so; otherwise, they leave themselves to the conduct of such as they judge to have more capacity, and take care to have them near at hand for that purpose. And if any man made him this objection, that a tyrant is at liberty not to believe the best advices, he answered, “Why do you say he is at liberty not to do so, seeing he will bear the smart of it? For every man who shuts his ears to good counsel commits a fault, and this fault is always attended with some damage.” And if it were said that a tyrant is permitted to put to death the men of the best parts and understanding in his State, he replied again, “Do you think he is not punished in losing his chief supports, or that he will be quit for a slight punishment? Is to govern in this manner the way to preserve himself? Or rather, is it not the certain means to hasten his own ruin?”

Being asked what was the best study for man to apply himself to, he answered, “To do well;” and being asked farther whether good fortune was the effect of study, “On the contrary,” said he, “I think good fortune and study to be two opposite things; for what I call good fortune is, when a man meets with what is necessary for him, without the trouble of seeking it; but when he meets with any good success after a tedious search and labor, it is an effect of study. This is what I call to do well; and I think that all who take delight in this study are for the most part successful, and gain the esteem of men, and the affection of the Deity. Such are they as have rendered themselves excellent in economy, in physic, and in politics; but he who knows not anyone thing perfectly is neither useful to men, nor beloved by the gods.”

## CHAPTER X.

### SOCRATES, IN CONVERSATION WITH SEVERAL ARTIFICERS, A PAINTER, A STATUARY, AND AN ARMORER, SHOWS HIS SKILL AND GOOD TASTE IN THE FINER ARTS.

As Socrates studied to be useful in all his conversations, so he never happened to be in company even with tradesmen but he always said something that might be of service to them. Going once into the shop of the painter Parrhasius, he entertained himself with him in the following manner:—

“Is not painting,” said he, “a representation of all we see? For with a few colors you represent on a canvas mountains and caverns, light and obscurity; you cause to be observed the difference between soft things and hard, between things smooth and rough; you give youth and old age to bodies; and when you would represent a perfect beauty, it being impossible to find a body but what has some defect, your way is to regard several, and taking what is beautiful from each of them, you make one that is accomplished in all its parts.”

“We do so,” said Parrhasius.

“Can you represent likewise,” said Socrates, “what is most charming and most lovely in the person, I mean the inclination?”

“How think you,” answered Parrhasius, “we can paint what cannot be expressed by any proportion, nor with any color, and that has nothing in common with any of those things you mentioned, and which the pencil can imitate; in a word, a thing that cannot be seen?”

“Do not the very looks of men,” replied Socrates, “confess either hatred or friendship?”

“In my opinion they do,” said Parrhasius.

“You can then make hatred and friendship appear in the eyes?”

“I own we can.”

“Do you think likewise,” continued Socrates, “that they who concern themselves either in the adversity or prosperity of friends, keep the same look with those who are wholly unconcerned for either?”

“By no means,” said he, “for during the prosperity of our friends, our looks are gay and full of joy, but in their adversity we look cloudy and dejected.”

“This, then, may be painted likewise?”

“It may.”

“Besides,” said Socrates, “magnificence, generosity, meanness of mind, cowardice, modesty, prudence, insolence, rusticity, all appear in the looks of a man, whether sitting or standing.”

“You say true.”

“And cannot the pencil imitate all this likewise?”

“It may.”

"And in which do you take most pleasure," said Socrates, "in regarding the picture of a man whose external appearance discovers a good natural disposition, and bespeaks an honest man, or of one who wears in his face the marks of a vicious inclination?"

"There is no comparison between them," said Parrhasius.

Another time, talking with Clito the sculptor, he said to him, "I wonder not that you make so great a difference between the statue of a man who is running a race and that of one who stands his ground to wait for his antagonist with whom he is to wrestle, or to box, or to play a prize at all sorts of defense; but what ravishes the beholders is, that your statues seem to be alive. I would fain know by what art you imprint upon them this wonderful vivacity?" Clito, surprised at this question, stood considering what to answer, when Socrates went on:—"Perhaps you take great care to make them resemble the living persons, and this is the reason that they seem to live likewise."

"It is so," said Clito.

"You must then," replied Socrates, "observe very exactly in the different postures of the body what are the natural dispositions of all the parts, for when some of them stoop down, the others raise themselves up; when some are contracted, the others stretch themselves out; when some are stiff with straining, others relax themselves; and when you imitate all this, you make your statues approach very near the life."

"You say true," said Clito.

"Is it not true likewise," replied Socrates, "that it is a great satisfaction to beholders to see all the passions of a man who is in action well expressed? Thus, in the statue of a gladiator who is fighting, you must imitate the sternness of look with which he threatens his enemy; on the contrary, you must give him, when victor, a look of gaiety and content."

"There is no doubt of what you say."

"We may then conclude," said Socrates, "that it is the part of an excellent statuary to express the various affections and passions of the soul, by representing such-and-such motions and postures of the body as are commonly exerted in real life whenever the mind is so-and-so affected."

Another time, Socrates being in the shop of Pistias the armorer, who showed him some corselets that were very well made: "I admire," said Socrates to him, "the invention of these arms that cover the body in the places where it has most need of being defended, and nevertheless are no hindrance to the motions of the hands and arms; but tell me why you sell the suits of armor you make dearer than the other workmen of the city, since they are not stronger nor of better-tempered or more valuable metal?"

"I sell them dearer than others," answered Pistias, "because they are better made than theirs."

“In what does this make consist?” said Socrates, “in the weight, or in the largeness of the arms? And yet you make them not all of the same weight nor of the same size, but to fit every man.”

“They must be fit,” said Pistias, “otherwise they would be of no use.”

“But do you not know,” replied Socrates, “that some bodies are well-shaped and others not?”

“I know it well.”

“How, then,” continued Socrates, “can you make a well-shaped suit of armor for an ill-shaped body?”

“It will be sufficient if they are fit for him,” answered Pistias; “for what is fit is well made.”

“You are of opinion, then,” added Socrates, “that one cannot judge whether a thing be well made, considering it merely in itself, but in regard to the person who is to use it; as if you said that a buckler is well made for him whom it fits, and in like manner of a suit of clothes and any other thing whatsoever. But I think there is another convenience in having a suit of armor well made.”

“What do you take that to be?” said Pistias.

“I think,” answered Socrates, “a suit of armor that is well made does not load the bearer so much as one ill made, even though it weigh as much. For ill-made arms, by pressing too much upon the shoulders, or hanging cumbrous on some other part, become almost insupportable, and greatly incommode the person that wears them. But those arms which, as they ought, distribute an equal weight to all the parts of the body, that join upon the neck, the shoulders, the breast, the back, and the hips, may be said to be glued to the body, and to weigh nothing at all.”

“For this,” said Pistias, “I value the arms I make. It is true that some choose rather to part with their money for arms that are gilt and finely carved, but if with all this they fit not easy upon them, I think they buy a rich inconveniency.”

Socrates went on:—“But since the body is not always in the same posture, but sometimes bends, and sometimes raises itself straight, how can arms that are very fit be convenient and easy?”

“They never can,” said Pistias.

“Your opinion therefore is,” said Socrates, “that the best arms are not those that are most fit, and fit closest to the body, but those that do not incommode the person that wears them.”

“You, too, are of the same opinion,” replied Pistias, “and you understand the matter aright.”

## CHAPTER XI.

DISCOURSE OF SOCRATES WITH THEODOTA, AN ATHENIAN LADY, OF NO GOOD CHARACTER; WHEREIN HE ENDEAVORS, IN THE MOST ARTFUL AND ENGAGING MANNER, TO WIN HER OVER FROM THE CRIMINAL PLEASURES TO WHICH SHE WAS ADDICTED UNTO THE SUBLIMER AND MORE INNOCENT DELIGHTS OF PHILOSOPHY AND VIRTUE.

There was at Athens a very beautiful lady called Theodota, who had the character of a loose dame. Some person was speaking of her in presence of Socrates, and saying that she was the most beautiful woman in the whole world; that all the painters went to see her, to draw her picture, and that they were very well received at her house. “I think,” said Socrates, “we ought to go see her too, for we shall be better able to judge of her beauty after we have seen her ourselves than upon the bare relation of others.” The person who began the discourse encouraged the matter, and that very moment they all went to Theodota’s house. They found her with a painter who was drawing her picture; and having considered her at leisure when the painter had done, Socrates began thus:—“Do you think that we are more obliged to Theodota for having afforded us the sight of her beauty than she is to us for coming to see her? If all the advantage be on her side, it must be owned that she is obliged to us; if it be on ours, it must be confessed that we are so to her.” Some of the company saying there was reason to think so, Socrates continued in these words:—“Has she not already had the advantage of receiving the praises we have given her? But it will be yet a much greater to her when we make known her merit in all the companies we come into; but as for ourselves, what do we carry from hence except a desire to enjoy the things we have seen? We go hence with souls full of love and uneasiness; and from this time forward we must obey Theodota in all she pleases to enjoin us.”

“If it be so,” said Theodota, “I must return you many thanks for your coming hither.”

Meanwhile Socrates took notice that she was magnificently appareled, and that her mother appeared likewise like a woman of condition. He saw a great number of women attendants elegantly dressed, and that the whole house was richly furnished. He took occasion from hence to inform himself of her circumstances in the world, and to ask her whether she had an estate in land or houses in the city, or slaves, whose labor supplied the expenses of her family.

“I have nothing,” answered she, “of all this; my friends are my revenue. I subsist by their liberality.”

Upon which Socrates remarked that “friendship was one of the greatest blessings in life, for that a good friend could stand one instead of all possessions whatever.” And he advised Theodota to try all her art to procure to herself some lovers and friends that might render her happy. The lady asking Socrates whether there were any artifices to be used for that purpose, he answered, “there were,” and proceeded to mention several: —“Some for attracting the regard of the men, some for insinuating into their hearts; others for securing their affections and managing their passions.”

Whereupon Theodota, whose soul then lay open to any impression, mistaking the virtuous design of Socrates in the whole of this discourse for an intention of another sort, cried out in raptures, “Ah! Socrates, why will not you help me to friends?”

“I will,” replied Socrates, “if you can persuade me to do so.”

“And what means must I use to persuade you?”

“You must invent the means,” said Socrates, “if you want me to serve you.”

“Then come to see me often,” added Theodota.

Socrates laughed at the simplicity of the woman, and in raillery said to her, “I have not leisure enough to come and see you; I have both public and private affairs which take up too much of my time. Besides, I have mistresses who will not suffer me to be from them neither day nor night, and who against myself make use of the very charms and sorceries that I have taught them.”

“And have you any knowledge in those things, too?” said she.

“Why do Apollodorus and Antisthenes,” answered Socrates, “never leave me? Why do Cebes and Simmias forsake Thebes for my company? This they would not do if I were not master of some charm.”

“Lend it me,” said Theodota, “that I may employ it against you, and charm you to come to me.”

“No,” said Socrates, “but I will charm you, and make you come to me.”

“I will,” said Theodota, “if you will promise to make me welcome.”

“I promise you I will,” answered Socrates, “provided there be nobody with me whom I love better than you.”

## CHAPTER XII.

### OF THE NECESSITY OF EXERCISE TO HEALTH AND STRENGTH OF BODY.

Among others who frequented Socrates, there was a young man whose name was Epigenes, and who was very awkward in his person and behavior, and had contracted an ill habit of body, having never learnt nor used any exercise. Socrates reproached him for it, and told him that it was unworthy of any man to be so negligent of himself. Epigenes slightly answered that he was under no obligation to do better.

"You are no less obliged to it," replied Socrates, "than they who train themselves up for the Olympic Games. For do you believe that to fight for one's life against the enemies of the Republic, which we are all obliged to do when the Athenians please to command us, is a less important occasion than to contend with antagonists for a prize? How many men are there who, for want of strength, perish in fights; or have recourse to dishonorable means to seek their safety? Some are taken prisoners, and remain in slavery all the rest of their days, or are forced to pay so great a ransom, as makes them live poor and miserable ever afterwards: others are ill thought of, and their weakness is imputed to cowardice. And do you value so little all these misfortunes, which constantly attend an ill habit of body, and do they seem to you so slight? In my opinion, there are no fatigues in the exercises but what are easier and more agreeable. But perhaps you despise the advantages of a good disposition of body: nevertheless, they are considerable; for men in that condition enjoy a perfect health, they are robust and active, they come off from combats with honor, they escape from dangers, they succor their friends, they render great services to their country. For these reasons they are well received wherever they come, they are in good reputation with all men, they attain to the highest offices, they live the more honorably and the more at ease, and they leave their posterity the most noble examples. If, therefore, you do not practice the military exercises in public, you ought not to neglect the doing so in private, but to apply yourself to them with all possible diligence.

"To have the body active and healthy can be hurtful to you in no occasions: and since we cannot do anything without the body, it is certain that a good constitution will be of great advantage to us in all our undertakings. Even in study, where there seems to be least need of it, we know many persons who could never make any great progress for want of health. Forgetfulness, melancholy, loss of appetite, and folly, are the diseases that generally proceed from the indisposition of the body; and these diseases sometimes seize the mind with so great violence, that they wipe out even the least remembrance of what we knew before. But in health we have nothing like this to fear, and consequently there is no toil which a judicious man would not willingly undergo to avoid all these misfortunes. And, indeed, it is shameful for a man to grow old before he has tried his own strength, and seen to what degree of dexterity and perfection he can attain, which he can never know if he give himself over for useless; because dexterity and strength come not of themselves, but by practice and exercise."

## CHAPTER XIII.

### SEVERAL APOTHEGMS OF SOCRATES.

1. A certain man being vexed that he had saluted one who did not return his civility, Socrates said to him, “It is ridiculous in you to be unconcerned when you meet a sick man in the way, and to be vexed for having met a rude fellow.”

2. Another was saying that he had lost his appetite and could eat nothing. Socrates, having heard it, told him he could teach him a remedy for that. The man asking what it was, “Fast,” said he, “for some time, and I will warrant you will be in better health, spend less money, and eat with more satisfaction afterwards.”

3. Another complained that the water which came into the cistern was warm, and nevertheless he was forced to drink it. “You ought to be glad of it,” said Socrates, “for it is a bath ready for you, whenever you have a mind to bathe yourself.”

“It is too cold to bathe in,” replied the other.

“Do your servants,” said Socrates, “find any inconvenience in drinking it, or in bathing in it?”

“No, but I wonder how they can suffer it.”

“Is it,” continued Socrates, “warmer to drink than that of the temple of Æsculapius?”

“It is not near so warm.”

“You see, then,” said Socrates, “that you are harder to please than your own servants, or even than the sick themselves.”

4. A master having beaten his servant most cruelly, Socrates asked him why he was so angry with him. The master answered, “Because he is a drunkard, a lazy fellow who loves money, and is always idle.”

“Suppose he be so,” said Socrates: “but be your own judge, and tell me, which of you two deserves rather to be punished for those faults?”

5. Another made a difficulty of undertaking a journey to Olympia. “What is the reason,” said Socrates to him, “that you are so much afraid of walking, you, who walk up and down about your house almost all day long? You ought to look upon this journey to be only a walk, and to think that you will walk away the morning till dinner-time, and the afternoon till supper, and thus you will insensibly find yourself at your journey’s end. For it is certain that in five or six days’ time you go more ground in walking up and down than you need to do in going from Athens to Olympia. I will tell you one thing more: it is much better to set out a day too soon than a day too late; for it is troublesome to be forced to go long journeys; and on the contrary, it is a great ease to have the advantage of a day beforehand. You were better therefore to hasten your departure than be obliged to make haste upon the road.”

6. Another telling him that he had been a great journey, and was extremely weary, Socrates asked whether he had carried anything. The other answered that he had carried nothing but his cloak.

“Were you alone?” said Socrates.

“No; I had a slave with me.”

“Was not he loaded?” continued Socrates.

“Yes, for he carried all my things.”

“And how did he find himself upon the road?”

“Much better than I.”

“And if you had been to carry what he did, what would have become of you?”

“Alas!” said he, “I should never have been able to have done it.”

“Is it not a shame,” added Socrates, “in a man like you, who have gone through all the exercises, not to be able to undergo as much fatigue as his slave?”

## CHAPTER XIV.

### SOCRATES PROPOSES SOME REGULATIONS FOR THE BETTER MANAGEMENT OF THEIR PUBLIC FEASTS.

Socrates having observed that in public suppers everyone brought his own dish of meat, and that sometimes some brought more and others less, was wont, when this happened, to bid a servant set the least dish in the middle of the table, and to give some of it to all the company. No man could, in civility, refuse it, nor exempt himself from doing the like with his own dish, insomuch that every man had a taste of the whole, and all fared alike. This in some measure banished luxury and expensiveness from these feasts. For they who would have laid out a great deal of money in delicacies cared no longer to do so, because they would have been as much for others as for themselves.

Being one day in these assemblies, and seeing a young man who ate his meat without bread, he took occasion to rally him for it upon a question that was started touching the imposing of names. “Can we give any reasons,” said he, “why a man is called flesh-eater—that is to say, a devourer of flesh?—for every man eats flesh when he has it; and I do not believe it to be upon that account that a man is called so.”

“Nor I neither,” said one of the company.

“But,” continued Socrates, “if a man takes delight to eat his meat without bread, do you not take him to be, indeed, a flesh-eater?”

“I should think it difficult to find another who better would deserve that name.” Upon which somebody else taking the word said,

“What think you of him who, with a little bread only, eats a great deal of flesh?”

“I should,” replied Socrates, “judge him, too, to be a flesh-eater; and whereas others ask of the gods in their prayers to give them an abundance of fruits, such men in their petitions it is likely would pray only for abundance of flesh.”

The young man whom Socrates had in mind, suspecting that he spoke upon his account, took some bread, but continued still to eat a great deal of flesh with it. Socrates perceived him, and showing him with his finger to those that sat next to him, said to them, “Take notice of jour neighbor, and see whether it be the meat that makes him eat his bread, or the bread that makes him eat his meat.”

In a like occasion, seeing a man sop the same morsel of meat in several sauces, he said, “Is it possible to make a sauce that will cost more, and be not so good, as one that is made by taking out of several different sauces at once? For there being more ingredients than usual, no doubt it costs more; but then because we mix things together, which the cooks never used to mingle, because they agree not well with one another, we certainly spoil the whole; and is it not a jest to be curious in having good cooks, and at the same time to be so fantastical as to alter the relish of the dishes they have dressed? Besides, when we have once got a habit of eating thus of several dishes at once, we are not so well satisfied when we have no longer that variety. Whereas a man who contents himself to eat but of one dish at a time finds no great inconvenience in having but one dish of meat for his dinner.”

He made likewise this remark: that to express what the other Greeks called “to eat a meal,” the Athenians said “to make good cheer;” and that the word “good” shows us that we ought to eat such things only as will neither disorder the body nor the mind, which are easily had, and purchased without great expense. From whence he inferred that they alone who live temperately and soberly can truly be said to make good cheer—that is to say, to eat well.

# BOOK IV.

## CHAPTER I.

THAT PERSONS OF GOOD NATURAL PARTS, AS WELL AS THOSE WHO HAVE PLENTIFUL FORTUNES, OUGHT NOT TO THINK THEMSELVES ABOVE INSTRUCTION. ON THE CONTRARY, THE ONE OUGHT, BY THE AID OF LEARNING, TO IMPROVE THEIR GENIUS; THE OTHER, BY THE ACQUISITION OF KNOWLEDGE, TO RENDER THEMSELVES VALUABLE.

There was always, as we have already remarked, some improvement to be made with Socrates; and it must be owned that his company and conversation were very edifying, since even now, when he is no more among us, it is still of advantage to his friends to call him to their remembrance. And, indeed, whether he spoke to divert himself, or whether he spoke seriously, he always let slip some remarkable instructions for the benefit of all that heard him.

He used often to say he was in love, but it was easy to see it was not with the beauty of one's person that he was taken, but with the virtues of his mind.

The marks of a good genius, he said, were these—a good judgment, a retentive memory, and an ardent desire of useful knowledge; that is to say, when a person readily learns what he is taught, and strongly retains what he has learnt, as also when he is curious to know all that is necessary to the good government either of a family or of a republic; in a word, when one desires to obtain a thorough knowledge of mankind and of whatever relates to human affairs. And his opinion was that when these good natural parts are cultivated as they ought, such men are not only happy themselves, and govern their families prudently, but are capable likewise to render others happy, and to make republics flourish.

On the one hand, therefore, whenever he met with any who believed themselves men of parts, and for that reason neglected to be instructed, he proved to them that men of the best natural parts are they who have most need of instruction; and to this purpose he alleged the example of a high-mettled horse, who, having more courage and more strength than others, does us very great service, if he be broke and managed in his youth; but if that be neglected, he grows so vicious and unruly that we know not what to do with him. Thus also dogs of a good breed, and that by nature are the most strong and mettlesome, are excellent for game, if they are well taught; otherwise they are apt to become high rangers and at no command. In like manner among men they who are blessed with the greatest advantages of Nature, to whom she has given the most courage and the greatest strength to enable them to succeed in their undertakings, are likewise the most virtuous, and do more good than others, when they meet with a good education; but if they remain without instruction they fall into an excess of ill, and become most pernicious to themselves and others. Merely for want of knowing their duty they often engage themselves in very wicked designs; and being imperious and violent, it is very difficult to keep them within bounds and to make them change their resolution, which is the reason they do a great deal of mischief.

On the other hand, when he saw any of those men who pique themselves on their estates, and who believe because they are men of high condition that they are above instruction, or have no need of it, because their riches alone are sufficient to gain them the esteem of the world, and to make them succeed in all their undertakings, he endeavored to convince them of their error, and to show them that they, too, have need of instruction. He told them that that man is a fool who imagines with himself that he can know the things that are useful from those that are hurtful, without having ever learnt the difference; or who, not discerning between them, fondly thinks that because he has wherewithal to buy whatever he has a mind to, he can therefore do whatever may lend to his advantage; or who, judging himself incapable to do what is useful for himself, thinks, nevertheless, that he is well in the world, and in a safe and happy condition of life. That it is likewise a folly for a man to persuade himself that, being rich and having no merit, he will pass for a man of parts; or that, not having the reputation of being a man of parts, he shall nevertheless be esteemed.

## CHAPTER II.

### CONFERENCE BETWEEN SOCRATES AND EUTHYDEMUS, IN WHICH HE CONVINCES THAT YOUNG MAN, WHO HAD A GREAT OPINION OF HIMSELF, THAT HE KNEW NOTHING.

When Socrates, on the other hand, found any who soothe themselves up in the belief that they are well instructed, and who boast of their own sufficiency, he never failed to chastise the vanity of such persons. Of his conduct in this particular I will relate the following instance—

He had been told that Euthydemus had bought up several works of the most celebrated poets and sophists, and that this acquisition had so puffed him up with arrogance, that he already esteemed himself the greatest man for learning and parts of any of the age, and pretended to no less than being the first man of the city, either for negotiating or for discoursing in public. Nevertheless, he was still so young that he was not admitted into the assemblies of the people, and if he had any affair to solicit, he generally came and placed himself in one of the shops that were near the courts of justice. Socrates, having observed his station, failed not to go thither likewise with two or three of his friends; and there, being fallen into discourse, this question was started: Whether it was by the improving conversation of philosophers or by the strength of his natural parts only, that Themistocles surpassed all his countrymen in wisdom and valor, and advanced himself to such a high rank and to so great esteem, that all the Republic cast their eyes upon him whenever their affairs required the conduct of a man of bravery and wisdom? Socrates, who had a mind to reflect upon Euthydemus, answered that “a man must be very stupid to believe that mechanic arts (which are comparatively things but of small importance) cannot be learnt without masters; and yet that the art of governing of States, which is a thing of the greatest moment and that requires the greatest effort of human prudence, comes of itself into the mind.” And this was all that passed in this first interview.

After this Socrates, observing that Euthydemus always avoided being in his company, lest he should be taken for one of his admirers, attacked him more openly; and once when he happened to be where he was, addressed himself to the rest of the company in these words:—“Certainly, gentlemen, by what may be conjectured from the studies of this young man, it is very likely that when he shall have attained the age that permits him to be present in the assemblies of the people, if any important affair come to be debated there, he will not fail to give his judgment of it; and in my opinion he would introduce his harangue by a very pleasant exordium, if he should begin with giving them to understand that he had never learnt anything of any man whatsoever; he must address himself to them in words to this purpose:—

“‘Gentlemen, I have never been taught anything, I never frequented the conversation of men of parts, I never gave myself the trouble to look out for a master that was able to instruct me. On the contrary, gentlemen, I have not only had an aversion to learn from others, but I should even have been very sorry to have it believed I had done so; nevertheless, I will venture to tell you what chance shall suggest to me in this present occasion.’ At this rate they who present themselves to be received physicians might introduce a like discourse as thus:—'Gentlemen, I have never had any master to teach me this science; for, indeed, I would never learn it, nor even have the repute of having learnt it; nevertheless, admit me a physician, and I will endeavor to become learned in the art by making experiments on your own bodies.'"

All the company fell a-laughing at this pleasant preface, and from that time Euthydemus never avoided Socrates' company as he had done before; but he never offered to speak, believing that his silence would be an argument of his modesty. Socrates, being desirous to rally him out of that mistaken notion, spoke to him in this manner:—

"I wonder that they who desire to learn to play upon the lute, or to ride well, do not endeavor to learn it alone by themselves; but that they look out for masters, resolved to do everything they bid them, and to believe all they say, there being no other way to arrive at perfection in those arts; and that they who hope one day to govern the Republic, and to declaim before the people, imagine they can become fit to do so of themselves all of a sudden. Nevertheless, it must be owned that these employments are more difficult than the others, since among the great number of persons who push themselves into office so few discharge their duty as they ought. This shows us that more labor and diligence is required in such as would capacitate themselves for those offices than for anything else."

By these discourses, Socrates having prepared the mind of Euthydemus to hearken to what he intended to say to him, and to enter into conference with him, he came another time by himself into the same shop, and taking a seat next to this young man—"I have heard," said he to him, "that you have been curious in buying a great many good books."

"I have," said Euthydemus, "and continue to do so every day, designing to have as many as I can get."

"I commend you very much," said Socrates, "for choosing rather to hoard up a treasure of learning and knowledge than of money. For you testify by so doing that you are not of opinion that riches, or silver and gold, can render one more valuable, that is to say, a wiser or a better man; but that it is only the writings and precepts of the philosophers and other fine writers that are the true riches, because they enrich with virtue the minds of those that possess them."

Euthydemus was pleased to hear him say this, believing that he approved his method; and Socrates, perceiving his satisfaction, went on: "But what is your design of making a collection of so many books? Do you intend to be a physician? There are many books in that science."

"That is not my design," said Euthydemus.

"Will you be an architect, then?" said Socrates, "for that art requires a learned man. Or do you study geometry or astrology?"

"None of them."

"Do you mean to be a reciter of heroic verses?" continued Socrates, "for I have been told that you have all Homer's works."

"Not in the least," answered Euthydemus, "for I have observed that men of that profession know indeed a great many verses by heart, but for anything else they are for the most part very impertinent."

"Perhaps you are in love with that noble science that makes politicians and economists, and that renders men capable to govern, and to be useful to others and to themselves?"

"That is what I endeavor to learn," said Euthydemus, "and what I passionately desire to know."

"It is a sublime science," replied Socrates; "it is that we call the royal science, because it truly is the science of kings. But have you weighed this point, whether a man can excel in that science without being an honest man?"

"I have," said the young man, "and am even of opinion that none but honest men can be good citizens."

"And are you an honest man?" said Socrates.

"I hope I am," answered Euthydemus, "as honest a man as another."

"Tell me," said Socrates, "can we know who are honest men by what they do, as we know what trade a man is of by his work?"

"We may."

"Then," said Socrates, "as architects show us their works, can honest men show us theirs likewise?"

"No doubt of it," replied Euthydemus; "and it is no difficult task to show you which are the works of justice, and which those of injustice, that we so often hear mentioned."

"Shall we," said Socrates, "make two characters, the one (J) to signify justice, the other (I) to denote injustice; and write under one of them all the works that belong to justice, and under the other all that belong to injustice?"

"Do," said Euthydemus, "if you think fit."

Socrates, having done what he proposed, continued thus his discourse: —"Do not men tell lies?"

"Very often," answered Euthydemus.

"Under which head shall we put lying?"

"Under that of injustice," said Euthydemus.

"Do not men sometimes cheat?"

"Most certainly."

"Where shall we put cheating?" said Socrates.

"Under injustice."

"And doing wrong to one's neighbor?"

"There too."

"And selling of free persons into slavery?"

"Still in the same place."

"And shall we write none of all these," said Socrates, "under the head of justice?"

"Not one of them," answered Euthydemus; "it would be strange if we did."

"But what," replied Socrates, "when a general plunders an enemy's city, and makes slaves of all the inhabitants, shall we say that he commits an injustice?"

"By no means."

"Shall we own, then, that he does an act of justice?"

"Without doubt."

"And when he circumvents his enemies in the war, does he not do well?"

"Very well."

"And when he ravages their land, and takes away their cattle and their corn, does he not do justly?"

"It is certain he does," said Euthydemus; "and when I answered you that all these actions were unjust, I thought you had spoken of them in regard only of friend to friend."

"We must, therefore," replied Socrates, "put among the actions of justice those very actions we have ascribed to injustice, and we will only establish this distinction, that it is just to behave ourselves so towards our enemies; but that to treat our friends thus is an injustice, because we ought to live with them uprightly, and without any deceit."

"I think so," said Euthydemus.

"But," continued Socrates, "when a general sees that his troops begin to be disheartened, if he make them believe that a great reinforcement is coming to him, and by that stratagem inspires fresh courage into the soldiers, under what head shall we put this lie?"

"Under the head of justice." answered Euthydemus.

"And when a child will not take the physic that he has great need of, and his father makes it be given him in a mess of broth, and by that means the child recovers his health, to which shall we ascribe this deceit?"

"To justice likewise." "And if a man, who sees his friend in despair, and fears he will kill himself, hides his sword from him, or takes it out of his hands by force, what shall we say of this violence?"

"That it is just." replied Euthydemus.

"Observe what you say," continued Socrates; "for it follows from your answers that we are not always obliged to live with our friends uprightly, and without any deceit, as we agreed we were."

"No; certainly we are not, and if I may be permitted to retract what I said, I change my opinion very freely."

"It is better," said Socrates, "to change an opinion than to persist in a wrong one. But there is still one point which we must not pass over without inquiry, and this relates to those whose deceits are prejudicial to their friends; for I ask you, which are most unjust, they who with premeditate design cheat their friends, or they who do it through inadvertency?"

"Indeed," said Euthydemus, "I know not what to answer, nor what to believe, for you have so fully refuted what I have said, that what appeared to me before in one light appears to me now in another. Nevertheless, I will venture to say that he is the most unjust who deceives his friend deliberately."

"Do you think," said Socrates, "that one may learn to be just and honest, as well as we learn to read and write?"

"I think we may."

"Which," added Socrates, "do you take to be the most ignorant, he who reads wrong on purpose, or he who reads wrong because he can read no better?"

"The last of them," answered Euthydemus; "for the other who mistakes for pleasure need not mistake when he pleases."

"Then," inferred Socrates, "he who reads wrong deliberately knows how to read; but he who reads wrong without design is an ignorant man."

"You say true."

"Tell me likewise," pursued Socrates, "which knows best what ought to be done, and what belongs to justice, he who lies and cheats with premeditate design, or he who deceives without intention to deceive?"

"It is most plain," said Euthydemus, "that it is he who deceives with premeditate design."

"But you said," replied Socrates, "that he who can read is more learned than he who cannot read?"

"I did so."

"Therefore he who best knows which are the duties of justice is more just than he that knows them not."

"It seems to be so," answered Euthydemus, "and I know not well how I came to say what I did."

"Indeed," said Socrates, "you often change your opinion, and contradict what you say; and what would you yourself think of any man who pretended to tell the truth, and yet never said the same thing; who, in pointing out to you the same road, should show you sometimes east, sometimes west, and who, in telling the same sum, should find more money at one time than another; what would you think of such a man?"

"He would make all men think," answered Euthydemus, "that he knew nothing of what he pretended to know."

Socrates urged him yet further, and asked him: "Have you ever heard say that some men have abject and servile minds?"

"I have."

"Is it said of them because they are learned or because they are ignorant?"

"Surely because they are ignorant."

"Perhaps," said Socrates, "it is because they understand not the trade of a smith?"

"Not in the least for that." "Is it because they know not how to build a house, or to make shoes?"

"By no means," said Euthydemus; "for most who are skilled in such professions have likewise abject and servile minds."

"This character, then," pursued Socrates, "must be given to those who are ignorant of the noble sciences, and who know not what is just nor what is honorable?"

"I believe so."

"We ought, therefore, Euthydemus, to do all we can to avoid falling into that ignominious ignorance that sinks us down so low."

"Alas, Socrates!" cried he out, "I will not lie for the matter; I thought I knew something in philosophy, and that I had learnt whatever was requisite to be known by a man who desired to make a practice of virtue; but judge how much I am afflicted to see that, after all my labors, I am not able to answer you concerning things which I ought chiefly to know; and yet I am at a loss what method to pursue in order to render myself more capable and knowing in the things I desire to understand."

Upon this, Socrates asked him whether he had ever been at Delphi, and Euthydemus answered that he had been there twice.

"Did you not take notice," said Socrates, "that somewhere on the front of the temple there is this inscription, 'KNOW THYSELF'?"

"I remember," answered he, "I have read it there."

"It is not enough," replied Socrates, "to have read it. Have you been the better for this admonition? Have you given yourself the trouble to consider what you are?"

"I think I know that well enough," replied the young man, "for I should have found it very difficult to have known any other thing if I had not known myself."

"But for a man to know himself well," said Socrates, "it is not enough that he knows his own name; for, as a man that buys a horse cannot be certain that he knows what he is before he has ridden him, to see whether he be quiet or restive, whether he be mettlesome or dull, whether he be fleet or heavy—in short, before he has made trial of all that is good and bad in him—in like manner, a man cannot say that he knows himself before he has tried what he is fit for, and what he is able to do."

"It is true," said Euthydemus, "that whoever knows not his own strength knows not himself."

"But," continued Socrates, "who sees not of how great advantage this knowledge is to man, and how dangerous it is to be mistaken in this affair? For he who knows himself knows likewise what is good for himself. He sees what he is able to do, and what he is not able to do; by applying himself to things that he can do, he gets his bread with pleasure, and is happy; and by not attempting to do the things he cannot do, he avoids the danger of falling into errors, and of seeing himself miserable. By knowing himself, he knows likewise how to judge of others, and to make use of their services for his own advantage, either to procure himself some good, or to protect himself from some misfortune; but he who knows not himself, and is mistaken in the opinion he has of his own abilities, mistakes likewise in the knowledge of others, and in the conduct of his own affairs. He is ignorant of what is necessary for him, he knows not what he undertakes, nor comprehends the means he makes use of, and this is the reason that success never attends his enterprises, and that he always falls into misfortunes. But the man who sees clear into his own designs generally obtains the end he proposes to himself, and at the same time gains reputation and honor. For this reason, even his equals are well pleased to follow his advices; and they whose affairs are in disorder implore his assistance, and throw themselves into his hands, depending upon his prudence to retrieve their affairs, and to restore them to their former good condition. But he who undertakes he knows not what, generally makes an ill choice, and succeeds yet worse; and the present damage is not the only punishment he undergoes for his temerity. He is disgraced forever; all men laugh at him, all men despise and speak ill of him. Consider likewise what happens to Republics who mistake their own strength, and declare war against States more powerful than themselves; some are utterly ruined, others lose their liberty, and are compelled to receive laws from the conquerors."

"I am fully satisfied," said Euthydemus, "that a great deal depends on the knowledge of oneself. I hope you will now tell me by what a man must begin to examine himself."

"You know," said Socrates, "what things are good and what are bad?"

"Indeed," answered Euthydemus, "if I knew not that, I were the most ignorant of all men."

"Then tell me your thoughts of this matter," said Socrates.

"First," said Euthydemus, "I hold that health is a good and sickness an evil, and that whatever contributes to either of them partakes of the same qualities. Thus nourishment and the exercises that keep the body in health are very good; and, on the contrary, those that cause diseases are hurtful."

"But would it not be better to say," replied Socrates, "that health and sickness are both good when they are the causes of any good, and that they are both bad when they are the causes of any ill?"

"And when can it ever happen," said Euthydemus, "that health is the cause of any ill, and sickness the cause of any good?"

"This may happen," answered Socrates, "when troops are raised for any enterprise that proves fatal; when men are embarked who are destined to perish at sea; for men who are in health may be involved in these misfortunes, when they who, by reason of their infirmities, are left at home, will be exempted from the mischiefs in which the others perish."

"You say true," said Euthydemus, "but you see, too, that men who are in health are present in fortunate occasions, while they who are confined to their beds cannot be there."

“It must therefore be granted,” said Socrates, “that these things which are sometimes useful and sometimes hurtful are not rather good than bad.”

“That is, indeed, the consequence of your argument,” replied Euthydemus; “but it cannot be denied that knowledge is a good thing; for what is there in which a knowing man has not the advantage of an ignorant one?”

“And have you not read,” said Socrates, “what happened to Dædalus for his knowing so many excellent arts, and how, being fallen into the hands of Minos, he was detained by force, and saw himself at once banished from his country and stripped of his liberty? To complete his misfortune, flying away with his son, he was the occasion of his being miserably lost, and could not, after all, escape in his own person; for, falling into the hands of barbarians, he was again made a slave. Know you not likewise the adventure of Palamedes, who was so envied by Ulysses for his great capacity, and who perished wretchedly by the calumnious artifices of that rival? How many great men likewise has the King of Persia caused to be seized and carried away because of their admirable parts, and who are now languishing under him in a perpetual slavery?”

“But, granting this to be as you say,” added Euthydemus, “you will certainly allow good fortune to be a good?”

“I will,” said Socrates, “provided this good fortune consists in things that are undoubtedly good.”

“And how can it be that the things which compose good fortune should not be infallibly good?”

“They are,” answered Socrates, “unless you reckon among them beauty and strength of body, riches, honors, and other things of that nature.”

“And how can a man be happy without them?”

“Rather,” said Socrates, “how can a man be happy with things that are the causes of so many misfortunes? For many are daily corrupted because of their beauty; many who presume too much on their own strength are oppressed under the burden of their undertakings. Among the rich, some are lost in luxury, and others fall into the snares of those that wait for their estates. And lastly, the reputation and honors that are acquired in Republics are often the cause of their ruin who possess them.”

“Certainly,” said Euthydemus, “if I am in the wrong to praise good fortune, I know not what we ought to ask of the Deity.”

“Perhaps, too,” replied Socrates, “you have never considered it, because you think you know it well enough.

“But,” continued he, changing the subject of their discourse, “seeing you are preparing yourself to enter upon the government of our Republic, where the people are master, without doubt you have reflected on the nature of this State, and know what a democracy is?”

“You ought to believe I do.”

“And do you think it possible,” said Socrates, “to know what a democracy or popular State is without knowing what the people is?”

"I do not think I can."

"And what is the people?" said Socrates.

"Under that name," answered Euthydemus, "I mean the poor citizens."

"You know, then, who are the poor?"

"I do," said Euthydemus.

"Do you know, too, who are the rich?"

"I know that too."

"Tell me, then, who are the rich and who are the poor?"

"I take the poor," answered Euthydemus, "to be those who have not enough to supply their necessary expenses, and the rich to be they who have more than they have occasion for."

"But have you observed," replied Socrates, "that there are certain persons who, though they have very little, have nevertheless enough, and even lay up some small matter out of it; and, on the contrary, there are others who never have enough how great soever their estates and possessions are?"

"You put me in mind," said Euthydemus, "of something very much to the purpose, for I have seen even some princes so necessitous that they have been compelled to take away their subjects' estates, and to commit many injustices."

"We must, then," said Socrates, "place such princes in the rank of the poor, and those who have but small estates, yet manage them well, in the number of the rich."

"I must give consent to all you say," answered Euthydemus, "for I am too ignorant to contradict you; and I think it will be best for me, from henceforward, to hold my peace, for I am almost ready to confess that I know nothing at all."

Having said this, he withdrew, full of confusion and self-contempt, beginning to be conscious to himself that he was indeed a person of little or no account at all. Nor was he the only person whom Socrates had thus convinced of their ignorance and insufficiency, several of whom never came more to see him, and valued him the less for it. But Euthydemus did not act like them. On the contrary, he believed it impossible for him to improve his parts but by frequently conversing with Socrates, insomuch that he never left him, unless some business of moment called him away, and he even took delight to imitate some of his actions. Socrates, seeing him thus altered from what he was, was tender of saying anything to him that might irritate or discourage him; but took care to speak more freely and plainly to him of the things he ought to know and apply himself to.

## CHAPTER III.

PROOFS OF A KIND SUPERINTENDING PROVIDENCE.—WHAT RETURNS OF GRATITUDE AND DUTY MEN OUGHT TO MAKE TO GOD FOR HIS FAVORS.—AN HONEST AND GOOD LIFE THE BEST SONG OF THANKSGIVING OR THE MOST ACCEPTABLE SACRIFICE TO THE DEITY.

As Socrates considered virtue and piety as the two grand pillars of a State, and was fully persuaded that all other qualifications whatever, without the knowledge and practice of these, would, instead of enabling men to do good, serve, on the contrary, to render them more wicked and more capable of doing mischief. For that reason he never pressed his friends to enter into any public office until he had first instructed them in their duty to God and mankind. But, above all, he endeavored to instill into their minds pious sentiments of the Deity, frequently displaying before them high and noble descriptions of the Divine power, wisdom, and goodness. But seeing several have already written what they had heard him say in diverse occasions upon this subject, I will content myself with relating some things which he said to Euthydemus when I myself was present.

"Have you never reflected, Euthydemus, on the great goodness of the Deity in giving to men whatever they want?"

"Indeed, I never have," answered he.

"You see," replied Socrates, "how very necessary light is for us, and how the gods give it us."

"You say true," answered Euthydemus, "and without light we should be like the blind."

"But because we have need of repose they have given us the night to rest in; the night, which, of all times, is the fittest for repose."

"You are in the right," said Euthydemus, "and we ought to render them many praises for it."

"Moreover," continued Socrates, "as the sun is a luminous body, and by the brightness of his beams discovers to us all visible things, and shows us the hours of the day; and as, on the contrary, the night is dusky and obscure, they have made the stars to appear, which, during the absence of the day, mark the hours to us, by which means we can do many things we have occasion for. They have likewise made the moon to shine, which not only shows us the hours of the night, but teaches us to know the time of the month."

"All this is true," said Euthydemus.

"Have you not taken notice likewise that having need of nourishment, they supply us with it by the means of the earth? How excellently the seasons are ordered for the fruits of the earth, of which we have such an abundance, and so great a variety, that we find, not only wherewith to supply our real wants but to satisfy even luxury itself."

"This goodness of the gods," cried Euthydemus, "is an evidence of the great love they bear to men."

"What say you," continued Socrates, "to their having given us water, which is so necessary for all things? For it is that which assists the earth to produce the fruits, and that contributes, with the influences from above, to bring them to maturity; it helps to nourish us, and by being mingled with what we eat, makes it more easily got ready, more useful, and more delightful; in short, being of so universal an use, is it not an admirable providence that has made it so common? What say you to their having given us fire, which defends us from cold, which lights us when it is dark, which is necessary to us in all trades, and which we cannot be without in the most excellent and useful inventions of men?"

"Without exaggeration," said Euthydemus, "this goodness is immense."

"What say you, besides," pursued Socrates, "to see that after the winter the sun comes back to us, and that proportionally as he brings the new fruits to maturity, he withers and dries those whose season is going over; that after having done us this service he retires that his heat may not incommode us; and then, when he is gone back to a certain point, which he cannot transgress, without putting us in danger of dying with cold, he returns again to retake his place in this part of the heavens, where his presence is most advantageous to us? And because we should not be able to support either cold or heat, if we passed in an instant from one extreme to the other, do you not admire that this planet approaches us and withdraws himself from us by so just and slow degrees, that we arrive at the two extremes without almost perceiving the change?"

"All these things," said Euthydemus, "make me doubt whether the gods have anything to do but to serve mankind. One thing puts me to a stand, that the irrational animals participate of all these advantages with us."

"How!" said Socrates, "and do you then doubt whether the animals themselves are in the world for any other end than for the service of man? What other animals do, like us, make use of horses, of oxen, of dogs, of goats, and of the rest? Nay, I am of opinion, that man receives not so much advantage from the earth as from the animals; for the greatest part of mankind live not on the fruits of the earth, but nourish themselves with milk, cheese, and the flesh of beasts; they get the mastery over them, they make them tame, and use them to their great advantage in war and for the other necessities of life."

"I own it," said Euthydemus, "for some of them are much stronger than man, and yet are so obedient to him, that he does with them whatever he pleases."

"Admire yet further the goodness of the gods," said Socrates, "and consider, that as there is in the world an infinite number of excellent and useful things, but of very different natures, they have given us external senses, which correspond to each of those sensible objects, and by means of which senses we can perceive and enjoy all of them. They have, besides, endued us with reason and understanding, which enables us to discern between those things that the senses discover to us, to inquire into the different natures of things useful and things hurtful, and so to know by experience which to choose and which to reject. They have likewise given us speech, by means whereof we communicate our thoughts to each other, and instruct one another in the knowledge of whatever is excellent and good; by which also we publish our laws and govern States. In fine, as we cannot always foresee what is to happen to us, nor know what it will be best for us to do, the gods offer us likewise their assistance by the means of the oracles; they discover the future to us when we go to consult them, and teach us how to behave ourselves in the affairs of life.”

Here Euthydemus, interrupting him, said, “And indeed these gods are in this respect more favorable to you than to the rest of mankind, since, without expecting you to consult them, they give you notice of what you ought or ought not to do.”

“You will allow, therefore, that I told you true,” said Socrates, “when I told you there were gods, and that they take great care of men; but expect not that they will appear to you, and present themselves before your eyes. Let it suffice you to behold their works, and to adore them, and be persuaded that this is the way by which they manifest themselves to men, for among all the gods that are so liberal to us there is not one who renders himself visible to confer on us his favors. And that Supreme God, who built the universe, and who supports this great work, whose every part is accomplished in beauty and goodness; He, who is the cause that none of its parts grow old with time, and that they preserve themselves always in an immortal vigor, who is the cause, besides, that they inviolably obey His laws with a readiness that surpasses our imagination; He, I say, is visible enough in the so many wondrous works of which He is author, but our eyes cannot penetrate even into His throne to behold Him in these great occupations, and in that manner it is that He is always invisible. Do but consider that the sun, who seems to be exposed to the sight of all the world, does not suffer us to gaze fixedly upon him, and whoever has the temerity to undertake it is punished with sudden blindness. Besides, whatever the gods make use of is invisible; the thunder is lanced from above, it shatters all it finds in its way, but we see it not fall, we see it not strike, we see it not return. The winds are invisible, though we see the desolations they daily make, and easily feel when they grow boisterous. If there be anything in man that partakes of the divine nature it is his soul, which, beyond all dispute, guides and governs him, and yet we cannot see it. Let all this, therefore, teach you not to neglect or disbelieve the Deity, because He is invisible; learn to know His presence and power from the visible effects of it in the world around you; be persuaded of the universal care and providence of the all-surrounding Deity from the blessings He showers down upon all His creatures, and be sure to worship and serve this God in a becoming manner.”

“I am sure,” said Euthydemus, “I shall never derogate from the respect due to the gods; and I am even troubled that every man cannot sufficiently acknowledge the benefits he receives from them.”

“Be not afflicted at that,” said Socrates, “for you know what answer the Delphian Oracle is wont to return to those who inquire what they ought to do in order to make an acceptable sacrifice. ‘Follow the custom of your country,’ says he to them. Now, it is a custom received in all places for every man to sacrifice to them according to his power; and by consequence there is no better nor more pious a way of honoring the gods than that, since they themselves ordain and approve it. It is indeed a truth that we ought not to spare anything of what we are able to offer, for that would be a manifest contempt. When, therefore, a man has done all that is in his power to do, he ought to fear nothing and hope all; for, from whence can we reasonably hope for more, than from those in whose power it is to do us the greatest good? And by what other way can we more easily obtain it, than by making ourselves acceptable to them? And how can we better make ourselves acceptable to them, than by doing their will?”

This is what Socrates taught, and by this doctrine, which was always accompanied with an exemplary devotion, he greatly advanced his friends in piety.

## CHAPTER IV.

### INSTANCES OF THE INVIOLABLE INTEGRITY OF SOCRATES.— HIS CONVERSATION WITH HIPPIAS CONCERNING JUSTICE.

Concerning justice, it cannot be said that Socrates concealed his opinion of it, for he plainly revealed his sentiments by his actions, as well in public as in private, making it his business to serve every man, and to obey the magistrates and the laws; insomuch, that as well in the army as in the city, his obedience and uprightness rendered him remarkable above all others. He fully discovered the integrity of his soul, when he presided in the assemblies of the people; he would never pass a decree that was contrary to the laws; he alone defended the cause of justice against the efforts of the multitude, and opposed a violence which no man but himself was able to resist. Again, when the Thirty commanded him anything that was unjust, he did not obey them. Thus, when they forbid him to speak to the young men, he regarded not their inhibition, and when they gave orders to him, as well as to some other citizens, to bring before them a certain man, whom they intended to put to death, he alone would do nothing in it, because that order was unjust. In like manner when he was accused by Melitus, though in such occasions others endeavor to gain their judges by flatteries and ignominious solicitations, which often procure them their pardon, he would not put in practice any of these mean artifices that are repugnant to the laws, and yet he might very easily have got himself acquitted, if he could have prevailed with himself to comply in the least with the custom, but he chose rather to die in an exact observance of the laws, than to save his life by acting contrary to them, for he utterly abhorred all mean or indirect practices; and this was the answer he gave to several of his friends who advised him to the contrary.

Since I am now illustrating the character of Socrates with regard to justice, I will, at the same time, relate a conversation I remember he had with Hippias of Elis on that subject.

It was a long while that Hippias had not been at Athens; and being arrived there, he happened to come to a place where Socrates was discoursing with some persons, and telling them that if anyone had a mind to learn a trade, there wanted not masters to teach him; nay, that if one would have a horse trained up there were persons enough to undertake it; but that if one desired to learn to be a good man, or to have his son, or any of his family taught to be so, it would be difficult to know to whom to apply himself. Hippias rallying him, said:—“What! Socrates, you are still repeating the same things I heard you say so long ago.”

“Nay, more,” replied Socrates, “and always upon the same subject; but you, perhaps, being learned as you are, do not always say the same thing upon the same subject.”

“Indeed,” said Hippias, “I always endeavor to say something new.”

“Is it possible,” replied Socrates?

“Pray tell me if you were asked how many letters there are in my name, and which they are, would you answer sometimes in one manner and sometimes in another? Or if you were asked whether twice five be not ten, would you not always say the same thing?"

"In subjects like those," said Hippias, "I should be obliged to say the same thing as well as you; but since we are upon the theme of justice, I believe I can now say some things of it, against which, neither you nor any man else can make any objection."

"Good God!" cried Socrates, "what a mighty boast is here! Upon my word, Hippias, you have made an admirable discovery! And you have reason to value yourself upon it; for, let me tell you, if you can establish one single opinion of justice, the judges will be no longer divided in their sentiments, there will be no more quarrels, no more suits at law, no more seditions among citizens, no more wars between republics. Indeed, it much troubles me to leave you before you have taught me this secret, which you say you have discovered."

"I give you my word," answered Hippias, "that I will tell you nothing of it, till you have first declared your own opinion concerning justice; for it is your old way to interrogate others, and then to laugh at them by refuting what they have said; but you never make known your own opinions, that you may not be obliged to give a reason for them."

"Why do you lay this to my charge," said Socrates, "since I am continually showing to all the world what are the things I believe to be just?"

"How do you show it?" said Hippias.

"If I explain it not by my words," answered Socrates, "my actions speak it sufficiently; and do you think that actions deserve not rather to be believed than words?"

"Much rather," said Hippias, "because many may say one thing, and do another; nay, we see that, in fact, many who preach up justice to others are very unjust themselves; but this cannot be said of a man whose every action is good, and that never in his life did an unjust thing."

"Have you known, then," said Socrates, "that I have accused any man out of malice, that I have sown dissension among friends, that I have raised seditions in the Republic; in short, that I have committed any other sort of injustice?"

"Not in the least," said he.

"Well, then," added Socrates, "do you not take him to be just who commits no manner of injustice?"

"It is plain, now,'" said Hippias, "that you intend to get loose, and that you will not speak your mind freely, nor give us an exact definition of justice. For all this while you have only shown what just men do not, but not what they do."

"I should have thought," said Socrates, "I had given at once a good definition, and a clear instance of justice, when I called it an aversion from doing injustice. But since you will not allow it to be so, see whether this will satisfy you: I say, then, that justice 'is nothing but the observance of the laws.'"

"You mean," said Hippias, "that to observe the laws is to be just?"

"Yes," answered Socrates.

“I cannot comprehend your thought,” said Hippias.

“Do you not know,” pursued Socrates, “what the laws in a State are?”

“The laws,” answered Hippias, “are what the citizens have ordained by a universal consent.”

“Then,” inferred Socrates, “he who lives conformably to those ordinances observes the laws; and he who acts contrary to them is a transgressor of the laws.”

“You say true.”

“Is it not likewise true,” continued Socrates, “that he who obeys these ordinances does justly, and that he obeys them not does unjustly?”

“Yes.”

“But,” said Socrates, “he who acts justly is just, and he who acts unjustly is unjust?”

“Without doubt.”

“Therefore,” said Socrates, “whosoever observes the laws is just, and whosoever observes them not is unjust.”

“But how can it be imagined,” objected Hippias, “that the laws are a good thing, and that it is good to obey them, since even they that made them mend, alter, and repeal them so often?”

To this Socrates answered, “When you blame those who obey the laws, because they are subject to be abrogated, you do the same thing as if you laughed at your enemies for keeping themselves in a good posture of defense during the war, because you might tell them that the peace will one day be made: and thus you would condemn those who generously expose their lives for the service of their country. Do you know,” added he, “that Lycurgus could never have rendered the Republic of Sparta more excellent than other States if he had not made it his chief care to incline the citizens most exactly to observe the laws? This, too, is what all good magistrates aim at, because a Republic that is obedient to the laws is happy in peace, and invincible in war. Moreover, you know that concord is a great happiness in a State. It is daily recommended to the people; and it is an established custom all over Greece to make the citizens swear to live in good understanding with one another, and each of them takes an oath to do so. Now, I do not believe that this unity is exacted of them, only that they might choose the same company of comedians, or of musicians, nor that they might give their approbation to the same poets, or all take delight in the same diversions, but that they may all unanimously obey the laws, because that obedience is the security and the happiness of the State. Concord, therefore, is so necessary, that without it good polity and authority cannot subsist in any State, nor good economy and order in any family.

“In our private capacity, likewise, how advantageous is it to obey the laws? By what means can we more certainly avoid punishments, and deserve rewards? What more prudent conduct can we observe, always to gain our suits at law, and never to be cast! To whom should we with greater confidence trust our estates or our children, than to him who makes a conscience of observing the laws? Who can deserve more of his country? Whom can she more safely entrust with public posts, and on whom can she more justly bestow the highest honors, than on the good and honest man? Who will discharge himself better of his duty towards his father or his mother, towards his relations or his domestics, towards his friends, his fellow-citizens, or his guests? To whom will the enemy rather trust for the observing of a truce, or for the performance of a treaty of peace? With whom would we rather choose to make an alliance? To whom will the allies more readily give the command of their armies, or the government of their towns? From whom can we rather hope for a grateful return of a kindness than from a man who strictly obeys the laws? and, by consequence, to whom will men be more ready to do good turns, than to him of whose gratitude they are certain? With whom will men be better pleased to contract a friendship, and, consequently, against whom will men be less inclined to commit acts of hostility, than against that person who has everybody for his well-wisher and friend, and few or none for his ill-wishers or enemies? These, Hippias, are the advantages of observing the laws. And now, having shown you that the observance of the laws is the same thing with justice, if you are of another opinion, pray let me know it."

"Indeed, Socrates," answered Hippias, "what you have said of justice agrees exactly with my sentiments of it."

"Have you never heard," continued Socrates, "of certain laws that are not written?"

"You mean the laws," answered Hippias, "which are received all over the earth."

"Do you think, then," added Socrates, "that it was all mankind that made them?"

"That is impossible," said Hippias, "because all men cannot be assembled in the same place, and they speak not all of them the same language."

"Who, then, do you think gave us these laws?"

"The gods," answered Hippias; "for the first command to all men is to adore the gods."

"And is it not likewise commanded everywhere to honor one's father and mother?"

"Yes, certainly," said Hippias.

Socrates went on:—"And that fathers and mothers should not marry with their own children, is not that too a general command?"

"No," answered Hippias, "this last law is not a Divine law, because I see some persons transgress it."

"They observe not the others better," said Socrates; "but take notice, that no man violates with impunity a law established by the gods. There are unavoidable punishments annexed to this crime; but we easily secure ourselves from the rigor of human laws, after we have transgressed them, either by keeping ourselves hid, or defending ourselves by open force."

"And what is this punishment," said Hippias, "which it is impossible for fathers, who marry with their own children, to avoid?"

"It is very great," said Socrates; "for what can be more afflicting to men, who desire to have children than to have very bad ones?"

"And how do you know," pursued Hippias, "that they will have bad children? What shall hinder them, if they are virtuous themselves, from having children that are so likewise?"

"It is not enough," answered Socrates, "that the father and the mother be virtuous: they must, besides, be both of them in the vigor and perfection of their age. Now, do you believe, that the seed of persons who are too young, or who are already in their declining age, is equal to that of persons who are in their full strength?"

"It is not likely that it is," said Hippias.

"And which is the best?" pursued Socrates.

"Without doubt," said Hippias, "that of a man in his strength."

"It follows, then," continued Socrates, "that the seed of persons who are not yet come to their full strength, or who are past it, is not good."

"In all appearance it is not."

"In those ages, then, we ought not to get children?" said Socrates.

"I think so."

"Such, therefore, as indulge their lust in such untimely fruition will have very weakly children?"

"I grant they will."

"And are not weakly children bad ones?"

"They are," said Hippias.

"Tell me, further," said Socrates, "is it not a universal law to do good to those who have done good to us?"

"Yes," said Hippias, "but many offend against this law."

"And they are punished for it," replied Socrates, "seeing their best friends abandon them, and that they are obliged to follow those who have an aversion for them. For are not they the best friends who do kindnesses whenever they are desired? And if he who has received a favor neglect to acknowledge it, or return it ill, does he not incur their hate by his ingratitude? And yet, finding his advantage in preserving their goodwill, is it not to them that he makes his court with most assiduity?"

"It is evident," said Hippias, "that it is the gods who have ordered these things; for, when I consider that each law carries with it the punishment of the transgressor, I confess it to be the work of a more excellent legislator than man."

"And do you think," said Socrates, "that the gods make laws that are unjust?"

"On the contrary," answered Hippias, "it is very difficult for any but the gods to make laws that are just."

"Therefore, Hippias," said Socrates, "according to the gods themselves 'to obey the laws is to be just.'"

This is what Socrates said on the subject of justice, and his actions being conformable to his words, he from day to day created a greater love of justice in the minds of those who frequented him.

## CHAPTER V.

### OF THE MISCHIEFS OF INTEMPERANCE, AND THE ADVANTAGES OF SOBRIETY.

I will now set down the arguments that Socrates used to bring his friends to the practice of good actions, for being of opinion that temperance is a great advantage to such as desire to do anything that is excellent, he first showed them, by his way of living, that no man was more advanced than himself in the exercise of that virtue; and in his conferences he exhorted his hearers above all things to the practice of it, and his thoughts being continually employed in the means of arriving to be virtuous, he made it likewise the subject of all his discourses.

I remember that talking once with Euthydemus concerning temperance he delivered himself to this effect:—"In your opinion, Euthydemus, is liberty a very valuable thing?"

"To be valued above all things," answered Euthydemus.

"Do you believe that a man who is a slave to sensual pleasures, and finds himself incapable of doing good, enjoys his liberty?"

"Not in the least."

"You allow, then, that to do good is to be free, and that to be prevented from doing it, by any obstacle whatever, is not to be free?"

"I think so," said Euthydemus.

"You believe, then," said Socrates, "that debauched persons are not free?" "I do."

"Do you believe likewise," continued Socrates, "that debauchery does not only hinder from doing good, but compels to do ill?"

"I think it does."

"What would you say, then, of a master who should hinder you from applying yourself to what is honest, and force you to undertake some infamous occupation?"

"I would say he was a very wicked master," answered Euthydemus.

"And which is the worst of all slaveries?" added Socrates.

"To serve ill masters," said Euthydemus.

"Therefore," inferred Socrates, "the debauched are in a miserable slavery."

"No doubt of it."

"Is it not debauchery, likewise," said Socrates, "that deprives men of their wisdom, the noblest gift of the gods, and drives them into ignorance and stupidity, and all manner of disorders? It robs them of leisure to apply themselves to things profitable, while it drowns them in sensual pleasures; and it seizes their minds to that degree that, though they often know which is the best way, they are miserably engaged in the worst."

"They are so."

"Nor can we expect to find temperance nor modesty in a debauched person, since the actions of temperance and debauchery are entirely opposite."

"There is no doubt of it," said Euthydemus.

"I do not think neither," added Socrates, "that it is possible to imagine anything that makes men neglect their duty more than debauchery."

"You say true."

"Is there anything more pernicious to man," said Socrates, "than that which robs him of his judgment, makes him embrace and cherish things that are hurtful, avoid and neglect what is profitable, and lead a life contrary to that of good men?"

"There is nothing," said Euthydemus.

Socrates went on:—"And may we not ascribe the contrary effects to temperance?"

"Without doubt."

"And is it not likely to be true that the cause of the contrary effects is good?"

"Most certainly."

"It follows, then, my dear Euthydemus," said Socrates, "that temperance is a very good thing?"

"Undoubtedly it is."

"But have you reflected," pursued Socrates, "that debauchery, which pretends to lead men to pleasures, cannot conduct them thither, but deceives them, leaving them in disappointment, satiety, and disgust? And have you considered that temperance and sobriety alone give us the true taste of pleasures? For it is the nature of debauchery not to endure hunger nor thirst, nor the fatigue of being long awake, nor the vehement desires of love, which, nevertheless, are the true dispositions to eat and drink with delight, and to find an exquisite pleasure in the soft approaches of sleep, and in the enjoyments of love. This is the reason that the intemperate find less satisfaction in these actions, which are necessary and frequently done. But temperance, which accustoms us to wait for the necessity, is the only thing that makes us feel an extreme pleasure in these occasions."

"You are in the right," said Euthydemus.

"It is this virtue, too," said Socrates, "that puts men in a condition of bringing to a state of perfection both the mind and the body, of rendering themselves capable of well governing their families, of being serviceable to their friends and their country, and of overcoming their enemies, which is not only very agreeable on account of the advantages, but very desirable likewise for the satisfaction that attends it. But the debauched know none of this, for what share can they pretend to in virtuous actions, they whose minds are wholly taken up in the pursuit of present pleasures?"

"According to what you say," replied Euthydemus, "a man given to voluptuousness is unfit for any virtue."

"And what difference is there," said Socrates, "between an irrational animal and a voluptuous man, who has no regard to what is best, but blindly pursues what is most delightful? It belongs to the temperate only to inquire what things are best and what not, and then, after having found out the difference by experience and reasoning, to embrace the good and avoid the bad, which renders them at once most happy, most virtuous, and most prudent."

This was the sum of this conference with Euthydemus. Now Socrates said that conferences were so called because the custom was to meet and confer together, in order to distinguish things according to their different species, and he advised the frequent holding of these conferences, because it is an exercise that improves and makes men truly great, teaches them to become excellent politicians, and ripens the judgment and understanding.

## CHAPTER VI.

SOCRATES' FRIENDS ATTAIN, BY FREQUENTING HIS CONVERSATION, AN EXCELLENT WAY OF REASONING.—THE METHOD HE OBSERVED IN ARGUING SHOWN IN SEVERAL INSTANCES.—OF THE DIFFERENT SORTS OF GOVERNMENT.—HOW SOCRATES DEFENDED HIS OPINIONS.

I will show, in the next place, how Socrates' friends learnt to reason so well by frequenting his conversation. He held that they who perfectly understand the nature of things can explain themselves very well concerning them, but that a man who has not that knowledge often deceives himself and others likewise. He therefore perpetually conferred with his friends without ever being weary of that exercise. It would be very difficult to relate how he defined every particular thing. I will therefore mention only what I think sufficient to show what method he observed in reasoning. And, in the first place, let us see how he argues concerning piety.

"Tell me," said he to Euthydemus, "what piety is?"

"It is a very excellent thing," answered Euthydemus.

"And who is a pious man?" said Socrates.

"A man who serves the gods."

"Is it lawful," added Socrates, "to serve the gods in what manner we please?"

"By no means," said Euthydemus; "there are laws made for that purpose, which must be kept."

"He, then, who keeps these laws will know how he ought to serve the gods?"

"I think so."

"And is it not true," continued Socrates, "that he who knows one way of serving the gods believes there is no better a way than his?"

"That is certain."

"And will he not be careful how he does otherwise?"

"I believe he will."

"He, then, who knows the laws that ought to be observed in the service of the gods, will serve them according to the laws?"

"Without doubt."

"But he who serves the gods as the laws direct, serves them as he ought?"

"True, he does." "And he who serves the gods as he ought is pious?" "There can be no doubt of it."

"Thus, then," said Socrates, "we have the true definition of a pious man: He who knows in what manner he ought to serve the gods?"

"I think so," said Euthydemus.

"Tell me further," continued Socrates, "is it lawful for men to behave themselves to one another as they please?"

"In nowise," answered Euthydemus; "there are also certain laws which they ought to observe among themselves."

"And do they," said Socrates, "who live together according to those laws, live as they ought?"

"Yes."

"And do they, who live as they ought, live well?"

"Certainly they do."

"And does he who knows how to live well with men understand well how to govern his affairs?"

"It is likely that he may."

"Now, do you believe," said Socrates, "that some men obey the laws without knowing what the laws command?"

"I do not believe it."

"And when a man knows what he ought to do, do you think he believes that he ought not to do it?"

"I do not think so."

"And do you know any men who do otherwise than they believe they ought to do?"

"None at all."

"They, then, who know the laws that men ought to observe among themselves, do what those laws command?"

"I believe so."

"And do they who do what the laws command, do what is just?"

"Most surely."

"And they who do what is just are just likewise?"

"None but they are so."

"We may, therefore, well conclude," said Socrates, "that the just are they who know the laws that men ought to observe among themselves?"

"I grant it," said Euthydemus.

"And as for wisdom," pursued Socrates, "what shall we say it is? Tell me whether are men said to be wise in regard to the things they know, or in regard to those they do not know?"

"There can be no doubt," answered Euthydemus, "but that it is in consideration of what they know; for how can a man be wise in things he knows not?"

"Then," said Socrates, "men are wise on account of their knowledge?"

"It cannot be otherwise."

"Is wisdom anything but what renders us wise?"

"No."

"Wisdom therefore is only knowledge?"

"I think so."

"And do you believe," said Socrates, "that it is in the power of a man to know everything?"

“Not so much as even the hundredth part.”

“It is, then, impossible,” said Socrates, “to find a man who is wise in all things?”

“Indeed it is,” said Euthydemus.

“It follows, then,” said Socrates, “that every man is wise in what he knows?”

“I believe so.”

“But can we, by this same way of comparison, judge of the nature of good?”

“As how?” said Euthydemus.

“Do you think,” said Socrates, “that the same thing is profitable to all men?”

“By no means.”

“Do you believe that the same thing may be profitable to one and hurtful to another?”

“I think it may.”

“Then is it not the good that is profitable?”

“Yes, certainly.”

“Therefore, ‘what is profitable is a good to him to whom it is profitable.’”

“That is true.”

“Is it not the same with what is beautiful? For, can you say that a body or a vessel is beautiful and proper for all the world?”

“By no means.”

“You will say, then, that it is beautiful in regard to the thing for which it is proper?”

“Yes.”

“But tell me whether what is reputed beautiful for one thing has the same relation to another as to that to which it is proper?”

“No.”

“Then ‘whatever is of any use is reputed beautiful in regard to the thing to which that use relates?’”

“I think so.”

“And what say you of courage?” added Socrates. “Is it an excellent thing?”

“Very excellent,” answered Euthydemus.

“But do you believe it to be of use in occasions of little moment?”

“Yes; but it is necessary in great affairs.”

“Do you think it of great advantage in dangers,” continued Socrates, “not to perceive the peril we are in?”

“I am not of that opinion.”

“At that rate,” said Socrates, “they who are not frightened because they see not the danger are in nowise valiant.”

“There is no doubt of it,” said Euthydemus, “for otherwise there would be some fools, and even cowards, who must be accounted brave.”

"And what are they who fear what is not to be feared?"

"They are less brave than the others," answered Euthydemus.

"They therefore," said Socrates, "who show themselves valiant in dangerous occasions, are they whom you call brave; and they who behave themselves in them unworthily, are they whom you call cowards?"

"Very right."

"Do you think," added Socrates, "that any men are valiant in such occasions except they who know how to behave themselves in them?"

"I do not think there are."

"And are not they, who behave themselves unworthily, the same as they who know not how to behave themselves?"

"I believe they are."

"And does not every man behave himself as he believes he ought to do?"

"Without doubt."

"Shall we say, then, that they who behave themselves ill know how they ought to behave themselves?"

"By no means."

"They, therefore, who know how to behave themselves, are they who behave themselves well?"

"They and no others."

"Let us conclude, then," said Socrates, "that they who know how to behave themselves well in dangers and difficult occasions are the brave, and that they who know not how to do so are the cowards."

"That is my opinion," said Euthydemus.

Socrates was wont to say, that a kingly government and a tyrannical government were indeed two sorts of monarchy, and that there was this difference between them; that, under a kingly government, the subjects obeyed willingly, and that everything was done according to the laws of the State; but that, under a tyrannical government, the people obeyed by force, and that all the laws were reduced to the sole will of the sovereign.

Concerning the other sorts of government, he said: That when the offices of a Republic are given to the good citizens, this sort of State was called aristocracy, or government of good men; when, on the contrary, the magistrates were chosen according to their revenues, it was called a plutocracy, or government of the rich; and when all the people are admitted, without distinction, to bear employments, it is a democracy, or popular government.

If anyone opposed the opinion of Socrates, on any affair whatever, without giving a convincing reason, his custom was to bring back the discourse to the first proposition, and to begin by that to search for the truth. For example: if Socrates had commended any particular person, and any stander-by had named another, and pretended that he was more valiant, or more experienced in affairs, he would have defended his opinion in the following manner:—"You pretend," would he have said, “that he of whom you speak is a better citizen than the person whom I was praising. Let us consider what is the duty of a good citizen, and what man is most esteemed in a Republic. Will you not grant me, that in relation to the management of the public revenue, he is in the highest esteem who, while he has that office, saves the Republic most money? In regard to the war, it is he who gains most victories over the enemies. If we are to enter into a treaty with other States, it is he who can dexterously win over to the party of the Republic those who before opposed its interests. If we are to have regard to what passes in the assemblies of the people, it is he who breaks the cabals, who appeases the seditious, who maintains concord and unity among the citizens.” This being granted him, he applied these general rules to the dispute in question, and made the truth plainly appear, even to the eyes of those who contradicted him. As for himself, when he undertook to discourse of anything, he always began by the most common and universally received propositions, and was wont to say, that the strength of the argumentation consisted in so doing. And, indeed, of all the men I have ever seen, I know none who could so easily bring others to own the truth of what he had a mind to prove to them. And he said that Homer, speaking of Ulysses, called him “the certain or never-failing orator,” because he had the art of supporting his arguments upon principles that were acknowledged by all men.

## CHAPTER VII.

### METHOD TO BE OBSERVED IN STUDY. —ARTS AND SCIENCES NO FURTHER USEFUL, THAN THEY CONTRIBUTE TO RENDER MEN WISER, BETTER, OR HAPPIER.— VAIN AND UNPROFITABLE KNOWLEDGE TO BE REJECTED.

I presume now, that what I have said has been a sufficient evidence of the frankness and sincerity with which Socrates conversed with his friends, and made known his opinions to them. It remains now that I should say something of the extreme care Socrates showed for the advancement of his friends, and how much he had at heart that they might not be ignorant of anything that could be useful to them, to the end they might not want the assistance of others in their own affairs. For this reason, he applied himself to examine in what each of them was knowing; then, if he thought it in his power to teach them anything that an honest and worthy man ought to know, he taught them such things with incredible readiness and affection; if not, he carried them himself to masters who were able to instruct them. But he resolved within himself how far a person who was well-educated in his studies ought to learn everything.

Thus for geometry he said, that we ought to know enough of it not to be imposed upon in measure when we buy or sell land, when we divide an inheritance into shares, or measure out the work of a laborer, and that it was so easy to know this, that if a man applied himself ever so little to the practice of such things, he would soon learn even the extent and circumference of the whole earth, and how to measure it; but he did not approve that a man should dive into the very bottom of this science, and puzzle his brains with I know not what figures, though he himself was expert in it, for he said he could not see what all those niceties and inventions were good for, which take up the whole life of a man, and distract him from other more necessary studies.

In like manner he was of opinion that a man should employ some time in astronomy, that he might know by the stars the hour of the night, what day of the month it is, and what season of the year we are in, in order that we might know when to relieve a sentinel in the night, and when it is best to venture out to sea, or undertake a journey, and, in short, that we might know how to do everything in its proper season. He said that all this was easily learnt by conversing with seamen, or with such as go a-hunting by night, or others who profess to know these things; but he dissuaded very much from penetrating farther into this science, as even to know what planets are not in the same declination, to explain all their different motions, to know how far distant they are from the earth, in how long time they make their revolutions, and what are their several influences, for he thought these sciences wholly useless, not that he was ignorant of them himself, but because they take up all our time, and divert us from better employments. In fine, he could not allow of a too curious inquiry into the wonderful workmanship of the Deity in the disposition of the universe, that being a secret which the mind cannot comprehend, and because it is not an action acceptable to God to endeavor to discover what He would hide from us. He held, likewise, that it was dangerous to perplex the mind with these sublime speculations, as Anaxagoras had done, who pretended to be very knowing in them, for in teaching that the sun was the same thing as fire, he does not consider that fire does not dazzle the eyes, but that it is impossible to support the splendor of the sun. He did not reflect, neither, that the sun blackens the sky, which fire does not; nor lastly, that the heat of the sun is necessary to the earth, in order to the production of trees and fruits, but that the heat of fire burns and kills them. When he said, too, that the sun was only a stone set on fire, he did not consider that a stone glitters not in the fire, and cannot last long in it without consuming, whereas the sun lasts always, and is an inexhaustible source of light.

Socrates advised, likewise, to learn arithmetic, but not to amuse ourselves with the vain curiosities of that science, having established this rule in all his studies and in all his conferences, never to go beyond what is useful.

He exhorted his friends to take care of their health, and to that purpose to consult with the learned; and to observe, besides, each in his own particular, what meat, what drink, and what exercise is best for him, and how to use them to preserve himself in health. For when a man has thus studied his own constitution, he cannot have a better physician than himself.

If anyone desired to attempt or to learn things that were above the power or capacity of human nature, he advised him to apply himself to divination; for he who knows by what means the gods generally signify their mind to men, or how it is they used to give them counsel and aid, such a person never fails to obtain from the Deity all that direction and assistance that is necessary for him.

## CHAPTER VIII.

### BEHAVIOR OF SOCRATES FROM THE TIME OF HIS CONDEMNATION TO HIS DEATH.—HIS CHARACTER SUMMED UP IN A FEW WORDS.

To conclude: if, because Socrates was condemned to death, anyone should believe that he was a liar to say that he had a good demon that guided him, and gave him instructions what he should or should not do, let him consider, in the first place, that he was arrived to such an age that if he had not died when he did, he could not have lived much longer; that by dying when he did he avoided the most toilsome part of life, in which the mind loses much of its vigor; and that in amends for it he discovered to the whole world the greatness of his soul, acquired to himself an immortal glory, by the defense he made before his judges, in behaving himself with a sincerity, courage, and probity that were indeed wonderful, and in receiving his sentence with a patience and resolution of mind never to be equaled; for it is agreed by all that no man ever suffered death with greater constancy than Socrates.

He lived thirty days after his condemnation, because the Delian feasts happened in that month, and the law forbids to put any man to death till the consecrated vessel that is sent to the Isle of Delos be come back to Athens. During that time his friends, who saw him continually, found no change in him; but that he always retained that tranquility of mind and agreeableness of temper which before had made all the world admire him. Now, certainly no man can die with greater constancy than this; this is doubtless the most glorious death that can be imagined; but if it be the most glorious, it is the most happy; and if it be the most happy, it is the most acceptable to the Deity.

Hermogenes has told me, that being with him a little after Melitus had accused him, he observed, that he seemed to decline speaking of that affair: from whence he took occasion to tell him that it would not be amiss for him to think of what he should answer in his own justification. To which Socrates replied: “Do you believe I have done anything else all my life than think of it?” And Hermogenes asking him what he meant by saying so? Socrates told him that he had made it the whole business of his life to examine what was just and what unjust; that he had always cherished justice and hated injustice, and that he did not believe there was any better way to justify himself.

Hermogenes said further to him—“Do you not know that judges have often condemned the innocent to death, only because their answers offended them, and that, on the contrary, they have often acquitted the guilty?”

“I know it very well,” answered Socrates; “but I assure you, that having set myself to think what I should say to my judges, the demon that advises me dissuaded me from it.”

At which Hermogenes seeming surprised, Socrates said to him, “Why are you surprised that this God thinks it better for me to leave this world than to continue longer in it? Sure, you are not ignorant that I have lived as well and as pleasantly as any man, if to live well be, as I take it, to have no concern but for virtue, and if to live pleasantly be to find that we have made some progress in it. Now, I have good reason to believe that this is my happy case, that I have always had a steady regard for virtue, and made progress in it, because I perceive that my mind, at this time, does not misgive me, nay, I have the sincere testimony of my conscience that I have done my duty; and in this belief I strengthen myself by the conversation I have had with others, and by comparing myself with them. My friends, too, have believed the same thing of me, not because they wish me well, for in that sense every friend would think as much of his friend, but because they thought they advanced in virtue by my conversation.

"If I were to live longer, perhaps I should fall into the inconveniences of old age: perhaps my sight should grow dim, my hearing fail me, my judgment become weak, and I should have more trouble to learn, more to retain what I had learnt; perhaps, too, after all, I should find myself incapable of doing the good I had done before. And if, to complete my misery, I should have no sense of my wretchedness, would not life be a burden to me? And, on the other hand, say I had a sense of it, would it not afflict me beyond measure? As things now stand, if I die innocent the shame will fall on those who are the cause of my death, since all sort of iniquity is attended with shame. But who will ever blame me because others have not confessed my innocence, nor done me justice? Past experience lets us see that they who suffer injustice, and they who commit it, leave not a like reputation behind them after their death. And thus, if I die on this occasion, I am most certain that posterity will more honor my memory than theirs who condemn me; for it will be said of me, that I never did any wrong, never gave any ill advice to any man; but that I labored all my life long to excite to virtue those who frequented me."

This was the answer that Socrates gave to Hermogenes, and to several others. In a word, all good men who knew Socrates daily regret his loss to this very hour, reflecting on the advantage and improvement they made in his company.

For my own part, having found him to be the man I have described, that is to say, so pious as to do nothing without the advice of the Deity; so just as never to have in the least injured any man, and to have done very signal services to many; so chaste and temperate as never to have preferred delight and pleasure before modesty and honesty; so prudent as never to have mistaken in the discernment of good and evil, and never to have had need of the advice of others, to form a right judgment of either; moreover, most capable to deliberate and resolve in all sorts of affairs, most capable to examine into men, to reprehend them for their vices, and to excite them to virtue; having, I say, found all these perfections in Socrates, I have always esteemed him the most virtuous and most happy of all men; and if anyone be not of my opinion, let him take the pains to compare him with other men, and judge of him afterwards.

# Xenophon's Memories of Socrates

THE WHOLE WORKS OF XENOPHON,

TRANSLATED BY FIELDING, WELWOOD, BRADLEY.

SOCRATES: THE ***STANDARD OF RIGHT AND WRONG*** ONCE FIXED, ALL DIFFERENCE OF OPINION AMONG THE JUDGES, ALL SEDITION AMONG THE PEOPLE, ALL LAWSUITS BETWEEN CITIZENS, ALL WARS AND CONTENTIONS AMONG COMMUNITIES, MUST BE AT AN END!

Holding my edition of Fielding's translation suspect, due to the poor quality of the original and every other feature at odds with more modern typography which challenges an OCR program, I have taken the liberty to second her translation, filling it with two additional texts for a complete Xenophon's memory of Socrates from a more recent and complete set of translations of Xenophon. As before, I have edited that version. John Clark Saturday, October 2, 2021

# XENOPHON’S MEMOIRS OF SOCRATES.

TRANSLATED BY

Sarah Fielding.

## PREFACE TO THE MEMOIRS OF SOCRATES.

Although the translator of the following Memoirs was fully persuaded, that the far greater number of those who favored her with their names, and assisted her with their interest, were influenced by much nobler motives, than the expectation of receiving any thing very extraordinary from her hand; yet, so little did this appear to her any reason for relaxing her endeavors, that on the contrary, she considered it as laying her under an additional obligation to do all the justice she possibly could to her author. It was partly on that account; partly from sickness; and partly from some other accidents, not more within her power to regulate, than the state of her own health, that the publication of these Memoirs has been deferred beyond the time first mentioned in the proposals: but if the task is, at last, discharged tolerably, the mind of the translator will be set much at ease; and the reader find somewhat to repay him for his waiting.

That the Memoirs of Socrates, with regard to the greatest part, are held in the highest estimation, is most certain; and if there are some passages which seem obscure; and of which the use does not so plainly appear to us at this distance of time; and from the dissimilarity of our customs and manners; yet, perhaps, we might not do amiss, in taking Socrates himself for our example in this particular, as well as in many others; who being presented by Euripides with the writings of Heraclitus, and afterwards asked his opinion of their merit;—”What I understand,” said he, “I find to be excellent; and therefore believe that to be of equal value, which I do not understand.”

“And, certainly,” continues the admired modern writer, from whom the quotation above was taken, “this candor is more particularly becoming us in the perusal of the works of ancient authors; of those works which have been preserved in the devastation of cities; and snatched up in the wreck of nations: which have been the delight of ages; and transmitted as the great inheritance of mankind, from one generation to another: and we ought to take it for granted, that there is a justness in the connexion, which we cannot trace; and a cogency in the reasoning, which we cannot understand.” The translator of the following sheets would willingly bespeak the same candor, in reading the translations of the ancient writers, which has above been thought so necessary for judging right of the originals. In the preface to the Life of Cicero, the celebrated writer of it thus expresses himself:—”Nor has that part of the task,” said he, (speaking of the several passages he had translated from the writings of Cicero) “been the easiest to me; as those will readily believe who have ever attempted to translate the classical writings of Greece and Rome.” It may, perhaps, be objected, “That candor alone is not sufficient for the present occasion:” to which it can only be answered, “That something was to be done: and, that no pains has been spared, to do it as well as possible.”

Note: The translator is sorry to find, that the title affixed to this work has not been approved of universally: and, in truth, that inundation of trifles, follies, and vices, lately introduced into the world, under the general appellation of Memoirs, has occasioned such an unhappy association of ideas, as does not well suit with a Xenophon’s giving a relation of what a Socrates once said and did: but the translator takes shelter for her self, under the respectable names of Mr. Johnson and Mrs. Carter; the one having, as she thinks, explained the word Memoir in a manner consistent with the present application of it; and the other actually made choice of it for the very same purpose as is here done.

## THE DEFENSE OF SOCRATES BEFORE HIS JUDGES.

I have always considered the manner in which Socrates behaved after he had been summoned to his trial, as most worthy of our remembrance; and that, not only with respect to the defense he made for himself, when standing before his judges; but the sentiments he expressed concerning his dissolution. For, although there be many who have written on this subject, and all concur in setting forth the wonderful courage and intrepidity wherewith he spoke to the assembly—so that it remains incontestable that Socrates did thus speak—yet that it was his full persuasion, that death was more eligible for him than life at such a season, they have by no means so clearly manifested; whereby the loftiness of his style, and the boldness of his speech, may wear at least the appearance of being imprudent and unbecoming.

But Hermogenes, the son of Hipponicus, was his intimate friend; and from him it is we have heard those things of Socrates, as sufficiently prove the sublimity of his language was only conformable to the sentiments of his mind. For, having observed him, as he tells us, choosing rather to discourse on any other subject than the business of his trial; he asked him, “If it was not necessary to be preparing for his defense?” And “What!” said he, “my Hermogenes, suppose you I have not spent my whole life in preparing for this very thing?” Hermogenes desiring he would explain himself: “I have,” said he, “steadily persisted, throughout life, in a diligent endeavor to do nothing which is unjust; and this I take to be the best and most honorable preparation.”

“But see you not,” said Hermogenes, “that often here in Athens, the judges, influenced by the force of oratory, condemn those to death who no way deserve it; and, not less frequently, acquit the guilty, when softened into compassion by the moving complaints, or the insinuating eloquence of those who plead their cause before them?”

"I know it," replied Socrates; "and therefore, twice have I attempted to take the matter of my defense under consideration; but the Genius always opposed me."

Hermogenes having expressed some astonishment at these words, Socrates proceeded: "Does it then appear marvelous to you, Hermogenes, that God should think this the very best time for me to die? Know you not, that hitherto I have yielded to no man that he has lived more uprightly or even more pleasurably than myself; possessed, as I was, of that well-grounded self-approbation, arising from the consciousness of having done my duty both to the gods and men: my friends also bearing their testimony to the integrity of my conversation! But now,—if my life is prolonged, and I am spared even to old age,—what can hinder, my Hermogenes, the infirmities of old age from falling upon me? My sight will grow dim; my hearing, heavy; less capable of learning, as more liable to forget what I have already learned; and if, to all this, I become sensible of my decay, and bemoan myself on the account of it; how can I say that I still lived pleasantly? It may be too," continued Socrates, "that God, through his goodness, has appointed for me, not only that my life should terminate at a time which seems the most seasonable; but the manner in which it will be terminated shall also be the most eligible: for, if my death is now resolved upon, it must needs be, that they who take charge of this matter will permit me to choose the means supposed the most easy; free too from those lingering circumstances which keep our friends in anxious suspense for us, and fill the mind of the dying man with much pain and perturbation. And when nothing offensive, nothing unbecoming, is left on the memory of those who are present, but the man is dissolved while the body is yet sound, and the mind still capable of exerting itself benevolently, who can say, Hermogenes, that so to die is not most desirable? And with good reason," continued Socrates, "did the gods' oppose themselves at what time we took the affair of my escape under deliberation, and determined, that every means should be diligently sought after to effect it; since, if our designs had been carried into execution, instead of terminating my life in the manner I am now going, I had only gained the unhappy privilege of finding it put an end to by the torments of some disease, or the lingering decays incident to old age, when all things painful flow in upon us together, destitute of every joy which might serve to soften and allay them.

"Yet think not, Hermogenes, the desire of death shall influence me beyond what is reasonable: I will not set out with asking it at their hands: but if, when I speak my opinion of myself, and declare what I think I have deserved both of gods and men, my judges are displeased, I will much sooner submit to it, than meanly entreat the continuance of my life, whereby I should only bring upon myself many and far greater evils, than any I had taken such unbecoming pains to deprecate."

In this manner Socrates replied to Hermogenes and others: and his enemies having accused him of "not believing in the gods whom the city held sacred; but as designing to introduce other and new deities; and, likewise, of his having corrupted the youth Hermogenes further told me, that Socrates, advancing towards the tribunal, thus spoke:

"What I chiefly marvel at, O you judges! is this; whence Melitus infers that I esteem not those as gods whom the city hold sacred. For that I sacrifice at the appointed festivals, on our common altars, was evident to all others; and might have been to Melitus, had Melitus been so minded. Neither yet does it seem to be asserted with greater reason, that my design was to introduce new deities among us, because I have often said, 'That it is the voice of God which gives me significations of what is most expedient;' since they themselves, who observe the chirping of birds, or those ominous words spoken by men, ground their conclusions on no other than voices. For who among you doubts whether thunder sends forth a voice? or whether it be not the very greatest of all auguries? The Pythian priestess herself; does not she likewise, from the tripod, declare, by a voice, the divine oracles? And, truly, that God foreknows the future, and also shows it to whomsoever he pleases, I am no way singular either in believing or asserting; since all mankind agree with me herein; this difference only excepted, that whereas they say it is from auguries, omens, symbols, and diviners, whence they have their notices of the future; I, on the contrary, impute all those premonitions, wherewith I am favored, to a genius; and I think, that, in so doing, I have spoken not only more truly, but more piously, than they who attribute to birds the divine privilege of declaring things to come: and that I lied not against God, I have this indisputable proof, that whereas I have often communicated to many of my friends the divine counsels, yet has no man ever detected me of speaking falsely."

No sooner was this heard, but a murmuring arose among his judges; some disbelieving the truth of what he had said, while others envied him for being, as they thought, more highly favored of the gods than they. But Socrates, still going on; "Mark!" said he, "I pray; and attend to what is yet more extraordinary, that such of you as are willing, may still the more disbelieve that I have been thus favored of the deity: Chærephon, inquiring of the oracle at Delphos concerning me, was answered by Apollo himself, in the presence of many people, "That he knew no man more free, more just, or more wise than I."

On hearing this, the tumult among them visibly increased: but Socrates, still going on,—"And yet Lycurgus, the Lacedæmonian lawgiver, had still greater things declared of him: for, on his entering into the temple, the deity thus accosted him: "I am considering," said he, "whether I shall call you a god, or a man!" Now Apollo compared me not to a god.

This, indeed he said, “That I by far excelled man.” Howbeit, credit not too hastily what you have heard, though coming from an oracle; but let us thoroughly examine those things which the deity spoke concerning me.

“Say, then, where have you ever known any one less enslaved to sensual appetite; whom more free than the man who submits not to receive gift, or reward, from the hands of any other? Whom can you deservedly esteem more just, than he who can so well accommodate himself to what he has already in his own possession, as not even to desire what belongs to another? Or how can he fail of being accounted wise, who, from the time he first began to comprehend what was spoken, never ceased to seek, and search out, to the very best of his power, whatever was virtuous and good for man? And, as a proof that in so doing I have not labored in vain, you yourselves know, that many of our citizens, yes, and many foreigners also, who made virtue their pursuit, always preferred, as their chief pleasure, the conversing with me. Whence was it, I pray you, that when every one knew my want of power to return any kind of pecuniary favor, so many should be ambitious to bestow them on me? Why does no man call me his debtor, yet many acknowledge they owe me much? When the city is besieged, and every other person bemoaning his loss, why do I appear as in no respect the poorer than while it remained in its most prosperous state? And what is the cause, that when others are under a necessity to procure their delicacies from abroad, at an exorbitant rate, I can indulge in pleasures far more exquisite, by recurring to the reflections in my own mind? And now, O you judges! if, in whatsoever I have declared of myself, no one is able to confute me as a false speaker, who will say I merit not approbation, and that not only from the gods, but men?

“Nevertheless, you, O Melitus, have asserted, that I,—diligently applying myself to the contemplation and practice of whatever is virtuous—‘corrupt the youth—and, indeed, we well know what it is to corrupt them. But show us, if in your power, whom, of pious, I have made impious; of modest, shameless; of frugal, profuse? Who, from temperate is become drunken; from laborious, idle, or effeminate, by associating with me? Or, where is the man who has been enslaved, by my means, to any vicious pleasure whatsoever?”

“No, verily!” said Melitus; “but I know of many whom you have persuaded to obey you rather than their parents.”

“And with good reason,” replied Socrates, “when the point in question concerned education; since no man but knows that I made this my chief study: and which of you, if sick, prefers not the advice of the physician to his parents? Even the whole body of the Athenian people,—when collected in the public assembly,—do not they follow the opinion of him whom they think the most able, though he be not of their kindred? And in the choice of a general, do you not to your fathers, brothers, no, even to yourselves, prefer the man whom you think the best skilled in military discipline?”

“Certainly,” returned Melitus; “neither can any one doubt of its being most expedient.”

“How then could it escape being regarded even by you, Melitus, as a thing deserving the highest admiration, that while in every other instance the man who excels in any employment is supposed not only entitled to a common regard, but receives many, and those very distinguishing, marks of honor; I, on the contrary, am persecuted even to death, because I am thought by many to have excelled in that employment which is the most noble, and which has for its aim the greatest good to mankind; by instructing our youth in the knowledge of their duty, and planting in the mind each virtuous principle!”

Now, doubtless, there were many other things spoken at the trial, not only by Socrates, but his friends, who were most zealous to support him; but I have not been careful to collect all that was spoken, yet think I have done enough to show, and that most plainly, that the design of Socrates in speaking at this time, was no other than to exculpate himself from any thing that might have the least appearance of impiety towards the gods, or of injustice towards men. For, with regard to death, he was no way solicitous to importune his judges, as the custom was with others: on the contrary, he thought it the best time for him to die. And, that he had thus determined with himself, was still the more evident after his condemnation: for, when he was ordered to fix his own penalty, he refused to do it, neither would he suffer any other to do it for him; saying, that to fix a penalty implied a confession of guilt. And, afterwards, when his friends would have withdrawn him privately, he would not consent; but asked them with a smile, “If they knew of any place beyond the borders of Attica where death could not approach him?”

The trial being ended, Socrates, as it is related, spoke to his judges in the following manner:

“It is necessary, O you judges! that all they who instructed the witnesses to bear, by perjury, false testimony against me, as well as all those who too readily obeyed their instructions, should be conscious to themselves of much impiety and injustice: but that I, in any wise, should be more troubled and cast down than before my condemnation, I see not, since I stand here unconvicted of any of the crime whereof I was accused: for no one has proved against me that I sacrificed to any new deity; or by oath appealed to, or even made mention of the names of, any other than Zeus, Hera, and the rest of the deities, which, together with these, our city holds sacred: neither have they once shown what were the means I made use of to corrupt the youth, at the very time that I was inuring them to a life of patience and frugality. As for those crimes to which our laws have annexed death as the only proper punishment,—sacrilege, man-stealing, undermining of walls, or betraying of the city,—my enemies do not even say that any of these things were ever once practiced by me. Wherefore I the rather marvel that you have now judged me worthy to die.

"But it is not for me to be troubled on that account: for, if I die unjustly, the shame must be theirs who put me unjustly to death; since, if injustice is shameful, so likewise every act of it; but no disgrace can it bring on me, that others have not seen that I was innocent. Palamedes likewise affords me this further consolation: for being, like me, condemned undeservedly, he furnishes, to this very day, more noble subjects for praise, than the man who had iniquitously caused his destruction.

And I am persuaded that I also shall have the attestation of the time to come, as well as of that which is past already, that I never wronged any man, or made him more depraved; but, contrariwise, have steadily endeavored, throughout life, to benefit those who conversed with me; teaching them, to the very utmost of my power, and that without reward, whatever could make them wise and happy."

Saying this, he departed; the cheerfulness of his countenance, his gesture, and whole deportment, bearing testimony to the truth of what he had just declared. And seeing some of those who accompanied him weeping, he asked what it meant. And why they were now afflicted. "For, knew you not," said he, "long ago, even by that whereof I was produced, that I was born mortal? If, indeed, I had been taken away when the things which are most desirable flowed in upon me abundantly, with good reason it might have been lamented, and by myself, as well as others; but if I am only to be removed when difficulties of every kind are ready to break in upon me, we ought rather to rejoice, as though my affairs went on the most prosperously.”

Apollodorus being present,—one who loved Socrates extremely, though otherwise a weak man,—he said to him, “But it grieves me, Socrates! to have you die so unjustly!” Socrates, with much tenderness, laying his hand upon his head, answered, smiling, “And what, my much-loved Apollodorus! would you rather they had condemned me justly?”

It is likewise related, that on seeing Anytus pass by, “There goes a man,” said he, “not a little vain-glorious, on supposing he shall have achieved something great and noble, in putting me to death, because I once said, ‘that since he himself had been dignified with some of the chief offices in the city, it was wrong in him to breed up his son to the trade of a tanner.’ But he must be a fool,” continued Socrates, “who sees not that he who at all times performs things useful and excellent, is alone the hero. And, truly,” added Socrates, “as Homer makes some, who were near the time of their dissolution, look forward into futurity; I, likewise, have a mind to speak somewhat oraculously. Now it happened I was once, for a short time, with this same son of Anytus; and plainly perceiving he neither wanted talents nor activity, therefore I said, it was not fitting that the young man should continue in such a station: but continuing, as he still does, destitute at the same time of any virtuous instructor, to guide and restrain him within the bounds of duty, he must soon fall a prey to some evil inclination, that will hurry him headlong into vice and ruin.”

And, in thus speaking, Socrates prophesied not untruly; for the young man delighted so much in wine, that he ceased not drinking, whether night or day; whereby he became perfectly useless to his country, to his friends, and even to himself. The memory of Anytus was likewise held in the highest detestation; and that not only on the account of his other crimes, but for the scandalous manner in which he had educated his son.

Now, it cannot be doubted but Socrates, by speaking thus highly of himself, incurred the more envy, and made his judges still the more eager to condemn him; yet I think, indeed, he only obtained that fate which the gods decree to those they most love;—a discharge from life, when life is become a burden; and that by a means, of all others, the most easy. Yet here, as well as on every other occasion, Socrates demonstrated the firmness of his soul. For, although he was fully persuaded that to die would be the best for him, yet did he not discover any anxious solicitude, any womanish longings for the hour of his dissolution; but waited its approach with the same steady tranquility, and unaffected complacency, with which he afterwards went out of life. And, truly, when I consider the wisdom and greatness of soul, so essential to this man, I find it not more out of my power to forget him, than to remember and not praise him. And if, among those who are most studious to excel in virtue, there be any who has found a person to converse with, more proper than Socrates for promoting his design,—verily, we may well pronounce him the most fortunate of all mankind.

## XENOPHON’S MEMOIRS OF SOCRATES

### BOOK I.

I. I have often wondered by what arguments the accusers of Socrates could persuade the Athenians that he had behaved in such a manner towards the republic as to deserve death; for the accusation proffered against him was to this effect:

“Socrates is criminal; inasmuch as he acknowledged not the gods whom the republic holds sacred, but introduced other and new deities.

He is likewise criminal, because he corrupted the youth.”

Now, as to the first of these, that he acknowledged not the gods whom the republic held sacred,—what proof could they bring of this, since it was manifest that he often sacrificed both at home and on the common altars? Neither was it in secret that he made use of divination; it being a thing well known among the people, that Socrates should declare his genius gave him frequent intimations of the future; whence, principally, as it seems to me, his accusers imputed to him the crime of introducing new deities. But, surely, herein Socrates introduces nothing newer, or more strange, than any other, who, placing confidence in divination, make use of auguries, and omens, and symbols, and sacrifices. For these men suppose not that the birds or persons they meet unexpectedly, know what is good for them: but that the gods by their means, give certain intimations of the future, to those who apply themselves to divination.

And the same also was his opinion, only with this difference, that while the greatest part say they are persuaded, by the flights of birds, or some accidental occurrence, Socrates, on the contrary, so asserted concerning these matters, as he knew them from an internal consciousness; declaring it was his genius from whom he received his information. And, in consequence of these significations, (communicated, as he said, by his genius,) Socrates would frequently forewarn his friends what might be well for them to do, and what to forbear; and such as were guided by his advice found their advantage in so doing, while those who neglected it had no small cause for repentance.

Now, who is there that will not readily acknowledge, that Socrates could have no desire to appear to his friends either as an enthusiast or arrogant boaster? which, however, would have been unavoidable, had he openly asserted that notices of the future had been given him by the Deity; while a failure in the event made the falsehood of the assertion notorious to all. Wherefore, it is manifest Socrates foretold nothing but what he firmly believed would, hereafter, be fulfilled:—But where could he place this full confidence, exclusive of a deity; and how could one, who thus confided, be said to acknowledge no gods?

Further:—although Socrates always advised his followers to perform the necessary affairs of life in the best manner they were able; yet, with regard to every thing, the event whereof was doubtful, he constantly sent them to consult the oracle, whether it ought or ought not to be undertaken. He likewise asserted, that the science of divination was necessary for all such as would govern successfully either cities or private families: for, although he thought every one might choose his own way of life, and afterwards, by his industry, excel therein; whether architecture, mechanics, agriculture, superintending the laborer, managing the finances, or practicing the art of war; yet even here, the gods, he would say, thought proper to reserve to themselves, in all these things, the knowledge of that part of them which was of the most importance; since he, who was the most careful to cultivate his field, could not know, of a certainty, who should reap the fruit of it. He who built his house the most elegantly, was not sure who should inhabit it. He who was the best skilled in the art of war, could not say, whether it would be for his interest to command the army: neither he who was the most able to direct in the administration, whether for his to preside over the city. The man who married a fair wife, in hopes of happiness, might procure for himself a source of much sorrow; and he who formed the most powerful alliances, might come in time, by their means, to be expelled from his country. Socrates therefore, esteemed all those as no other than madmen, who, excluding the Deity, referred the success of their designs to nothing higher than human prudence. He likewise thought those not much better who had recourse to divination on every occasion, as if a man was to consult the oracle whether he should give the reins of his chariot into the hands of one ignorant or well versed in the art of driving; or place at the helm of his ship a skilful or unskillful pilot. He also thought it a kind of impiety to importune the gods with our inquiries concerning things of which we may gain the knowledge by number, weight, or measure; it being, as it seemed to him, incumbent on man to make himself acquainted with whatever the gods had placed within his power: as for such things as were beyond his comprehension, for these he ought always to apply to the oracle; the gods being ever ready to communicate knowledge to those whose care had been to render them propitious.

Socrates was almost continually in men’s sight. The first hours of the morning were usually spent in the places set apart for walking, or the public exercises; and from thence he went to the forum, at the time when the people were accustomed to assemble The remainder of the day was passed where might be seen the greatest concourse of the Athenians; and for the most part, he so discoursed, that all who were willing might hear whatsoever he said: yet no one ever observed Socrates either speaking or practicing any thing impious or profane; neither did he amuse himself, like others, with making curious researches into the works of Nature; and finding out how this, which sophists call the world, had its beginning, or what those powerful springs which influence celestial bodies. On the contrary, he demonstrated the folly of those who busied themselves much in such fruitless disquisitions; asking, whether they thought they were already sufficiently instructed in human affairs, that they undertook only to meditate on divine? Or, if passing over the first, and confining their inquiries altogether to the latter, they appeared, even to themselves, to act wisely, and as became men. He marveled they should not perceive, it was not for man to investigate such matters; for those among them who arrogated the most to themselves, because they could with the greatest facility talk on these subjects, never agreed in the same opinion; but like madmen, some of whom tremble when no danger is near, while others fear no harm at the approach of things hurtful: so these philosophers; some of them asserting there was no shame in saying or doing any thing before the people; others sending their disciples into solitude, as if nothing innocent could be performed by us in public: some regarding neither temples nor altars, nor reverencing any thing whatsoever as divine; while others thought nothing could be found too vile for an object of their adoration. Even among those who laboriously employed themselves in studying the universe, and the nature of all things, some imagined the whole of being to be simply one only; others, that beings are in number infinite: some, that all things are eternally moving; others, that nothing can be moved at all: some, that all things are generated and destroyed; others, that there can never be any generation or destruction of any thing.

He would ask, concerning these busy inquirers into the nature of such things as are only to be produced by a divine power, whether as those artists who have been instructed in some art, believe they are able to practice it at pleasure, so they, having found out the immediate cause, believe they shall be able, for their own benefit, or that of others, to produce winds and rain, the vicissitudes of time, or the change of seasons? Or if indeed altogether destitute of this hope, they could content themselves with such fruitless knowledge?

In this manner would he reason concerning those people who gave themselves up to such useless speculations. As for himself, man, and what related to man, were the only subjects on which he chose to employ himself. To this purpose, all his inquiries and conversation turned upon what was pious, what impious; what honorable, what base; what just, what unjust; what wisdom, what folly; what courage, what cowardice; what a state or political community, what the character of a statesman or politician; what a government of men, what the character of one equal to such government. It was on these, and other matters of the same kind, that he used to dissert; in which subjects, those who were knowing he used to esteem men of honor and goodness; and those who were ignorant, to be no better than the basest of slaves.

That the judges of Socrates should err concerning him, in points wherein his opinion might not be apparently manifest, I marvel not; but that such things as had been spoken plainly, and acted openly, should have no weight with them, is indeed wonderful; for, being of the senate, and having taken, as was customary, the senatorial oath, by which he bound himself to act in all things conformable to the laws, and arriving in his turn to be president of the assembly of the people, he boldly refused to give his suffrage to the iniquitous sentence which condemned the nine captains, two Of whom were Erasmides and Thrasellus, to an unjust death; being neither intimidated with the menaces of the great, nor the fury of the people, but steadily preferring the sanctity of an oath to the safety of his person; for he was persuaded the gods watched over the actions and the affairs of men in a way altogether different to what the vulgar imagined; for while these limited their knowledge to some particulars only, Socrates, on the contrary, extended it to all; firmly persuaded, that every word, every action, no, even our most retired deliberations, were open to their view; that they were every where present, and communicated to mankind all such knowledge as related to the conduct of human life: wherefore, I greatly wonder the Athenians could ever suffer themselves to be persuaded that Socrates retained sentiments injurious to the Deity! He in whom nothing was ever observed unbecoming that reverence so justly due to the gods; but, on the contrary, so behaved towards them, both in regard to his words and his actions, that whoever shall hereafter demean himself in such a manner, must be in fact, and ought also to be esteemed, a man of the truest and most exemplary piety.

II. But it is still matter of more wonder to me, that any one could be prevailed on to believe that Socrates was a corrupter of youth! Socrates, the most sober and the most chaste of all mankind! supporting with equal cheerfulness the extreme, whether of heat or cold! who shrunk at no hardships, declined no labor, and knew so perfectly how to moderate his desires, as to make the little he possessed altogether sufficient for him! Could such a one be an encourager of impiety, injustice, luxury, intemperance, effeminacy? But, so far from any such thing, that on the contrary he reclaimed many from these vices, by kindling in their minds a love of virtue; encouraging them to think, that by a steadfast perseverance they might make themselves esteemed by becoming virtuous men: and although he never undertook to be a teacher of others, yet, as he practiced the virtues he sought to recommend, those who conversed with him were animated with the hopes of becoming one day wise, from the influence of his example. Not that Socrates ever omitted a due concern for his body; neither did he commend those who did: he would even frequently blame the people whose custom it was to eat to excess, and afterwards use immoderate exercise; saying, that men should only eat till nature was satisfied, and then apply themselves to some moderate exercise; which would not only keep the body in health, but set the mind at liberty for the more proper discharge of its peculiar duties.

In his apparel nothing was either delicate or ostentatious; and the same might be said with respect to his whole manner of living: yet no man ever became avaricious from having conversed with Socrates: on the contrary, many were reclaimed from this infamous vice by his example, as they had been already from many others; while they observed him not only to forbear the taking any reward of those who sought his conversation, but heard him earnestly contend it was necessary to do so, for any one who desired to avoid slavery: for such, he would say, as submit to receive a pecuniary return for the instructions they bestow, are no longer at liberty to give, or withhold them; but, like so many slaves, are at the will of those from whom they are content to receive wages: therefore he much admired, that the man who professed himself a teacher of virtue, should debase himself so far; unless he either understood not, that to gain a virtuous friend was the greatest of all acquisitions; or at least feared, that such as had been made wise and virtuous by his instructions, might yet be wanting in gratitude to their greatest benefactor.

But, far from any such absurdity, Socrates, without setting himself up for an instructor, had full confidence, that all who attended to his discourses, and embraced his doctrines, would never fail in point of friendship, either to him or to each other:—How then could a man like this, be a corrupter of youth; unless, haply, the study of virtue should be the way to corrupt the morals, and incline mankind to become more dissolute?

But, say his accusers, “Socrates makes those who converse with him contemners of the laws; calling it madness to leave to chance the election of our magistrates; while no one would be willing to take a pilot, an architect, or even a teacher of music, on the same terms; though mistakes in such things would be far less fatal than errors in the administration.” With these, and the like discourses, he brought (as was said) the youth by degrees to ridicule and contemn the established form of government; and made them thereby the more headstrong and audacious.

Now, it seems to me, that whoever applies himself to the study of wisdom, in hopes of becoming one day capable of directing his fellow-citizens, will not indulge, but rather take pains to subdue whatever he finds in his temper of turbulent and impetuous; knowing that enmity and danger are the attendants on force; while the path of persuasion is all security and good-will: for they who are compelled hate whoever compels them, supposing they have been injured; whereas we conciliate the affection of those we gain by persuasion; while they consider it as a kindness to be applied to in such a manner. Therefore it is only for those to employ force who possess strength without judgment; but the well-advised will have recourse to other means. Besides, he who pretends to carry his point by force, has need of many associates; but the man who can persuade, knows that he is of himself sufficient for the purpose: neither can such a one be supposed forward to shed blood; for, who is there would choose to destroy a fellow-citizen, rather than make a friend of him, by mildness and persuasion?

“But,” adds his accuser, “Critias and Alcibiades were two of his intimate friends; and these were not only the most profligate of mankind, but involved their country in the greatest misfortunes; for, as among the thirty none was ever found so cruel and rapacious as Critias; so, during the democracy, none was so audacious, so dissolute, or so insolent, as Alcibiades."

Now I shall not take upon me to exculpate either of these men; but shall only relate at what time, and, as I think, to what end, they became the followers of Socrates.

Critias and Alcibiades were, of all the Athenians, by nature the most ambitious; aiming, at what price soever, to set themselves at the head of the commonwealth, and thereby exalt their names beyond that of any other: they saw that Socrates lived well satisfied with his own scanty possessions; that he could restrain every passion within its proper bounds, and lead the minds of his hearers, by the power of his reasoning, to what purpose he most desired. Understanding this, and being such men as we have already described them, will any one say it was the temperance of Socrates, or his way of life, they were in love with; and not rather, that by hearing his discourses, and observing his actions, they might the better knowhow to manage their affairs, and harangue the people?

And, truly, I am thoroughly persuaded, that if the gods had given to these men the choice of passing their whole lives after the manner of Socrates, or dying the next moment, the last would have been preferred, as by much the most eligible. And their own behavior bears sufficient testimony to the truth of this assertion; for, no sooner did they imagine they surpassed in knowledge the rest of their contemporaries, who, together with themselves, had attended on Socrates, but they left him, to plunge into business and the affairs of the administration; the only end they could propose in desiring to associate with him.

But, perhaps, it may be objected, that Socrates ought not to have discoursed with his followers on the affairs of government, till he had first instructed them how to behave with temperance and discretion. Far am I from saying otherwise, and shall only observe, that it is commonly the practice with those who are teachers of others, to perform in the presence of their pupils the things they would recommend; to the end, that while they enforced them on their minds, by the strength of their reasonings, they might set forth, by their example, the manner in which they are done.

Now, with respect to either of these methods of instruction, I know not of any who went beyond Socrates; his whole life serving as an example of the most unblemished integrity; at the same time that he ever reasoned with a peculiar force and energy, on virtue and those several duties which are becoming us as men. And it is certain, that even Critias and Alcibiades themselves behaved soberly and wisely all the time they conversed with him; not that they feared punishment; but as supposing a regular conduct would best serve the end they had in view.

Nevertheless, I know there are many who value themselves on the account of their philosophy who allow not that a virtuous man can ever be any other than virtuous, but that he who is once temperate, modest, just, must always remain so; because the habits of these virtues being deeply imprinted, cannot afterwards be erased out of the minds of men. But I hold not this opinion; for, as the body from disuse may come in time to be deprived of all its powers, so the mental faculties may lose all their energy, through a neglect of their being exerted duly, and the man no longer able to act, or not act in the manner that best becomes him. Therefore fathers, although otherwise well assured of the good disposition of their children, forget not to warn them against the company of ill men; knowing, that as to converse with the good must exercise and improve every virtue, so to associate with the bad must prove no less pernicious and baneful. And to this purpose also the poet:

“Although unconscious of the pleasing charm,
The mind still bends where friendship points the way;
Let virtue then your partner’s bosom warm,
Lest vice should lead your soften’d soul astray.”

And that other:

“In the same mind, now good, now bad, prevail.”

And with these do I agree; for as we may observe people who have learnt verses soon forget them, if not frequently repeated, so will it prove with regard to the precepts of philosophy; they slip out of the memory, and along with them we lose the very ideas which kindled and nourished in our souls the love of virtue; which ideas once gone, no wonder if the practice of it ceases soon after. I have observed further, that such men as are hurried away with an inordinate love, whether of wine or women, become less capable of attending to what will be for their advantage, or refraining from what is to their harm; so that it has often happened, that many, who before were remarkable for their economy, no sooner became slaves to one or other of these passions, but all things went to ruin; and having squandered away their substance, were compelled, through want, to submit to such offices as they themselves had once thought shameful. How then shall we say, that he who is once temperate cannot become intemperate? or that he who acts uprightly at one time, cannot at another act the very contrary? For myself, I am persuaded that no one virtue can subsist that is not diligently and duly exercised, and temperance more especially; because our sensual desires, being seated with our minds in the same body, are continually soliciting us to a compliance with those appetites nature has implanted, though at the expense of virtue and all things virtuous; wherefore I can well imagine that even Alcibiades and Critias could restrain their vicious inclinations while they accompanied with Socrates and had the assistance of his example: but being at a distance from him, Critias retiring into Thessaly, there very soon completed his ruin, by choosing to associate with libertines rather than with such as were men of sobriety and integrity; while Alcibiades, seeing himself sought after by women of the highest rank, on account of his beauty; and at the same time much flattered by many who were then in power, because of the credit he had gained, not only in Athens, but with such as were in alliance with her; in a word, perceiving how much he was the favorite of the people, and placed, as it were, above the reach of a competitor, neglected that care of himself which alone could secure him; like the athletic, who will not be at the trouble to continue his exercises, on seeing no one near able to dispute the prize with him. Therefore, in such an extraordinary concurrence of circumstances as befell these men, puffed up with the nobility of their birth, elated with their riches, and inflamed with their power, if we consider the company they fell into, together with their many unhappy opportunities for riot and intemperance, can it seem wonderful, separated as they were from Socrates, and this for so long a time too, if at length they became altogether degenerate, and rose to that height of pride and insolence to which we have been witnesses?

But the crimes of these men are, it seems, in the opinion of his accuser, to be charged upon Socrates; yet allows he no praise for keeping them within the bounds of their duty in that part of life which is generally found the most intemperate and intractable; nevertheless, on all other occasions, men judge not in this manner. For what teacher of music, or any other art or science, was ever known to incur censure, because the scholar, whom he had well instructed, forgot all he had been taught, when placed under the care of some other master? Or what father would condemn those companions of his son with whom the first years of his life had been spent innocently, because afterwards he had been drawn aside into riot and debauchery by associating himself with very different people? Will he not rather bestow the greater praise on the one by how much more he sees his son has been corrupted by the other? Even parents themselves are not blamed for the faults of their children, though educated under their own eye, provided they are careful not to set before them any ill example.

Here, then, is the test whereby to have tried Socrates: "Has his life been wicked? let him be considered, and condemned, as a wicked man: but, if otherwise, if he has steadily and invariably persevered in the paths of virtue, accuse him not of crimes which his soul never knew."

"Yet it may be he countenanced those vices in others which in his own person he chose not to commit."

But far from Socrates were all such compliances! On the contrary, when Critias was ensnared with the love of Euthydemus, he earnestly endeavored to cure him of so base a passion; showing how illiberal, how indecent, how unbecoming the man of honor, to fawn, and cringe, and meanly act the beggar; before him, too, whom of all others he the most earnestly strove to gain the esteem of, and, after all, for a favor which carried along with it the greatest infamy. And when he succeeded not in his private remonstrances, Critias still persisting in his unwarrantable designs, Socrates, it is said, reproached him in the presence of many, and even before the beloved Euthydemus; resembling him to a swine, the most filthy and disgusting of all animals. For this cause Critias hated him ever after; and when one of the Thirty, being advanced, together with Charicles, to preside in the city, he forgot not the affront; but, in order to revenge it, made a law, wherein it was forbidden that any should teach philosophy in Athens: by which he meant, having nothing in particular against Socrates, to involve him in the reproach cast by this step on all the philosophers, and thereby render him, in common with the rest, odious to the people; for I never heard Socrates say that he taught philosophy; neither did I know any who ever did hear him; but Critias was stung, and he determined to show it—Now, after the Thirty had put to death many of the citizens, and some of them of the best rank, and had given up the reins to all manner of violence and rapine, Socrates had said somewhere "that it would astonish him much, if he who lost part of the herd every day, while the rest grew poorer and weaker under his management, should deny his being a bad herdsman; but it would astonish him still more, if he who had the charge of the city, and saw the number of his citizens decrease hourly, while the rest became more dissolute and depraved under his administration, should be shameless enough not to acknowledge himself an evil ruler." These words, therefore, of Socrates, being told to Critias and Charicles, they sent for him; and showing him the law, straightly forbade him to discourse any more with the young men. Socrates then asked, "if it was permitted him to propose some questions touching some parts of the said law, which he said he could not thoroughly understand;" and being answered it was permitted: "I am always," said he, "most ready to obey the laws; but, to the end I may not transgress unwittingly, inform me, I pray you, whether you take philosophy, as it stands here condemned by you, to consist in reasoning right, or reasoning wrong; since, if you intend it to imply the first, then must we henceforth beware how we reason right; but if the latter is meant, the consequence is plain, then must we endeavor to mend our reasoning."

At these words Charicles, being much enraged, said to him, "Since you are so ignorant, Socrates, and withal so dull of apprehension, we will express ourselves in terms somewhat more easy to be understood; refrain altogether from talking with the young men."

“It is well,” answered Socrates; “but that nothing of ambiguity may remain in the present case, tell me, I pray you, how long are men called young?”

“So long,” replied Charicles, “as they are refused admittance into the senate, as supposed not yet arrived at maturity of judgment: or, in other words, till they are thirty.”

“But suppose I should want to buy something of a merchant, must I not ask the price of it if the man is under thirty?”

“Who says any such thing?” returned Charicles. “But, Socrates,” said he, “it is so much your custom to ask questions when you are not ignorant of the matter in hand, that I do not wonder at your doing so now. Let us, however, have done for the present with your trifling interrogatories.”

“But what if some young man, as he passes along, should ask me in haste, ‘Where lives Charicles? Where’s Critias gone?’ Must I not answer him?”

“It is hardly intended to prohibit such things,” returned Charicles: when Critias interrupting them; “And I, Socrates, I can inform you of something more you have to refrain from: keep henceforth at a proper distance from the carpenters, smiths, and shoemakers; and let us have no more of your examples from among them. And, besides, I fancy they are sufficiently tired with your bringing them in so often in your long discourses.”

“Must I likewise give up the consequences,” said Socrates, “deducible from these examples, and concern myself no longer with justice and piety, and the rules of right and wrong?”

“You must, by Zeus!” replied Charicles. “And, Socrates,” said he, “to make all sure, trouble not yourself any more with the herdsmen, for fear you should occasion the loss of more cattle.”

Now, from this, it is evident, that what Socrates once said concerning the cattle, being told these men, had greatly inflamed their rage against him. Hence also may be seen how long Critias continued to associate with Socrates, and what the affection they had for each other. I might here likewise add, how seldom it is we make proficiency under people who are not pleasing to us; and that the conversation of Socrates did not render him so either to Critias or Alcibiades, may well be supposed. Even at the very time they followed him, their chief delight was in conversing with such persons as they believed the most skilful in the affairs of state; their only design being to govern the republic. And, agreeably to this, they tell us that Alcibiades, when under the age of twenty, coming to Pericles his tutor, and at that time sole director of the Athenian state, entered into the following conversation with him concerning the laws:

"My Pericles," said he, "can you explain to me what a law is?"

"Undoubtedly," returned the other. "Then, I conjure you by the immortal gods!" said Alcibiades, "instruct me in this point: for when I hear men praised for their strict observance of the laws, it seems to me evident, that he can no way pretend to that praise who is altogether ignorant what a law is."

"Your request," Alcibiades, "is not difficult to be complied with: for that is a law, which the people agree upon in their public assemblies, and afterwards cause to be promulgated in a proper manner; ordaining what ought or ought not to be done."

"And what do they ordain; to do good, or to do evil?"

"Not evil, most assuredly, my young man."

"But what do you call that," said Alcibiades, which in states where the people have no rule, is advised and ordained by the few who may be then in power?"

"I call that likewise a law," replied Pericles; "for the laws are nothing but the injunctions of such men as are in possession of the sovereign authority."

"But when a tyrant is possessed of this sovereign authority, are the things he ordains to be received as laws?"

"As laws," returned Pericles.

"What then is violence and injustice?" said Alcibiades. "Is it not when the strong compel the more weak, not by mildness and persuasion, but force, to obey them?"

"I think it is."

"Will it not then follow, that what a tyrant decrees, and compels the observance of, not only without, but contrary to the will of the people; is not law, but the very reverse to it?"

"I believe it may," answered Pericles; "for I cannot admit that as a law, which a tyrant enacts, contrary to the will of the people."

"And when the few impose their decrees on the many, not by persuasion, but force, are we to call this also violence?"

"We are: and truly, I think," said Pericles, "that whatever is decreed and enforced without the consent of those who are hereafter to obey, is not law, but violence."

"Then ought that also, which is decreed by the people, contrary to the will of the nobles, to be deemed violence, rather than law?"

"No doubt of it," replied Pericles: "But, Alcibiades," continued he, "at your age we were somewhat more acute in those subtleties, when we made it our business to consider them, as we now see you."

To which, it is said, Alcibiades returned answer: "Would to the gods then, Pericles, I might have conversed with you at the time when you best understood these sorts of things!" In consequence, therefore, of this most ambitious disposition, no sooner did these men suppose they had acquired some advantages over the persons then employed in the administration, but they forbore to associate any longer with Socrates: for, besides that his company was no way pleasing to them, on other considerations, they could still less brook his frequent remonstrances for the many irregularities of their lives: therefore they plunged at once into business, and the affairs of the commonwealth; the only end for which they had ever been among his followers.

But Crito, Chærephon, Chærecrates, Simmias, Cebes, Phædo, and many others, were continually with him; not from the hope of becoming, by his means, better orators, whether at the bar, or before the people; but better men: capable of discharging all those duties which they owed to themselves, to their country, to their families, their friends, their fellow-citizens. And, so far were these men from practicing what was dishonest, that whether in youth or in age, not one of them ever incurred even the suspicion of any crime.

But, said his accuser, “Socrates encourages his followers to despise their parents; inasmuch as he persuades them that he is able to make them wiser than they; declaring still further, that as it is lawful for a son to confine his father in chains when convicted of madness, so ought the ignorant also to be confined by him who is possessed of superior knowledge.”

Now, whatever his accuser might endeavor to insinuate, it is certain Socrates was very far from being of such an opinion. On the contrary, it was common with him to say; “that whoever pretended to confine another on the account of his ignorance, might himself be thus treated by those who were still more knowing.” And, to this purpose, he would often discourse on the essential difference between madness, and ignorance; saying, on such occasions, plainly and clearly; “that it was indeed necessary, and for the benefit of himself, as well as his friends, that the madman should be enchained; but, that he who was ignorant in any thing useful, should only be instructed, by such persons as were qualified to give him proper instruction."

His accuser, however, went on to assert, "that Socrates not only taught the youth to have a contempt for their parents, but for the rest of their kindred; since he would frequently declare, that when men were sick, or had a lawsuit upon their hands, they had not recourse to any of their kindred for relief; but to the lawyer in one case, and the physician in the other. And, with regard to friendship, he would likewise say, "that a useless good-will, unaccompanied with the power of serving, was little to be accounted of; but the man to be esteemed and preferred, should be one who not only knows what is for our advantage, but can so explain it as to make us likewise know it;" thereby insinuating, as was pretended, into the minds of the youth, that he himself was the friend to be chosen before any other, as being the best able to direct in the way of wisdom: while the rest of mankind, in comparison with him, were of small estimation.

Now, that I myself have heard him talk after some such manner, concerning relations, fathers, and friends, is most certain. And I remember him saying, "that when the soul, in which thought and reason alone reside, retires from the body, although it may be the body of a father, or a friend, we remove it from our sight as speedily as well may be. And whereas no man can be doubted as to the love he bears to his own body, yet who is there, would he ask, that scruples to take away from it the part that is superfluous? to cut the hair, or pair the nails; or remove the whole limb, when mortified? for which purpose the surgeon is called in, and the steel and the caustic not only readily submitted to, but the hand which applies them liberally rewarded. The spittle, he would say, men were glad to cast from them, because, remaining in the mouth, it was both useless and offensive. But, notwithstanding all this, Socrates never intended, though he talked in such a manner, that fathers were to be buried alive, or that he himself should have a limb taken off; but he intended to let us see, that whatever is useless can be of no estimation; in order to excite in his hearers a desire to improve, and make themselves, as far as may be, serviceable to others; to the end, that if they wished to be regarded, by their parents, or respected and honored by their brethren or kindred, they might urge their claim on the account of merit, and not owe the whole only to consanguinity."

"But," says his accuser, "Socrates, the better to convey, and at the same time conceal the malignity of his intentions, has chosen many passages from our most celebrated poets, whereby to convey his poison to the people, and dispose them the more readily to fraud and oppression for having often cited that fine of Hesiod's,

"Employ yourself in any thing, rather than stand idle,"

it was pretended he meant to insinuate it as the poet's opinion, "that no employment whatever could be unjust or dishonorable from whence profit might arise:" whereas, in truth, nothing could be further from the design of Socrates: for, although he constantly maintained that labor and employment were not only useful, but honorable, and idleness no less reproachful than pernicious to man; yet he never concluded without saying, "that he alone could be considered as not idle who was employed in procuring some good to mankind; but that the gamester, the debauchee, and every other whose end was only evil, were emphatically to be called so; and, in this sense, he might, with good reason, adopt that line of Hesiod's,

"Employ yourself in any thing, rather than stand idle."

But it was still further alleged, that Socrates frequently introduced these lines of Homer, where, speaking of Ulysses, he says,

“Each prince of name, or chief in arms approved,
He fired with praise, or with persuasion moved:
‘Warriors like you, with strength and wisdom blest,
By brave examples should confirm the rest
“But if a clamorous vile plebeian rose,
Him with reproof he check’d, or tamed with blows:
‘Be still, you slave, and to your betters yield;
Unknown alike in council and in field!’” Pope.

These words, it was said, he would explain in such a manner, as if the poet hereby meant to recommend roughness, severity, and stripes, as the only proper arguments to be made use of against the vulgar and the indigent. But Socrates was not absurd enough to draw such conclusions; for how then could he have complained, if he himself had been rudely treated? But he asserted, and might strengthen his assertion with these lines from Homer, “that such as could neither counsel nor execute, equally unfit, whether for the city or the camp, these, and such as these, and more especially when insolent and unruly, ought to be reduced to reason, without any regard to the extent of their possessions.”

And it is certain nothing more could be in-tended; for as to himself, Socrates loved the people: his benevolence even extended to all mankind; insomuch that, although he was sought after by foreigners as well as Athenians, he took no reward from any who applied to him, but freely imparted that wisdom he was endued with. Yet so did not others. On the contrary, many who were become rich by his liberality, sold at no mean price, but a small part of that which had cost them nothing: while, uninfluenced by his example, and bearing no resemblance to him in affection to the people, they refused to converse with any who were not able to pay, and that largely, for their instruction.

And, indeed, by this conduct Socrates had rendered the city of Athens renowned throughout all Greece; so that, if it was said of Lychas the Lacedæmonian, "that he was the glory of Sparta," because he entertained, at his own expense, the strangers who resorted thither at one of the feasts made in honor of Apollo, much rather might be said of Socrates, "that he was the glory of Athens," whose whole life was one continued largess; and who, dispensing with a liberal hand his inestimable treasure, sent no one ever away from him without making him, if willing, a wiser and a happier man. Wherefore, it should seem, that had Socrates been treated by the Athenians according to his merit, public honors would have been decreed him much rather than a shameful death. And, after all, for whom do the laws appoint this punishment? Is it not for the thief? for the assaulter on the highway? for the underminer of walls, and the committer of sacrilege? But where, among mankind, shall we find any one at so great a distance from any of these crimes as Socrates? Who can accuse him of holding intelligence with the common enemy? of spreading sedition and treason throughout the city? or of having been the cause of any one calamity whatsoever? Where is he who, in private life, can say, "Socrates has defrauded me of my possessions, or has injured me in any kind?" No, when did he incur even the suspicion of any of these things? And as to the points whereof he stood accused, could he be a denier of those very gods whom in so eminent a manner he worshipped? Could he be a corrupter of youth, whose only employment was to root out of the mind of man every vicious inclination, and plant in their stead a love of that virtue, which is so amiable in itself, and so becoming us as men, and which alone has the power to make, whether cities or private families, flourishing and happy? This being so, who sees not how much his country stood indebted to Socrates? and that honors, not ignominy, should have been his reward?

III. Now, as I am persuaded the benefit arising to all those who accompanied with Socrates was not less owing to the irresistible force of his example than to the excellence of his discourses, I will set down whatever occurs to my memory, whether it relates to his words or his actions.

And first, with respect to sacred rites and institutions. In these things it was ever his practice to approve himself a strict observer of the answer the Pythian priestess gives to all who inquire the proper manner of sacrificing to the gods, or paying honors to their deceased ancestors: “Follow,” said the god, “the custom of your country:” and therefore Socrates, in all those exercises of his devotion and piety, confined himself altogether to what he saw practiced by the republic; and to his friends he constantly advised the same thing, saying, it only savored of vanity and superstition in all those who did otherwise.

When he prayed, his petition was only this—”That the gods would give to him those things that were good.” And this he did, forasmuch as they alone knew what was good for man. But he who should ask for gold or silver, or increase of dominion, acted not, in his opinion, more wisely than one who should pray for the opportunity to fight, or game, or any thing of the like nature, the consequence whereof being altogether doubtful, might turn, for aught he knew, not a little to his disadvantage. When he sacrificed, he feared not his offering would fail of acceptance in that he was poor; but, giving according to his ability, he doubted not, but, in the sight of the gods, he equaled those men whose gifts and sacrifices overspread the whole altar. And, indeed, he made no scruple to assert, that it would not be agreeable to the nature of the gods to respect the costly offerings of the rich and the great, while the poor man's gift was altogether disregarded. For by this means it might happen, nor yet infrequently, that the sacrifice of the wicked would find the most acceptance: which, if so, he thought life itself would not be desirable to a reasonable creature. But Socrates always reckoned upon it as a most indubitable truth, that the service paid the Deity by the pure and pious soul, was the most grateful sacrifice; and therefore it was, he so much approved that precept of the poet, which bids us "offer to the gods according to our power." And not only on these, but on every other occasion, he thought he had no better advice to give his friends, than "that they should do all things according to their ability." Further, whenever he supposed any intimation had been given him by the Deity concerning what ought or ought not to be done, it was no more possible to bring Socrates to act otherwise, than to make him quit the guide, clear sighted and well instructed in the road he was to go, in favor of one not only ignorant but blind. And to this purpose he always condemned the extreme folly of those, who, to avoid the ill opinion and reproach of men, acted not according to the direction of the gods; looking down with contempt on all the little arts of human prudence, when placed in competition with those divine notices and admonitions which it is often their pleasure to communicate to man.

As to his manner of living, it may be said, that whoever is willing to regulate and discipline his body and his mind after the example of Socrates, can hardly fail, no deity opposing, to procure for himself that degree of health and strength as cannot easily be shaken. Neither shall he want large sums for such a purpose. On the contrary, such was his moderation, that I question whether there ever was any man, if able to work at all, but might have earned sufficient to have supported Socrates. His custom was to eat as long as it gave him any pleasure; and a good appetite was to him what delicious fare is to another: and as he only drank when thirst compelled him, whatever served to allay it could not fail of being grateful. So that it was easy for him, when present at their feasts, to refrain from excess, which other men find so much difficulty in doing. And as to such persons as gave proof how very little they could command themselves, to these he would counsel even the not tasting of those delicacies which might allure them to eat when they were not hungry, and drink when they were not dry; since the fruits (he said) of so doing were not only pains in the head and loss of digestion, but disorder and confusion in the mind of man. And it was frequent with him to say, between jest and earnest, "that he doubted not its being with charms like these that Circe turned the companions of Ulysses into swine; while the hero himself, being admonished by Mercury, and, from his accustomed temperance, refusing to taste the enchanting cup, happily escaped the shameful transformation."

With regard to love, his counsel always was to keep at a distance from beautiful persons; saying, it was difficult to approach any such and not be ensnared. As for himself, his great continence was known to every one; and it was more easy for him to avoid the most beautiful objects, than for others those who were the most disgusting. But although this was the manner in which Socrates lived, yet could he not be persuaded that he enjoyed less of the pleasures of life than the voluptuous man, who employed all his thoughts in the eager pursuit of them; at the same time that he escaped all that vexation and grief so sure to attend on those who too freely indulge in sensual gratifications.

IV. Now, should there be any inclined to believe what some on conjecture have undertaken to advance, both in their conversations and writings, "that Socrates could indeed inflame his hearers with the love of virtue, but could never influence them so far as to bring them to make any great proficiency therein:” let these, I say, consider what his arguments were, not only when his design was to refute such men as pretended to know every thing, but even in his retired and familiar conversation, and then let them judge whether Socrates was not fully qualified for the bringing his followers and his friends to make proficiency in the paths of virtue.

And, for this purpose, I will now relate the manner in which I once heard him discoursing with Aristodemus, surnamed the Little, concerning the Deity. For, observing that he neither prayed nor sacrificed to the gods, nor yet consulted any oracle, but, on the contrary, ridiculed and laughed at those who did, he said to him:

“Tell me, Aristodemus, is there any man whom you admire on account of his merit?”

Aristodemus having answered, “Many.”

“Name some of them, I pray you.”

“I admire,” said Aristodemus, “Homer for his epic poetry, Melanippides for his dithyrambics, Sophocles for tragedy, Polycletes for statuary, and Xeuxis for painting.”

“But which seems to you most worthy of admiration, Aristodemus;—the artist who forms images void of motion and intelligence; or one who has the skill to produce animals that are endued, not only with activity, but understanding?”

“The latter, there can be no doubt,” replied Aristodemus, “provided the production was not the effect of chance, but of wisdom and contrivance.”

“But since there are many things, some of which we can easily see the use of, while we cannot say of others to what purpose they were produced; which of these, Aristodemus, do you suppose the work of wisdom?”

“It should seem the most reasonable to affirm it of those, whose fitness and utility is so evidently apparent.”

“But it is evidently apparent, that He, who at the beginning made man, endued him with senses because they were good for him; eyes, wherewith to behold whatever was visible; and ears, to hear whatever was to be heard. For say, Aristodemus, to what purpose should odors be prepared, if the sense of smelling had been denied? Or why the distinctions of bitter and sweet, of savory and unsavory, unless a palate had been likewise given, conveniently placed, to arbitrate between them, and declare the difference? Is not that Providence, Aristodemus, in a most eminent manner conspicuous, which, because the eye of man is so delicate in its contexture, has therefore prepared eyelids like doors, whereby to secure it; which extend of themselves whenever it is needful, and again close when sleep approaches? Are not these eyelids provided, as it were, with a fence on the edge of them, to keep off the wind and guard the eye? Even the eyebrow itself is not without its office, but, as a penthouse, is prepared to turn off the sweat, which, falling from the forehead, might enter and annoy that no less tender than astonishing part of us! Is it not to be admired that the ears should take in sounds of every sort, and yet are not too much filled by them? That the fore-teeth of the animal should be formed in such a manner as is evidently best suited for the cutting of its food, as those on the side for grinding it in pieces? That the mouth, through which this food is conveyed, should be placed so near the nose and the eyes, as to prevent the passing, unnoticed, whatever is unfit for nourishment; while nature, on the contrary, has set at a distance, and concealed from the senses, all that might disgust or any way offend them? And can you still doubt, Aristodemus, whether a disposition of parts like this should be the work of chance, or of wisdom and contrivance?”

“I have no longer any doubt,” replied Aristodemus: “and, indeed, the more I consider it, the more evident it appears to me, that man must be the masterpiece of some great artificer;

carrying along with it infinite marks of the love and favor of Him who has thus formed it."

"And what do you think, Aristodemus, of that desire in the individual which leads to the continuance of the species? Of that tenderness and affection in the female towards her young, so necessary for its preservation? Of that unremitted love of live, and dread of dissolution, which take such strong possession of us from the moment we begin to be?"

"I think of them," answered Aristodemus, "as so many regular operations of the same great and wise Artist, deliberately determining to preserve what he has once made."

"But, further, (unless you desire to ask me questions), seeing, Aristodemus, you yourself art conscious of reason and intelligence, suppose you there is no intelligence elsewhere? You know your body to be a small part of that wide extended earth which you everywhere behold: the moisture contained in it, you also know to be a small portion of that mighty mass of waters whereof seas themselves are but a part, while the rest of the elements contribute, out of their abundance, to your formation. It is the soul then alone, that intellectual part of us, which is come to you by some lucky chance, from I know not where. If so be, there is indeed no intelligence elsewhere: and we must be forced to confess, that this stupendous universe, with all the various bodies contained therein—equally amazing, whether we consider their magnitude or number, whatever their use, whatever their order—all have been produced, not by intelligence, but chance!"

"It is with difficulty that I can suppose otherwise," returned Aristodemus; "for I behold none of those gods, whom you speak of, as making and governing all things; whereas I see the artists when at their work here among us."

"Neither yet do you see your soul, Aristodemus, which, however, most assuredly governs your body: although it may well seem, by your manner of talking, that it is chance, and not reason, which governs you.”

“I do not despise the gods,” said Aristodemus: “on the contrary, I conceive so highly of their excellence, as to suppose they stand in no need either of me or of my services.”

“You mistake the matter, Aristodemus; the greater magnificence they have shown in their care of you, so much the more honor and service you owe them.”

“Be assured,” said Aristodemus, “if I once could be persuaded the gods took care of man, I should want no monitor to remind me of my duty.”

“And can you doubt, Aristodemus, if the gods take care of man? Has not the glorious privilege of walking upright been alone bestowed on him, whereby he may, with the better advantage, survey what is around him, contemplate with more ease those splendid objects which are above, and avoid the numerous ills and inconveniences which would otherwise befall him? Other animals, indeed, they have provided with feet, by which they may remove from one place to another; but to man they have also given hands, with which he can form many things for his use, and make himself happier than creatures of any other kind. A tongue has been bestowed on every other animal; but what animal, except man, has the power of forming words with it, whereby to explain his thoughts, and make them intelligible to others? And to show that the gods have had regard to his very pleasures, they have not limited them, like those of other animals, to times and seasons, but man is left to indulge in them, whenever not hurtful to him.

“But it is not with respect to the body alone that the gods have shown themselves thus bountiful to man; their most excellent gift is that soul they have infused into him, which so far surpasses what is elsewhere to be found. For by what animal, except man, is even the existence of those gods discovered, who have produced, and still uphold, in such regular order, this beautiful and stupendous frame of the universe? What other species of creatures are to be found that can serve, that can adore them? What other animal is able, like man, to provide against the assaults of heat and cold, of thirst and hunger? That can lay up remedies for the time of sickness, and improve the strength nature has given by a well-proportioned exercise? That can receive, like him, information and instruction; or so happily keep in memory what he has seen, and heard, and learnt? These things being so, who sees not that man is, as it were, a god in the midst of this visible creation; so far does he surpass, whether in the endowments of soul or body, all animals whatsoever that have been produced therein! For, if the body of the ox had been joined to the mind of man, the acuteness of the latter would have stood him in small stead, while unable to execute the well-designed plan; nor would the human form have been of more use to the brute, so long as it remained destitute of understanding! But in you, Aristodemus, has been joined to a wonderful soul, a body no less wonderful: and you say, after this, 'the gods take no thought for me!' What would you then more to convince you of their care?"

"I would they should send, and inform me," said Aristodemus, "what things I ought or ought not to do, in like manner as you say they frequently do to you."

"And what then, Aristodemus? suppose you, that when the gods give out some oracle to all the Athenians, they mean it not for you? If, by their prodigies, they declare aloud to all Greece,—to all mankind,—the things which shall befall them, are they dumb to you alone? And are you the only person whom they have placed beyond their care? Believe you they would have wrought into the mind of man a persuasion of their being able to make him happy or miserable, if so be they had no such power? or would not even man himself, long before this, have seen through the gross delusion? How is it, Aristodemus, you remember, or remark not, that the kingdoms and commonwealths most renowned as well for their wisdom as antiquity, are those whose piety and devotion have been the most observable? and that even man himself is never so well disposed to serve the Deity, as in that part of life when reason bears the greatest sway, and his judgment supposed in its full strength and maturity. Consider, Aristodemus, that the soul which resides in your body can govern it at pleasure; why then may not the soul of the universe, which pervades and animates every part of it, govern it in like manner? If your eye has the power to take in many objects, and these placed at no small distance from it, marvel not if the eye of the Deity can, at one glance, comprehend the whole! And as you perceive it not beyond your ability to extend your care, at the same time, to the concerns of Athens, Egypt, Sicily; why do you think, Aristodemus, that the providence of God may not easily extend itself throughout the whole universe? As, therefore, among men, we make best trial of the affection and gratitude of our neighbor, by showing him kindness; and discover his wisdom, by consulting him in our distress; do you, in like manner, behave towards the gods: and, if you would experience what their wisdom, and what their love, render yourself deserving the communication of some of those divine secrets which may not be penetrated by man; and are imparted to those alone, who consult, who adore, who obey the Deity. Then shall you, Aristodemus, understand there is a being whose eye pierce throughout all nature, and whose ear is open to every sound; extended to all places; extending through all time; and whose bounty and care can know no other bounds than those fixed by his own creation!”

By this discourse, and others of the like nature, Socrates taught his friends that they were not only to forbear whatever was impious, unjust, or unbecoming before men; but even, when alone, they ought to have a regard to all their actions; since the gods have their eyes continually upon us; and none of our designs can be concealed from them.

V. And now, if temperance be a virtue conducing to the honor and happiness of man, let us see in what manner Socrates endeavored to stir up his followers to the practice of it.

“My fellow-citizens! would he say, when war is declared, and it becomes necessary for you to make choice of a general, choose you the man enslaved to wine or women; luxurious in his diet; intemperate in his sleep; incapable of labor; impatient of fatigue? Can you, from such a one, expect safety to yourselves; or conquest over your enemies? Or, when death draws nigh, and no thought remains but for the welfare of your children, do you then inquire for the debauchee wherewith to entrust them? Is it he who must direct in the virtuous education of your sons, and guard the chastity of your virgin daughters; or secure to them the inheritance from the hand of the oppressor? Do you entrust your flocks or your herds to the conduct of him who is overcharged with drunkenness? or expect from such a one dispatch to your affairs? Would even the slave be received, though sent as a gift, who came to us branded with so loathsome a vice? If, therefore, intemperance appears to us so odious when seen only in the slave, how should we dread the being ourselves degraded by it! The rapacious and covetous have the pleasure of growing rich, and add to their own substance what they take from others: but the dissolute man injures his neighbor without profit to himself; no, he injures every one, and himself most of all, if the ruin of his family, his health, his body, and his mind, may be termed injuries? Neither can such a one add to the pleasures that arise from social conversation: for what pleasure can he give whose only delight is in eating and drinking, and, destitute of shame, prefers the company of the common prostitute to that of his best friend? Hence, therefore, we may see how necessary it is to make temperance our chief study; since, without this as its basis, what other virtue can we attain? How can we learn what is profitable, or practice what is praiseworthy? Neither can we conceive a state more pitiable, whether in respect to body or mind, than the voluptuary, given up to all the drudgery of intemperance. And, certainly, we should wish no worthy man may be encumbered with a slave of this disposition: or, however, we are sure all slaves who abandon themselves to such irregularities ought to entreat the gods that they may fall into the hands of mild and gentle masters,—their only chance to save them from utter ruin."

Thus would Socrates talk concerning temperance; and if the whole tenor of his discourse showed his regard for this virtue, the whole tenor of his life served more abundantly to confirm it. For he was not only superior to the pleasures of sense, but the desire of gain: it being his full persuasion, that the man who received money bought himself a master; whose commands, however humbling, could not honestly be rejected.

VI. It may not be improper, nor yet to the discredit of Socrates, to relate a conversation he had with Antipho the sophist. Now this man, having a design to draw to himself the followers of Socrates, came to him one day, and, in the presence of many of them, accosted him as follows:

"I always thought," said he, "that philosophy served to make men happier; but the fruit of your wisdom, Socrates, seems to be the very reverse: for I know not that slave who would tarry with his master a single day, if compelled to live in the manner that you do. You eat and drink the meanest of every thing. Your habit is not only coarser than others, but you make no difference between summer and winter; and your feet are always naked. You will take no money, though we find no little pleasure in accumulating wealth: and besides, when a man has once made his fortune, he has nothing more to do than to live nobly, and go on at his ease. Now, if all who attend to your instructions are to follow your example, as is commonly the case of pupils with their masters, may we not well say you only teach men how to be miserable?"

To which Socrates: "I perceive, Antipho, you have formed to yourself so woeful a picture of my manner of life, as shows you had much rather die than live as I do: let us therefore examine what it is you are so much afraid of. You think I am to be pitied for not taking money: is it because those who do, are no longer masters of their own time, but must perform their engagements, however contrary to their inclinations; while I am at liberty to talk or not talk, as best suits my humor? The manner in which I eat may not be to your mind: Does my dinner afford less nourishment than yours? Does it cost more? Or is it, do you think, more difficult to procure? And though I allow the things they provide for your table may be more delicious than those on mine, consider, Antipho, he who sits down with a good appetite has no want of rich sauce to give a relish to his food: neither will he wish for the high-flavored wine, who has already with delight quenched his thirst with water. As to my habit: You know, Antipho, he who changes his dress, does it on account of the heat or cold; and puts on shoes only that the ruggedness of the road may not prevent his passing it: but tell me, I desire you, when has the cold kept me within doors? Or where did you see me contend for the shade, to avoid the scorching heat of the sun? Or, when was I hindered by the anguish of my feet from going wherever my fancy led me? Besides, you cannot but know many, whose constitution being naturally weak, have brought themselves by the force of exercise to bear labor and fatigue far better than those of a more robust make, who through indolence and sloth have shamefully neglected it. Why then should you not suppose that I, who have always accustomed myself to bear with patience whatever might fall to my lot, may do it at present with somewhat more ease than you, Antipho, who, perhaps, have not so much as once thought of the matter? If I am observed to be not over delicate in my diet, if I sleep little, nor once taste of those infamous delights which others indulge in, assign no other cause than my being possessed of pleasures in themselves far more eligible, which delight not alone for the moment in which they are enjoyed, but gladden with the hope of yielding perpetual satisfaction. Now, you must have remarked, Antipho, that people who doubt their affairs go ill, are never cheerful; while those who think they are in the way to succeed, whether in agriculture, traffic, or whatever it may be, are happy as if they had al-ready succeeded. But suppose you there can arise from any of these a pleasure equal to what the mind experiences while it is conscious of improving in the paths of virtue, and sees the wise and the good add to the number of its friends? Yet these are the purposes to which I think I employ myself; and this, the reward I have for my labor! Besides, should we suppose our friends or our country wanting assistance, who would be judged the best able to bestow it; he, Antipho, who lives as I do? Or he who engaged in that course of life which seems to you so very delightful? Or, when called on to bear arms, which would you think the most likely to discharge the duty of a good soldier; he who sits down dissatisfied to his table unless loaded with delicacies, however difficult to be obtained; or he who is not only content, but rises well pleased from whatever is set before him? And if the city is besieged, which will be the first to advise the surrendering it up to the enemy? It should seem your opinion, Antipho, that happiness consisted in luxury and profusion; whereas, in truth, I consider it as a perfection in the gods that they want nothing; and consequently, he comes the nearest to the divine nature, who stands in want of the fewest things: and seeing there is nothing which can transcend the divine nature, who ever approaches the nearest thereto, approaches the nearest to sovereign excellence.”

At another time, Antipho disputing with him, said, “I am willing to acknowledge you a just man, Socrates, but surely not a man of much knowledge; and of this you seem to be yourself aware, since you refuse to receive any reward for your instructions. Now it is certain you would not give your house, or even your cloak, for nothing; no, nor for less than the full worth of them; yet you will talk, it is well known, for a whole day gratis;—a plain proof how the case stands with you. Now it is for this very reason I commend your honesty, that will not suffer you, through desire of gain, to deceive any; but then you must give up all pretences to knowledge, since you hereby declare you have none worth purchasing.”

To which Socrates;—”You know, Antipho, that among us it is imagined there is no small similarity between beauty and philosophy; for that which is praiseworthy in the one, is so likewise in the other; and the same sort of vices are apt to blemish both. Now, when we see a woman bartering her beauty for gold, we look upon such a one as no other than a common prostitute; but she who rewards the passion of some worthy youth with it, gains at the same time our approbation and esteem. It is the very same with philosophy: he who sets it forth for public sale, to be disposed of to the best bidder, is a sophist, a public prostitute. But he who becomes the instructor of some well-disposed youth, and makes thereby a friend of him, we say of such a one, he discharges as he ought the duty of a good citizen. And besides, Antipho, as there are some who delight in fine horses, others in dogs, and others in other animals, my pleasure is in the company of my friends. If I know any thing whereby they may at all be profited, I communicate it to them, or recommend them to those whom I think better qualified for carrying them on in the paths of virtue. When we are together, we employ ourselves in searching into those treasures of knowledge the ancients have left us: we draw from the same fountains; and running over whatever these sages have left behind them, where we find any thing excellent, we remark it for our use; and think ourselves not to have profited a little, when we see mutual love begin to flourish among us." Thus did Socrates reply: and truly, when I have heard him talk in this manner, I could not doubt of his being a happy man; nor yet of his kindling in the minds of his hearers an ardent love for that virtue which in him appeared so amiable.

Being asked at another time by the same man, "Why he, who fancied himself so able to make skilful statesmen of others, did not himself engage in state affairs?"

"And by which of these methods," said Socrates, "suppose you I shall most advantage the commonwealth? Taking on me some office, which, however well executed, would only be the service of one man; or, by instructing all I meet, furnish the republic with many good citizens, every one capable of serving it well?"

VII. And now let us examine, whether, by dissuading his friends from vanity and arrogance, he did not excite them to the practice of virtue. It was his custom to assert, "that the only way to true glory, was for a man to be really excellent, not affect to appear so and to show this the more plainly, he would often make use of the following example: "Let us suppose," said he, "that one altogether ignorant in music desires to be thought an excellent musician. To this purpose he takes care to imitate whatever is imitable in those who are the greatest proficients in the art. He is uncommonly curious in the choice of his instruments; and a crowd must follow him, to cry him up for a wonder wherever he goes, as they do the most admired masters; but for all this, he must never venture the public with a specimen of his skill, lest his ignorance, as well as arrogance, should instantly appear, and ridicule, not fame, prove the reward of his ill-judged expenses. The case," he would say, "is the same with the man who endeavors to pass for an able general, or a good pilot, without knowing any thing of the matter. If his word is not taken, he is displeased; if it is, what will become of him when called to preside at the helm, or command the army? What but shame to himself, and perhaps ruin to his best friends, can possibly be the result of the vain undertaking? Neither will he who foolishly affects the character of valiant, or rich, or strong, be exposed to less danger. By the help of some false appearance he may be called, indeed, to some honorable employment; but it is an employment exceeding his abilities to perform;; and his mistakes will not be pardoned by those I whom he imposed on. For as the man can be deemed no other than a cheat who refuses to return the money, or the cloak, which, through his fair demeanor, has been lent him by his neighbor, much rather ought he to be stigmatized as such, who, destitute of every talent necessary for the purpose, shall dare impose himself on the state, as one well qualified to direct in the administration."

Thus Socrates endeavored to make vanity and ostentation the more odious to his followers, by showing clearly how much folly attended the practice of it.

## BOOK II.

I. It is likewise my opinion that Socrates contributed not a little by his discourses to make his followers more patient of hunger, and thirst, and labor; contemn heat and cold; despise sleep; with every other sensual gratification. For hearing that one of them lived too effeminately, he asked him, saying, "Suppose now, Aristippus, the education of two young men was submitted to your direction; the one intended to bear rule in the state, the other to obey; what method would you take with them? Shall we examine the matter, and begin with their food?"

"It will be right to do this, most certainly," replied Aristippus, "since food seems to be the support of life."

"It is probable then," said Socrates, "that you will accustom them both to eat and drink at certain stated hours?"

"Most probably."

"But which would you teach to relinquish this stated hour of repast when urgent business called him away from it?"

"He whom I intend for sovereignty, most assuredly, that the affairs of the commonwealth may not suffer from delay."

"And the power of enduring thirst patiently, ought not this likewise to be added?"

"Certainly."

"And which of these would you accustom to rise early and go to rest late, or pass, when necessary, whole nights in watching? Which to subdue even love itself, with every tender inclination, while fatigue and labor are not shunned, but with cheerfulness submitted to?"

"The same, no doubt of it."

"But if there is an art teaching us in what manner we may best subdue our enemies, which of these young men would you endeavor to make master of it?"

"He whom I intended for rule," replied Aristippus; "since, without this art, all the rest will be useless."

"One should suppose then," said Socrates, "that a man thus educated would not so readily fall into the snares that are laid for him, as those animals, whereof some, we know, are destroyed by their gluttony, while they rush forward, however timorous by nature, to seize the bait thrown out to allure them: others, with equal greediness, swallow down the liquor which has been prepared and set for that very purpose; and, intoxicated therewith, are easily taken; while the partridge and quail find their destruction in running too eagerly after the female's call."

Aristippus assenting to this, Socrates went on: "But is it not then most shameful, Aristippus, when men do fall into the same snares with which those foolish animals are taken? Yet so does the adulterer. He meanly submits to be shut up like a prisoner in the chamber of the man whom he is seeking to injure. Neither the rigor of the laws, nor the fear of a discovery, though sensible how many evils besides that of infamy must attend it, are sufficient to restrain him; but, regardless of the danger, and neglecting those many rational and creditable amusements which are still within his power, and might serve to divert him from so shameful a passion, he rushes headlong to his ruin? And can any other be said of so wretched a being, but that some fury has possessed him?"

"So it should seem," said Aristippus.

"But," continued Socrates, "since so many, and those the most important employments of life,—as war, husbandry, and others,—are of necessity to be carried on in the open fields, from under shelter; do you not think, Aristippus, that mankind are much to blame in neglecting to inure themselves to the inclemencies of the air, and the changes of the seasons? Above all, should not he endeavor to bring himself to bear these inconveniences with patience, who expects one day to command others?”

“I believe he should.”

“But if he who has thus brought himself to endure pain and inconvenience, is alone qualified for command; they who have not done this, ought never to pretend to it?”

This being granted, Socrates went on:—”Seeing then you so well perceived, Aristippus, the rank to which each of these properly belong; in which would you rather we should place you?”

“Not with those, Socrates, who are intended to command; I envy not these: and, indeed, since men are obliged to take so much pains to provide for their own wants, I see no great wisdom in undertaking to supply the wants of a whole community. For, while he who does this is forced to relinquish many of the things he most ardently desires; it will be held highly criminal, if, during his administration, any one wish of the capricious multitude remains ungratified: these behaving towards their governors exactly in the manner I do to my slaves. I expect them to prepare what I am to eat and drink, and all other necessaries; but suffer them to take no part for themselves. The people likewise require that plenty and abundance should flow in upon them from every quarter; but permit not the person, to whose care they owe this, even to taste of those indulgences he has so amply provided for others. Such, therefore, Socrates, as are fond of employment, and have been educated in the manner you mentioned, may do very well to make governors; but, as for me, I am for a life of more ease and tranquility?”

“Let us see then, Aristippus, which of the two leads a life of the greatest tranquility and ease; those who govern, or they who obey? Among the nations that are known to us; in Asia, the Syrians, Phrygians, and Lydians are subject to the

Persians; in Europe, the Bœotians to the Scythians; and, in Africa, the Carthaginians lord it over all the rest; which of these do you take to be in the most eligible situation? Or here, in Greece, where you are placed, which seem to you the most happy; they who are possessed of the sovereign power, or those who are compelled to submit to it?"

"I do not desire to be ranked among slaves," returned Aristippus; "but there is a station equally remote from sovereignty and servitude; this is the true path of liberty; and in this I would walk, as the surest road to happiness."

"This path," replied Socrates, "which lies so equally clear, whether of sovereignty or servitude, might perhaps be supposed to have some existence in nature, could we place it beyond the bounds of human society: But how, Aristippus, to live among men without governing or being governed? Do you not see that the strong will always oppress the weak; and compel them at last, by repeated injuries, both public and private, to fly, as it were, to slavery for refuge! If they refuse to submit willingly, their lands are ravaged, their trees cut down, their corn ruined: till, wearied out at last by oppression of every kind, they are obliged to give up the unequal combat. Also, in private life; see you not how the bold and strong trample upon such as are weak, or want courage to defend themselves?"

I do see it," said Aristippus: "and to the end it may not fall out so with me, I confine myself to no one commonwealth, but move here and there, and think it best to be a stranger every where."

"Truly," said Socrates, "this method of providing for your safety has something peculiar in it: and it should seem, Aristippus, that since the days of Sinnis, Sciro, and Procrustes, no man has dared to molest the traveler. What, then! those who remain continually in their own country have the laws to secure them against violence of every sort; they have their relations, their friends, their dependents, to assist them; their cities are fortified; they have arms for their defense: and, to strengthen them still more, they make alliance with their neighbors: yet shall not all this secure them from falling sometimes into the snares of bad men: while you, destitute of all those various advantages; exposed continually to the many dangers, in a manner unavoidable to those who pass from one place to another; nor yet can enter that city whose very meanest inhabitant does not surpass you in credit: you, who shall then be seen in that situation wherein all the world would wish the man whom they purposed to betray: will they then spare you, Aristippus, because you are a stranger? or, because the public faith has been given, that neither at your entrance into, or going from the city, you shall meet with any molestation? But perhaps you think yourself of so little worth, that no one will be found willing to purchase you: and in truth, Aristippus, I know not that man who would wish to have such a slave in his family, as would do nothing, and yet expect to live well. But shall we see how masters generally manage such sort of people? If their appetites and passions are very outrageous, fasting is made use of to reduce them to order. If they are inclined to take what does not belong to them, every thing valuable is kept carefully out of their way. If escape is meditated, chains shall secure them: and when inclined to be lazy, stripes are called in, to quicken their motions. And you, Aristippus, if you discovered such a slave among your domestics, in what manner would you treat him?"

"I would certainly leave no sort of severity untried," said Aristippus, "till I had brought him to better manners. But let us return to our first subject, Socrates; and tell me, if you please, wherein the happiness of sovereignty consists, which you make such account of; if pain and fatigue, and hunger and cold, and ten thousand other inconveniences, not only pave the way to it, but are afterwards the chosen portion of the man who undertakes to command others? As to my part, I see no greater difference between the strokes of the whip - which we give ourselves, and those laid on by the order of another: for, if my body is to be tortured, it matters not the hand by which it is done: except that folly may also be added to the account, when the pain appears of our own procuring."

"Is it so then, Aristippus, that you perceive no difference between the things we submit to voluntarily, and those we undergo, compelled to it by some other? Now, he who through choice abstains from his food may return to his food whenever he pleases: and he who endures thirst, because he is so minded, may, when minded otherwise, as easily remove it: but the case is not the same when we have constraint to encounter. Besides, he who of his own accord engages in what may be attended with labor, has the hopes of success to animate him in the way, and the fatigue of the chase never discourages the hunter.

"But, if the prospect of acquiring what he is in pursuit of, however worthless in itself, is sufficient to make him regard neither thirst nor hunger; what may not he, whose aim is to procure the friendship of the good, conquer his enemies, gain the command over himself, and wisely govern his own family, benefit his friends, serve his country? Will such a one shrink at fatigue and pain? Rather, will he not court them, while they add to the delight arising from his own consciousness, and the united approbation of those who best know him? And, to show still further how necessary labor and pain are judged for all who would perform any thing laudable; it is a maxim of those who instruct youth, to regard the exercises that are gone through with ease, or give pleasure on their first performance, as of little worth; whether in forming the body or improving the mind: whereas those which require patience, application, and labor, these are they which prepare the man for illustrious deeds and noble undertakings, as many who were excellent judges have told us; and, among the rest, Hesiod, for he speaks somewhere or other after the following manner:

“See Vice, preventing even your wish, appears
To lead through down-hill paths and gay parterres,
Where Pleasure reigns; while Virtue, decent maid,
Retires from view in yon sequester’d shade.
Craggy and steep the way that to her leads;
Fatigue and pain, by order of the gods,
Stern sentry keep. But, if nor pain, nor toil,
Can check the generous ardor of your soul,
Exert your powers, nor doubt your labor’s meed; Conquest and joy shall crown the glorious deed.”

Epicharmus said likewise,

“Earn your reward—the gods give naught to sloth.”

And again,

“Seek not the sweets of life, in life’s first bloom;
They ill prepare us for the pain to come!”

And the wise Prodicus is also of the same opinion; for to him is the allegory given. Now this writer tells us, to the best of my remembrance, “that Hercules having attained to that stage of life when man being left to the government of himself, seldom fails to give certain indications whether he will walk in the paths of virtue or wander through all the intricacies of vice, perplexed and undetermined what course to pursue, retired into a place where silence and solitude might bestow on him that tranquility and leisure so necessary for deliberation, when two women, of more than ordinary stature, came on towards him. The countenance of the one, open and amiable, and elevated with an air of conscious dignity. Her person was adorned with native elegance, her look with modesty, every gesture with decency, and her garments were altogether of the purest white. The other was comely, but bloated, as from too high living. Affecting softness and delicacy, every look, every action, was studied and constrained; while art contributed all its powers to give those charms to her complexion and shape which nature had denied her. Her look was bold, the blush of modesty she was a stranger to, and her dress was contrived, not to conceal, but display those beauties she supposed herself possessed of. She would look round to see if any observed her; and not only so, but she would frequently stand still to admire her own shadow. Drawing near to the place where the hero sat musing, eager and anxious for the advantage of first accosting him, she hastily ran forward; while the person who accompanied her moved on with her usual pace, equal and majestic. Joining him, she said, 'I know, Hercules! you have long been deliberating on the course of life you should pursue; engage with me in friendship, and I will lead you through those paths which are smooth and flowery, where every delight shall court your enjoyment, and pain and sorrow shall not once appear. Absolved from all the fatigue of business and the hardships of war, your employment shall be to share in the social pleasures of the table, or repose on beds of down no sense shall remain without its gratification; beauty shall delight the eye and melody the ear, and perfumes shall breathe their odors around you. Nor shall your care be once wanted for the procuring of these things: neither be afraid lest time should exhaust your stock of joys, and reduce you to the necessity of purchasing new, either by the labor of body or mind: it is to the toil of others that you alone shall owe them I Scruple not, therefore, to seize whatever seems most desirable; for this privilege I bestow on all who are my votaries.'

"Hercules, having heard so flattering an invitation, demanded her name.

‘My friends,’ said she, ‘call me Happiness; but they who do not love me endeavor to make me odious, and therefore brand me with the name of Sensuality.’

“By this time the other person being arrived, thus addressed him in her turn:

‘I also, O Hercules! am come to offer you my friendship, for I am no stranger to your high descent; neither was I wanting to remark the goodness of your disposition in all the exercises of your childhood; from whence I gather hopes, if you choose to follow where I lead the way, it will not be long before you have an opportunity of performing many actions glorious to yourself and honorable to me. But I mean not to allure you with specious promises of pleasure, I will plainly set before you things as they really are, and show you in what manner the gods think proper to dispose them. Know therefore, young man, these wise governors of the universe have decreed, that nothing great, nothing excellent, shall be obtained without care and labor. They give no real good, no true happiness, on other terms. If, therefore, you would secure the favor of these gods, adore them. If you would conciliate to yourself the affection of your friends, be of use to them. If to be honored and respected of the republic be your aim, show your fellow-citizens how effectually you can serve them. But if it is your ambition that all Greece shall esteem you, let all Greece share the benefits arising from your labors. If you wish for the fruits of the earth, cultivate it. If for the increase of your flocks or your herds, let your flocks and your herds have your attendance and your care. And if your design is to advance yourself by arms, if you wish for the power of defending your friends, and subduing your enemies, learn the art of war under those who are well acquainted with it; and, when learnt, employ it to the best advantage. And if to have a body ready and well able to perform what you wish from it be your desire, subject yours to your reason, and let exercise and hard labor give to it strength and agility.’

“At these words, as Prodicus informs us, the other interrupted her:—‘You see,’ said she, ‘my Hercules, the long, the laborious road she means to lead you; but I can conduct you to happiness by a path more short and easy.’

“‘Miserable wretch!’ replied Virtue, ‘what happiness can you boast of? You, who will not take the least pains to procure it! Does not satiety always anticipate desire? Will you wait till hunger invites you to eat, or stay till you are thirsty before you drink? Or, rather, to give some relish to your repast, must not art be called in to supply the want of appetite? while your wines, though costly, can yield no delight, but the ice in summer is sought for to cool and make them grateful to your palate! Beds of down, or the softest couch, can procure no sleep for you, whom idleness inclines to seek for repose; not labor and fatigue, which alone prepare for it. Nor dost you leave it to nature to direct you in your pleasures, but all is art and shameless impurity. The night is polluted with riot and crimes, while the day is given up to sloth and inactivity: and, though immortal, you are become an outcast from the gods, and the contempt and scorn of all good men. You boast of happiness, but what happiness can you boast of? Where was it that the sweetest of all sounds, the music of just self-praise, ever reached your ear? Or when could you view, with complacency and satisfaction, one worthy deed of your own performing? Is there any one who will trust your word, or depend upon your promise; or, if sound in judgment, be of your society? For, among your followers, which of them, in youth, are not altogether effeminate and infirm of body? Which of them, in age, not stupid and debilitated in every faculty of the mind? While wasting their prime in thoughtless indulgence, they prepare for themselves all that pain and remorse so sure to attend the close of such a life! Ashamed of the past, afflicted with the present, they weary themselves in bewailing that folly which lavished on youth all the joys of life, and left nothing to old age but pain and imbecility!

"'As for me, my dwelling is alone with the gods and good men; and, without me, nothing great, nothing excellent, can be performed, whether on earth or in the heavens; so that my praise, my esteem, is with all who know me! I make the labor of the artist pleasant, and bring to the father of his family security and joy; while the slave, as his lord, is alike my care. In peace I direct to the most useful councils, in war approve myself a faithful ally; and I only can tie the bond of indissoluble friendship. Nor do my votaries even fail to find pleasure in their repasts, though small cost is wanted to furnish out their table; for hunger, not art, prepares it for them; while their sleep, which follows the labor of the day, is far more sweet than whatever expense can procure for idleness: yet, sweet as it is, they quit it unreluctant when called by their duty, whether to the gods or men. The young enjoy the applause of the aged, the aged are reverenced and respected by the young. Equally delighted with reflecting on the past, or contemplating the present, their attachment to me renders them favored of the gods, dear to their friends, and honored by their country. And when the fatal hour is arrived, they sink not, like others, into an inglorious oblivion, but, immortalized by fame, flourish for ever in the grateful remembrance of admiring posterity! Thus, O Hercules! you great descendant of a glorious race of heroes! thus may you attain that supreme felicity wherewith I have been empowered to reward all those who willingly yield themselves up to my direction.' "

"See here Aristippus," continued Socrates, "see here the advice which, Prodicus tells us, Virtue gave the young hero. He clothes it, as you may suppose, in more exalted language than I have attempted; but it will be your wisdom if you endeavor to profit from what he has said, and consider at present what may befall you hereafter."

II. Socrates, seeing his eldest son Lamprocles enraged with his mother, spoke to him in the following manner; "Tell me, my son," said he, "did you ever hear of any who are called ungrateful?"

"Many," replied Lamprocles.

"Did you consider what gained them this appellation?"

"They were called ungrateful, because, having received favors, they refused to make any return."

"Ingratitude, then, should seem one species of injustice!"

"Most certainly."

"Have you ever examined thoroughly what this sort of injustice is? Or do you think, Lamprocles, because we are only said to be unjust when we treat our friends ill, not so when we injure our enemies; therefore we are indeed unjust when we are ungrateful to our friends, but not so when only ungrateful to our enemies?"

"I have considered it thoroughly," replied Lamprocles; "and am convinced, that to be ungrateful, is to be unjust; whether the object of our ingratitude be friend or foe."

"If then," continued Socrates, "ingratitude is injustice, it will follow, that the greater the benefit of which we are unmindful, the more we are unjust?"

"Most assuredly."

"But where shall we find the person who has received from any one, benefits so great or so many, as children from their parents? To them it is they owe their very existence; and, in consequence of this, the capacity of beholding all the beauties of nature, together with the privilege of partaking of those various blessings which the gods have so bountifully dispensed to all mankind. Now these are advantages universally held so inestimable, that to be deprived of them excites our very strongest abhorrence; an abhorrence well understood, when the wisdom of the legislator made death to be the punishment of the most atrocious crimes: rightly judging, that the terror wherewith every one beheld it, would serve the most powerfully to deter from the commission of such offences, as they saw must bring upon them this greatest of all evils. Neither should you suppose it sensuality alone which induces mankind to enter into marriage, since not a street but would furnish with other means for its gratification: but our desire is to find out one wherewith to unite ourselves, from whom we may reasonably expect a numerous and a healthful progeny. The husband then turns his thoughts in what manner he may best maintain the wife whom he has thus chosen, and make ample provision for his children yet unborn; while she, on her part, with the utmost danger to herself, bears about with her, for a long time, a most painful burden. To this she imparts life and nourishment, and brings it into the world with inexpressible anguish: nor does her task end here; she is still to supply the food that must afterward support it. She watches over it with tender affection; attends it continually with unwearied care, although she has received no benefit from it; neither does it yet know to whom it is thus indebted. She seeks, as it were, to divine its wants: night or day her solicitude and labor know no intermission; unmindful of what hereafter may be the fruit of all her pain. Afterward, when the children are arrived at an age capable to receive instruction, how does each parent endeavor to instill into their minds the knowledge which may best conduce to their future well-doing! And if they hear of any better qualified than themselves for this important task, to these they send them, without regard to the expense; so much do they desire the happiness of their children!”

"Certain it is," replied Lamprocles, "although my mother had done this, and a thousand times more, no man could bear with so much ill humor."

"Do not you think it easier to bear the anger of a mother, than that of a wild beast?"

"No, not of such a mother."

"But what harm has she done you? Has she kicked you, or bit you, as wild beasts do when they are angry?"

"No, but she utters such things as no one can bear from any body."

"And you, Lamprocles, what have you not made this mother bear, with your continual cries and untoward restlessness! what fatigue in the day! what disturbance in the night! and what pangs when sickness at anytime seized you!"

"But, however, I never did or said any thing to make her ashamed of me."

"It is well. But why, Lamprocles, should you be more offended with your mother, than people on the stage are with one another? There is nothing so injurious or reproachful that these do not often say, yet no one becomes outrageous against the man whom he hears threaten and revile him, because he well knows he intends him no real injury: but you, although you as well know that no hurt is designed you, but, on the contrary, every kindness, you fly out into rage against your mother; or, perhaps, you suppose she intended you some harm?"

"Not at all," replied Lamprocles; "I never once suspected any such matter."

"What! a mother who thus loves you! who, when you are sick, spares no means, no pains for your recovery; whose care is to supply your every want; and whose vows to the gods are so frequent on your behalf! Is she harsh and cruel? Surely the man who cannot bear with such a mother, cannot bear with that which is most for his advantage. But tell me," continued Socrates, "does it seem to you at all necessary to show respect or submission to any one whatsoever? Or are you indeed conscious of such a degree of self-sufficiency, as makes it needless to pay any regard, whether to magistrate or general?"

"So far from it," said Lamprocles, "I endeavor all I can to recommend myself to my superiors."

"Perhaps, too, you would cultivate the goodwill of your neighbor, that he may supply you with fire from his hearth, when you want it; or yield you ready assistance, when any accident befalls you?"

"I would, most surely."

"And if you were to go a journey, or a voyage with any one, it would not be indifferent to you, whether they loved or hated you?"

"No, certainly!"

"Wretch! to think it right to endeavor to gain the good-will of these people; and suppose you are to do nothing for a mother, whose love for you so far exceeds that of any other! Surely you have forgot, that while every other kind of ingratitude is passed over unnoticed by the magistrate, those who refuse to return good offices, in any other case, being only punished with the contempt of their fellow-citizens; the man who is wanting in respect to his parents, for this man public punishments are appointed; the laws yield him no longer their protection; neither is he permitted any share in the administration, since they think no sacrifice offered by a hand so impious, can be acceptable to the gods, or beneficial to man: and conclude the mind so altogether degenerate, equally incapable of undertaking any thing great, or executing any thing justly. For such, too, as neglect to perform the rites of sepulture for their parents, for these, the same punishments have been allotted by the laws: and particular regard is had to these points, when inquiry is made into the lives and behavior of those who offer themselves candidates for any public employment. You, therefore, O my son! will not delay, if wise, to entreat pardon of the gods; lest they, from whom your ingratitude cannot be hid, should turn away their favor from you: and be you likewise careful to conceal it from the eyes of men, that you find not yourself forsaken by all who know you; for no one will expect a return to his kindness, however considerable, from him who can show himself unmindful of what he owes to his parents."

III. Socrates having observed that Chærephon and Chærecrates, two brothers, with whom he was acquainted, were at variance, he wished very much to reconcile them to each other. To which end, meeting one of them, he said to him, "What, are you then, Chærecrates, one of those mercenary kind of people, who prefer riches to a brother, and forget that these being only inanimate things, require much vigilance and care to protect them; whereas a brother endued with reason and reflection, is able to give assistance and protection to you? And, besides, brothers are somewhat less plentiful than gold! It is strange a man should think himself injured because he cannot enjoy his brother's fortune! Why not equally complain of injury done him by the rest of his fellow-citizens, because the wealth of the whole community does not centre in him alone? But in this case they can argue right, and easily see that a moderate fortune secured by the mutual aid of society, is much better than the riches of a whole city attended with the dangers to which solitude would expose them, yet admit not this reasoning in regard to a brother. If rich, they buy slaves in abundance to serve them: they endeavor all they can to gain friends to support them; but make at the same time no account of a brother, as if nearness in blood disqualified for friendship! But surely, to be born of the same parents, and educated in the same house, ought rather to be considered as so many powerful cements, since even wild beasts themselves show some inclination to animals they are brought up with. And besides, Chærecrates, he who has a brother, is much more regarded than he who has none; his enemies too will be the less forward to molest him."

"I will not deny," replied Chærecrates, "that a brother, when such as he should be, is, as you say, an inestimable treasure, and therefore we ought to bear long with one another, so far from quarrelling on every slight occasion; but when this brother fails in every particular, and is indeed the very reverse of all he ought to be, to keep on terms with such a one, is next to an impossibility."

"Your brother then, Chærecrates, is displeasing to every one? Or are there some to whom he can make himself very agreeable?"

"Therefore he the more deserves my hatred," said Chærecrates, "because wherever he comes he fails not to make himself pleasing to others; whereas, he seems to aim at nothing but displeasing me."

"But may not this happen, Chærecrates, from your not knowing how to converse properly with a brother? As the horse, not un-tractable to others, becomes altogether unmanageable to the unskillful rider."

"And why should I, who well knowhow to return any kindness shown me either in words or actions, be supposed ignorant in what manner to behave properly to a brother? No: but when I see a man catch at every opportunity to vex and disoblige me, shall I, after this, show kindness to such a one? I cannot, Socrates; nor will I even attempt it!"

"You surprise me, Chærecrates! Suppose you had a dog who watched and defended your sheep diligently; this dog fawns and caresses your shepherds, but snarls at you whenever you come near him. What do you on this occasion?

Fly out into rage? Or endeavor, by kindness, to reconcile him to you? You acknowledge a brother, when such as he ought to be, an invaluable treasure: you say you are not unacquainted with the arts of conciliating favor and affection, but yet are resolved to employ none of them to gain the love of Chærephon!”

“I do not believe, Socrates, I have arts sufficient to succeed in such an attempt.”

“And yet I should imagine,” said Socrates, “no new one necessary: practice only those you are already master of, and you will find them sufficient to regain his affection.”

“If you know what these are, of favor inform me,” replied Chærecrates; “for they are unknown to me.”

“Suppose, Chærecrates, you wished some friend to invite you to his feast when he offered sacrifice; what means would you take to induce him thereto.”

“Invite him to one of mine.”

“And if you wanted him, in your absence, to manage your affairs, what then?”

“I would try what I could to engage his gratitude, by first rendering him the service I wished to receive.”

“But, suppose you desired to secure for yourself an hospitable reception in some foreign country, what would you do?”

“When any of that place came to Athens, I would invite them to my house,” said Chærecrates; “and would spare no pains to assist them in dispatching the business they came for, that they, when I went thither, might help me in return to expedite mine.”

“Is it so then!” replied Socrates; “and are you so well skilled in all the arts of conciliating favor and affection, yet know nothing of the matter? But you are afraid, Chærecrates, of making the first advances to your brother, lest it should degrade you in the opinion of those who hear it? Yet surely it ought not to be less glorious for a man to anticipate his friends in courtesy and kind offices, than get the start of his enemies in injuries and annoyance! Had I thought Chærephon as well disposed as you towards a reconciliation, I should have endeavored to have prevailed on him to make the first advances; but you seemed to me the better leader in this affair; and I fancied success the most likely to ensue from it."

"No, now, Socrates," cried out Chærecrates, "you certainly speak not with your usual wisdom. What! would you have me, who am the youngest, make overtures to my brother; when in all nations it is the undoubted privilege of the first-born to lead the way?"

"How!" replied Socrates; "is it not the custom every where for the younger to yield precedence to the elder? Must not he rise at his approach and give to him the seat which is most honorable; and hold his peace till he has done speaking? Delay not therefore, Chærecrates, to do what I advise: use your endeavor to appease your brother; nor doubt his readiness to return your love. He is ambitious of honor: he has a nobleness of disposition; sordid souls, indeed, are only to be moved by mercenary motives; but the brave and liberal are ever best subdued by courtesy and kindness."

"But suppose, Socrates, when I have acted as you advise, my brother should behave no better than he has done?"

"Should it prove so, Chærecrates, what other harm can arise to you from it, than that of having shown yourself a good man, and a good brother to one whose badness of temper makes him undeserving of your regard? But I have no apprehension of so unfavorable an issue to this matter: rather, when your brother shall see it your intention to conquer by courtesy, he himself will strive to excel in so noble a contest. As it is, nothing can be more deplorable than your present situation; it being no other than if these hands, ordained of God for mutual assistance, should so far forget their office, as mutually to impede each other: or these feet, designed by Providence for a reciprocal help, should entangle each other to the hindrance of both. But surely, it shows no less our ignorance and folly, than works our harm, when we thus turn those things into evil which were not created but for our good. And, truly, I regard a brother as one of the best blessings that God has bestowed on us; two brothers being more profitable to each other than two eyes or two feet, or any other of those members which have been given to us in pairs, for partners and helps, as it were, to each other by a bountiful Providence. For, whether we consider the hands or feet, they assist not each other unless placed at no great distance: and even our eyes, whose power evidently appears of the widest extent, are yet unable to take in, at one and the same view, the front and the reverse of any one object whatsoever, though placed ever so near them: but no situation can hinder brothers, who live in amity, from rendering one another the most essential services."

IV. I also remember a discourse that Socrates once held concerning friendship; which I think could not but greatly benefit his hearers; since he not only taught us how we might gain friends, but how to behave towards them when gained. On this occasion he observed, "that although the generality of mankind agreed in esteeming a firm and virtuous friend an invaluable possession, yet were there very few things about which they gave themselves less trouble. They were diligent, he said, to purchase houses and lands, and slaves, and flocks, and household goods; and, when purchased, would take no little pains to preserve them; but were no way solicitous either to purchase or preserve a friend, however they might talk of the advantages of having one. No, he had seen people, who, if they had a friend and a slave sick at the same time, would send for the physician, and try every means to recover the slave, while the friend was left to take care of himself; and, if both died, it was easy to see how each stood in their estimation. Of all their possessions this alone was neglected: they would even suffer it to be lost for want of a little attention. Their estates here and there they could with readiness point out to you; but ask them of their friends, how many and what they are, and you reduce them to some difficulty. The number, though acknowledged small, is more than they can well make out to you; so little do these people concern themselves about the matter. And yet, what possession shall be placed in competition with a friend? What slave so affectionate to our persons, or studious of our interest? What horse able to render us such service? From whence, or from whom, can we at all times and on every occasion receive so many and such essential benefits? Are we at a loss in our own private affairs, or in those the public have entrusted to our management? A friend will supply every deficiency. Do we wish for the pleasure of giving assistance to some other? A friend will furnish us with the power. Are we threatened with danger? He flies to our assistance; for he not only dedicates his fortune to our service, but his life to our defense.

Do we purpose to persuade? His eloquence is ever ready to second all we say.

Are we compelled to contend? His arm is ever found among the foremost to assist us. He doubles the joy which prosperity brings, and makes the load of affliction less heavy. Our hands, our feet, our eyes, can yield us small service in comparison to that we receive from a friend; for what we are not able to do for ourselves: that which we neither see, nor hear, nor think of, when our own interest is the question, a friend will perceive, and perform for us. And yet, this friend, while the plant that promises us fruit shall be carefully cultivated, this friend we neglect to nourish and improve; though where else the tree from whence such fruit is to be found!"

V. I remember likewise another discourse of his, wherein he exhorts his hearers to look well into themselves, and see in what estimation they might reasonably hope their friends should hold them. For, having observed one of his followers desert a friend when oppressed with penury, he thus questioned Antisthenes in the presence of the man, together with many others: "Pray, say, Antisthenes, is it allowable to value our friends as we do our slaves: for one of these we perhaps rate at five mina; while we think another dear at two; these again we will give ten for; and for some, it may be, twenty; no, it is said that Nicias, the son of Nicerates, gave no less than a whole talent for one he intended to set over his mines. May we estimate our friends in the same manner?"

"I think we may," replied Antisthenes; "for, while I know some whose affection I would purchase at no mean price, there are others whom I would scarcely thank for theirs, if I might have it for nothing. And there are, Socrates, whose favor and friendship I should be glad to secure, though at the expense of the last farthing."

"If this is the case," replied Socrates, "it behooves us not a little to consider of how much worth we really are to our friends; at the same time that we use our diligence to raise our value with them as much as we can, that they may not lay us aside like useless lumber. For when I hear this man cry out, 'My friend has deserted me and another complain, 'that one whom he thought most strongly attached to him, had sold his friendship for some trifling advantage,' I am inclined to ask, Whether, as we are glad to get rid of a bad slave at any rate, so we may not wish to do the same by a worthless friend? since, after all, we seldom hear of the good friend being forsaken, any more than of the good slave wanting a master."

VI. And here, on the other hand, I will relate a conversation Socrates once had with Critobulus; from whence we may learn to try our friends, and find out such as are worthy of our affection.

"Suppose," said he, "Critobulus, we wanted to choose a worthy friend, what should be our method of proceeding in this matter? Should we not beware of one much addicted to high living? to wine or women? or of a lazy disposition? since, enslaved to such vices, no man could be of use either to himself, or any other."

"Certainly."

"Suppose we met with a man whose possessions being small, he is yet most lavish in his expenses; who stands daily in need of his friend's purse, as a necessary supply for his own profusion; with whom, however, all that is lent is lost; yet, whom to refuse is most deadly to offend: Would not such a one prove rather troublesome, think you?"

"No doubt, Socrates."

"And if there was a person, provident indeed enough, but withal so covetous, as never to be content unless he has the advantage of you on every occasion?"

"I think of him worse than of the other."

"But what do you say to the man, Critobulus, who is so much bent on making a fortune, as to mind nothing but what serves to that end?"

"I say, leave him to himself," returned Critobulus; "since it is sure he will never be of use to any other."

"And suppose one of so turbulent a disposition, as to be daily engaging his friends in some quarrel on his account?"

"I would keep clear of such a one, most certainly, Socrates."

"But what if the man were free from these defects, and had only such a sort of selfishness belonging to him, as made him always ready to receive favors, not at all solicitous about returning any?”

“'Why certainly,” replied Critobulus, “no person would wish to have any thing to say to such a one. But, Socrates,” continued he, “since none of these people will serve our purpose, show me, I desire you, what sort of man he must be whom we should endeavor to make a friend of?”

“I suppose,” said Socrates, “he should be the very reverse of all we have been saying: moderate in his pleasures, a strict observer of his word, fair and open in all his dealings; and who will not suffer even his friend to surpass him in generosity; so that all are gainers with whom he has to do.”

“But how shall we find such a one,” said Critobulus; “or make trial of these virtues and vices, without running some hazard by the experiment?”

“When you are inquiring out the best statuary, Critobulus, you trust not to the pretences of any, but examine the performances of all; and conclude that he who has hitherto excelled, gives the best grounded assurance of excelling for the future.”

“So you would have us infer, Socrates, that he who has already discharged the duties of a good friend towards those with whom he has been formerly connected will not fail to do the same when connected with you?”

“Undoubtedly, Critobulus, just as I should infer, that the groom who has taken proper care of your horses, will do the same by mine, whenever I send him any.”

“But, Socrates, when we have found out a man whom we judge proper to make a friend of, what means may we use to engage his affection?”

“In the first place,” returned Socrates, “we must consult the gods, whether it be agreeable to their will that we engage in friendship with him.”

“But suppose the gods disapprove not of our choice, what way shall we take to obtain his favor

“Not hunt him down, Critobulus, as we do

hares; nor catch him by stratagem, as we do birds; neither are we to seize him by force, as we are wont to serve our enemies; for it would prove an arduous task to make a man your friend in spite of inclination. To shut him up like a criminal might create aversion, but would never conciliate favor and esteem.”

“But what must we do then?”

“I have heard,” said Socrates, “of certain words that have all the force in them of the most powerful charms. There are likewise other arts, wherewith such as know them seldom fail to allure to themselves whomsoever they please.”

“And where can we learn these words?” said Critobulus.

“You know the song the Sirens used to charm Ulysses? It begins with,

“O stay, O pride of Greece, Ulysses stay!” Pope’s Odyssey.

“I do know it, Socrates. But did they not mean to detain others by these charms, as well as Ulysses?”

“Not at all, Critobulus; words like these are only designed to allure noble souls, and lovers of virtue.”

“I begin to understand you,” said Critobulus; “and perceive the charm which operates so powerfully, is praise: but, in order to make it effectual, we must bestow it with discretion, lest ridicule should seem intended by us, rather than applause. And, indeed, to commend a man for his beauty, his strength, or his stature, who knows himself to be weak, little, and deformed, would be to incur his resentment, not conciliate his affection; and make mankind not seek but shun our society.

But do you know of no other charms?”

“No: I have heard, indeed, that Pericles had many, wherewith he charmed the city, and gained the love of all men.”

“By what means did Themistocles procure the affection of his fellow-citizens?”

“By no incantations, most certainly,” replied Socrates; “if you except that of serving the state.”

“You would insinuate then, Socrates, that, in order to obtain a virtuous friend, we must endeavor first of all to be ourselves virtuous?”

“Why, can you suppose, Critobulus, that a bad man can gain the affection of a good one?”

“And yet,” said Critobulus, “I have seen many a sorry rhetorician live in great harmony with the best orator in Athens; and a general, perfectly well skilled in the art of war, shall admit others to his intimacy, who know nothing of the matter.”

“But did you ever see a man, Critobulus, who had no one good quality to recommend him;—for that is the question;—did you ever see such a one gain a friend of distinguished abilities?”

“I do not know I ever did. But if it is so clear, Socrates, that those who have much merit, and they who have none, can never unite together in friendship; are the virtuous equally sure of being beloved by all the virtuous?”

“You are led into this inquiry, Critobulus, from observing that the great and the good, although alike enemies to vice, and equally engaged in the pursuit of glory, are so far from expressing their mutual good-will, that enmity and opposition sometimes prevail among them; and are with more difficulty reconciled to each other, than even the most worthless and vile of all mankind. This you see, and are concerned at.”

"I am so," replied Critobulus; "and the more, as I observe this not confined to particulars, but communities: those, too, where vice finds its greatest discouragement, and virtue its best reward; even these shall engage in hostilities against each other! Now when I see this, Socrates, I almost despair to find a friend; for where shall I seek one? Not among the vicious; for, how can one who is ungrateful, profuse, avaricious, idle, intemperate, faithless, be a friend? He may hate, but cannot love. Neither yet is it more possible for the virtuous and the vicious to unite in the bonds of amity; since, what concord can subsist between those who commit crimes, and they who abhor them? And if, after this, we are to add the virtuous; if ambition can sow enmity among the best of men; if these, desirous all of the highest places, can envy and oppose each other, where can friendship be found? or where the asylum on earth for fidelity and affection?"

"My Critobulus," answered Socrates, "we shall find it no easy matter to investigate this point. Man is made up of contrarieties. Inclined to friendship from the want he finds in himself of friends, he compassionates the sufferer; he relieves the necessitous; and finds complacency and satisfaction, whether his turn is to receive or confer an obligation. But as one and the same thing may be an object of desire to many; strife, enmity, and ill-will, become thereby unavoidable: benevolence is extinguished by avarice and ambition; and envy fills the heart, which till then was all affection! But friendship can make its way, and surmount every obstacle, to unite the just and good. For virtue will teach these to be contented with their own possessions, how moderate soever; no, infinitely prefer them to the empire of the world, if not to be had without hatred and contention. Assisted by this, they willingly endure the extreme of thirst and hunger, rather than injure, or bear hard on any; nor can love itself, even when the most violent, transport them beyond the rules of decency and good order. They are satisfied with whatever the laws have allotted them: and so far from desiring to encroach on the rights of others, they are easily inclined to resign many of their own. If disputes arise, they are soon accommodated, to the contentment of each party: anger never rises so high, as to stand in need of repentance; nor can envy once find admission into the minds of those who live in a mutual communication of their goods; and plead a kind of right in whatever a friend possesses. Hence, therefore, we may be very sure, that virtuous men will not oppose, but assist each other in the discharge of the public offices. Those, indeed, who only aim at highest honors, and posts of the greatest power, that they may accumulate wealth, riot in luxury, and oppress the people, are too profligate and unjust to live in concord with any: but he who aspires to an honorable employment, for no other end than to secure himself from oppression, protect his friends, and serve his country; what should hinder his uniting with those whose intentions are no other? Would it render him less able to accomplish these designs? Or would not his power become so much the more extensive, from having the wise and good associate in the same cause with him? In the public games, continued Socrates, "we permit not the skilful and the strong, to unite themselves together, as knowing that in so doing they must bear away the prize in every contention: but here, in the administration of the public affairs, we have no law to forbid the honest from joining with the honest; who are generally, too, the most able; and on that account to be chosen rather for associates than opponents. Besides, since contentions will arise, confederates should be sought for; and the greater number will be necessary, if those who oppose us have courage and ability. For this purpose, and to make those whom we engage the more zealous in serving us, favors and good offices are to be dispensed with a liberal hand: and even prudence will direct us to prefer the virtuous, as not being many: besides, evil men are always found insatiable. But however this may be, Critobulus, take courage; make yourself, in the first place, a virtuous man, and then boldly set yourself to gain the affection of the virtuous: and this is a chase wherein I may be able to assist you, being myself much inclined to love. Now, whenever I conceive an affection for any, I rest not till it becomes reciprocal; but, borne forward towards them by the most ardent inclination, I strive to make my company equally desirable. And much the same management will you find necessary, Critobulus, whenever you would gain the friendship of any: conceal not, therefore, from me the person whose affection you most desire. For, as I have made it my study to render myself pleasing to those who are pleasing to me, I believe I am not ignorant of some of the arts best calculated for such a purpose."

"And I," replied Critobulus, "have long been desirous of receiving some instructions herein; and more especially if they will help me to gain the affection of those who are desirable on account of the beauty of their persons as well as the graces of their minds."

"But all compulsion is entirely excluded from my scheme," continued Socrates; "and I verily believe," says he, "that the reason why all men fled the wretched Scylla, was, from her employing no other means; since we see them easily detained by the Siren's song; and, forgetful of every thing, yield themselves up to the enchanting harmony."

"Be assured, Socrates," said Critobulus, "I shall never think of taking any man's affection by storm: of favor, therefore, proceed, I beseech you, to your instructions."

"You must promise me, likewise, to keep at a proper distance, and not give way to overmuch fondness."

"I shall make no great difficulty to promise you this, Socrates, provided the people are not very handsome."

“And those who are so will be in less danger, as far less likely to suffer you than those who are more plain.”

“Well, I will not transgress in this point,” said Critobulus; “only let me knowhow I may gain a friend.”

“You must permit me then,” said Socrates, “to tell him how much you esteem him, and how great your desire to become one of his friends.”

“Most readily, Socrates; since I never knew any one displeased with another for thinking well of him.”

“And that your observation of his virtue has raised in you great affection of his person; Would you think I did amiss, and might hurt you in the man’s opinion?”

“The very reverse, I should imagine; for I find in myself a more than ordinary affection towards those who express an affection for me.”

“I may go then so far in speaking of you to those you love: but will you allow me to proceed, Critobulus, and assure them, that the sweetest pleasure you know is in the conversation of virtuous friends? That you are constant in your care of them? That you behold their honorable achievements with no less satisfaction and complacency than if you yourself had performed them, and rejoice at their prosperity in like manner as at your own? That, in the service of a friend, you can feel no weariness, and esteem it no less honorable to surpass him in generosity than your enemy in arms? By this, or something like this, I doubt not to facilitate your way to the forming of many very excellent friendships.”

“But why do you ask my leave, Socrates, as if you were not at liberty to say what you please of me?”

“Not so,” returned Socrates; “for I have often heard Aspasia declare, that matchmakers succeed pretty well if they keep to the truth in what they say of each party; whereas, if falsehood is employed, nothing but vexation can ensue; for they who have been deceived hate one another, and those most of all who brought them together. Now, I hold this observation of Aspasia to be right, and not less to concern the point in question: and, therefore, I think I cannot urge any thing in your behalf, Critobulus, which strict truth will not make good.”

“Which is as much as to say,” replied Critobulus, “that if I have good qualities sufficient to make myself beloved, I may then have your helping hand: but, otherwise, you are not so very much my friend as to be at the trouble to feign any for me.”

“And by which of these methods shall I best serve you, Critobulus? Bestowing on you some praise, which, after all, is not your due, or exhorting you to act in such a manner as may give you a just claim to it, and that from all mankind? Let us examine the matter, if you are still doubtful. Suppose I should recommend you to the master of a ship, as a skilful pilot, and on this you were admitted to direct at the helm, must not destruction to yourself, as well as the loss of the ship, be the inevitable consequence? Or suppose I spoke of you everywhere as a great general, or able statesman, and you, on the credit of this false representation, were called to determine causes, preside in the council, or command the army, would not your own ruin be involved in that of your country? No, were I only to commend you as a good economist to my neighbor, and thereby procure for you the management of his affairs, and the care of his family, would not you expose yourself to much ridicule, at the same time that you were exposing him to ruin? But the surest, as the shortest way, to make yourself beloved and honored, Critobulus, is to be indeed the very man you wish to appear. Set yourself, therefore, diligently to the attaining of every virtue, and you will find, on experience, that no one of them whatsoever but will flourish and gain strength when properly exercised. This is the counsel I have to give you, Critobulus. But, if you are of a contrary opinion, let me know it, I entreat you."

"Far from it," replied Critobulus; "and I should only bring shame upon myself by contradicting you, since thereby I should contradict the sure principles of truth and virtue."

VII. Socrates had the greatest tenderness for his friends. Had ignorance or imprudence brought them into difficulties, Socrates, by his good advice, would often set them at ease.

Or, if sinking under poverty, he would procure to them relief, by pressing upon others the duty of mutual assistance.

I will give some instances of his sentiments on such occasions.

Perceiving on a time a deep melancholy on the countenance of one of his friends, "You seem oppressed," said he, "Aristarchus; but impart the cause of it to your friends; they may be able to relieve you.'

"I am indeed," said Aristarchus, "oppressed with no small difficulty: for since our late troubles, many of our men being fled for shelter to the Piræus, the women belonging to them have all poured down upon me; so that I have at present no less than fourteen sisters, and aunts, and cousins, all to provide for! Now, you know, Socrates, we can receive no profit from our lands; for these our enemies have got into their possession: nor yet from our shops and houses in the city; since Athens has scarcely an inhabitant left in it. Nobody to be found neither to purchase our wares; nobody to lend us money, at what interest soever: so that a man may as well hope to find it in the very streets as to borrow it any where. Now, what am I to do, Socrates, in this case? It would be cruel not to relieve our relations in their distress; and yet, in a time of such general desolation, it is impossible for me to provide for so great a number."

Socrates having patiently heard out his complaint,—”Whence comes it,” said he, “that we see Ceramo not only provide for a large family, but even become the richer by their very means; while you, Aristarchus, are afraid of being starved to death, because some addition has been lately made to yours?”

“The reason is plain,” replied Aristarchus;

“Ceramo’s people are all slaves; whereas those with me are every one of them free.”

“And which, in your opinion, do you rate the highest? Ceramo’s slaves, or the free people your house is filled with?”

“There can be no comparison.”

“But is it not then a shame,” said Socrates, “that your people, who so far exceed in worth, should reduce you to beggary, while those with Ceramo make him a rich man?”

“Not at all,” replied Aristarchus: “the slaves with him have been brought up to trades; but those I speak of had a liberal education.”

“May we be said to be masters of some trade when we understand how to make things which are useful?”

“No doubt of it.”

“Is flour or bread useful?”

“Certainly.”

“And clothes, whether for men or women, are they useful?”

“Who doubts it?” said Aristarchus.

“But the people with you are altogether ignorant of these things?”

So far from it,” replied Aristarchus, “that I question not their being able to perform any one of them.”

“But of what are you afraid then, Aristarchus. Nausycides with one of these can maintain himself and family; and not only so, but buy flocks and herds, and accommodate the republic with a round sum on occasion: Cyribes also supports his household in ease and affluence by making bread: Demeas, the Collytensian, his, by making cassocks: Menon, his, by making of cloaks: and the Megarensians theirs, by making of short jackets.”

“That is true,” interrupted Aristarchus; “for the way with these is to buy Barbarians, whom they can compel to labor: but I can do no such thing with the women who live with me; they are free, they are my relations, Socrates.”

“And so, because they are free, and related to you, they are to do nothing but eat and sleep! Do you suppose, Aristarchus, that such as live in this manner are more content than others? or enjoy more happiness than they, who by their labor earn bread for their families? Suppose you that idleness and inattention can gain any useful knowledge, or preserve in the memory what has been already gained? That they can keep the man in health, add strength to his body, and gold to his stores, or give security to what he has already in his possession; and shall labor and industry stand him in no stead? To what purpose, I pray you, did your relations learn any thing? Did they resolve at the time to make no use of their knowledge? Or, rather, did they not intend from it some advantage to themselves, or benefit to others? Surely we give small proof of our wisdom when we thus decline all employment. For, which is most reasonable—procuring to ourselves the things that are useful, by exerting the powers which nature has bestowed; or, with arms across, sit listless and musing, considering only the means by which others may provide for us? And verily, if I may speak my mind to you freely, I should suppose, Aristarchus, you cannot have any great love for your guests, in your present situation; nor they for you. You think them a burden; and they perceive you think them so: and it will be well if discontent does not increase daily, till all gratitude and affection are compelled to give way.

But show them once in what manner they may become useful; and you will henceforth regard them with complacency and satisfaction; while they, perceiving it, will hardly be wanting in affection to you. They will be able to look back with pleasure, not pain, on all you have done for them: and the sweet familiarity of friendship, together with all the tender charities arising from the sacred ties of consanguinity, will again be restored to your happy society! Were the employments indeed of that nature as would bring shame along with them, death itself were to be chosen rather than a subsistence so obtained: but such as they are skilled in, are, as I suppose, decent and honorable; to be performed with pleasure, since they can perform them with so much ease. Delay not then, Aristarchus, to propose what may be of so much advantage both to them and you; and doubt not their compliance with what they must perceive to be so very reasonable.”

“O heavens! “ cried Aristarchus; “what truths have I now heard! But your advice, Socrates, shall be regarded as it ought: hitherto I have been afraid to borrow money of my neighbor, as not knowing, when spent, by what means to repay it; but my scruples are now over: this moment I will buy such materials as may be wanted.”

Nor did he at all cool in his resolutions. Wool, with whatever was necessary for the working of it, were sent in by Aristarchus; and each one was employed from morning to night. Melancholy gave way to continual cheerfulness; and mutual confidence took the place of that mutual suspicion, which, till then, had possessed the minds of Aristarchus and his guests. They consider him now as their generous protector; and his love for them increased in proportion to their usefulness.

Some time afterward, Aristarchus coming to see Socrates, related with much pleasure in what manner they went on:

"But my guests," said he, "begin now to reproach me, for being, as they say, the only idle person in the whole family."

"Acquaint them," answered Socrates, "with the fable of the dog. You must know," continued he, "that in the days of yore, when brutes could talk, several of the sheep coming to their master, 'Is it not strange, sir!' say they to him, 'that we, who provide you with milk, and wool, and lambs, have nothing at all given us but what we can get off the ground ourselves; while the dog there, who cannot so much as help you to one of them, is pampered and fed with the very bread you eat of?'

'Peace!' cries the dog, who overheard their complaint; 'it is not without reason I am taken most care of; for I secure you from the thief and the wolf; nor would you, wretches! dare to eat at all, if I did not stand sentinel, to watch and defend you.' The sheep, said the fable, on hearing this, withdrew, convinced that the dog had reason on his side: and do you, Aristarchus, convince your guests that it is by your care they are protected from harm; and enjoy a life of security and pleasure."

VIII. At another time, Socrates meeting his old friend Eutherus, whom he had not seen for many years, asked him, "Where he came from?"

"From no great distance, at present," replied Eutherus. "Towards the end of our late destructive war, I returned, indeed, from a long journey: for, being dispossessed of all the estate I had on the frontiers of Attica, and my father dying, and leaving me nothing here, I was obliged to gain a subsistence by my labor wherever I could: and thought it better to do so, than beg of any one; and borrow I could not, as I had nothing to mortgage."

"And how long," said Socrates, "do you imagine your labor will supply you with necessaries?"

"Not long."

"And yet age increases the number of our wants, at the same time that it lessens our power of providing for them?"

"It does so."

"Would it not then be more advisable, Eutherus, to seek out for some employment, which might enable you to lay up some little for old age? What if you were to go to some wealthy citizen, who may want such a person, to assist him in gathering in his fruits; inspecting his affairs; and overlooking his laborers; whereby you might become a mutual benefit to each other?"

"But slavery, Socrates, is a thing I can ill submit to."

"Yet magistrates, Eutherus, and those who are employed in public affairs, are so far from being considered as slaves on that account, that, on the contrary, they are held in the highest estimation."

"It may be so, Socrates, but I never can bear being found fault with."

"And yet," said Socrates, "you will be hard set to do any one thing whose every circumstance is secure from blame. For it is difficult so to act, as to commit no error; which yet if we could, I know of no security against the censure of ill judges: and truly I should wonder, Eutherus, if what you are at present employed about could be performed in such a manner as to escape all blame. It seems therefore to me, that all you can do, is only to take care, as far as may be, to keep clear of those people who seem glad to find fault; and seek out such as are more candid. Which done, pursue with steadiness and alacrity whatever you undertake, but beware how you undertake any thing beyond your power. Thus will your indigence find relief, without the hazard of much blame to you. Certainty shall take the place of a precarious subsistence, and leave you to the full enjoyment of all the peaceful pleasures of old age!"

IX. I remember one day Crito complaining how difficult it was at Athens for a man who loved quiet to enjoy his fortune in security: “For,” said he, “I have now several lawsuits on my hands, for no other reason, that I can guess at, but because they know I would rather pay my money than involve myself in business and perplexity.”

Socrates asked, “If he kept never a dog, to defend his sheep from the wolves?”

“I keep several,” said Crito, “as you may imagine; and they are of no small use to me.”

“Why then,” said Socrates, “do you not engage some person in your service, whose vigilance and care might prevent others from molesting you?”

“So I would, Socrates, did I not fear that this very man might, at last, turn against me.”

“But wherefore should you fear this? Are you not pretty certain, that it may be more for the interest of people to keep on good terms with you, than have you for an enemy. Believe me, Crito, there is many a man in Athens who would think himself very much honored by your friendship.” Saying this, Archidemus came immediately into their mind; a man able and eloquent, and, withal, well versed in business; but poor, as being one of those few who are not for having whatever they can lay hands on. He loved honest men; though he would often say, nothing was more easy than to grow rich by calumny. To this man, Crito, in consequence of what Socrates had said to him, would send corn, or wool, or wine or oil, or any other produce of his estate, when they brought him those things from the country: and when he sacrificed to the gods, he sent for him to the feast, nor ever omitted any opportunity of showing respect to him. Archidemus seeing this, began to detach himself from all other dependencies, and consider Crito’s house as the place that would shelter him from every want. He therefore gave himself entirely to him: and discovering that Crito's false accusers were guilty of many crimes, and had made themselves many enemies, he undertook to manage them. He therefore summoned one of them to answer for an offence, which, if proved against him, must subject him at least to a pecuniary mulct, if not to corporal punishment. The man, knowing how little he could defend his malpractices, endeavored by every art to make Archidemus withdraw his prosecution, but to no purpose; for he would never lose sight of him till he had compelled him not only to leave Crito in peace, but purchase his own with no inconsiderable sum of money. Archidemus having conducted this affair, and many others of the same nature, successfully, Crito was thought not a little happy in having his assistance: and as the shepherds often avail themselves of their neighbor's dog, by sending their sheep to pasture near him, Crito's friends would entreat him to lend Archidemus to them. He, on his side, was glad of an opportunity to oblige his benefactor; and it was observed, that not only Crito himself, but all his friends, lived free, for the future, from any molestation. Likewise, when any reproached him with having made his court to Crito for his own interest: "And which," said he, "do you think the most shameful? serving the good who have already served you, and joining with them in their opposition to the wicked; or, confederating with the bad, assist them the more effectually to oppress the virtuous, and thereby make every honest man your enemy?" From this time Archidemus lived in the strictest intimacy with Crito; nor did Crito's friends less honor and esteem him.

X. I remember Socrates once saying to Diodorus, "Suppose, Diodorus, one of your slaves ran away from you, would you be at any pains to recover him?"

"Yes, certainly," said the other; "and I would even go so far as to publish a reward for whoever would bring him to me."

"And if any of them were sick, you would take care of them, I imagine, and send for a physician to try to save them?"

"Undoubtedly."

"But what if a friend, something of more worth to you than a thousand slaves, were reduced to want, would it not become you, Diodorus, to relieve him? You know him for a man incapable of ingratitude; no, one who would even blush to lie under an obligation without endeavoring to return it. You know too, that the service of him who serves from inclination—who not only can execute what you command, but of himself find out many things that may be of use to you—who can deliberate, foresee, and assist you with good counsel—is infinitely of more value than many slaves? Now good economists tell us, it is right to purchase when things are most cheap; and we can scarcely recollect the time, at Athens, when a good friend might be had for such a pennyworth."

"You are in the right," said Diodorus; therefore you may bid Hermogenes come to me."

"Not so neither," returned Socrates; "for, since the benefit will be reciprocal, it seems; just as reasonable that you go to him, as he come to you."

In consequence of this discourse, Diodorus went himself to Hermogenes, and, for a small consideration, secured a valuable friend, whose principal care was to approve his gratitude, and return the kindness shown him with many real services.

## BOOK III.

I. We will now relate in what manner Socrates was useful to such of his friends as aimed at any honorable employment, by stirring them up to the attainment of that knowledge which alone could qualify them for discharging it properly.

Being told that one Dionysidorus was come to Athens, and there made public profession of teaching the military art, Socrates from thence took occasion to address the following discourse to a young man of his acquaintance, whom he knew at that very time soliciting for one of the principal posts in the army:—”Is it not,” said he, “a most scandalous thing, for one who aims at commanding the forces of his country, to neglect an opportunity of gaining the instructions necessary for it? And does he not deserve to be more severely treated, than he who undertakes to form a statue without having learnt the statuary’s art? In time of war, no less than the safety of the whole community is entrusted to the general: and it is in his power either to procure to it many and great advantages, by a prudent discharge of the duties of his station, or involve his country, through misconduct, in the very deepest distress; and therefore that man must be worthy of no small punishment, who while he is unwearied in his endeavors to obtain this honor, takes little or no thought about qualifying himself properly for executing a trust of such vast importance.”

This reasoning wrought so powerfully upon the mind of the young man, that he immediately applied himself to the gaining of instruction.

And coming a little time after where Socrates was standing with others of his friends, Socrates, on his approach, said to them laughing, “You remember, sirs, that Homer, speaking of Agamemnon, styles him venerable. Do you not think our young man here has acquired new dignity, and looks far more respectable, now he has learnt the art of commanding? For, as he who is a master of music, will be a master of music, though he touches no instrument; and he who has the skill of a physician, will be a physician, though not actually employed in the practice of his art: so, no doubt of it, this young man, now that he has gained the knowledge of a general, is incontestably a general, though he never should be chosen to command the army: whereas it would be to very little purpose for an ignorant pretender to get himself elected, since this could no more make a general of him, than it would make a man a physician, to call him one. But," continued Socrates, turning towards him, "since it may fall out that some of us may command a company, or a cohort under you, inform us, I pray you, with what point your master began his instructions, that we may not be altogether ignorant of the matter?"

"With the very same point with which he ended," replied the other; "the right ordering of an army, whether in marching, fighting, or encamping."

"Surely," answered Socrates, "this is out a small part of the office of a general: for he must likewise take care that none of the necessaries of war be wanting, and that his soldiers are supplied with every thing needful, as well for their health as daily subsistence. He should be diligent, patient, fruitful in expedients, quick of apprehension, unwearied in labor, mildness and severity must each have their place in him: equally able to secure his own, and take away that which belongs to another. Open, yet reserved; rapacious, yet profuse; generous, yet avaricious; cautious, yet bold; besides many other talents, both natural and acquired, necessary for him who would discharge properly the duties of a good general. Yet I do not esteem the right disposition of an army a slight thing: on the contrary," said he, "nothing can be of so much importance; since, without order, no advantage can arise from numbers any more than from stones, and bricks, and tiles, and timber, thrown together at random: but when these are disposed of in their proper places; when the stones and the tiles, as least perishable, are made use of for the foundation and covering; the bricks and timber, each likewise in their order; then we may see a regular edifice arising, which afterward becomes no inconsiderable part of our possessions."

"Your comparison," interrupted the other, "makes me recollect another circumstance, which we were told the general of an army ought to have regard to; and that is, to place the best of his soldiers in the front and in the rear: while those of a doubtful character being placed in the middle, may be animated by the one, and impelled by the other, to the performance of their duty."

"Your master then," said Socrates, "taught you how to know a good soldier from a bad one; otherwise this rule could be of no use: for if he ordered you, in the counting of money, to place the good at each end of the table, and that which was adulterated in the middle, without first instructing you by what means to distinguish them, I see not to what purpose his orders could be."

"I cannot say," replied the other; "but it is very sure my master did no such thing: we must therefore endeavor to find it out ourselves."

"Shall we consider this point then a little further," said Socrates, "that so we may the better avoid any mistake in this matter? Suppose," continued he, "the business was to seize some rich booty; should we not do well to place in the front, those whom we thought the most avaricious?"

"Certainly."

"But where the undertaking is attended with peril, there, surely, we should be careful to employ the most ambitious, the love of glory being sufficient to make men of this stamp despise all danger: neither shall we be at a loss to find out these people; since they are always forward enough to make themselves known. But this master of yours," continued Socrates, "when he taught you the different ways of ranging your forces, taught you at the same time the different use you were to make of them."

"Not at all, I do assure you."

"And yet a different disposition of the army should be made, according as different occasions require."

"That may be," replied the other; "but he said not a word to me of the matter."

"Then return to him," said Socrates, "and question him concerning it; for if he is not either very ignorant, or very impudent, he mil be ashamed of having taken your money, and sent you away so little instructed."

II. Meeting with one who had been newly elected general, Socrates asked him, "Why has Agamemnon the title of pastor of the people given him by Homer? Must it not be for this reason, think you, that like as a shepherd looks carefully to the health of his flock, and provides them pasture; so he, who has the command of the army, should provide his soldiers with all things necessary; and procure those advantages to them for which they endure the hardships of war, conquest over their enemies, and to themselves more happiness? Why also does the same poet praise Agamemnon for being,

"Great in the war; and great in arts of sway," Pope.

but to show in him, that personal bravery, however remarkable, is not enough to constitute the general, without he animates his whole army with courage, and makes every single soldier brave? Neither," continued he, "can that prince be celebrated for the arts of sway, however successful he may be in regulating his domestic affairs, who does not cause felicity and abundance to be diffused throughout his whole dominion. For kings are not elected that their cares should afterwards centre in their own private prosperity; but to advance the happiness of those who elect them, are they called to the throne. As, therefore, the only motive for submitting to war, is the hope of rendering our future lives more secure and happy; and commanders are chosen for no other purpose, than to lead the way to this desirable end; it is the duty of a general to use his utmost endeavors not to disappoint the people therein: for, as to answer their expectations will bring to him the highest glory; so, to fail through misconduct, must be attended with the greatest shame."

We may here see, from what has been just said, that Socrates designed to give us his idea of a good prince; passing over every other consideration; confines it to him alone, who diligently promotes the happiness of his people.

III. Meeting at another time with a person who had been chosen general of the horse, Socrates said to him, "As I doubt not, my young man, your being able to give a good reason why you desired the command of the cavalry, I should be glad to hear it: for I cannot suppose you asked it only for an opportunity of riding before the rest of the army, as the archers on horseback must go before you: neither could it be, to make yourself the more taken notice of; for madmen will still have the advantage of you there. But your design, I conclude, was to reform the cavalry, in hopes of making them of more service to the republic."

"I did design this, most certainly."

"A noble intention!" replied Socrates, "if you can but accomplish it. But your station obliges you to have an eye to your horses, as well as men."

"Undoubtedly."

"Pray tell us then," said Socrates, "what method you will take to get good horses?"

"O that," answered the general, "belongs not to me: the rider himself must look to that particular."

"Very well," said Socrates. "But suppose you wanted to lead them on to charge the enemy: and you found some of them lame; and others so weak, from being half-starved, that they could not come up with the rest of the army: while others again were so restive and unruly, as to make it impossible to keep them in their ranks: of what use would such horses be to you? or you to the republic?"

"You are in the right," said the other; "and I will certainly take care what sort of horses are in my troop."

"And what sort of men too, I hope," replied Socrates.

"Certainly."

"Your first endeavor, I suppose then, will be, to make them mount their horses readily?"

"It shall," said the other, "to the end they may stand a better chance to escape, if they are thrown off them."

"You will likewise take care," said Socrates, "to exercise them often: sometimes in one place, and sometimes in another; particularly there where it seems the most like to that in which you expect to meet the enemy, that your troops may be equally dexterous in all: for you cannot, I suppose, when going to engage, order your enemies to come and fight you on the plain, because there alone you were accustomed to exercise your army? You will likewise instruct them in throwing the dart: and if you would indeed make good soldiers, animate them with the love of glory, and resentment against their enemies: but, above all, be careful to establish your authority; since neither the strength of your horses, nor the dexterity of the riders, can be of much use to you without obedience?"

"I know it, Socrates: but what must I do to bring them to this obedience?"

"Have you not observed," said Socrates, "that all men willingly submit to those whom they believe the most skilful; in sickness, to the best physician; in a storm, to the best pilot; and in agriculture, to him whom they consider as the best husbandman?"

"I have," replied the other.

"If so, may we not well conclude, that he who is known to have the most skill in conducting the cavalry, will always find himself the most willingly obeyed?"

"But need I do no more than convince them of my superior abilities?"

"Yes; you must likewise convince them that both their glory and safety depend on their obedience."

"But how shall I be able to convince them of this?

"With less trouble," replied Socrates, "than you can prove to them it is better and more for their advantage to be vicious than virtuous."

"But, at this rate, it will be necessary for a general to add the study of the art of speaking to all his other cares."

"And do you imagine," said Socrates, "he can discharge his office without speaking? It is by the medium of speech the laws are made known to us for the regulation of our conduct; and whatsoever is useful in any science, we become acquainted with it by the same means; the best method of instruction being in the way, of conversation: and he who is perfectly master of his subject will always be heard with the greatest applause. But have you never observed," continued Socrates, "that, throughout all Greece, the Athenian youth bear away the prize in every contention, from those sent by any other republic? Even a chorus of music going from hence to Delos, exceeds, beyond all comparison, whatever appears from any other places. Now the Athenians have not, naturally, voices more sweet, or bodies more strong, than those of other nations, but they are more ambitious of glory, which always impels to generous deeds and noble undertakings. Why, therefore, may not our cavalry be brought in time to excel any other; whether in the beauty of their horses and arms; whether in their discipline, order, and courage; were they but shown that conquest and glory would almost prove the infallible result of it?”

“I see not why, indeed,” answered the other, “if we could but convince them this would be the event.

“Lose no time, then,” said Socrates; “but go, excite your soldiers to the performance of their duty; that while you make them of use to you, they may likewise make you of some use to your country.”

“I certainly shall make the attempt,” replied the general.

IV. Seeing, at another time, Nichomachides return from the assembly of the people, where they had been choosing the magistrates, Socrates asked, whom they had fixed upon to command the army? “Could you have thought it!” said the other, “the Athenians, Socrates, paid no regard to me, who have spent my whole life in the exercise of arms! passed through every degree, from that of common sentinel to colonel of the horse, covered with these scars (showing them on his bosom), my whole strength wasted with fighting in defense of them! while Antisthenes, one who never served among the infantry, nor ever did any thing remarkable among the horse, him they have elected, though all his merit seems to consist in being able to get money.”

“No bad circumstance,” replied Socrates; “we may hope, at least, to have our troops well paid.”

“But a merchant can get money as well as Antisthenes; does it follow from thence that a merchant is a fit man to command an army?”

“You overlook, Nichomachides, that Antisthenes is likewise a lover of glory, and seeks to excel in whatever he undertakes;—a quality of some worth in the commander of an army. You know, whenever he led the chorus, he always took care to carry off the prize.”

“But, surely, there is some difference between commanding an army and ordering the chorus?”

“And yet,” replied Socrates, “Antisthenes has no great knowledge himself either in music or the laws of the theatre? but as he had penetration sufficient to find out those who excelled in them, you see how, by their assistance, he came off conqueror.”

“He must have somebody then to fight, and give out his orders, when at the head of his army?”

“Be that as it may,” returned Socrates, “it is certain that he who follows the counsel of such as are best skilled in any art, let it be war or music, or any thing else, is pretty sure of surpassing all who are engaged in the same pursuit with him. Neither is it probable that he who so liberally expends his money, when the affair is no more than to amuse the people, and purchase a victory which only brings honor to himself and to his own tribe, will be more sparing when the point is to gain a conquest far more glorious over the enemies of his country, and in which the whole republic are equally concerned.”

“We are to conclude, then,” returned the other, “that he who knows how to preside properly at a public show, knows in like manner how to command an army.”

“It is certain,” said Socrates, “so much may be concluded, that he who has judgment enough to find out what things are best for him, and ability to procure them, can hardly fail of success, whether his design be to direct the stage or govern the state,—manage his own house or command the army.”

“Truly,” replied Nichomachides, “I scarcely expected to hear from you, Socrates, that a good economist and a good commander was the same thing.”

“Do you think so?” answered Socrates: “Let us inquire then if you please, into the duty of each; and see what agreement we can find between them. Is it not the business of them both to endeavor to make the people who are placed under them tractable and submissive?”

“It is.”

“Must they not see that every person be employed in the business he is most proper for? Are they not, each of them, to punish those who do wrong, and reward those who do right? Must they not gain the love of the people who are placed under their authority, and procure to themselves as many friends as may be, to strengthen and stand by them in time of need? Should they not knowhow to secure their own? And, in short, should not each of them be diligent and unwearied in the performance of his duty?”

“So far,” replied Nichomachides, “it may be as you say; but surely the comparison can scarcely hold, when the case is to engage an enemy.”

“Why so?” said Socrates, “have they not each of them enemies to engage?”

“Certainly.”

“And would it not be for the advantage of both, to get the better of these enemies?”

“No doubt of it, Socrates! But I still see not of what use economy can be to a general, when the hour is come for his soldiers to fall on.”

"The very time," said Socrates, "when it will be the most; for, as economy will show him his greatest gain must arise from conquest, his greatest loss from being overcome; he will for that reason be very careful not to take any one step whatsoever which may hazard a defeat; wisely declining an engagement while in want of any thing; but equally ready to seize the hour, when, provided with all that is necessary, victory seems to him no longer doubtful. Thus you see of what use economy may be to a general: nor do you, Nichomachides, despise those who practice it, since the conduct of the state, and that of a private family, differ no otherwise than as greater and less; in every thing else there is no small similarity. The business is with men in either case: neither do we know of one species of these, whereby to manage the affairs of government, and another for carrying on the common concerns of life; but the prince at the helm, and the head of his family, must serve themselves from the same mass. And, to complete the parallel, be assured, Nichomachides, that whoever has the skill to use these instruments properly, has also the best secret for succeeding in his design; whether his aim be to direct the state, or limit his care to the concerns of his own household; while he who is ignorant of this point must commit many errors, and of course meet with nothing but disappointments."

V. Being in company with Pericles, son to the great Pericles, Socrates said to him,—"I hope, my young man, when you come to command the forces of the republic, the war may be carried on with more glory and success than we have lately known it."

"I should be glad if it were so," replied the other; "but how it is to be done I cannot easily see."

"Shall we try," said Socrates, "to get some light into this matter? You know the Bœotians are not more numerous than we."

"I know they are not."

"Neither are they stronger or more valiant."

"They are not."

"But the Bœotians, it may be, are more united among themselves?"

"So far from it," said Pericles, "that the Bœotians hate the Thebans on account of their oppression; whereas we can have nothing of this sort in Athens."

"But then we must own," said Socrates, "that the Bœotians are not only the most courteous of all mankind, but the most ambitious; and they who are so, the love of glory and of their country, will impel to undertake any thing."

"But I knew not," replied Pericles, "that the Athenians are deficient in any of these particulars."

"It must be acknowledged," said Socrates, "if we look back to the actions of our forefathers, and consider either the luster or the number of their glorious deeds, no nation can exceed us: and having such examples, taken out too from among ourselves, they cannot but inflame our courage, and stir us up to' a love of valor and of virtue."

"And yet you see," answered Pericles, "how much the glory of the Athenian name is tarnished since the fatal defeat of Lubea, wherein Tolmides lost more than a thousand men; and that other at Delium, where Hippocrates was slain: for whereas, till then, the Bœotians feared to make head against us, though in defense of their own country; without the assistance of the Lacedæmonians and the rest of Peloponnesus, they now threaten to invade us, and that with their own forces only; while the Athenians, instead of ravaging, as formerly, Bœotia at pleasure, when not defended by foreign troops, are made to tremble in their turn, lest Attica itself should become the scene of slaughter."

"The case," said Socrates, "is, I fear, as you have stated it; but for that reason it seems to me, Pericles, the very time wherein to desire the command of our armies. It is of the nature of security to make men careless, effeminate, and ungovernable; while fear, on the contrary, awakens their diligence, renders them obedient, and reduces them to order. We may see this among our seamen. So long as they are under no apprehension of danger, they give themselves over to riot and disorder; but at the sight of a pirate, or the appearance of a storm, become immediately other men: not only diligent in performing whatever is commanded, but even watching, in silence, the master's eye, ready to execute, as in a well-ordered chorus, whatever part he shall think proper to assign them."

"Supposing," replied Pericles, "the people of Athens were at present in such a state as might dispose them to obedience, what way shall we take to rouse them to an imitation of our ancestors, that, with their virtues, we may restore the happiness and the glory of the times they lived in?"

"Was it our desire," answered Socrates, "to stir up any one to regain an inheritance now in the possession of another, what more should we need than to tell them it was theirs by long descent from their progenitors? If, therefore, Pericles, you wish our Athenians to hold the foremost rank among the virtuous, tell them it is their right, delivered down to them from the earliest ages; and that, so long as they are careful to maintain this pre-eminence in virtue, preeminence in power cannot fail to attend it. You would likewise do well to remind them, how highly the most ancient of their forefathers were esteemed and honored on account of their virtue."

"You mean when, in the time of Cecrops, the people of Athens were chosen in preference to all others, to arbitrate in the dispute which had arisen among the gods?"

“I do,” said Socrates; “and I would have you go on, and relate to them the birth and the education of Erictheus, the wars in his time with all the neighboring nations; together with that undertaken in favor of the Heraclides against those of Peloponnesus. That also, in the days of Theseus, when our ancestors gained the reputation of surpassing all their contemporaries both in conduct and courage, ought not to be passed over. After which it may not be amiss to recall to their minds what the descendants of these heroes have performed in the ages just before us. Show them the time when, by their own strength alone, they made head against the man who lorded it over all Asia, and whose empire extended even into Europe itself, as far as Macedonia; inheriting from his forefathers a formidable army, as well as wide dominions, that had already made itself famous for many noble undertakings. Tell them at other times of the many victories, both by sea and land, when in league with the Lacedæmonians; men no less famous than themselves on the account of military courage: and, although innumerable have been the revolutions throughout the rest of Greece, whereby many have been compelled to change their habitations, show them the Athenians still in possession of their ancient territories; and not only so, but often made arbiters of the rights of other people, while the oppressed, on every side, have had recourse to them for protection.”

““When I think of these things, Socrates, I marvel by what means our republic has sunk so low.”

“I suppose,” replied Socrates, “the Athenians acted in this respect like men, who, seeing themselves exalted above the fear of a competitor, grow remiss, and neglect discipline, and become thereby more despicable than the people whom they once despised; for, no sooner had our virtue set us above the rest of our contemporaries but we sunk into sloth, which ended, as you see, in a total degeneracy.” But how shall we recover the luster of the ancient virtue?”

“Nothing more easy to point out,” replied Socrates; “let but our people call to mind what were the virtues and discipline of their forefathers, and diligently endeavor to follow their example, and the glory of the Athenian name may rise again as high as ever! But, if this is too much for them, let them copy at least the people, whom, at present, they are compelled to consider as far above them: let them apply themselves with the same diligence to perform the same things, and let them not doubt of becoming again their equals: their superiors, if so be they will but surpass them in virtue.”

“You speak, Socrates, as if you thought our Athenians at no little distance from it. And, indeed,” continued Pericles, “when do we see them, as at Sparta, reverencing old age? Or, rather, do we not see them showing their contempt of it even in the person of a father? Can they be expected to imitate that republic in the exercises which render the body healthful, who make sport of those who do? Will people who even glory in despising their rulers, submit readily to their commands? Or will concord and unanimity subsist among men, who seek not to help, but injure one another, and bear more envy to their fellow-citizens than to any other of mankind? Our assemblies, both public and private, are full of quarrels and contentions, while we harass each other with perpetual suits at law; choosing by that means some trifling advantage, though with the ruin of our neighbor, rather than content ourselves with an honest gain, whereby each party might be equally profited. The magistrate’s aim is altogether his own interest, as if the welfare of the community no way concerned him. Hence that eager contention for places and power, that ignorance and mutual hatred among those in the administration, that animosity and intrigue which prevail among private parties.

So that I fear, Socrates, lest the malady should rise to such a height, that Athens itself must, before long, sink under it.”

“Be not afraid, Pericles, that the distemper is incurable. You see with what readiness and skill our people conduct themselves in all naval engagements: how regular in obeying those who preside over their exercises, lead the dance, or direct the chorus.”

“I am sensible of this,” said Pericles: “and hence, Socrates, is the wonder, that, being so complying on all such occasions, our soldiers, who ought to be the choice and flower of this very people, are so frequently disposed to mutiny and disobedience.”

“The senate of the Areopagus,” said Socrates, “is not this likewise composed of persons of the greatest worth?”

“Most certainly.”

“Where else do we see judges who act in such conformity to the laws, and honor to themselves? Who determine with so much uprightness between man and man; or discharge, with such integrity, whatever business is brought before them?”

“I cannot reproach them,” said Pericles, “with having failed in any thing.”

“Therefore, let us not give up our Athenians, Pericles, as a people altogether degenerate.”

“Yet in war,” replied Pericles, “where decency, order, and obedience, are more especially required, they seem to pay no regard to the command of their superiors.”

“Perhaps,” returned Socrates, “some part of the blame may belong to those who undertake to command them? You hardly know of any man, I believe, pretending to preside over a chorus, directing the dance, or giving rules to the athletics, while ignorant of the matter. They who take upon them to do any of these things, must tell you where, and by whom they were instructed in the art they now pretend to teach others;

whereas the greater part of our generals learn the first rudiments of war at the head of their armies. But I know, Pericles, you are not of that sort of men; but have made it your employment to study the military art; and have gone through all the exercises so necessary for a soldier. In the memorials of your father, that great man! I doubt not your having remarked, for your own advantage, many of those refined stratagems he made use of; and can show us many more of your own collecting. These you study: and to the end that nothing may be omitted by one who hopes to command our armies, when you find yourself either deficient or doubtful, you are not unwilling to own your ignorance; but seek out for such as you imagine more knowing; while neither courtesy of behavior, nor even gifts, are wanting, whereby to engage them to give you assistance."

"Ah, Socrates!" cried Pericles, interrupting him, "it is not that you think I have done these things, but wish me to do them, that you talk in this manner."

"It may be so," replied Socrates. "But to add a word or two more. You know," continued he, "that Attica is separated from Bœotia by a long chain of mountains, through which the roads are narrow and craggy; so that all access to our country from that side, is both difficult and dangerous."

"I know it," said Pericles.

"It has been told you too, I imagine, how the Mysians and Pisidians, having seized for themselves several considerable places, and a large tract of land, in the territories of the king of Persia, are able, from the advantages of their situation, not Only to secure their own liberty, but with their light-armed horse greatly annoy their enemies, by making perpetual inroads upon them?'

"Yes, I have heard this," replied the other. "Why then may it not be supposed," said Socrates, "that if we secured those passes on the mountains which divide us from Bœotia, and sent there our youth properly armed for making incursions, we might in our turn give some annoyance to our enemies; while these mountains, as so many ramparts, secured us from their hostilities?”

“I agree with you,” said Pericles, “this might turn to our advantage, and that all you have said has been much to the purpose.”

“If you think so,” replied Socrates, “and that my observations may be of service, you have nothing more to do than to carry them into execution. Should success be the consequence, you, my friend, will have the honor, and the republic much gain. If you fail through want of power, no great mischief can ensue; Athens will not be endangered; nor shall you, Pericles, incur either shame or reproach, for having engaged in such an undertaking.”

VI. Glauco, the son of Aristo, was so strongly possessed with the desire of governing the republic, that, although not yet twenty, he was continually making orations to the people: neither was it in the power of his relations, however numerous, to prevent his exposing himself to ridicule; though sometimes they would drag him, by very force, from the tribunal. Socrates, who loved him on the account of Plato and Charmides, had alone the art to succeed with him. For meeting him, he said, “Your design then, Glauco, is to be at the very head of our republic?”

“It is so,” replied the other.

“Believe me,” said Socrates, “a noble aim! For, this once accomplished, and you become, as it were, absolute; you may then serve your friends, aggrandize your family, extend the limits of your country, and make yourself renowned, not only in Athens, but throughout all Greece; no, it may be, your fame will spread abroad among the most barbarous nations, like another Themistocles: while admiration and applause attend wherever you go!” Socrates having thus fired the imagination of the young man, and secured himself a favorable hearing, went on: “But if your design is to receive honor from your country, you intend to be of use to it; for nothing but that can secure its applause.”

“Undoubtedly,” replied Glauco.

“Tell me then, I entreat you, what may be the first service you intend to render the republic?”

Glauco remaining silent, as not knowing what to answer: “I suppose,” said Socrates, “you mean to enrich it? for that is generally the method we take, when we intend to aggrandize the family of some friend.”

“This is indeed my design,” returned the other.

“But the way to do this,” said Socrates, “is to increase its revenues.”

“It is so.”

“Tell me then, I pray you, whence the revenues of the republic arise, and what they annually amount to; since I doubt not of your having diligently inquired into each particular, so as to be able to supply every deficiency; and, when one source fails, can easily have recourse to some other.”

“I protest to you,” said Glauco, “this is a point I never considered.”

“Tell me then only its annual expenses; for I suppose you intend to retrench whatever appears superfluous?”

“I cannot say,” replied Glauco, “that I have yet thought of this affair any more than of the other.”

“We must postpone then our design of enriching the republic to another time,” said Socrates: “for I see not how a person can exert his endeavors to any purpose so long as he continues ignorant both of its income and expenses.”

“Yet a state may be enriched by the spoils of its enemies.”

“Assuredly,” replied Socrates: “But, in order to this, its strength should be superior, otherwise it may be in danger of losing what it has already. He, therefore, who advises war, ought to be well acquainted not only with the forces of his own country, but those of the enemy; to the end, that if he finds superiority on his side, he may boldly persist in his first opinion, or recede in time, and dissuade the people from the hazardous undertaking.”

“It is very true,” returned the other.

“I pray you, then, tell me what are our forces by sea and land; and what the enemy’s?”

“In truth, Socrates, I cannot pretend to tell you, at once, either one or the other.”

“Possibly you may have a list of them in writing? If so, I should attend to your reading it with pleasure.”

“No, nor this,” replied Glauco, “for I have not yet begun to make any calculation of the matter.”

“I perceive then,” said Socrates, “we shall not make war in a short time; since an affair of such moment cannot be duly considered at the beginning of your administration. But I take it for granted,” continued he, “that you have carefully attended to the guarding our coasts; and know where it is necessary to place garrisons; and what the number of soldiers to be employed for each: that while you are diligent to keep those complete which are of service to us, you may order such to be withdrawn as appear superfluous.”

“It is my opinion,” replied Glauco, “that every one of them should be taken away, since they only ravage the country they were appointed to defend.”

“But what are we to do then,” said Socrates, “if our garrisons are taken away? How shall we prevent the enemy from overrunning Attica at pleasure? And who gave you this intelligence, that our guards discharge their duty in such a manner? Have you been among them?”

“No: but I much suspect it.”

“As soon then,” said Socrates, “as we can be thoroughly informed of the matter, and have not to proceed on conjecture only, we will speak of it to the senate.”

“Perhaps,” replied Glauco, “this may be the best way.”

“I can scarcely suppose,” continued Socrates, “that you have visited our silver mines so frequently, as to assign the cause why they have fallen off so much of late from their once flourishing condition?”

“I have not been at all there,” answered Glauco.

“They say, indeed,” answered Socrates, “that the air of those places is very unhealthy; and this may serve for your excuse, if the affair at any time should be brought under deliberation.”

“You rally me, Socrates, now,” said the other.

“However,” said Socrates, “I question not but you can easily tell us how much corn our country produces; how long it will serve the city; and what more may be wanted to carry us through the year, that so you may be able to give out your orders in time; that scarcity and want may not come upon us unawares.”

“The man,” replied Glauco, “will have no little business on his hands, who pretends to take care of such a variety of things.”

“Yet so it must be, Glauco,” said Socrates: “you see even here, in our own private families, it is impossible for the master to discharge the duties of his station properly, unless he not only inquires out what is necessary for those who belong to him, but exerts his utmost endeavors to supply whatever is wanted. In the city there are more than ten thousand of these families to provide for; and it is difficult to bestow upon them, at one and the same time, that attention and care which is necessary for each of them. I therefore think you had better have given the first proof of your abilities in restoring the broken fortunes of one in your own family, from whence, if succeeding, you might afterwards have gone on to better those of the whole community; or finding yourself unable to do the one, thought no longer of the other; for surely the absurdity of the man is most apparent, who knowing himself not able to raise fifty pound weight, shall nevertheless attempt the carrying of five thousand."

"But I make no doubt," replied Glauco, "of my having been able to have served my uncle, and that very considerably, if he would have followed my advice."

"Alas!" returned Socrates, "if you could not to this hour prevail on so near a relation as your uncle to follow your counsel, how can you hope that all Athens, this very man too among others, should submit to your direction? Beware then, Glauco; beware lest a too eager desire of glory should terminate in shame. Consider how much they hazard who undertake things, and talk on subjects of which they are ignorant. Call to mind those of your acquaintance who have thus talked and thus done, and see whether the purchase they made for themselves had not more of censure than applause in it; of contempt than admiration. Consider, on the other hand, with what credit they appear, who have made themselves masters of the point in question: and when you have done this, I doubt not your seeing that approbation and glory are alone the attendants of capacity and true merit; while contempt and shame are the sure reward of ignorance and temerity. If, therefore, you desire to be admired and esteemed by your country beyond all others, you must exceed all others in the knowledge of those things which you are ambitious of undertaking: and thus qualified, I shall not scruple to insure your success, whenever you may think proper to preside over the commonwealth."

VII. On the other hand, having observed that Charmides, the son of Glauco, and uncle to the young man of whom we have been speaking, industriously declined any office in the government, though otherwise a man of sense, and far greater abilities than many who at that time were employed in the administration; Socrates said to him, "I pray you, Charmides, what is your opinion of one, who being able to win the prize at the Olympic games, and thereby gain honor to himself and glory to his country, shall nevertheless, decline to make one among the combatants?"

"I should certainly look upon him," said Charmides, "as a very effeminate and mean-spirited man."

"And suppose there may be one who has it in his power, by the wisdom of his counsels, to augment the grandeur of the republic, and raise at the same time his own name to no common pitch of glory, yet timorously refusing to engage in business; should not this man be deemed a coward?"

"I believe he should," replied Charmides: "but wherefore this question to me?"

"Because," said Socrates, "you seem to be this very man; since, able as you are, you avoid all employment; though, as citizen of Athens, you are certainly a member of the commonwealth, and, consequently, ought to take some share in serving it."

"But on what do you ground your opinion of my ability?"

"I never once doubted it," said Socrates, "since I once saw you in conference with some of our leading men: for, when they imparted any of their designs to you, you not only counseled what was best to be done, but expostulated freely and judiciously, when you thought they were mistaken."

"But surely there is some difference," said Charmides, "between discoursing in private and pleading your own cause before a full assembly."

"And yet," said Socrates, "a good arithmetician will not calculate with less exactness before a multitude than when alone: and he, who is a master of music, not only excels while in his own chamber, but leads the concert with applause in presence of the full audience."

"But you know, Socrates, the bashfulness and timidity nature has implanted, operates far more powerfully in us when before a large assembly, than in a private conversation."

"And is it possible," said Socrates, "that you, who are under no sort of concern when you speak to men who are in power, and men who have understanding, should stand in awe of such as are possessed of neither? For, after all, Charmides, who are the people you are most afraid of? Is it the masons, the shoemakers, the fullers, the laborers, the retailers? Yet these are the men who compose our assemblies. But to converse thus at your ease, before people who hold the highest rank in the administration, (some of them, perhaps, not holding you in the highest estimation,) and yet suffer yourself to be intimidated by those who know nothing of the business of the state, neither can be supposed at all likely to despise you, is, certainly, no other than if he, who was perfectly well skilled in the art of fencing, should be afraid of one who never handled a file. But you fear their laughing at you?"

"And do they not often laugh at our very best speakers?"

"They do," replied Socrates; "and so do the others—those great men whom you converse with daily. I therefore the rather marvel, Charmides, that you who have spirit and eloquence sufficient to reduce even these last to reason, should stand in awe of such stingless ridiculers! But endeavor, my friend, to know yourself better; and be not of the number of those who turn all their thoughts to the affairs of others, and are, the meanwhile, utter strangers at home. Be acquainted with your own talents, and lose no occasion of exerting them in the service of your country; and make Athens, if it may be, more flourishing than it is at present. The returns they bring will be glorious! Neither is it the commonwealth alone that shall be advantaged by them; yourself, Charmides, and your best friends, shall share the benefit."

VIII. Aristippus being desirous to retaliate in kind for having been formerly put to silence by Socrates, proposed a question in so artful a manner, as he doubted not would pose him. Socrates, however, was at no loss for an answer; though regardful rather of the improvement of his hearers than the ordering of his speech. The question was, "If he knew any thing that was good?"

Now, had it been said of food, money, health, strength, courage, or any thing else of the like nature, that they were good, Aristippus could with ease have demonstrated the contrary, and shown that each, and all of them, were often evil: but Socrates was better provided with a reply; for, knowing with what eagerness we wish to be relieved from whatever molests us—"What," said he, "Aristippus, do you ask me if I know any thing good for a fever?"

"No, not so," returned the other.

"For an inflammation in the eye?"

"Nor that, Socrates."

"Do you mean any thing good against a famine?"

"No, nor against a famine."

"No, then," replied Socrates, "if you ask me concerning a good, which is good for nothing, I know of none such; nor yet desire it.” Aristippus still urging him: “But do you know,” said he, “any thing beautiful?”

“A great many,” returned Socrates.

“Are these all like one another?”

“Far from it, Aristippus: there is a very considerable difference between them.”

“But how can beauty differ from beauty?”

“We want not many examples of it,” replied Socrates; “for the same disposition of the body which is beautiful in him who runs, is not beautiful in the wrestler; and while the beauty of the shield is to cover him well who wears it, that of the dart is to be swift and piercing.”

“But you return,” said Aristippus, “the same answer to this question as you did to the former.”

“And why not, Aristippus? for do you suppose there can be any difference between beautiful and good? Know you not, that whatever is beautiful, is, for the same reason, good? And we cannot say of anything,—of virtue, for example,—that on this occasion it is good, and on the other, beautiful. Likewise, in describing the virtuous character, say we not of it, “It is fair and good?” Even the bodies of men are said to be fair and good, with respect to the same purposes: and the same we declare of whatever else we meet with, when suited to the use for which it was intended.”

“You would, perhaps, then call a dung-cart beautiful?”

“I would,” said Socrates, “if made proper for the purpose; as I would call the shield ugly, though made of gold, that answered not the end for which it was designed.”

“Possibly you will say too,” returned Aristippus, “that the same thing is both handsome and ugly.”

“In truth, I will,” said Socrates; “and I will go still further, and add, that the same thing may be both good and evil: for I can easily suppose, that which is good in the case of hunger, may be evil in a fever; since what would prove a cure for the one, will certainly increase the malignity of other; and in the same manner will beauty, in the wrestler, change to deformity in him who runs. For whatsoever, continued he, “is suited to the end intended, with respect to that end it is good and fair; and, contrariwise, must be deemed evil and deformed, when it defeats the purpose it was designed to promote.”

Thus, when Socrates said that “beautiful houses were ever the most convenient,” he showed us plainly in what manner we ought to build. To this end he would ask, “Does not the man who builds a house intend, principally, the making it useful and pleasant?”

This being granted, Socrates went on: “But to make a house pleasant, it should be cool in summer and warm in winter.” This also was acknowledged. “Then,” said he, “the building which looks towards the south will best serve this purpose: for the sun, which by that means enters and warms the rooms in winter, will, in summer, pass over its roof. For the same reason, these houses ought to be carried up to a considerable height, the better to admit the winter sun; while those to the north should be left much lower, that they may not be exposed to the bleak winds which blow from that quarter: for in short,” continued Socrates, “that house is to be regarded as beautiful, where a man may pass pleasantly every season of the year, and lodge with security whatever belongs to him.” As for paintings, and other ornaments, he thought they rather impair than improve our happiness.

With regard to temples and altars, Socrates thought the places best fitted for these were such as lay at some distance from the city, and were open to the view; for, when withheld from them, we should pray with more ardor, while in sight of those sacred edifices; and being sequestered from the resort of men, holy souls would approach them with more piety and devotion.

IX. Socrates being once asked, “Whether he took courage to be an acquisition of our own, or the gift of Nature?”

“I think,” said he, “that, as in bodies some are more strong, and better able to bear fatigue than others; even so, among minds, may be discerned the same difference; some of these, being by Nature endued with more fortitude, are able to face dangers with greater resolution. For we may observe,” continued he, “that all who live under the same laws, and follow the same customs, are not equally valiant. Nevertheless, I doubt not but education and instruction may give strength to that gift Nature has bestowed on us: for, from hence it is we see the Thracians and the Scythians fearing to meet the Spartans with their long pikes and large bucklers; while, on the contrary, the Spartans are not less afraid of the Scythians with their bows, or of the Thracians with their small shields and short javelins. The same difference is likewise observable in every other instance; and so far as any man exceeds another in natural endowments, so may he, proportionally, by exercise and meditation, make a swifter progress towards perfection. From whence it follows, that not only the man to whom Nature has been less kind, but likewise he whom she has endowed the most liberally, ought constantly to apply himself, with care and assiduity, to whatsoever it may be he wishes to excel in.”

Socrates made no distinction between wisdom and a virtuous temperament; for he judged, that he who so discerned what things were laudable and good, as to choose them, what evil and base, as to avoid them, was both wise and virtuously tempered. And being asked, “Whether those persons who knew their duty but acted contrary to it, were wise and virtuously tempered?” his answer was, “that they ought rather to be ranked among the ignorant and foolish; for that all men whatever do those particular things, which having first selected out of the various things possible, they imagine to be well for their interest. I am of opinion, therefore," added Socrates, "that those who do not act right, are, for that very reason, neither wise nor virtuously tempered."

Agreeable to this, Socrates would often say, "That justice, together with every other virtue, was wisdom; for that all their actions being fair and good, must be preferred as such by all who were possessed of a right discernment; but ignorance and folly could perform nothing fair and good; because, if attempted, it would miscarry in their hands. Whence it follows, that as whatever is just and fair must be the result of sound wisdom; and as nothing can be fair and just where virtue is wanting; therefore, justice, and every other virtue, is wisdom."

And although Socrates asserted that madness was the very reverse of wisdom, yet did he not account all ignorance madness. But for a man to be ignorant of himself, and erect those things into matters of opinion, belief, or judgment, with which he was totally unacquainted, this he accounted a disorder of the mind bordering on madness. He further said, that "the vulgar never deemed any one mad, for not knowing what was not commonly known; but to be deceived in things wherein no other is deceived, as when he thinks himself too tall to pass upright through the gates of the city, or so strong as to carry the house on his shoulders, in these, and such like cases, they say at once, 'the man is mad;' but pass over, unnoticed, mistakes that are less striking. For, as they only give the name of love to that which is the very excess of the passion, so they confine their idea of madness to the very highest pitch of disorder that can possibly arise in the human mind."

Considering the nature of envy, he said, "It was a grief of mind which did not arise from the prosperity of an enemy, or the misfortunes of a friend; but it was the happiness of the last the envious man mourned at." And when it seemed strange that any one should grieve at the happiness of his friend, Socrates showed them, "It was no uncommon thing for the mind of man to be so fantastically disposed, as not to be able to bear either the pains or the pleasures of another; but that while it spared for no labor to remove the first, it would sicken and repine on seeing the other: but this," he said, "was only the punishment of minds ill-formed: the generous soul was above such weaknesses."

As to idleness, Socrates said he had observed very few who had not some employment; for the man who spends his time at the dice, or in playing the buffoon to make others laugh, may be said to do something: but, with Socrates, these, and such as these, were in reality no better than idlers, since they might employ themselves so much more usefully. He added, that no one thought himself at leisure to quit a good occupation for one that was otherwise: if he did, he was so much less excusable, as he could not plead the want of employment.

Socrates likewise observed, that a scepter in the hand could not make a king; neither were they rulers in whose favor the lot or the voice of the people had decided, or who by force or fraud had secured their election, unless they understood the art of governing. And although he would readily allow it not less the province of the prince to command, than the subjects to obey, yet he would afterwards demonstrate, that the most skilful pilot would always steer the ship; the master, no less than the mariners, submitting to his direction. "The owner of the farm left the management of it," he said, "to the servant whom he thought better acquainted than himself with the affairs of agriculture. The sick man sought the advice of the physician; and he, who engaged in bodily exercises, the instructions of those who had most experience. And whatever there may be," continued Socrates, "requiring either skill or industry to perform it, when the man is able, he does it himself; but if not, he has recourse, if prudent, to the assistance of others, since in the management of the distaff a woman may be his instructor: neither will he content himself with what he can have at hand; but inquire out with care for whoever can best serve him."

It being said by some present, "that an arbitrary prince was under no obligation to obey good counsel."

"And why so," replied Socrates; "must not he himself pay the penalty of not doing it? Whoever rejects good counsel commits a crime; and no crime can pass unpunished." It being further said, "That an arbitrary prince was at liberty to rid himself even of his ablest ministers."

"He may," returned Socrates: "but do you suppose it no punishment to lose his best supports? or think you it but a slight one? For, which would this be; to establish him in his power, or the most sure way to hasten his destruction?"

Socrates being asked, "What study was the most eligible and best for man?" answered, "To do well." And being asked by the same person, "If good fortune was the effect of study?"

"So far from it," returned Socrates, "that I look upon good fortune and study as two things entirely opposite to each other: for that is good fortune, to find what we want, without any previous care or inquiry: while the success which is the effect of study, must always be preceded by long searching and much labor, and is what I call doing well: and I think," added Socrates, "that he who diligently applies himself to this study, cannot fail of success; at the same time that he is securing to himself the favor of the gods and the esteem of men. They, likewise, most commonly excel all others in agriculture, medicine, the business of the state, or whatever else they may engage in; whereas they who will take no pains, neither can know any thing perfectly, or do any thing well, they please not the gods, and are of no use to man."

X. But all the conversations of Socrates were improving. Even to the artists while engaged in their several employments, he had always somewhat to say which might prove instructive. Being on a time in the shop of Parrhasius the painter, he asked him, "Is not painting, Parrhasius, a representation of what we see? By the help of canvass and a few colors, you can easily set before us hills and caves, light and shade, straight and crooked, rough and plain, and bestow youth and age where and when it best pleases you: and when you would give us perfect beauty, (not being able to find in any one person what answers your idea,) you copy from many what is beautiful in each, in order to produce this perfect form."

"We do so," replied Parrhasius.

"But can you show us, Parrhasius, what is still more charming,—a mind that is gentle, amiable, affable, friendly? Or is this inimitable?'

"And how should it be otherwise than inimitable, Socrates, when it has neither color, proportion, nor any of the qualities of those things you mentioned, whereby it might be brought within the power of the pencil? In short, when it is by no means visible?"

"Are men ever observed to regard each other with looks of kindness or hostility?'

"Nothing more frequently observed," replied Parrhasius.

"The eyes, then, discover to us something?"

"Most undoubtedly."

"And, in the prosperity or adversity of friends, is the countenance of him who is anxiously solicitous, the same with theirs who are indifferent about the matter?

“Far otherwise, Socrates: for he who is solicitous, has a countenance all cheerfulness and joy, on the prosperity of a friend; pensive and dejected, when this friend is in affliction?”

“And can this also be represented?”

“Certainly.”

“Likewise, where there is any thing noble and liberal; or illiberal and mean; honest, prudent, modest; bold, insolent, or sordid; are any of these to be discovered in the countenance and demeanor of a man, when he sits, stands, or is in motion?”

“It may.”

“And imitated?”

“Imitated, no doubt of it.”

“And which yields the most pleasure, Parrhasius—the portrait of him on whose countenance the characters of whatever is good, virtuous, and amiable, are impressed; or his, who wears in his face all the marks of a base, evil, and hateful disposition?”

“Truly,” returned Parrhasius, “the difference is too great, Socrates, to admit of any comparison.”

Entering another time into the shop of Clito the statuary, he said to him: “I marvel not, Clito, at your being able to mark out to us even the difference between the racer and the wrestler, the pancratiast and gladiator; but your statues are very men! Tell me, I pray, by what means you effect this?”

Clito hesitating, as at a loss how to reply; Socrates went on: “But, perhaps, you are particularly careful to imitate persons who are living; and that is the reason why your statues are so much alive?”

“It is,” returned Clito.

“Then you have certainly remarked, and that with no little exactness, the natural disposition of all the parts, in all the different postures of the body: for, while some of these are extended, others remain bent; when that is raised above its natural height, this sinks below it; these are relaxed, and those again contracted, to give the greater force to the meditated blow; and the more these sort of things are attended to, the nearer you approach to human life.”

“You are right, Socrates.”

“But it undoubtedly gives us the greatest pleasure, when we see the passions of men, as well as their actions, represented?”

“Undoubtedly.”

“Then the countenance of the combatant going to engage the enemy, must be menacing and full of fire; that of the conqueror, all complacency and joy?”

“They must.”

“Therefore,” concluded Socrates, “he will ever be deemed the best sculptor, whose statues best express the inward workings of the mind.” Socrates entering the shop of Pistias the armorer, was shown some corslets that were thought well made.

“I cannot but admire,” said Socrates, “the contrivance of those things which so well cover that part of the body which most wants defending, and yet leave the hands and arms at liberty. But tell us, Pistias, why you sell your armor so much dearer than any other, when it is neither better tempered, stronger, nor the materials of it more costly?”

“I make it better proportioned,” said Pistias; “and therefore I ought to have a better price.”

“But how are we to find out this proportion, Pistias? Not by weight or measure: for as you make for different people, the weight and the size must likewise differ, or they will not fit.”

“We must make them to fit,” said Pistias; otherwise the armor would be of little use.”

“And are you aware that all bodies are not justly proportioned?”

“I am.”

“How can you make a well-proportioned suit of arms for an ill-proportioned body?”

“I make it fit; and what fits is well-proportioned.”

“Then you are of opinion, that when we declare any thing well-proportioned, it must be in reference to the use for which it was intended: at when we say of this shield, or this cloak, it is well-proportioned, for it fits the person for whom it was made? But I think,” added Socrates, “there is still another advantage, and that no small one, in having arms made to fit the wearer.”

“Pray, what is that?”

“Armor which fits,” replied Socrates, “does not load the wearer so much as that which is ill made, although the weight may be the same: for that which does not fit hangs altogether upon the shoulders, or bears hard upon some other part of the body; and becomes, thereby, almost insupportable; whereas the weight of that which is well made, falls equally on all the shoulders, breast, back, loins;—and is worn with ease, not carried as a burden.”

“It is for this very same reason,” said Pistias, “that I set such a value on those I make: nevertheless, Socrates, there are who pay more regard to the gilding and carving of their arms than to any other matter.”

“And yet,” answered Socrates, “these people will make but a bad bargain with all their gilding and various colors, if they buy such arms as do not sit easy. But,” continued Socrates, “since the position of the body is not always the same, being sometimes stooping and sometimes erect, how can the arms, that are made with such exactness, be at all times easy?"

"Neither can they," replied the other.

"You think then, Pistias, the arms which are well made are not those which are exact, or sit close to the body, but give the least trouble to him who wears them?"

"You think so," said Pistias; "and have certainly taken the matter right."

XI. There was a courtesan at Athens, called Theodota, of great fame on the account of her many lovers. It being mentioned in company that her beauty surpassed all description, that painters came from all parts to draw her picture, and that one was now gone to her lodgings for that very purpose,—"We should do well," said Socrates, "to go ourselves and see this wonder, for we may then speak with more certainty when we speak from our own knowledge, and do not depend on the report of others."

The person who first mentioned this seconding the proposal, they went that instant to the lodgings of Theodota, and found her, as was said, sitting for her picture. The painter being gone, Socrates said to those who came along with him: "What say you, sirs, which of the two ought to think themselves the most obliged: we to Theodota, for the sight of so much beauty; or she to us, for coming to see it? Now, if the advantages of showing herself are found to be altogether on her side, then certainly is she indebted to us for this visit: if otherwise, indeed, we must thank her." The reasonableness of what was said being assented to by the rest, Socrates proceeded—"The praises we bestow at present, ought not even these to be had in some estimation by Theodota? But when we come to blaze abroad the fame of her beauty, what manifold advantages may not arise to her from it! while all our gain from the sight of so many charms can terminate in nothing but fruitless longing! We take our leave with hearts full of love and anxiety, and are henceforth no other than so many slaves to Theodota, with whom she has no more to do than to show them her pleasure!”

“If this is the case,” replied Theodota, “I am to thank you for coming to see me.”

Socrates, during this conversation, had observed how sumptuously she was adorned, and that her mother was the same; her attendants, of whom there was no small number expensively clothed, and all the furniture of her apartment elegant and costly: he therefore took occasion from thence to ask her concerning her estate in the country; adding, it must of necessity be very considerable?

Being answered, “she had not any.”

“You have houses then,” said he, “in the city, and they yield you a good income?”

“No, nor houses, Socrates.”

“You have certainly many slaves, then, Theodota, who by the labor of their hands supply you with these riches?”

“So far,” replied Theodota, “from having many, that I have not one.”

“But whence then,” said Socrates, “can all this come?”

“From my friends,” returned Theodota.

“A fair possession, truly!” replied Socrates; “and a herd of friends we find to be a far better thing than a flock of sheep or a herd of cattle. But tell me, pray, do you trust fortune to bring these friends home to you, as flies fall by chance into the spider’s web, or do you employ some art to draw them in?”

“But where, Socrates, shall I be furnished with this art?”

“You may procure it,” said Socrates, “with far greater ease than the spider her web. You see how this little animal, who lives only upon her prey, hangs her nets in the air, in order to entangle it?”

“You advise me, then, to weave some artificial nets,” said Theodota, “in order to catch friends?”

“Not so neither,” returned Socrates; “it is necessary to go a little less openly to work in a pursuit of such importance. You see what various arts are employed by men to hunt down hares, which, after all, are of little value. As these are known to feed chiefly in the night, they provide dogs to find them out at that season: and as they lie concealed in the day, the sharp-scented hound is employed to trace them up to their very forms: being swift of foot, the greyhound is let loose upon them, as more swift of foot than they; and, lest all this should not be sufficient for the purpose, they spread nets in the paths to catch and entangle them.”

“Very well,” replied Theodota; “but what art shall I make use of to catch friends?”

“Instead of the hunter’s dog,” said Socrates, “you must set somebody to find out those who are rich and well-pleased with beauty, whom afterwards they shall force into your toils.”

“And what are my toils?” replied Theodota.

“You are certainly mistress of many,” said Socrates, “and those not a little entangling. What think you of that form of yours, Theodota, accompanied as it is with a wit so piercing, as shows you at once what will be most for your advantage? It is this which directs the glance, tunes the tongue, and supplies it with all the shows of courtesy and kindness. It is this which teaches you to receive with transport him who assiduously courts your favor, and scorn such as show you no regard.

If your friend is sick, you spare for no pains in your attendance upon him: you rejoice in all his joy, and give every proof of having bestowed your heart on him who seems to have given his to you. In short, I make no doubt of your being well versed in all the arts of allurement, and dare venture to say, the friends you have, if true, were not gained by compliments, but substantial proofs of kindness."

"But," said Theodota, "I never practice any of the arts you mention."

"And yet," answered Socrates, "some management is necessary, since a friend is a sort of prey that is neither to be caught nor kept by force; a creature no otherwise to be taken and tamed, but by showing it kindness, and communicating to it pleasure."

"You say right, Socrates; but why will you not help me to gain friends?"

"And so I will," said Socrates, if you can find out how to persuade me to it."

"But what way must I take to persuade you?"

"Do you ask that?" returned Socrates: "You will find out the way, Theodota, if you want my assistance."

"Then come to me often."

Socrates, still joking with her, said laughing:—"But it is not so easy for me to find leisure: I have much business both in public and private, and have my friends too, as well as you, who will not suffer me to be absent night or day, but employ against me the very charms and incantations that I formerly taught them."

"You are then acquainted with those things?"

"Verily!" returned Socrates; "for what else can you suppose, Theodota, engaged Apollodorus and Antisthenes to be always with me? Or Cebes and Simmias to leave Thebes for my company, but the charms I speak of?"

"Communicate these charms to me," said Theodota, "and the first proof of their power shall be upon you."

“But I would not be attracted to you, Theodota; I would rather you should come to me.”

“Give me but a favorable reception,” said Theodota, “and I will certainly come.”

“So I will,” replied Socrates, “provided I have then no one with me whom I love better.”

XII. Socrates having taken notice how very awkward Epigenes, one of his followers, was in all his actions, and that he was moreover of a sickly constitution, both which he attributed to a neglect of those exercises which make so large a part of a liberal education, he reproved him for it, saying, “How unbecoming it was in him to go on in such a manner!” Epigenes only answered, “He was under no obligation to do otherwise.”

“At least as much,” replied Socrates, “as he who has to prepare for Olympia. Or do you suppose it, Epigenes, a thing of less consequence to fight for your life against the enemies of your country, whenever it shall please our Athenians to command your service, than to contend for a prize at the Olympic games? How many do we see, who, through feebleness and want of strength, lose their lives in battle; or, what is still worse, save themselves by some dishonorable means! How many fall alive into the enemy’s hand, endure slavery of the most grievous kind for the remainder of their days, unless redeemed from it by the ruin of their families! While a third procures himself an evil fame; and the charge of cowardice is given to imbecility. But, perhaps, Epigenes, you despise all the ills which attend on bad health, or account them as evils that may easily be borne?”

“Truly,” replied the other, “I think them rather to be chosen, than so much fatigue and labor for the purchase of a little health.”

"It may be, then," answered Socrates, "you equally contemn all the advantages arising from a contrary complexion; yet, to me, they seem to be many and great; since he who is possessed of a good constitution, is healthful, strong, and hardy, and may acquit himself with honor on every occasion. By the means of this he often escapes all the dangers of war; he can assist his friends, do much service to his country, and is sure of being well received wherever he shall go. His name becomes illustrious: he makes his way to the highest offices; passes the decline of life in tranquility and honor; and leaves to his children the fair inheritance of a good example. Neither ought we to neglect the benefits arising from military exercises, though we may not be called upon to perform them in public, since we shall find ourselves not the less fitted for whatever we may engage in, from having a constitution healthful and vigorous: and as the body must bear its part, it imports us much to have it in good order; for who knows not," continued Socrates, "that even there—where it seems to have least to do—who knows not how much the mind is retarded in its pursuits after knowledge, through indisposition of the body; so that forgetfulness, melancholy, fretfulness, and even madness itself, shall sometimes be the consequence, so far as to destroy even the very traces of all we have ever learned. But he whose constitution is rightly tempered, need fear none of these evils; and, therefore, he who has a just discernment will choose with pleasure whatever may best secure him from them. Neither does an inconsiderable shame belong to the man who suffers himself to sink into old age, without exerting to the utmost those faculties nature has bestowed on him; and trying how far they will carry him towards that perfection, which laziness and despondence can never attain to; for dexterity and strength are not produced spontaneously."

XIII. A certain man being angry with another for not returning his salutation, Socrates asked, "Why was he not enraged when he met one who had less health than himself, since it would not be more ridiculous, than to be angry with one who was less civil?"

Another bemoaning himself because he could not relish his food; "There is an excellent remedy for this complaint," answered Socrates; "fast often. By this means you will not only eat more pleasantly, but likewise better your health, and save your money."

Another complaining that the water which ran by his house was too warm to drink; "You are lucky, however," said Socrates, "in having a bath thus ready prepared for you."

"But it is too cold to bathe in," replied the other.

"Do your domestics complain of it when they drink or bathe?"

"So far from it," answered the man, "that it is often my wonder to see with what pleasure they use it for both these purposes."

"Which do you account," said Socrates, "the warmest; this water you speak of, or that in the temple of Æsclepius?"

"O! that in the temple," replied the other.

"And how is it," said Socrates, "that you do not perceive yourself more froward and harder to please, not only than your own servants, but even people who are sick?"

Socrates seeing one beat his servant immoderately, asked him, "What offence the man had committed?"

"I beat him," replied the other, "because he is not only a drunkard and a glutton, but avaricious and idle."

"You do well," said Socrates; "but judge for yourself which deserves the most stripes, your servant, or you?"

Another dreading the length of the way to Olympia; Socrates asked him, "What he was afraid of? For is it not your custom," said he, "to walk up and down in your own chamber, almost the whole day? You need therefore but fancy you are taking your usual exercise between breakfast and dinner, and dinner and supper, and you will find yourself, without much fatigue, at the end of your journey; for you certainly walk more in five or six days, than is sufficient to carry you from Athens to Olympia. And as it is pleasanter to have a day to spare, than to want one, delay not, I advise you; but set out in time, and let your haste appear, not at the end, but the beginning of your journey."

A certain person complaining of being tired with travelling, Socrates asked, "If he had carried any thing?"

"Nothing but my cloak," replied the other.

"Were you alone?" said Socrates.

"No; my servant went along with me."

"And did he carry any thing?"

"Yes, certainly, he carried all I wanted."

"And how did he bear the journey?"

"Much better than I."

"What, if you had carried the burden; how then?"

"I could not have done it," replied the other.

"What a shame," said Socrates, "for a man who has gone through all his exercises not to be able to bear as much fatigue as his servant!"

XIV. It being generally the custom, when they met together, for every one to bring his own supper; Socrates observed, that while some of them took such care of themselves, as to have more than was sufficient; others were compelled to be content with less. He, therefore, so ordered the matter, that the small portion of him who brought little should be offered about to all the company in such a manner, that no one could, civilly, refuse to partake of it; nor exempt himself from doing the like with what he brought: by which means a greater equality was preserved among them. There was also this further advantage arising from it the expenses of the table were considerably abridged: for when they saw, that whatever delicacy they brought thither, the whole company would have their share of it, few chose to be at the cost to procure it: and thus luxury was in some degree put a stop to in these entertainments.

Having observed at one of these meetings, a young man who ate his meat without any bread; and the discourse turning at that time on the cause why this or that person had procured to themselves some particular appellation.

“Can you tell me, sirs,” said Socrates, “why they call a man a gormandizer, since not one of us here but takes part of whatever is set before him; and therefore we cannot suppose this to be the reason?”

“I suppose it cannot,” replied one of the company.

“But,” continued Socrates, “when we see any one greedily swallowing down his meat without mixing any bread with it, may we not call this man a gormandizer? For, if otherwise, I know not where we shall meet with one.” And being asked by another who was present, What he thought of him who ate a little bread to a great deal of meat? “The same,” answered Socrates, “as I did of the other; and while the rest of mankind supplicate the gods to find them plenty of corn, these men must pay for an abundance of the well-mixed ragout.”

The young man whom this discourse glanced at, suspecting it was meant for him, thought proper to take a little bread, but, at the same time continued to cram down his meat as formerly; which Socrates observing, called to one who sat near him, to take notice “whether his neighbor ate his meat for the sake of the bread, or his bread for the sake of the meat.”

At another time, seeing a person dip a piece of bread into several different sauces, Socrates asked—”Whether it was possible to make a sauce so costly, and at the same time so little good as this person had made for himself? For, as it consisted of a greater variety, there could be no doubt of its costing more; and as he had mixed such things together as no cook ever once thought of, who could doubt his having spoiled all? Besides," said Socrates, "what folly to be curious in searching after cooks, if a man is to undo at once all they have done for us!" Moreover, he who is accustomed to indulge in variety, will feel dissatisfied when not in his power to procure it; but the man who generally restrains himself to one dish, will rise well satisfied from every table. He used also to say, that the compound verb, which in the Attic dialect signified to feast, or fare well, meant to eat; and that the term well was added to express the eating in such a manner as neither to disorder the body nor oppress the mind; and with such plainness that the food could not be difficult to come at: so that this Attic verb was only applicable to such persons as ate with decency and temperance, and agreeably to the nature of social rational beings.

## BOOK IV.

I. In this manner would Socrates make himself useful to all sorts of men, of whatsoever employment. Indeed no one can doubt the advantages arising from his conversation, to those who associated with him while living; since even the remembrance of him, when dead, is still profitable to his friends. Whether serious or gay, whatever he said carried along with it something which was improving. He would frequently assume the character and the language of a lover; but it was easy to perceive it was the charms of the mind, not those of the body, with which he was enamored, as the objects he sought after were always such as he saw naturally inclining towards virtue. Now he thought an aptness to learn, together with a strength of memory to retain what was already learned, accompanied with a busy inquisitiveness into such things as might be of use for the right conduct of life, whether as head only of a single family or governor of the whole state, indicated a mind well fitted for instruction, which, if duly cultivated, would render the youth in whom they were found not only happy in themselves, and their own families, but give them the power of making many others the same; since the benefits arising from thence would be diffused throughout the whole community. His method, however, was not the same with all; but whenever he found any who thought so highly of themselves on the account of their talents as to despise instruction, he would endeavor to convince them, that of all mankind they stood in the greatest want of it: like to the high-bred horse, which having more strength and courage than others, might be made for that very reason of so much the more use, if properly managed; but, neglected while young, becomes thereby the more vicious and unruly. Also those dogs which are of the nobler kind: these, being trained to it, are excellent in' the chase; but, left to themselves, are good for nothing. And it is the same, would he say, with respect to men;

such of them to whom nature has dealt the most liberally, to whom she has given strength of body and firmness of mind, as they can execute with greater readiness and facility whatever they engage in, so they become more useful than others, and rise to nobler heights of virtue, if care is taken , to give them a right turn: but, this not being done, they excel only in vice; and become, by the means of these very talents, more hurtful to society; for, through ignorance of their duty, they engage in a bad cause, and make themselves parties in evil actions; and, being haughty and impetuous, they are with difficulty restrained and brought back to their duty; so that many and great are the evils they occasion.

As to those men who relied upon their riches, and imagined they stood in no need of instruction, as their wealth would be sufficient to supply all their wants, and procure them every honor: these Socrates would endeavor to reduce to reason, by showing how foolish it was to imagine they could of themselves distinguish between things that were useful, and those which were hurtful, without having first been shown the difference. Or, wanting this power of discriminating, still vainly supposed, that because they could purchase the things they had a mind to, they could therefore perform whatever would be to their advantage; or, if not, could yet live safe and easy, and have all things go well with them. “Neither was it,” he said, “less absurd in them to suppose that wealth could supply the want of knowledge, and make the possessor of it pass for a man of abilities; or at least procure for him that esteem which is only acquired by true merit.”

II. But, on the other hand, when he met with any who valued themselves on account of their education, concluding they were qualified for every undertaking; we see the method Socrates took to chastise their vanity, from the manner in which he treated Euthydemus, surnamed the Fair.

This young man having collected many of the writings of the most celebrated poets and sophists, was so much elated by it, as to fancy himself superior to any other of the age, both in knowledge and abilities; and doubted not to see himself the very first man in Athens, whatever the business; whether to manage the affairs of the state, or harangue the people. Being, however, as yet too young to be admitted into the public assemblies, his custom was to go into a bridle-cutter's shop, which stood near to the forum, when he had any business depending: which Socrates observing, he also went in thither, accompanied by some of his friends; and one of them asking, in the way of conversation, "Whether Themistocles had been much advantaged by conversing with philosophers; or, whether it were not chiefly the strength of his own natural talents which had raised him so far above the rest of his fellow-citizens, as made them not fail to turn their eyes towards him whenever the state stood in need of a person of uncommon ability?" Socrates, willing to pique Euthydemus, made answer: "It was monstrous folly for any one to imagine, that while the knowledge of the very lowest mechanic art was not to be attained without a master; the science of governing the republic, which required for the right discharge of it all that human prudence could perform, was to be had by intuition."

Socrates went no further at that time; but plainly perceiving that Euthydemus cautiously avoided his company, that he might not be taken for one of his followers, he determined to attack him something more openly. To this purpose, when he was next along with him, Socrates, turning to some who were present, "May we not expect," said he, "from the manner in which this young man pursues his studies, that he will not fail to speak his opinion even the very first time he appears in the assembly, should there be any business of importance then in debate? I should suppose, too, that the proem to his speech, if he begins with letting them know that he has never received any instruction, must have something in it not unpleasant. 'Be it known to you,' will he say, 'O you men of Athens! I never learnt any thing of any man: I never associated with persons of parts or experience; never sought out for people who could instruct me: but, on the contrary, have steadily persisted in avoiding all such; as not only holding in abhorrence the being taught by others, but careful to keep clear of every the least suspicion of it: but I am ready, notwithstanding, to give you such advice as chance shall suggest to me.'—Not unlike the man," continued Socrates, "who should tell the people, while soliciting their voices; 'It is true, gentlemen, I never once thought of making physic my study; I never once applied to any one for instruction; and so far was I from desiring to be well versed in this science, I even wished not to have the reputation of it: but, gentlemen, be so kind as to choose me your physician; and I will gain knowledge by making experiments upon you.' "

Every one present laughed at the absurdity of such a preface; and Euthydemus, after this, never avoided the company of Socrates: but still he affected the most profound silence, hoping, by that means, to gain the reputation of a modest man. Socrates, desirous to cure him of his mistake, took an opportunity of saying to some of his friends, Euthydemus being present, "Is it not strange, sirs, that while such as wish to play well on the lute, or mount dexterously on horseback, are not content with practicing in private as often as may be, but look out for masters, and submit willingly to their commands, as the only way to become proficients and gain fame; the man whose aim is to govern the republic, or speak before the people, shall deem himself aptly qualified for either without the trouble of any previous instruction? Yet surely the last must be owned the most difficult; since, out of the many who force themselves into office, so few are seen to succeed therein; and therefore it should seem, that diligence and study are here the most needful."

By these and the like discourses, Socrates disposed the young man to enter into further conference, and give him a patient hearing. Which having observed, he took an opportunity of going on a time alone into the bridle-cutter's shop, where Euthydemus then was; and sitting down by him—"Is it true," said he, "Euthydemus, that you have collected so many of the writings of those men whom we call wise?"

"Most undoubtedly it is true," replied the other; "neither shall I give over collecting till I have gained as many of them as I well can."

"Truly," said Socrates, "I admire you much for thus endeavoring to accumulate wisdom rather than wealth: for by this, Euthydemus, you plainly discover it to be your opinion, that gold and silver cannot add to our merit; whereas we furnish ourselves with an inexhaustible fund of virtue, when we thus treasure up the writings of these great men."

Euthydemus was not a little pleased with hearing Socrates speak in such a manner; concluding his method of obtaining wisdom had met with approbation; which Socrates perceiving, he continued the discourse.

"But what employment do you intend to excel in Euthydemus, that you collect so many books?"

Euthydemus returning no answer, as at a loss what to say:

"You perhaps intend to study physic," said Socrates; "and no small number of books will be wanting for that purpose."

"Not I, upon my word."

"Architecture, perhaps, then? and for this too you will find no little knowledge necessary."

"No, nor that," replied Euthydemus.

“You wish to be an astrologer, or a skilful geometrician, like Theo?”

“Not at all.”

“Then you possibly intend to become a rhapsodist, and recite verses; for I am told you are in possession of all Homer’s works?”

“By no means,” replied Euthydemus, “will I do this; for however ready these men may be with their verses, it does not prevent their being thought troublesome, wherever they come.”

“Perhaps you are desirous of that knowledge, Euthydemus, which makes the able statesman or good economist? which qualifies for command, and renders a man useful both to himself and others?”

“This, indeed, is what I sigh for, and am in search of,” replied Euthydemus, with no small emotion.

“Verily!” answered Socrates, “a noble pursuit: for this is what we call the royal science, as it belongs in a peculiar manner to kings. But have you considered the matter, Euthydemus, whether it will not be necessary for the man to be just, who hopes to make any proficiency therein?”

“Certainly, Socrates; for I know very well, he who is not just cannot make even a good citizen.”

“Then you are a just man, Euthydemus?”

“I think I am, as much as any other.”

“Pray say, Euthydemus, may one know when a just man is engaged in his proper work, as we can when the artist is employed in his?”

“Undoubtedly.”

“So that—as the architect, for example, can show us what he is doing; so the just man likewise?”

“Assuredly, Socrates; nor should there be any great difficulty in pointing out what is just or unjust, in actions about which we are conversant daily.”

“Suppose, Euthydemus, we should make two marks; an A here, and a D there: under which to set down the things that belong to justice and injustice?”

“You may,” replied Euthydemus, “if you think there wants any such method.”

Socrates having done this, went on.

“Is there any such thing as lying.”

“Most certainly.”

“And to which side shall we place it?”

“To injustice, surely.”

“Does mankind ever deceive each other?”

“Frequently.”

“And where shall we place this?”

“To injustice still.”

“And injury?”

“The same.”

“Selling those into slavery who were born free?”

“Still the same, certainly.”

“But suppose,” said Socrates, “one whom you have elected to command your armies should take a city belonging to your enemies and sell its inhabitants for slaves?—Shall we say of this man he acts unjustly?”

“By no means.”

“May we say he acts justly?”

“We may.”

“And what if, while he is carrying on the war, he deceives the enemy?”

“He will do right by so doing.”

“May he not likewise, when he ravages their country, carry off their corn and their cattle without being guilty of injustice?”

“No doubt, Socrates; and when I seemed to say otherwise, I thought you confined what was spoken to our friends only.”

“So then, whatever we have hitherto placed under “our letter D, may be carried over, and ranged under A?”

“It may.”

“But will it not be necessary to make a further distinction, Euthydemus, and say, that to behave in such a manner to our enemies is just; but, to our friends, unjust: because to these last the utmost simplicity and integrity is due?”

“You are in the right Socrates.”

“But how,” said Socrates, “if this general, on seeing the courage of his troops begin to fail, should make them believe fresh succors are at hand; and by this means remove their fears? To which side shall we assign this falsehood?”

“I suppose to justice.”

“Or if a child refuses the physic he stands in need of, and the father deceives him under the appearance of food—where shall we place the deceit, Euthydemus?”

“With the same, I imagine.”

“And suppose a man in the height of despair should attempt to kill himself; and his friend should come and force away his sword; under what head are we to place this act of violence?”

“I should think, where we did the former.”

“But take care, Euthydemus, since it seems from your answers that we ought not always to treat our friends with candor and integrity, which yet we had before agreed was to be done.”

“It is plain we ought not,” returned Euthydemus; “and I retract my former opinion, if it is allowable for me so to do.”

“Most assuredly,” said Socrates; “for it is far better to change our opinion, than to persist in a wrong one. However,” continued he, “that we may pass over nothing without duly examining it: which of the two, Euthydemus, appears to you the most unjust; he who deceives his friend wittingly, or he who does it without having any such design?”

“Truly,” said Euthydemus, “I am not certain what I should answer, or what I should think; for you have given such a turn to all I have hitherto advanced, as to make it appear very different to what I before thought it: however, I will venture so far as to declare that man the most unjust who deceives his friend designedly.”

“Is it your opinion, Euthydemus, that a man must learn to be just and good, in like manner as he learns to write and read?”

“I believe so.”

“And which,” said Socrates, “do you think the most ignorant, he who writes or reads ill designedly, or he who does it for want of knowing better?”

“The last, certainly,” replied Euthydemus; “since the other can do right whenever he pleases.”

“It then follows that he who reads ill, from design, knows how to read well; but the other does not?”

“It is true.”

“Pray tell me,” continued Socrates, “which of the two knows best what justice is, and what he ought to do; he who offends against the truth and deceives designedly, or he who does it without having any such design?’

“He, no doubt, who deceives designedly,” replied Euthydemus.

“But you said, Euthydemus, that he who understands how to read, is more learned than one who does not?”

“I did so, Socrates; and it is certainly true.”

“Then he who knows wherein justice consists, is more just than he who knows nothing of the matter?’

“So it seems,” said Euthydemus; “and I know not how I came to say otherwise.”

“But what would you think of the man, Euthydemus, who, however willing he might be to tell the truth, never tells you twice together the same thing: but if you ask him about the road, will show you to-day to the east, and to-morrow to the west; and make the very same sum amount sometimes to fifty, and sometimes to a hundred; what would you say to this man, Euthydemus?”

“That it was plain he knew nothing of what he pretended to know.”

Socrates still went on, and said, “Have you never heard people called base and senile?’

“Frequently.”

“And why were they so called? for their ignorance, or knowledge?”

“Not for their knowledge, certainly.”

“What then? for their ignorance in the business of a brazier? building a house? or sweeping a chimney?”

“Nor this, nor that,” replied Euthydemus; “for the men who are the most expert in employments of this nature, are generally the most abject and servile in their minds.”

“It should seem then, Euthydemus, these appellatives only belong to those who are ignorant of what is just and good?”

“So I imagine.”

"Does it not then follow, that we ought to exert our powers to the utmost, to avoid this ignorance, which debases men so low?"

"O Socrates!" cried Euthydemus, with no little emotion, "I will not deny to you that I have hitherto believed I was no stranger to philosophy, but had already gained that knowledge so necessary for the man who aspires after virtue. What then must be my concern to find, after all my labor, I am not able to answer those questions which most imports me to know? And the more, as I see not what method to pursue whereby I may render myself more capable!"

"Have you ever been at Delphos?"

"I have been there twice."

"Did you observe this inscription somewhere on the front of the temple—Know yourself?"

"Yes, I read it."

"But it seems scarcely sufficient to have read it, Euthydemus: did you consider it? and, in consequence of the admonition, set yourself diligently to find out what you are?"

"I certainly did not," said Euthydemus; "for I imagined I must know this sufficiently already: and, indeed, it will be difficult for us to know any thing, if we can be supposed at a loss here."

"But for a man to know himself properly," said Socrates, "it is scarcely enough that he knows his own name. He who desires to purchase a horse, does not imagine he has made the proper trial of his merit, till by mounting him he has found out whether he is tractable or unruly, strong or weak, fleet or heavy, with every thing else, either good or bad, in him: so likewise we should not say, he knows himself as he ought, who is ignorant of his own powers; or those duties which, as man, it is incumbent upon him to perform."

“It must be confessed,” replied Euthydemus, “that he who knows not his own powers cannot be said to know himself.”

“And yet, who sees not,” continued Socrates, “how great the advantage arising from this knowledge; and what misery must attend our mistakes concerning it! For he who is possessed of it, not only knows himself, but knows what is best for him. He perceives what he can and what he cannot do; he applies himself to the one, he gains what is necessary, and is happy; he attempts not the other, and therefore incurs neither distress nor disappointment. From knowing himself he is able to form a right judgment of others, and turn them to his advantage, either for the procuring some good or preventing some evil. On the contrary, he who is ignorant of himself, and makes a wrong estimate of his own powers, will also mistake those of other men; he knows neither what he wants or undertakes, nor yet the means he makes use of; so that he not only fails of success, but often falls into many misfortunes; while the man who sees his way before him, most commonly obtains the end he aims at; and not only so, but secures to himself renown and honor. His equals gladly attend to his counsel and follow his advice; and they who, by wrong management, have plunged themselves into difficulties, implore his help, and found all their hopes of being restored to their former ease, on the prudence of his administration: while they who blindly engage in business, as they choose ill, so they succeed worse; nor is the damage they then sustain the only misfortune they incur; but they are disgraced for ever; all men ridiculing, despising, or blaming them. Neither does it fare any thing better with commonwealths themselves,” continued Socrates, “when mistaking their own strength, they engage eagerly in war with their more powerful neighbors, which ends either in the ruin of the state, or the loss of their liberty; compelled to receive their laws from the hand of the conqueror.”

"Be assured," answered Euthydemus, "that I am now fully convinced of the excellence of the precept which bids us know ourselves: but from what point shall the man set out, Socrates, on so important an inquiry? To inform me of this, is now what I hope from you."

"You know what things are good, what evil, Euthydemus?"

"Certainly," replied Euthydemus; "for otherwise I should know less than the very lowest of our slaves."

"Show me then, I pray you, what you think good; what evil."

"Most willingly," answered Euthydemus; "and truly, I think, the task will not be difficult—First, then, I count sound health good; and sickness evil; and whatever conduces to the one, or the other, are to be estimated accordingly; so that the food and exercise which keeps us in health, we may call good; and that which brings on us sickness and disease, evil."

"But might it not be as well to say, Euthydemus, that health and sickness are both of them good, when they are the cause of good; and evil, when they are the cause of evil?"

"But when do we see," replied Euthydemus, "that health is the cause of evil; or sickness of good?"

"It is certainly the case," answered Socrates, "when levies are raising for some unsuccessful expedition; or embarkations made, which afterwards suffer shipwreck: for the healthy and the strong being selected on these occasions, they are unhappily involved in the same common misfortune; while the feeble and the infirm remain in safety."

"That is true," replied Euthydemus: "but then, on the other hand, you must own, Socrates, that the healthful and strong have their share, and that to their no small advantage, in more fortunate undertakings; while the sickly and infirm are entirely excluded."

"These things being so, as indeed they are, sometimes profitable, and sometimes hurtful, we should not do amiss to set them down," said Socrates, "as being in themselves not more good than evil."

"So indeed it appears," said Euthydemus, "from this way of reasoning: but knowledge, Socrates, must ever remain an indubitable good; since he who has knowledge, whatever the business, may certainly execute it with far greater advantage than he who wants it."

"Have you not heard then," said Socrates, "how it fared with the wretched Dædalus, on the account of his excelling in so many different arts? This man falling into the hands of Minos, was detained by him in Crete: at once torn from his country, and deprived of his freedom: and when afterwards attempting to escape with his son, he was the cause of the loss of the miserable youth. Neither was he able to secure himself; but being seized by the Barbarians, was compelled to return, again to endure all the evil of slavery."

"I have heard this," replied Euthydemus.

"You know too," continued Socrates, "the unhappy fate of Palamedes, whose praises all men celebrated: he fell a sacrifice to the envy of Ulysses; and miserably perished, through the insidious artifices of his rival: and how many are now languishing in perpetual bondage, whom the king of Persia caused to be carried away, and still keeps near him, merely on the account of their superior talents?"

"But granting this to be as you say; yet certainly," replied Euthydemus, "we may esteem happiness an undoubted good?"

"We may," answered Socrates, "provided this happiness arises from such things as are undoubtedly good."

"But how can those things which produce happiness, be otherwise than good?"

"They cannot," said Socrates, "if you admit not of the number, health, strength, beauty, riches, fame, and such like."

"But we certainly do admit such things into the number," replied Euthydemus; "for how are we to be happy without them?"

"Rather, how are we to be happy with them," returned Socrates, "seeing they are the source of so many evils? For how often, has a beautiful form been the cause of defilement! How often, from a persuasion of their strength, have men been induced to engage in hazardous undertakings which overwhelm them in ruin! How many have sunk into luxury by means of their riches, or fallen into the snares that were insidiously laid for them, by the people whose interest it was to procure their ruin! Even that glory, Euthydemus, which results from our having well served our country, does not seldom prove fatal to the man on whom it is bestowed."

"If I have then erred in speaking well of happiness," replied Euthydemus, "I know not what it is for which I can yet supplicate the gods."

"It may be," answered Socrates, "you have not duly considered the matter, from thinking you were already sufficiently acquainted with it. But, (changing the subject,) they tell us, Euthydemus, you are preparing to take upon you the administration of our affairs. Now, since it is the people who bear sway in Athens, I doubt not your having thoroughly studied the nature of a popular government?"

"You do right not to doubt it."

"Pray tell us, may we understand what a popular government is, without knowing who are the people?"

"I should suppose not."

"And who are the people?" said Socrates.

"I include under that denomination," replied Euthydemus, "all such citizens as are poor."

"You know those who are so?"

"Certainly."

"And who are rich?"

"No doubt of it."

"Tell me then, I pray you, whom you think rich; whom poor."

"I consider those as being poor, who have not wherewithal to defray their necessary expenses," said Euthydemus; "and I esteem those rich who possess more than they want."

"But have you not observed, Euthydemus, there are people, who, although they have very little, have not only enough for their necessary expenses, but manage in such a manner as to lay up a part; while others are in want, notwithstanding their large possessions?"

"I own it," said Euthydemus; "and recollect some princes, whose necessities have compelled them to deal injuriously by their subjects; even so far as to deprive them of their possessions."

"It will follow then, Euthydemus, that we should place these princes among the poor, and the frugal managers of their little fortune among the rich, since these may truly be said to live in affluence."

"They may," replied Euthydemus; "for I am not able to support any thing against your arguments: and, indeed, I believe silence for the future will best become me, since, after all, I begin to suspect that I know nothing.

On saying this he hastily withdrew, full of confusion and contempt of himself, as beginning to perceive his own insignificancy. But it was not Euthydemus alone to whom Socrates gave that sort of uneasiness: many, who were once his followers, had forsaken him on that account, whom Socrates estimated accordingly: but it was otherwise with Euthydemus; his attachment to him after this increased daily, and he thought there was no other way to become a man of business than by conversing with Socrates; so that he never left him unless compelled to it by affairs of the greatest moment: carrying his admiration of him so far as to imitate many of his actions: which Socrates perceiving, he carefully avoided saying whatever might appear harsh or disgusting, but conversed with him freely, and instructed him, without reserve, concerning those things which it most imported him to know and practice.

III. Yet was not Socrates ever in haste to make orators, artists, or able statesmen. The first business, as he thought, was to implant in the minds of his followers virtuous principles; since, these wanting, every other talent only added to the capacity of doing greater harm, and more especially to inspire them with piety towards the gods. But seeing many others have already related what they heard him speak upon that subject, I shall content myself with only mentioning in what manner he once discoursed,—I being present with Euthydemus,—concerning a providence; for, turning towards him, he said:

“Have you never reflected, Euthydemus, how wondrously gracious the gods have been to men in providing all things useful for them?”

“I cannot say,” replied Euthydemus, “that I ever did.”

“And yet,” continued Socrates, “you want not to be informed how necessary this light is, or that it is the gods who have bestowed it upon us.”

“I do not,” replied Euthydemus; “nor yet that our state would be no better than that of the blind, were we deprived of it.”

“But because we stand in need of rest after our labor, they have likewise given to us the night, as the more proper time to repose in.”

“They have,” replied Euthydemus; “and we ought to be most thankful.”

“But, as the sun by its light not only renders each object visible, but points out the hours of the day to us; for the stars have been ordained, together with the moon, to mark out the time throughout the darkness of the night season; while the last is still of further use to us in regulating the months, and distinguishing the several parts of them.”

“It is true,” answered Euthydemus.

“And seeing that nourishment is so necessary for the support of man, observe you not, Euthydemus, how the earth has been made to produce it for him? The convenient changes of the seasons, all serving to the same purpose? While such the variety and abundance bestowed upon us, as not only secures from the fear of want, but gives us wherewithal to indulge even to luxury!”

“Undoubtedly,” cried Euthydemus, “this goodness of the gods is a strong proof of their care for man.”

“And what think you,” continued Socrates, “of their having given to us water, so useful and even necessary for all the affairs of life? By the means of it the earth produces its fruits, while the dew's from above carry them on to perfection. It makes of itself a part of our nourishment, and is of use in the dressing and preparing our food; rendering it not only more beneficial but pleasant. And, seeing our wants of it are evidently so many, how bountiful are the gods who have supplied us with it in such profusion!”

“A further proof,” cried Euthydemus, “of their great regard for man.”

“Likewise, what shall we say,” continued Socrates, “to their having provided us with fire, which secures from the cold, dispels the darkness, and is altogether so necessary for carrying on the arts of life, that mankind can produce nothing useful without it. The sun too, Euthydemus; observe you not how, winter being over, it turns towards us; withering those fruits whereof the season is now past, at the same time that it matures others and brings them to perfection? This service once done, it retires again, that its heat may not annoy us; but having reached that point, beyond which it cannot pass without exposing us to the danger of perishing from its absence, it measures back its steps to that part of the heavens in which its influence may be of the most advantage. And because we should be unable to bear the extreme, whether of heat or cold, when coming upon us suddenly, how can it otherwise than excite our admiration, when we consider those almost imperceptible degrees, whereby it advances to, and retires from us; so that we can arrive at the highest point of either, without being, in a manner, at all sensible to the change?”

“Truly,” said Euthydemus, “these things put me in some doubt, whether the gods have any other employment than taking care of man. This, however, perplexes me; I see these gifts bestowed upon him only in common with other animals!”

“And see you not,” replied Socrates, “that even all these themselves are produced and nourished for the service of man? For what animal, except himself, can turn to its use the hog, the goat, the ox, and the horse, together with the rest that everywhere surround him? So that it seems to me, that man is not more indebted to the earth itself, than to these, his fellow-creatures, whether for the conveniences or necessaries of life; since few of us live on the fruits of the earth, but on milk, cheese, and the flesh of other animals; while we break them for our use, and tame them for our service; and receive assistance from them in war, as well as on other occasions."

"I own it," answered Euthydemus; "for although many of these are much stronger than man, yet he is able to make them so far subservient to him as to perform readily whatever he commands."

"Marvelous, likewise, must we acknowledge the goodness of the gods, and worthy of our consideration; inasmuch, as having given to man an infinite number of things, all good in themselves, yet still differing in their nature, they have therefore bestowed upon him a variety of senses, each peculiarly formed for the enjoyment of its proper object. They have likewise endued him with reason and understanding; by the means of which he examines into those things the senses have discovered to him: he retains them in his memory, and finds out their use; whereby they are made to serve many admirable purposes, both for his ease and security from danger. From the gods likewise it is that we have received the gift of speech, which enables us to give and receive instruction and pleasure, unite into societies, promulgate laws, and govern communities. And, forasmuch as we are not able to foresee what may happen hereafter, or judge of ourselves what may be the best for us to do, they readily incline to such as seek to them for assistance; declaring by their oracles the things that are to come, and instruct us so to act as may be the most for our advantage."

"But," said Euthydemus, interrupting him, "the gods, Socrates, deal still more favorably with you, for they stay not to be consulted, but show of themselves what things you ought or ought not to do."

"But that I spoke not against the truth in so saying, you yourself shall know, if you wait not, Euthydemus, till the gods become visible; but it suffices you to see and adore them in their works, since it is by these alone they choose to manifest themselves to men. Even among all those deities who so liberally bestow on us good things, not one of them makes himself an object of our sight. And He who raised this whole universe, and still upholds the mighty frame, who perfected every part of it in beauty and in goodness, suffering none of these parts to decay through age, but renewing them daily with unfading vigor, whereby they are able to execute whatever he ordains with that readiness and precision which surpass man's imagination; even he, the supreme God, who performs all these wonders, still holds himself invisible, and it is only in his works that we are capable of admiring him. For consider, Euthydemus, the sun, which seems as it were set forth to the view of all men, yet suffers not itself to be too curiously examined; punishing those with blindness who too rashly venture so to do: and those ministers of the gods, whom they employ to execute their bidding, remain to us invisible: for, though the thunderbolt is shot from on high, and breaks in pieces whatever it finds in its way, yet no one sees it when it falls, when it strikes, or when it retires: neither are the winds discoverable to our sight, though we plainly behold the ravages they every where make; and with ease perceive what time they are rising. And if there be any thing in man, Euthydemus, partaking of the divine nature, it must surely be the soul which governs and directs him; yet no one considers this as an object of his sight. Learn, therefore, not to despise those things which you cannot see; judge of the greatness of the power by the effects which are produced, and reverence THE DEITY."

"It is very sure," replied Euthydemus, "I shall never be wanting in my acknowledgments to the gods, and it even troubles me that we cannot make a suitable return for the benefits they have conferred on us."

“Let not this afflict you,” replied Socrates. “You know the answer which is given by the oracle at Delphos to those who inquire what they must do to make their sacrifices acceptable?—Follow, said the god, the custom of your country. Now this is the custom which prevails every where, that each one should offer according to his ability: and therefore, Euthydemus, what better can we do to honor the gods, and show our gratitude towards them, than by acting in such a manner as they themselves have commanded? Let us however beware lest we fall short of that ability wherewith the gods have endued us; since this would not be to honor but express our contempt: but, having done all in our power, there is no longer any thing left us whereof to be afraid; nothing, indeed, which we may not hope for. For, from whom can we reasonably expect the most good, but from those beings who are possessed of the greatest power? Either what better can we do, to secure it to ourselves, than conciliate their favor—but we best conciliate their favor when we obey their commands.”

In this manner did Socrates instruct his followers in their duty to the gods: and forasmuch as all his precepts were ever accompanied with the practice of the purest devotion, he greatly advanced the piety of his friends.

IV. With regard to justice, no one could doubt what were the sentiments of Socrates concerning it; since all his actions, both public and private, sufficiently declared them. He was always willing to assist whoever wanted his assistance; to observe the laws, and to obey the legal commands of the magistrate; so that, whether in the city or the camp, Socrates distinguished himself above all others, for the readiness and exactness wherewith he executed every order. When it came to his turn to preside in the public assemblies, be would suffer no decree to pass in them which appeared to him contrary to the laws, but stood up alone in defense of them; opposing, on a time, so violent a tumult of the people, as, I think, none but himself could possibly have withstood; and when the Thirty imposed upon him things which were unjust, he paid no regard to their injunctions, but continued to discourse with the young men as usual, after the time they had ordered him otherwise; neither would obey, when they commanded him and three others to bring a certain person to execution, as knowing he had been condemned by them contrary to all law. And whereas it was common for others, when on their trial, to talk much with their judges; to flatter, and shamefully solicit their favor, which often they procured, in direct opposition to the laws; Socrates would not avail himself of these arts, however easy it was to have brought himself off by any the smallest compliance with the custom; but chose rather, as he himself said to those friends who counseled him otherwise, to die, continuing steadfast to the laws, than save his life by such indirect practices.

Now, though Socrates talked to several on that subject, yet I particularly remember a conversation he once had with Hippias the Elean, concerning justice. This man, after having been a long time absent from Athens, happened, on his return, to come accidentally to a place where Socrates was talking with some friends, and saying, “That if any one wanted to have a person taught the trade of a carpenter, a smith, or a shoemaker, he need not be at a loss for somebody to instruct him: or, if his horse was to be broke at the bit, or his ox to the yoke, many would be ready enough to undertake them but, if he wanted to learn how he himself might become a good man, or have a son, or any other of his family made so, it was not an easy matter to find out whom to apply to.”

Hippias having heard this, said to him jeeringly, “What, Socrates! still saying the same things we heard you say before I left Athens?”

"I am," replied Socrates; "and, what is still more wonderful, on the same subject; but you, Hippias, being so very learned, may perhaps do otherwise."

"You are in the right," said Hippias, "for I always endeavor to say something new."

"Is it possible!" said Socrates. "But pray," continued he, "suppose you were asked how many letters there were in my name, and what they were called, would you sometimes say one thing, and sometimes another? And would you not always answer, when asked, that five and five made ten?"

"As to such things," said Hippias, "I certainly should say the same as you; but we are now talking of justice, or the rule of right and wrong; and I think I have now something to say concerning it, as can hardly be controverted either by you or any other."

"By the gods," replied Socrates, "the discovery will be most useful! The standard of right and wrong once fixed, all difference of opinion among the judges, all sedition among the people, all lawsuits between citizens, all wars and contentions among communities, must be at an end! And truly it would grieve me to leave you, Hippias, without knowing what this inestimable secret may be that you say you have discovered."

"But it is certain," said Hippias, "you will not know it without first telling us your sentiments concerning justice, or this rule of right: for you content yourself, Socrates, with asking questions, and afterwards confuting the answers that are made you, in order to turn those who make them into ridicule; but never advance any thing of your own, that you may not be called upon to support your opinion."

"How!" said Socrates; "perceive you not that I am continually demonstrating to the world my sentiments concerning justice?"

“And in what manner do you demonstrate them?” said Hippias.

“By my actions,” replied Socrates; “at least as much deserving of credit as words.”

“By Zeus!” said Hippias, “I should fancy somewhat more; for I have heard many declaim loudly in behalf of justice who were all the time very far from being just: but he who is upright in his actions, must necessarily be an upright man.’

“But when have you known me,” said Socrates, “bearing false witness, or slandering any man? Where was it that I sowed dissension between friends? stirred up sedition in the republic? or practiced any other kind of injustice whatsoever?”

“I cannot say,” answered the other.

“And do you not think, that to refrain from injustice, is to be just?”

“Ay, now Socrates,” said Hippias, “you are endeavoring to get off, and care not to give us your opinion freely; for you only tell us what a just man should not do, but not one syllable of what he should.”

“I thought,” replied Socrates, “that a voluntary forbearance of all injustice was sufficient to denominate a person just; but, if it seems not so to you, Hippias, let us see if this will satisfy you better; I say, then, that justice is no other than a due observance of the laws.”

“Do you mean, that to be just, and to live agreeably to the laws, is the same thing?”

“I do.”

“I cannot comprehend you.”

“Know you the laws of the city?”

“Certainly.”

“And what are they?”

“Those things,” said Hippias, “which the people ordain in a public assembly, after having agreed what ought or ought not to be done.”

“Then he, who lives in the republic according to these ordinances, lives according to the laws? and he who does otherwise, must be deemed a transgressor?”

“He must.”

“And is not he, who obeys these ordinances, just? he, who does not obey them, unjust?”

“Undoubtedly.”

“But he, who does that which is just, is just: he, who does that which is unjust, unjust.”

“It cannot be otherwise.”

“Therefore,” said Socrates, “they who observe the laws, are just; they who do not observe them unjust.”

“But,” said Hippias, “what good can there be in obeying the laws; or even in the very laws themselves, when we see those who make them not only continually altering them, but even often abrogating them wholly?”

“Do not cities make war, and then again peace, with one another?

“They do.”

“But may you not as well laugh at your enemies,” said Socrates, “for putting themselves in a posture of defense in time of war, because a time of peace will come; as blame those who observe the laws, because they may afterwards happen to be abrogated? Besides, by so doing, you condemn all those who nobly expose their lives in the service of their country. And, further—can you suppose,” continued he, “that Lycurgus could have brought the republic of Sparta to excel all others, if he had not wrought into the very minds of his citizens a strict observance of his laws? And are not they who show themselves the most diligent and active to secure this observance, always considered as the best magistrates, seeing it is the certain way to render that city not only the most happy in time of peace, but by far the most formidable in time of war? Neither can you want to be informed," said Socrates, "of the benefits arising to the state from unanimity, since the people are daily exhorted thereto: and, even throughout all Greece, it is everywhere the custom to tender an oath to each person, whereby he engages to live in concord with his fellow-citizens. Now this is not done, as I suppose, for this purpose only, that all should be of the same opinion concerning the choruses; admire the same actor; praise the same poet; and delight in the same pleasures; but obey the same laws, as being what alone can give security, strength, and happiness to any nation: a concord," said he, "of that necessity, that not only states but private families cannot be well governed where it is wanting. For, with regard to our conduct, considered as individuals, what better means can we employ to avoid the incurring public punishment? what better for the procuring public honors and rewards, than a careful and steady observance of all the laws? What so likely to gain a process in our favor, when we have lawsuits depending before any of our tribunals? To whom do we entrust with equal confidence, our wealth, our sons, and our daughters? or even the whole city deem so deserving of their credit? Who is he that so faithfully discharges what he owes to his father, to his mother, to his relations, to his domestics, to his friends, to his fellow-citizens, to foreigners? With whom would our enemies rather leave their hostages during the truce; or more readily depend upon for the punctual performance of the articles of peace; or more desire to join with in strict alliance? Or to whom do our confederates rather entrust the command of their armies, or the government of their fortresses, than to the man who is careful not to infringe the laws? From whom can they, who bestow favors, be so sure of receiving the proper acknowledgments? And consequently, to whom should we rather choose to show courtesy and kindness, than to him who is ever ready to confess the obligation? In short, who is there we should more earnestly desire for a friend, or less wish for an enemy, than he whom few would willingly offend; while many strive to obtain his favor? Now these, Hippias, are the advantages that accrue to us from a careful and diligent observance of the laws: but, with me, to be an observer of the laws, and to be just, imply the same thing. If it appears otherwise to you, show us, I beseech you, what may be your opinion."

"Truly," answered Hippias, "I do not see that what you have said of justice is at all different to my own notions of it."

"Have you never heard," continued Socrates, "of certain laws that are not written?"

"You mean such as are in force every where?"

"True:—Did all mankind concur in making them?"

"Impossible; since all mankind could not assemble in one place; neither would all have spoken the same language."

"Whence then do you suppose we had them?"

"From the gods, I should imagine; for the first command every where is, to adore the gods."

"And is it not, likewise, as universally commanded, that parents are to be honored?"

"It is."

"And, that they ought not to marry with their children?"

"But this last," said Hippias, "does not seem to be from the gods."

"And why not?"

"Because," replied Hippias, "I see some who transgress it."

“Neither, perhaps, do they observe the other better; nevertheless,” continued Socrates, “it ought always to be remembered, that no one ever violates the laws of the gods with impunity; the punishment being ever annexed to the commission of the crime; whereas means are often found to elude by fraud, or escape by force, the penalties incurred for the breach of such laws as are only of human institution.”

“But what is this punishment,” said Hippias, “which you say is not to be avoided by those who marry with their own children?”

“The greatest of any: for what can be worse than not to have good children?”

“And from whence do you infer that such must necessarily have bad children; since, if parents are good themselves, what should hinder their having good children?”

“It is not enough,’ said Socrates, “that parents are virtuous; they ought both of them to be in the perfection of their age, if they would have their children such as they wish them. For do you suppose, Hippias, that children produced by parents not yet arrived to a state of maturity, or by such as are already past it, can be compared with the offspring of those who are in the prime of life and perfection of their nature?”

“I suppose they cannot.”

“And which do you take to be the best?”

“Those, no doubt,” said Hippias, “whose parents are in the perfection of their nature.”

“Then children produced by such as are net yet arrived to a state of maturity, or are now far past it, are not good, or such as we desire to have them?”

“So it seems.”

“People, then, who are under either of these circumstances, ought not to have children?’

“They ought not.”

“Those, therefore,” said Socrates, “who indulge themselves in this disorderly manner, what can they else than produce a miserable offspring?”

“They cannot, Socrates; for even in this point I am ready to agree with you.”

“But what think you, Hippias; is not this also an universal law, that we should do good to those who do good to us?”

“Certainly.’

“Yet it is transgressed by many,” said Socrates: “howbeit they go not unpunished any more than the other, since thereby they lose their most valuable friends, and follow those who most hate them: for are not they, Hippias, our most valuable friends from whom we receive the most essential acts of kindness? But he who neglects to acknowledge the kindness of his friends, or returns it with evil, must be hated for his ingratitude; yet because of the advantages he still hopes to receive, he continues to pursue those who shun him, and this with the meanest, most servile assiduity.”

‘‘Assuredly,” said Hippias, “these things are of the gods! For when I consider every breach of these laws, as carrying along with it the punishment of the transgressor, I cannot but allow them to proceed from a more excellent legislator than is to be found among the sons of men.”

“But what think you, Hippias; do the gods make laws that are unjust?”

“So far from it,” said Hippias, “that I believe it almost impossible for any but the gods to make such as are perfectly otherwise.”

“Then certainly,” replied Socrates, “the gods themselves show to us, that to obey the laws, and to be just, is the same thing.”

After this manner would Socrates reason concerning justice-, and his actions being at all times conformable to his words, he daily increased the love of it in the minds of all his followers.

V. I shall next relate the arguments which Socrates employed in order to make his hearers able to practice what was right: and being of opinion that temperance was absolutely necessary for the well performance of any thing excellent; and having, in the first place, shown by his manner of living how far he surpassed all others in the exercise of this virtue, he endeavored by his discourses, as well as by his example, to excite his friends to the practice of it. And as all his thoughts were only bent on the improvement of mankind, he never lost an opportunity of introducing into his conversation whatever he supposed might conduce to that end; and it was to this purpose that he once talked, as I remember, to Euthydemus in the following manner:

“Is it your opinion,” said he to him, “that liberty is a fair and valuable possession?”

“So valuable,” replied Euthydemus, “that I know of nothing more valuable.”

“But he who is so far overcome by sensual pleasure, that he is not able to practice what is the best, and consequently the most eligible, do you count this man free, Euthydemus?”

“Far from it,” replied the other.

“You think then,” said Socrates, “that freedom consists in being able to do what is right;—slavery, in not being able; whatever may be the cause that deprives us of the power?”

“I do, most certainly.”

“The debauchee, then, you must suppose is this state of slavery?”

“I do, and with good reason.”

"But does intemperance," Euthydemus, "only withhold from acting right? Or does it not frequently urge us on to the practice of what is evil?"

"I believe it may do both," said Euthydemus.

"And what should you say to a master, who not only opposes your applying yourself to any one thing commendable, but obliges you to undertake many that must bring on you dishonor?"

"I should esteem him the worst in the world," replied Euthydemus.

"And what the worst servitude?"

"To serve such a master."

"Then it should follow," said Socrates, "that he who is intemperate, is the very lowest of all slaves?"

"I believe it," said Euthydemus.

"Does not intemperance," continued Socrates, "rob us of our reason, that chief excellence of man, and drive us on to commit the very greatest disorders? Can he who is immersed in pleasure, find time to turn his thoughts on things that are Useful? But, and if he could, his judgment is so far overborne by his appetites, that, seeing the right path, he deliberately rejects it. Neither," continued Socrates, "should we expect modesty in such a character; it being most certain, that nothing can well stand at a greater distance from this than the whole life of the voluptuary."

"That is certain," replied Euthydemus.

"But what can be so likely to obstruct either the practice or the knowledge of our duty as intemperance? What can we suppose so fatally pernicious to man, as that which deprives him of his understanding; makes him prefer with eagerness the things that are useless; avoid, or reject, whatever is profitable; and act in every respect so unlike a wise man!"

"Nothing, that I know of," said Euthydemus.

"Must not temperance produce the very contrary, effects?"

"Most assuredly."

"But whatever produces the contrary effects should be good?"

"No doubt of it."

"Then temperance must be deemed so?"

"I own it," said Euthydemus.

"But have you thoroughly considered this point, Euthydemus?"

"What point do you mean?"

"That, however intemperance may promise pleasure, it can never bestow any; for this must be the gift of temperance and sobriety."

"But why not?" answered Euthydemus.

"Because the intemperate will not endure thirst and hunger; nor submit to any other want of nature; without which, however, no pleasure can arise from any sensual gratification; neither is it possible for that sleep to be sweet, which is not preceded by some degree of watchfulness: therefore, Euthydemus, intemperance must ever be a stranger to the delight which arises from those actions, which are not only necessary, but of daily use; while the temperate man, ever willing to await the call of nature, enjoys them to the full, and tastes pleasures that satiety cannot know."

"I believe it," replied Euthydemus.

"Furthermore," continued Socrates; "it is this virtue alone, Euthydemus, which places both the body and the mind in their utmost degree of perfection; qualifying the man for the study, the knowledge, and the practice of his duty; whereby he is enabled to govern his house prudently, serve his country and his friends usefully; conquer his enemies gloriously.

Neither are they the many benefits arising from such a conduct, that alone recommend it; the consciousness of being thus employed, must yield perpetual complacency and satisfaction: but it is a complacency and satisfaction which belongs not to the voluptuous: indeed, whom do we find at a greater distance from these, than the man whose every faculty is so entirely engaged in the pursuit of present pleasure, as to leave him no liberty for the performance of what is commendable."

"One would suppose," said Euthydemus, from your manner of speaking, that no one virtue can belong to those who suffer themselves to be led away by sensual gratifications."

"And where is the difference," said Socrates, "between him who, staying not to examine what is the best, eagerly rushes to seize what seems pleasant; and the wolf, or the sheep, or any other animal void of reason? But it is the temperate alone, Euthydemus, who are able to inquire into the nature of things, and find out their difference; and carefully consulting both reason and experience, can select what is good; reject what is evil; and become by that means both wise and happy."

Socrates likewise added, that by a constant exercise of this discriminating power, men were taught to reason well: and that the term conference, given to their assemblies, implied, that the very end of their meeting was in order to examine into the nature of things, and class them properly: and he advised his followers to the frequent holding of these conferences; saying, "It would be the best means to mature their judgment; making them thereby truly great, and capable of governing both themselves and others."

VI. I shall next endeavor to explain in what manner Socrates improved his friends in this method of reasoning.

Now, he always held, that whoever had acquired clear ideas himself, might, with equal clearness, explain those ideas: "but it was no marvel," he said, "if such as were deficient in that particular, should not only be led into error themselves, but mislead others." He therefore was never weary of conferring with his friends, and searching out wherein the peculiar property of all things consisted: but, as it would be difficult to relate the various subjects he endeavored to explain, I shall mention no more than what I think may be sufficient to make his method of reasoning plainly appear: and, in the first place, he thus inquired into the nature of piety:—

"Can you tell us," said he, "Euthydemus, what piety is?"

"A most excellent thing," replied the other.

"And what a pious man?"

"One who serves the gods," answered Euthydemus.

"But, may every one serve them in what manner he pleases?"

"Not so, assuredly," said Euthydemus, "since there are certain laws; and according to these laws we ought to serve them."

"He, then, who observes these laws," said Socrates, "shall know in what manner he ought to serve the gods?"

"So I imagine."

"But he who knows the way of serving them, will he prefer any other to that he knows?"

"I suppose not."

"Will he not rather be careful," said Socrates, "not to serve them, contrary to what he knows?"

"He will."

"The man then," Euthydemus, "who knows the laws that are to regulate his conduct in serving of the gods, will serve them according to these laws?"

"No doubt."

"And he who serves them according to these laws, will serve them as he ought?"

"He will."

"But he who serves them as he ought, is pious?"

"Assuredly."

"Then he who knows how he ought to serve the gods, may rightly be defined a pious man?"

"So it seems."

"But tell me," added Socrates; "are we at liberty to behave towards each other in what manner we please?"

"Not so," answered Euthydemus: "there are also certain laws to be observed by us with regard to men."

"And do they who live together according to these laws, live as they ought to do?"

"One can suppose no other."

"And he who lives as he ought to live, treats mankind properly?"

"He does."

"And they who treat mankind properly, execute properly all human affairs?"

"One should suppose so."

"But do you believe, Euthydemus, there are any who obey the laws, without knowing what the laws enjoin?"

"I do not believe there are any."

"But when a man knows what he ought to do, will he think he ought to act otherwise?"

"I do not imagine he will."

"Then such men as know the laws to be observed by mankind in their dealings with each other, will observe them?"

"They will."

“And they who observe to do what the laws command, do that which is just?”

“They do,” replied Euthydemus.

“But those who act justly, are just?”

“There are no other,” said Euthydemus, “who can be so.”

“May we not be said, then, to make a right definition, when we call them just who know the laws which mankind ought to observe, in their commerce with one another?•’

“It seems so to me,” said Euthydemus.

“And what shall we say of wisdom, Euthydemus? Is it in regard to things they know, or do not know, that men are wise?”

“Certainly on the account of what they do know,” said Euthydemus; “for how can any one be wise, as to things which he understands not?”

“Then it is on account of their knowledge that men are wise?”

“Most certainly.”

“But wisdom is nothing else but the being wise?”

“It is not.”

“Consequently,” said Socrates, “knowledge is wisdom?”

“I grant it,” said Euthydemus.

“But do you think,” continued Socrates, “that any one man is capable of knowing all things?’ ‘

“No; nor the thousandth part,” returned Euthydemus.

“Then it is impossible for him to be wise in all things?”

“It is.”

“It must follow, then, that no one is wise but in such things as he knows? ‘

“Certainly.”

“But can we, Euthydemus, discover the nature of good, by this our present method of trying and comparing things?”

“What do you mean?” said Euthydemus.

“Is one and the same thing useful for all men, and to every purpose?”

“No, certainly.”

“It may then be useful to one man, and hurtful to another?”

“It may, assuredly.”

“Then, to constitute any thing good, it must be found useful?”

“It must.”

“Consequently,” replied Socrates, “that which is useful, is good for him to whom it is useful?”

“I own it.”

“And beautiful, Euthydemus; may we not determine the same concerning this? for we cannot say of a body or vessel, of what kind soever, that it is beautiful with regard to every purpose.”

“We cannot.”

“Perhaps you would say then,” continued Socrates, “that it is beautiful with respect to that particular thing for which it is proper?”‘

“I would.”

“But that which is beautiful on the account of its being well suited to one thing, is it also beautiful with respect to every other?”

“Not at all.”

“Then, whatever is well suited, is beautiful with regard to that thing to which it is well suited?”

“It is so,” said Euthydemus.

“Also, courage, Euthydemus; do you look upon courage as any thing excellent?”

“Most excellent,” answered Euthydemus.

“Is it of much use on occasions of little moment?”

“The advantage of it,” said Euthydemus, “is chiefly in things of importance.”

“It is of service to us,” said Socrates, “not to see our danger?”

“I think not.”

“But not to be frightened when we see no danger, is scarcely being valiant?”

“It is not,” said Euthydemus; “for, otherwise, there are madmen, and even cowards, who might be called brave.”

“And what are they,” continued Socrates, “who fear, where there is nothing to be feared?”

“These I should think at a greater distance from courage than the other.”

“They, therefore, who show themselves brave when sensible of their danger, are valiant; those who act otherwise, cowardly?”

“It is true.”

“But do you think, Euthydemus, any one can behave as he ought, if he knows not in what manner he ought to behave?”

“I should imagine not.”

“And are not they who behave ill, and they who know not how to behave, the same people?”

“I believe they are.”

“Does not every man behave as he thinks he ought to behave?”

“Certainly.”

“Can we say, then, that he who behaves ill, knows in what manner he ought to behave?”

“We cannot.”

“But he who knows how to behave as he ought, does behave as he ought?”

“He is the only man,” said Euthydemus, “who can do it.”

“We will conclude then our discourse, Euthydemus, with saying, That he who knows how to behave properly, in all cases of difficulty and danger, is brave: he who knows it not, a coward.”

“I agree with you entirely,” replied Euthydemus.

Socrates used to say, “That a regal government, and a tyranny, were each of them of that species of dominion which is called monarchical; but differed in this particular,—that the submission of men under a regal government was altogether voluntary, and nothing could be done in it which was not agreeable to the laws; whereas, under a tyranny, the people were compelled to obey; the will of the prince being the sole standard of the laws.” As to the other forms of government, he would say, “That when the chief offices of the commonwealth were lodged in the hands of a small number of the most eminent citizens, it was called an aristocracy; when with the richest, elected on account of their riches, a plutocracy; and when the whole people were admitted indifferently into power, this,” he said, “was a democracy.”

Now, when any one showed himself of a different opinion to Socrates, without producing a sufficient reason for his dissenting; as when, for example, on his commending any one, the preference was given to some other, as more valiant, or better skilled in the affairs of the administration; his custom was, to carry back the argument to the very first proposition; and, from thence, set out in the search of truth; saying to them, “You assert, then, that the man whom you speak well of, is a far better citizen than he whom I recommend?" And being answered, "It was true:—"We may not do amiss then," said Socrates, "to examine, first of all, what the office of a good citizen is, and what the man should be, who gains to himself the esteem of the republic."

"It is right," answered the other.

"If the affair, then, relates to the management of the treasury, I suppose it must be one who, during his administration, is the most careful of the public money? If to war, then he who renders his country victorious over its enemies will be held in the highest estimation?"

"Undoubtedly."

"When treaties are forming, should not he who, by his address, gains over to the interest of the republic those who before were its enemies, be the most sure of our approbation?"

"He should."

"And, with regard to the business carried on in our public assemblies; to calm sedition, break cabals, and restore concord and unanimity, should best show the good citizen?"

This likewise being granted, and application made of these several particulars to the point in question, the truth shone forth to the acknowledgment of all; even of the very man who before had opposed him. And it was ever his manner, when he intended to examine any thing thoroughly, to begin with such propositions as were self-evident, and universally received; and said, that herein consisted the whole strength of reasoning. Nor have I ever yet known any man who could so readily bring others to admit the truth of what he wished to prove, as Socrates: and he thought Homer only gave Ulysses the appellation of the irresistible orator, because he would lead his argument, step by step, through such paths as lay obvious to the eyes of all mankind.

Thus have I, as it seems to me, made it sufficiently appear with what sincerity and openness Socrates conversed with his followers, and showed them his sentiments on every occasion.

VII. Neither must I omit to mention how solicitous Socrates always showed himself to have his friends become capable of performing their own business, that they might not stand in need of others to perform it for them. For this reason, he made it his study, more than any man I ever knew, to find out wherein any of his followers were likely to excel in things not unbecoming a wise and good man; and in such points as he himself could give them any instruction, he did it with the utmost readiness; and where he could not, was always forward to carry them to some more skilful master. Yet was he very careful to fix the bounds in every science; beyond which, he would say, no person properly instructed ought to pass. And, therefore,—in geometry, for example,—he thought it sufficient if so much of it was known as would secure a man from being imposed upon in the buying and selling of land; direct him in the proper distributions of the several portions of an inheritance, and in measuring out the laborer's work: all which, he said, was so easy to be done, that he who applied himself to this science, though almost ever so slightly, might soon find out in what manner to measure the whole earth, and describe its circumference. But to dive deep into such things, and perplex the mind with various uncouth figures, and hard to be understood, although he himself had much knowledge therein, he approved not of it, as seeing no use in these nice inquiries which consume all his time, and engross the whole man, taking off his thoughts from more profitable studies. He also advised his friends to gain such a knowledge of astronomy, as to be able to tell by the stars the hours of the night, the day of the month, and the seasons of the year, that they should not be at a loss when to relieve the sentinel, begin a journey or a voyage, or do any other thing which depends on this science: all which, he said, was easily to be learnt by conversing with seafaring men, or those whose custom it was to hunt in the night. But to go further, in order to find out what planets were in the same declension, explain their different motions, tell their distances from the earth, their influences, together with the time necessary for the performance of their respective revolutions; these, and things like these he strongly dissuaded his followers from attempting: not as being ignorant of them himself; but he judged of this science as he did of the former, that to examine deeply into the nature of such things, would rob us of all our time, divert our thoughts from useful studies, and, after all, produce nothing that could turn to our advantage. In short, he would not that men should too curiously search into that marvelous art, wherewith the Maker of the universe had disposed the several parts of it, seeing it was a subject incomprehensible to the mind of man; neither yet pleasing to the gods to attempt to discover the things, which they in their wisdom had thought fit to conceal. He also said, "that the understanding, unable to bear these towering speculations, often lost itself in the inquiry; as was the case with Anaxagoras, who gloried not a little in the extent of his knowledge: yet this very man asserted, 'that the sun was the same as fire;' forgetful that the eye can bear the light of the fire, whereas the luster of the sun is too dazzling for it to behold. Neither did he consider that the rays of the sun change the skin black, which the fire does not: as also, that its warmth produces and brings to perfection trees and flowers, and fruits of the earth, while it is the property of the fire to wither and consume them. He said, moreover, 'that the sun was no other than a stone thoroughly inflamed;' not perceiving," added Socrates, "that the stone shines not in the fire; neither can remain there any long time without wasting;

whereas the sun abides still the same,—an inexhaustible source of light and warmth to us.”

Socrates also recommended the study of arithmetic to his friends; and assisted them, as was his custom, in tracing out the several parts of it, as far as might be useful: but here, as elsewhere, fixed bounds to their inquiries; never suffering them to run out into vain and trifling disquisitions, which could be of no advantage either to themselves or others.

He always earnestly exhorted his friends to be careful of their health: and, to this end, not only advised them to consult those who were skilful therein, but of themselves to be continually attentive to their diet and exercise; always preferring what would keep them in the best health; since they who did this would seldom, he said, want a better physician. And when he found any who could not satisfy themselves with the knowledge that lay within the reach of human wisdom, Socrates advised that they should diligently apply to the study of divination: asserting, that whoever was acquainted with those mediums which the gods made use of when they communicated any thing to man, should never be left destitute of divine counsel.

VIII. And now, if any one should be inclined to conclude that Socrates asserted a falsehood, when he declared himself under the guidance of a good genius, seeing he acted in such a manner as to incur the sentence of death: let such a one, I say, consider that he was now already so far advanced in age, that if he died not then, he must die soon after, and that he only relinquished that part of life which is held the most painful, and when the faculties of the mind are greatly impaired: whereas he now manifested to all the world the strength and vigor of his soul, and gained to himself immortal honor by the manner in which he spoke while before his judges. And, indeed, no man was ever known to plead his own cause with that plainness, firmness, and steady regard to truth; at the same time that he received his condemnation with that meekness and magnanimity as altogether surpassed the example of former ages; it being on all hands universally acknowledged, that no man ever met death in like manner as Socrates.

After his sentence he was obliged to live thirty days in prison, the laws forbidding any one to be put to death until the return of the sacred vessel: during which time his friends conversed with him daily, and saw no change in his behavior, for he still retained that tranquility of mind, and pleasing turn of humor, which had made him so justly admired by all mankind. Now, who could give greater proofs of fortitude? Either, what death could be attended with more honor? But the death which is the most honorable is likewise the most happy; and that which is the most happy is best pleasing to the gods.

I shall further relate what I heard from Hermogenes, the son of Hipponicus, concerning Socrates. This man being along with him, after the time that Melitus had accused him, and observing that he rather chose to discourse on any other subject than the business of the trial, asked, “Whether it was not necessary to be preparing for his justification?”

“And what!” answered Socrates, “suppose you, Hermogenes! that I have not, throughout life, been preparing for this very thing?” Hermogenes then desiring him to explain his meaning: “I have,” said he, “made it the business of my whole life to examine what things were just or unjust; and have as steadily persisted in practicing the one and refraining from the other; and this I take to be the best way of preparing for my trial.”

But know you not,” replied Hermogenes, “that here, in Athens, the judges often condemn those to death who have no way deserved it, only because their manner of speaking was displeasing; while, on the other hand, they not less frequently acquit the guilty?"

"I do know it," answered Socrates; "and be assured, Hermogenes, that I did not neglect to take the matter of my defense under consideration,—but the Genius opposed me."

Hermogenes replying, that he talked marvelously; "But why," said he, "should it be marvelous that God should think this the very best time for me to die? Know you not that hitherto I have granted to no man that he has lived either better, or even more pleasurably, than I; if, as I think it is, to be alone solicitous after the attainment of virtue be living well; and the consciousness of making some proficiency therein pleasant: and that I did make some proficiency therein I well perceived, by comparing myself with others, and from the testimony of my own conscience; my friends also saying the same concerning me. Not for that they love me: since, if so, every friend would think the same of him whom he was a friend to; but because, as it seemed to them, they themselves became better men from having much conversed with me. But if my life should be still prolonged, it can hardly be but the infirmities of old age will likewise come upon me: my sight will fail, my hearing grow heavy, and my understanding much impaired; so that I shall find it more difficult to learn, as less easy to retain what I have learnt already; deprived too of the power of performing many of those things which heretofore I have excelled in. And if, after all, I should become insensible to these decays, still life would not be life, but a wearisome burden. And if otherwise, if I indeed find and feel them, how unpleasant, how afflicting, must a state like this prove! If I die wrongfully, the shame must be theirs who put me wrongfully to death: since, if injustice is shameful, so likewise every act of it: but no disgrace will it bring on me, that others have not seen that I was innocent. The examples drawn from former ages sufficiently show us, that those who commit wrong, and they who suffer it, stand not alike in the remembrance of men: and I am persuaded, that if I now die, I shall be held in far higher estimation by those who come after me than any of my judges; since posterity will not fail to testify concerning me, that I neither wronged, nor yet, by my discourses, corrupted any man; but, contrariwise, strove throughout life, to the utmost of my power, to make all those who conversed with me happy."

In this manner did Socrates continue to discourse with Hermogenes and others: nor are there any among those who knew him, if lovers of virtue, who do not daily regret the loss of his conversation; convinced how much they might have been advantaged thereby.

As to myself, knowing him of a truth to be such a man as I have described; so pious towards the gods, as never to undertake any thing without having first consulted them: so just towards men, as never to do an injury, even the very slightest, to any one; while many and great were the benefits he conferred on all with whom he had any dealings: so temperate and chaste, as not to indulge any appetite, or inclination, at the expense of whatever was modest or becoming: so prudent, as never to err in judging of good and evil; nor wanting the assistance of others to discriminate rightly concerning them: so able to discourse upon, and define with the greatest accuracy, not only those points of which we have been speaking, but likewise of every other; and looking as it were into the minds of men, discover the very moment for reprehending vice, or stimulating to the love of virtue. Experiencing, as I have done, all these excellencies in Socrates, I can never cease considering him as the most virtuous and the most happy of all mankind. But if there is any one who is disposed to think otherwise, let him go and compare Socrates with any other, and afterwards let him determine.

# THE BANQUET OF XENOPHON.

Translated by James Welwood, M. D.

Fellow of the Royal College Of Physicians, London.

I. I am of opinion, that as well the sayings as the actions of great men deserve to be recorded, whether they treat of serious subjects with the greatest application of mind, or, giving themselves some respite, unbend their thoughts to diversions worthy of them. You will know by the relation I am going to make, what it was inspired me with this thought, being myself present.

During the festival of Minerva, there was a solemn tournament, whither Callias, who tenderly loved Autolycus, carried him, which was soon after the victory which that youth had obtained at the Olympic games. When the show was over, Callias taking Autolycus and his father with him, went down from the city to his house at the Piræum, with Nicerates the son of Nicias.

But upon the way meeting Socrates, Hermogenes, Critobulus, Antisthenes, and Charmides, discoursing together, he gave orders to one of his people to conduct Autolycus and those of his company to his house; and addressing himself to Socrates, and those who were with him, “I could not,” said he, “have met with you more opportunely; I treat today Autolycus and his father; and, if I am not deceived, persons who like you have their souls purified by refined contemplations, would do much more honor to our assembly, than your colonels of horse, captains of foot, and other gentlemen of business, who are full of nothing but their offices and employments.”

“You are always upon the banter,” said Socrates; “for, since you gave so much money to Protagoras, Gorgias, and Prodicus, to be instructed in wisdom, you make but little account of us, who have no other assistance but from ourselves to acquire knowledge."

"It is true," said Callias, "hitherto I have concealed from you a thousand fine things I learned in the conversation of those gentlemen; but if you will sup with me this evening, I will teach you all I know, and after that I do not doubt you will say I am a man of consequence."

Socrates and the rest thanked him with the civility that was due to a person of so high a rank, that had invited them in so obliging a manner: and Callias, showing an unwillingness to be refused, they at last accepted the invitation, and went along with him. After they had done bathing and anointing, as was the custom before meals, they all went into the eating-room, where Autolycus was seated by his father's side; and each of the rest took his place according to his age or quality.

The whole company became immediately sensible of the power of beauty, and every one at the same time silently confessed, that by natural right the sovereignty belonged to it, especially when attended with modesty and a virtuous bashfulness. Now Autolycus was one of that kind of beauties; and the effect which the sight of so lovely a person produced was to attract the eyes of the whole company to him, as one would do to flashes of lightning in a dark night. All hearts surrendered to his power, and paid homage to the sweet and noble mien and features of his countenance, and the manly gracefulness of his shape.

It is very certain, that in those who are divinely inspired by some good demon, there appears something which makes them behold with the strictest attention, and a pleasing astonishment: whereas, those who are possessed by some evil genius or power, besides the terror that appears in their looks, they talk in a tone that strikes horror, and have a sort of unbounded vehemence in all they say and do, that comes but little short of madness. Thence it is, as it was in this case, that those who are touched with a just and well regulated love, discover in their eyes a charming sweetness, in the tone of the voice a musical softness, and in their whole deportment something that expresses in dumb show the innate virtue of their soul.

At length they sat down to supper, and a profound silence was observed, as though it had been enjoined: when a certain buffoon, named Philip, knocked at the door, and bade the servant that opened it tell the gentlemen he was there, and that he came to sup with them; adding, there was no occasion to deliberate whether he should let him in, for that he was perfectly well furnished with every thing that could be necessary towards supping well on free cost, his boy being weary with carrying nothing in his belly, and himself extremely fatigued with running about to see where he could fill his own." Callias understanding the arrival of this new guest, ordered him to be let in, saying, "We must not refuse him his dish;" and at the same time turned his eyes towards Autolycus, to discover, probably, the judgment he made of what had passed in the company with relation to him; but Philip coming into the room, "Gentlemen," said he, "you all know I am a buffoon by profession, and therefore am come of my own accord. I choose rather to come uninvited, than put you to the trouble of a formal invitation, having an aversion to ceremony."

"Very well," said Callias, "take a place then Philip; the gentlemen here are full of serious thoughts, and I fancy they will have occasion for somebody to make them laugh."

While supper lasted, Philip failed not to serve them up, now and then, a dish of his profession; he said a thousand ridiculous things; but not having provoked one smile, he discovered sufficient dissatisfaction. Some time after he fell to it again, and the company heard him again without being moved. Thereupon he got up, and throwing his cloak over his head, laid himself down at his full length on his couch, without eating one bit more. “What is the matter,” said Callias; “has any sudden illness taken you?”

“Alas!” cried he, fetching a deep sigh from his heart, “the quickest and most sensible pain that ever I felt in my whole life; for, since there is no more laughing in the world, it is plain my business is at an end, and I have nothing now to do but to make a decent exit. Heretofore I have been called to every jolly entertainment, to divert the company with my buffooneries; but to what purpose should they now invite me? I can as soon become a god as say one serious word; and to imagine any one will give me a meal in hopes of a return in kind, is a mere jest, for my spit was never yet laid down for supper; such a custom never entered my doors.”

While Philip talked in this manner, he held his handkerchief to his eyes, and personated to admiration a man grievously afflicted. Upon which every one comforted him, and promised, if he would eat, they would laugh as much as he pleased. The pity which the company showed Philip having made Critobulus almost burst his sides, Philip uncovered his face and fell to his supper again, saying, “Rejoice, my soul, and take courage, this will not be your last good meal; I see you will yet be good for something.”

II. They had now taken away, and made effusion of wine in honor of the gods, when a certain Syracusan entered, leading in a handsome girl, who played on the flute; another, that danced and showed very nimble feats of activity; and a beautiful little boy, who danced and played perfectly well on the guitar. After these had sufficiently diverted the company, Socrates, addressing himself to Callias, “In truth,” says he, “you have treated us very handsomely, and have added to the delicacy of eating, other things delightful to our seeing and hearing.”

"But we want perfumes to make up the treat," answered Callias: "What say you to that?"

"Not at all," replied Socrates; "perfumes, like habits, are to be used according to decency; some become men, and others women; but I would not that one man should perfume himself for the sake of another: and for the women, especially such as the wife of Critobulus or Nicerates, they have no occasion for perfumes, their natural sweetness supplying the want of them. But it is otherwise if we talk of the smell of that oil that is used in the Olympic games, or other places of public exercise. This, indeed, is sweeter to the men than perfumes to the women; and when they have been for some time disused to it, they only think on it with a greater desire. If you perfume a slave and a freeman, the difference of their birth produces none in the smell; and the scent is perceived as soon in the one as the other: but the odor of honorable toil, as it is acquired with great pains and application, so it is ever sweet, and worthy of a brave man."

"This is agreeable to young men," said Lycon; "but as for you and me, who are past the age of these public exercises, what perfumes ought we to have?"

"That of virtue and honor," said Socrates

Lycon. "And where is this sort of perfume to be had?"

Soc. "Not in the shops, I assure you."

Lycon. "Where then?"

Soc. "Theognis sufficiently discovers where, when he tells us in his poem:

"When virtuous thoughts warn? the celestial mind
With generous heat, each sentiment's refin'd:
Th' immortal perfumes breathing from the heart,
With grateful odors sweeten every part.

“But when our vicious passions fire the soul,
The clearest fountains grow corrupt and foul;
The virgin springs, which should untainted flow,
Run thick, and blacken all the stream below.”

“Do you understand this, my son?” said Lycon to Autolycus. “He not only understands it, but will practice it too,” said Socrates, “and I am satisfied, when he comes to contend for that noble prize, he will choose a master to instruct him, such as you shall approve of, who will be capable of giving him rules to attain it.”

Then they began all to reassume what Socrates had said. One affirmed there was no master to be found that was qualified to instruct others in virtue; another said it could not be taught: and a third maintained that if virtue could not be taught nothing else could. “Very well,” said Socrates; “but since we cannot agree at present in our opinions about this matter, let us defer the question to another opportunity, and apply ourselves to what is before us; I see the dancing girl entering at the other end of the hall, and she has brought her cymbals along with her.” At the same time the other girl took her flute; the one played and the other danced to admiration; the dancing girl throwing up and catching again her cymbals, so as to answer exactly the cadency of the music, and that with a surprising dexterity. Socrates, who observed her with pleasure, thought it deserved some reflection: and therefore, said he, “This young girl has confirmed me in the opinion I have had of a long time, that the female sex are nothing inferior to ours, excepting only in strength of body, or perhaps steadiness of judgment. Now you, gentlemen, that have wives amongst us, may take my word for it they are capable of learning any thing you are willing they should know to make them more useful to you.”

"If so, sir," said Antisthenes; "if this be the real sentiment of your heart, how comes it you do not instruct Xantippe, who is, beyond dispute, the most insupportable woman that is, has been, or ever will be?"

"I do with her," said Socrates, "like those who would learn horsemanship: they do not choose easy tame horses, or such as are manageable at pleasure, but the highest metalled and hardest mouthed; believing, if they can tame the natural heat and impetuosity of these, there can be none too hard for them to manage. I propose to myself very near the same thing; for having designed to converse with all sorts of people, I believed I should find nothing to disturb me in their conversation or manners, being once accustomed to bear the unhappy temper of Xantippe."

The company relished what Socrates said, and the thought appeared very reasonable. Then a hoop being brought in, with swords fixed all around it, their points upwards, and placed in the middle of the hall, the dancing girl immediately leaped head foremost into it, through the midst of the points, and then out again, with a wonderful agility. This sight gave the company more surprise and fear than pleasure, every one believing she would wound herself; but she received no harm, and performed her feats with all the courage and assurance imaginable.

"The company may say what they please," said Socrates: "but, if I am not mistaken, nobody will deny but courage may be learned, and that there are masters for this virtue in particular, though they will not allow it in the other virtues we were just now speaking of; since a girl, you see, has the courage to throw herself through the midst of naked swords, which I believe none of us dare venture upon."

"Truly," said Antisthenes, to whom Socrates spoke, "the Syracusan may soon make his fortune, if he would but show this girl in a full theatre, and promise the Athenians that, for a considerable sum of money, he would instruct them to be as little afraid of the Lacedæmonian lances as this girl of her swords.”

“Ah!” cries the buffoon, “what pleasure should I take to see Pisander, that grave counselor of state, taking lessons from this girl; he that is like to swoon away at the sight of a lance, and says it is a barbarous cruel custom to go to war and kill men.”

After this the little boy danced, which gave occasion to Socrates to say, “You see this child, who appeared beautiful enough before, is yet much more so now, by his gesture and motion, than when he stood still.”

“You talk,” said Charmides, “as if you were inclinable to esteem the trade of a dancing-master.”

“Without doubt,” said Socrates, “when I observe the usefulness of that exercise, and how the feet, the legs, the neck, and indeed the whole body, are all in action, I believe whoever would have his body supple, easy, and healthful, should learn to dance. And, in good earnest, I am resolved to take a lesson of the Syracusan whenever he pleases.” But it was replied, “When you have learned to do all this little boy does, what advantage can it be to you?”

“I shall then dance,” said Socrates. At which all the company burst out a laughing: but Socrates, with a composed and serious countenance, “Methinks you are pleasant,” said he. “What is it tickles you? Is it because dancing is not a wholesome exercise? or that after it we do not eat and sleep with more pleasure? You know those who accustom themselves to the long foot-race have generally thick legs and narrow shoulders; and, on the contrary, our gladiators [and wrestlers have broad shoulders and small legs. Now, instead of producing such effects, the exercise of dancing occasions in us so many various motions, and agitating all the members of the body with so equal a poise, renders the whole of a just proportion, both with regard to strength and beauty. What reason then can you find to laugh, when I tell you I design to dance? I hope you would not think it decent for a man of my age to go into a public school, and unrobe myself before all the company to dance? I need not do that; a parlor, like this we are in, will serve my turn. You may see, by this little boy, that one may sweat as well in a little room as an academy, or a public place; and in winter you may dance in a warm apartment; in summer, if the, heat be excessive, in the shade. When I have told you all this, laugh on, if you please, at my saying I design to dance. Besides, you know I have a belly somewhat larger than I could wish; and are you surprised if I endeavor to bring it down by exercise? Have you not heard that Charmides, the other morning, when he came to visit me, found me dancing?"

"Very true," said Charmides; "and I was extremely surprised, and afraid you had lost your senses: but when you had given me the same reasons you have now, I went back to my house; and, though I cannot dance, I began to move my hands and legs, and practice over some lessons, which I remembered something of when I was young."

"Faith!" said Philip to Socrates, "I believe your thighs and shoulders are exactly of the same weight; so that if you put one into one scale, and the other into the other, as the civil magistrate weighs bread in the market-place, you will not be in danger of being forfeited, for there is not an ounce, no not a grain difference between them."

"Well then," said Callias, "when you have an inclination for a lesson of dancing, Socrates, pray call upon me, that we may learn together."

"With all my heart," answered Socrates.

“And I could wish,” said Philip, “that some one would take the flute, and let Socrates and me dance before this good company; for methinks I have a mighty mind that way.” With that he jumped up, and took two or three frisks round the ball, in imitation of the dancing boy and girl. Upon which every body took notice, that all those gestures or motions, that were so beautiful and easy in the little boy, appeared awkward and ridiculous in Philip: and when the little girl, bending backwards, touched her heels with her head, and flung herself swiftly round three or four times like a wheel, Philip would needs do the same, but in a manner very different; for, bending himself forward, and endeavoring to turn round, you may imagine with what success he came off. Afterwards, when every one praised the child for keeping her whole body in the exactest and most regular motion in the dance, Philip bade the music strike up a brisker tune, and began to move his head, his arms, and his heels, all at once, till he could hold out no longer: then throwing himself on the couch, he cried out, “I have exercised myself so thoroughly, that I have already one good effect of it, I am plaguy thirsty; boy: bring the great glass that stands on the sideboard, and fill it up to me, for I must drink.”

“Very well,” said Callias; “the whole company shall drink, if you please, master Philip, for we are thirsty too with laughing at you.”

“It is my opinion too,” said Socrates, “that we drink; wine moistens and tempers the spirits, and lulls the cares of the mind to rest, as opium does the body: on the other hand, it revives our joys, and is oil to the dying flame of life. It is with our bodies as with seeds sown in the earth; when they are over-watered they cannot shoot forth, and are unable to penetrate the surface of the ground: but when they have just so much moisture as is requisite, we may behold them break through the clod with vigor; and pushing boldly upwards, produce their flowers, and then their fruits. It is much the same thing with us; if we drink too much, the whole man is deluged, his spirits are overwhelmed, and is so far from being able to talk reasonably, or indeed to talk at all, that it is with the utmost pain he draws his breath: but if we drink temperately, and small draughts at a time, the wine distils upon our lungs like sweetest morning dew (to use the words of that noble orator Gorgias). It is then the wine commits no rape upon our reason, but pleasantly invites us to agreeable mirth." Every one was of his opinion; and Philip said he had something to offer, which was this: "Your servants," said he, "that wait at the sideboard should imitate good coachmen, who are never esteemed such till they can turn dexterously and quick." The advice was immediately put in practice, and the servants went round and filled every man his glass.

III. Then the little boy, tuning his guitar to the flute, sung and played at the same time; which gave mighty satisfaction to all the company. Upon this Charmides spoke: "What Socrates," said he, "just now offered about the effects of wine, may, in my opinion, with little difference, be applied to music and beauty, especially when they are found together: for I begin in good earnest to be sensible that this fine mixture buries sorrow, and is at the same time the parent of love." Whereupon Socrates took occasion to say, "If these people are thus capable of diverting us, I am well assured we are now capable ourselves, and I believe nobody here doubts it. In my judgment, it would be shameful for us, now we are met together, not to endeavor to benefit one another by some agreeable or serious entertainment. What say you, gentlemen?" They generally replied, "Begin then the discourse from which we are to hope so good an effect."

"I hope," said Socrates, "to obtain that favor of Callias, if he would but give us a taste of those fine things he learnt of

Prodicus: you know he promised us this when we came to sup with him.”

“With all my heart,” said Callias, “I am willing, but on condition that you will all please to contribute to the conversation, and every one tell, in his turn, what it is he values himself most upon.”

“Be it so,” said Socrates.

“I will tell you then,” added Callias, “what I esteem most, and value myself chiefly upon: it is this, that I have it in my power to make men better.”

“How so,” said Antisthenes; “will you teach them to become rich or honest?”

“Justice is honesty,” replied Callias. “You are in the right,” said Antisthenes, “I do not dispute it; for though there are some occasions when even courage or wisdom may be hurtful to one’s friends or the government, yet justice is ever the same, and can never mix with dishonesty.”

“When, therefore, every one of us,” says Callias, “has told wherein he chiefly values himself, and is most useful to others, I shall then likewise make no scruple to tell you by what arts I am able to perform what I told you: that is, to make men better.”

Soc. “But, Nicerates, what is the thing that you value yourself most upon?”

Nic. “It is that my father, designing to make a virtuous man of me, ordered me to get by heart every verse of Homer; and I believe I can repeat you at this minute the whole Iliad and Odyssey.”

“But you know very well,” said Antisthenes, “every public rehearser, or ballad-singer, does the same at all the corners of the streets.”

“I acknowledge it,” said Nicerates; “nor does a day pass but I go to hear them.”

Ant. “I think them a pack of scandalous wretches: What say you?”

Nic. “I am of your opinion.”

Soc. “It is certain they do not know the sense of one verse they recite: but you, who have given so much money to Hesimbrotus, Anaximander, and other wise men, to instruct you in wisdom, you cannot be ignorant of any thing.”

“Now it is your turn, Critobulus,” continued Socrates: “tell us then, if you please, what it is you value yourself most upon?”

“On beauty,” replied he.

“But will you say, Socrates, that yours is such as will help to make us better?’

Soc. “I understand you: but if I do not make that out anon, then blame me. What says Antisthenes? upon what does he value himself?”

Ant. “I think I can value myself upon nothing in this world equal to that of being rich.”

He had scarce done speaking, when Hermogenes took him up, and asked him how much he was worth? “Faith, not one halfpenny,” said Antisthenes.

Her. “But you have a good estate in land?” Ant. “I may perhaps have just as much as may afford dust for Autolycus, the next time he has a mind to wrestle.”

Soc. “Charmides, will you, in few words, acquaint us with what it is you value yourself most upon?”

Car. “Poverty.”

Soc. “Very well; you have made an excellent choice: it is indeed in itself of an admirable nature; nobody will be your rival; you may preserve it without care, and even negligence is its security. These are not small reasons, you see.”

Callias. “But, since you have asked the whole company, may we not inquire of you, Socrates, what it is you value yourself upon?”

When Socrates, putting on a very grave and solemn air, answered coldly, and without hesitation, “I value myself upon procuring.” The gravity of the speaker, and the manner of speaking a word so little expected from Socrates, set the whole company a laughing.

“Very well, gentlemen,” said he, “I am glad you are pleased; but I am very certain this profession of mine, if I apply myself closely to it, will bring in money enough if I pleased.”

When Lycon, pointing to Philip; “Well, what say you?”

“You, I suppose, value yourself upon making men laugh?”

“Yes, certainly,” said Philip; “and have I not more reason to be proud of myself for this, than that fine spark, Callipides, who is so fond, you know, of making his audience weep, when he { recites his verses in the theatre?”

“But, Lycon,” said Antisthenes, “let us know what it is you value yourself most upon? What gives you greatest content?”

You know very well,” answered he, “what I esteem the most, and which gives me the greatest pleasure, it is to be the father of such a son as Autolycus.”

“And for your son,” said some of the company, “he, no question, values himself most upon carrying the prize the other day at the Olympic games?”

“Not so, I assure you,” said Autolycus, blushing. And then the whole company turning their eyes with pleasure towards him, one of them asked him, ‘What is it, then, Autolycus, you value yourself most upon?’

"It is," replied he, "that I am the son of such a father and at the same time turned himself lovingly towards him for a kiss.

Callias, who observed it, said to Lycon, "Don't you know yourself to be the richest man in the world?"

"I cannot tell that," replied Lycon.

"And yet it is true," said Callias, "for you would not change this son of yours for the wealth of Persia."

Lycon. "Be it so; I am then the richest man in the world; nor will I contradict your opinion."

Then Nicerates addressing himself to Hermogenes: "What is it," said he, "that you value yourself most upon?"

"On virtue," answered he, "and the power of my friends: and that, with these two advantages, I have yet the good fortune to be beloved by these friends."

Then every one looking upon him, began to inquire who were his friends?"

"I will satisfy you," said he, "as you shall see, when it comes to my turn."

IV. Then Socrates resumed the discourse: "Now you have all," said he, "declared your opinions, as to what you value yourselves most upon, it remains that you prove it. Let us now then hear every man's reasons, if you please, for his opinion."

"Hear me first then," said Callias: "for though you have all been inquiring what justice is, I alone have found the secret to make men just and honest."

Soc. "How so?"

Call. "By giving them money."

At these words, Antisthenes rising up, asked him hastily, "Is justice to be found in the heart or the pocket?"

Call. "In the heart."

Ant. "And would you then make us believe, that by filling a bag with money, you can make the heart honest or just?"

Call. “Most assuredly.”

Ant. “How?”

Call. “Because when they have all things necessary for life, they will not, for the world, run any hazard by committing evil actions.”

Ant. “But do they repay you again what they receive of you?”

Call. “Not at all.”

Ant. “Nothing but gratitude, I hope; good thanks for good money.”

Call. “Not that neither: for I can tell you something you will hardly believe; I have found some people of so evil a nature, that they love me less for receiving benefits from me.” Then Antisthenes replied briskly,

Ant. “That is wonderful: you make men just and honest to others, and they prove unjust and dishonest only to you?”

Call. “Not so wonderful neither!”

“Have we not architects and masons, who build houses for other men, and live in hired lodgings themselves?”

“Have patience, my master,” said he, (turning to Socrates) “and I will prove this beyond dispute.”

“You need not,” said Socrates; “for, beside what you allege for a proof, there is another that occurs to me: Do you not see there are certain diviners who pretend to foretell every thing to other people, and are entirely ignorant of what is to happen to themselves.” Socrates said no more.

“It is now my turn to speak,” said Nicerates: “hear then to what I am going to say, attend to a conversation which will necessarily make you better, and more polite. You all know, or I am much mistaken, there is nothing that relates to human life but Homer has spoken of it. Whoever then would learn economy, eloquence, arms; whoever would be master of every qualification that is to be found in Achilles, Ajax, Ulysses, or Nestor; let him but apply himself to me, and he shall become perfect in them, for I am entirely master of all that.”

“Very well,” said Antisthenes, “you have learned likewise the art of being a king; for you may remember Homer praises Agamemnon for that he was

“A noble warrior and a mighty prince.”

Nicer. “I learnt too, from Homer, how a coachman ought to turn at the end of his career. He ought to incline his body to the left, and give the word to the horse that is on the right, and make use at the same time of a very loose rein. I have learnt all this from him, and another secret too, which, if you please, we will make trial of immediately: the same Homer says somewhere, that an onion relishes well with a bottle. Now let some of your servants bring an onion, and you will see with what pleasure you will drink.”

“I know very well,” said Charmides, “what he means; Nicerates, gentlemen, thinks deeper than you imagine. He would willingly go home with the scent of an onion in his mouth, that his wife may not be jealous, or suspect he has been kissing abroad.”

“A very good thought,” said Socrates; “but perhaps I have one full as whimsical, and worthy of him: it is, that an onion does not only relish wine, but victuals too, and gives a higher seasoning: but if we should eat them now after supper, they would say we had committed a debauch at Callias’s.”

“No, no,” said Callias, “you can never think so: but onions, they say, are very good to prepare people for the day of battle, and inspire courage; you know they feed cocks so against they fight: but our business, at present, I presume, is love, not war; and so much for onions.”

Then Critobulus began. “I am now,” said he, “to give my reasons why I value myself so much upon my beauty. If I am not handsome (and I know very well what I think of the matter), you ought all of you to be accounted imposters, for without being obliged to it upon oath, when you were asked what was your opinion of me, you all swore I was handsome, and I thought myself obliged to believe you, being men of honor that scorned a lie. If, then, I am really handsome, and you feel the same pleasure that I do when I behold another beautiful person, I am ready to call all the gods to witness, that were it in my choice either to reign king of Persia, or be that beauty, I would quit the empire to preserve my form. In truth, nothing in this world touches me so agreeably as the sight of Amandra, and I could willingly be blind to all other objects, if I might but always enjoy the sight of her I so tenderly love.

"I curse my slumbers, doubly curse the night,
That hides the lovely maid from my desiring sight;
But, oh! I bless the cheerful god's return,
And welcome with my praise the ruddy morn;
Light with the morn returns, return my fair,
She is the light, the morn restores my dear."

"There is something more in the matter, besides this, to be considered. A person that is vigorous and strong, cannot attain his designs but by his strength and vigor; a brave man by his courage; a scholar by his learning and conversation: but the beautiful person does all this, without any pains, by being only looked at. I know very well how sweet the possession of wealth is, but I would sacrifice all to Amandra: and I should with more pleasure give all my estate to her, than to receive a thousand times more from any other. I would lay my liberty at her feet if she would accept me for her slave: fatigue would be much more agreeable to me than repose, and dangers than ease, if endured in the service of Amandra. If, then, you boast yourself so much, Callias, that you can make men honester by your wealth, I have much more reason to believe I am able to produce in them all sorts of virtue by the mere force of beauty; for when beauty inspires, it makes its votaries generous and industrious; they thereby acquire a noble thirst after glory, and a contempt of dangers; and all this attended with an humble and respectful modesty, which makes them blush to ask what they wish most to possess. I think the government is stark mad, that they do not choose for generals the most beautiful persons in the state; for my part, I would go through fire to follow such a commander, and I believe you would all do the same for me. Doubt not then, Socrates, but beauty may do much good to mankind; nor does it avail to say beauty does soon fade; for there is one beauty of a child, another of a boy, another of a man. There is likewise a beauty of old age, as in those who carry the consecrated branches at the feast of Minerva; for you know for that ceremony they make choice always of the handsomest old men. Now, if it is desirable to obtain without trouble what one wishes, I am satisfied that, without speaking one word, I should sooner persuade that little girl to kiss me than any of you, with all the arguments you can use; no, not you yourself, Socrates, with all the strength of your extolled eloquence."

"Why, Critobulus, do you give yourself this air of vanity," said Socrates, "as if you were handsomer that me?"

"Doubtless," replied Critobulus, "if I have not the advantage of you in beauty, I must be uglier than the Sileni, as they are painted by the poets." Now Socrates had some resemblance to those figures.

Soc. "Take notice, if you please, that this article of beauty will be soon decided anon, after every one has taken his turn to speak: nor shall we call Paris to make a judgment for us, as he did in the case of the three goddesses about the apple: and this very young girl, who you would make us believe had much rather kiss you than any of us, she shall determine it?"

Crit. “And why may not Amandra be as good as a judge of this matter?”

Soc. “Amandra must needs have a large possession of your heart, seeing, by your good will, you would never name any other name but hers.”

Crit. “True; and yet when I do not speak of her, do you think she lives not in my memory? I assure you, if I were a painter or a statuary, I could draw her picture or statue by the idea of her in my mind, as well as if she were to sit to it.”

Soc. “Since then you have her image in your heart, and that image resembles her so strongly, why is it that you importune me continually to carry you to places where you are sure to meet her?”

Crit. “It is because the sight of Amandra only gives me real joy.

“The idea does no solid pleasure give;
She must within my sight, as well as fancy, live.”

Hermogenes interrupted the discourse; and addressing himself to Socrates, said, “You ought not to abandon Critobulus in the condition he is in, for the violent transport and fury of his passion makes me uneasy for him, and I know not where it may end.”

Soc. “What! do you think he is become thus only since he was acquainted with me? You are mightily deceived; for I can assure you this fire has been kindled ever since they were children. Critobulus’s father having observed it, begged of me that I would take care of his son, and endeavor, if I could, by all means to cure him of it. He is better now; things were worse formerly: for I have seen, when Amandra appeared in company, Critobulus, poor creature, would stand as one struck dead, without motion, and his eyes so fixed upon her, as if he had beheld Medusa’s head; insomuch, that it was impossible almost for me to bring him to himself.

"I remember one day, after certain amorous glances, (this is between ourselves only,) he ran up to her and kissed her; and, Heaven knows, nothing gives more fuel to the fire of love than kisses. For this pleasure is not like others, which either lessen or vanish in the enjoyment: on the contrary, it gathers strength the more it is repeated; and flattering our souls with sweet and favorable hopes, bewitches our minds with a thousand beautiful images. Thence it may be, that to love and to kiss are frequently expressed by the same word in the Greek: and it is for that reason, I think, he that would preserve the liberty of his soul, should abstain from kissing handsome people."

"What, then," said Charmides, "must I be afraid of coming near a handsome woman? Nevertheless, I remember very well, and I believe you do so too, Socrates, that being one day in company with Critobulus's beautiful sister, who resembles him so much, as we were searching together for a passage m some author, you held your head very close to that beautiful virgin; and I thought you seemed to take pleasure in touching her naked shoulder with yours."

"Good God!" replied Socrates, "I will tell you truly how I was punished for it for five days after: I thought I felt in my shoulder a certain tickling pain, as if I had been bit by gnats, or pricked with nettles: and I must confess too, that during all that time I felt a certain hitherto unknown pain at my heart. But, Critobulus, take notice what I am going to tell you before this good company: it is, that I would not have you come too near me, till you have as many hairs upon your chin as your head, for fear you put me in mind of your handsome sister."

Thus the conversation between these gentlemen was sometimes serious, sometimes in raillery. After this Callias took up the discourse. "It is your turn now," said he, "Charmides, to tell us what reasons you have for valuing yourself so much upon poverty."

"I will," replied Charmides, "and without delay. Is any thing more certain, than that it is better to be brave than a coward; a freeman, than a slave; to be credited, than distrusted; to be inquired after for your conversation, than to court others for theirs? These things, I believe, may be granted me without much difficulty. Now, when I was rich, I was in continual fear of having my house broken open by thieves, and my money stolen, or my throat cut upon the account of it. Besides all this, I was forced to keep in fee with some of these pettyfogging rascals that retain to the law, who swarm all over the town like so many locusts. This I was forced to do, because they were always in a condition to hurt me; and I had no way to retaliate upon them. Then I was obliged to bear public offices at my own charges, and to pay taxes: nor was it permitted me to go abroad for travel, to avoid that expense. But now that my estate, which I had without the frontiers of our republic, is all gone, and my land in Attica brings me in no rent, and all my household goods are exposed to sale, I sleep wonderfully sound, and stretched upon my bed as one altogether fearless of officers. The government is now no more jealous of me, nor I of it; thieves fright me not, and I myself affright others. I travel abroad when I please; and when I please I stay at Athens. What is to be free, if this is not? Besides, rich men pay respect to me; they run from me, to leave me the chair, or to give me the wall. In a word, I am now perfectly a king; I was then perfectly a slave. I have yet another ad vantage from my poverty; I then paid tribute to the republic; now the republic pays tribute to me; for it maintains me. Then every one snarled at me, because I was often with Socrates. Now that I am poor, I may converse with him, or any other I please, without any body's being uneasy at it. I have yet another satisfaction: in the days of my estate, either the government or my ill fortune were continually clipping it: now that is all gone, it is impossible to get any thing of me; he that has nothing, can lose nothing. And I have the continual pleasure of hoping to be worth something again, one time or other.”

“Don’t you pray heartily against riches?” says Callias. “And if you should happen to dream you were rich, would you not sacrifice to the gods to avert the ill omen:”

“No, no,” replied Charmides: “but when any flattering hope presents, I wait patiently for the success.” Then Socrates turning to Antisthenes; “And what reason have you,” said he, “who have very little or no money, to value yourself upon wealth?”

Ant. “Because I am of opinion, gentlemen, that poverty and wealth are not in the coffers of those we call rich or poor, but in the heart only; for I see numbers of very rich men, who believe themselves poor; nor is there any peril or labor they would not expose themselves to, to acquire more wealth. I knew two brothers, the other day, who shared equally their father’s estate. The first had enough, and something to spare; the other wanted every thing. I have heard likewise of some princes so greedy of wealth, that they were more notoriously criminal in the search of it than private men: for though the latter may sometimes steal, break houses, and sell free persons to slavery, to support the necessities of life; yet those do much worse: they ravage whole countries, put nations to the sword, enslave free states: and all this for the sake of money, and to fill the coffers of their treasury. The truth is, I have a great deal of compassion for these men, when I consider the distemper that afflicts them Is it not an unhappy condition to have a great deal to eat, to eat a great deal, and yet never be satisfied? For my part, though I confess I have no money at home, yet I want none; because I never eat but just as much as will satisfy my hunger, nor drink but to quench my thirst. I clothe myself in such manner that; am as warm abroad as Callias, with all his great abundance. And when I am at home, the floor and the wall, without mats or tapestry, make my chamber warm enough for me. And as for my bed, such as it is, I find it more difficult to awake than to fall asleep in it. If at any time a natural necessity requires me to converse with women, I part with them as well satisfied as another. For those to whom I make my addresses, having not much practice elsewhere, are as fond of me as if I were a prince. But don't mistake me, gentlemen, for governing my passion in this as in other things: I am so far from desiring to have more pleasure in the enjoyment, that I wish it less; because, upon due consideration, I find those pleasures that touch us in the most sensible manner deserve not to be esteemed the most worthy of us. But observe the chief advantage I reap from my poverty; it is, that in case the little I have should be taken entirely from me, there is no occupation so poor, no employment in life so barren, but would maintain me without the least uneasiness, and afford me a dinner without any trouble. For if I have an inclination at any time to regale myself and indulge my appetite, I can do it easily; it is but going to market, not to buy dainties (they are too dear,) but my temperance gives that quality to the most common food; and, by that means, the contentedness of my mind supplies me with delicacies, that are wanting in the meat itself. Now, it is not the excessive price of what we eat that gives it a relish, but it is necessity and appetite. Of this I have experience just now, while I am speaking; for this generous wine of Thasos, that I am now drinking, the exquisite flavor of it is the occasion that I drink it now without thirst, and consequently without pleasure. Besides all this, I find it is necessary to live thus, in order to live honestly. For he that is content with What he has, will never covet what is his neighbor's. Further, it is certain the wealth I am speaking of makes men liberal. For, Socrates, from whom I have all mine, never gave it me by number or weight; but, whenever I am willing to receive, he loads me always with as much as I can carry. I do the same by my friends; I never conceal my plenty. On the contrary, I show them all I have, and at the same time I let them share with me. It is from this, likewise, I am become master of one of the most delightful things in the world; I mean, that soft and charming leisure, that permits me to see every thing that is worthy to be seen, and to hear every thing that is worthy to be heard. It is, in one word, that which affords me the happiness of hearing Socrates from morning to night; for he having no great veneration for those that can only count vast sums of gold and silver, converses only with them who he finds are agreeable to him, and deserve his company."

"Truly," said Callias, "I admire you, and these your excellent riches, for two reasons: first, that thereby you are no slave to the government; and, secondly, that nobody can take it ill you do not lend them money."

"Pray do not admire him for the last," said Nicerates; "for I am about to borrow of him what he most values, that is, to need nothing; for by reading Homer, and especially that passage where he says,

"Ten golden talents, seven three-legg'd stools,
Just twenty cisterns, and twelve charging steeds;"

I have so accustomed myself, from this passage, to be always upon numbering and weighing, that I begin to fear I shall be taken for a miser." Upon this they all laughed heartily; for there was nobody there but believed Nice-rates spoke what he really thought, and what were his real inclinations.

After this, one spoke to Hermogenes: "It is yours now," said he, "to tell us who are your friends; and make it appear, that if they have much power, they have equal will to serve you with it, and, consequently, that you have reason to value yourself upon them."

Hermog. “There is one thing, gentlemen, universally received among barbarians as well as Greeks; and that is, that the gods know both the present and what is to come: and for that reason they are consulted and applied to by all mankind, with sacrifices, to know of them what they ought to do. This supposes that they have the power to do us good or evil; otherwise, why should we pray to them to be delivered from evils that threaten us, or to grant us the good we stand in need of? Now these very gods, who are both all-seeing and all-powerful, they are so much my friends, and have so peculiar a care of me, that be it night, be it day, whether I go any where, or take any thing in hand, they have me ever in their view and under their protection, and never lose me out of their sight. They foreknow all the events and all the thoughts and actions of us poor mortals; they forewarn us by some secret prescience impressed on our minds, or by some good angel or dream, what we ought to avoid, and what we ought to do. For my part, I have never had occasion yet to repent these secret impulses given me by the gods, but have been often punished for neglecting them.”

“There is nothing in what you have said,” added Socrates, “that should look incredible: but I would willingly hear by what services you oblige the gods to be so much your friends, and to love and take all this care of you?”

“That is done very cheap, and at little or no expense,” replied Hermogenes, “for the praises I give them cost me nothing. If I sacrifice to them after I have received a blessing from them, that very sacrifice is at their own charge. I return them thanks on all occasions; and if at any time I call them to witness, it is never to a lie, or against my conscience.”

“Truly,” said Socrates, “if such men as you have the gods for their friends, and I am sure they have, it is certain those gods take pleasure in good actions and the practice of virtue.”

Here ended their serious entertainment. What followed was of another kind; for all of them turning to Philip, asked him, "What it was he found so very valuable in his profession?"

"Have I not reason to be proud of my trade," said he, "all the world knowing me to be a buffoon? If any good fortune happens to them, they cheerfully invite me; but when any misfortune comes, they avoid me like the plague, lest I should make them laugh in spite of themselves." Nicerates, interrupting him, "You have reason indeed," said he, "to boast of your profession, for it is quite otherwise with me: when my friends have no occasion for me, they avoid me like the plague; but in misfortunes they are ever about me, and, by a forged genealogy, will needs claim kindred with me, and at the same time carry my family up as high as the gods."

"Very well," said Charmides, "now to the rest of the company."

"Well, Mr. Syracusan, What is it which gives you the greatest satisfaction, or that you value yourself most upon? I suppose it is that pretty little girl of yours?"

"Quite contrary," says he; "I have much more pain than pleasure upon her account: I am in constant apprehension and fear when I see certain people so busy about her, and trying all insinuating ways to ruin her."

"Good God!" said Socrates, "What wrong could they pretend to have received from that poor young creature, to do her a mischief? Would they kill her?"

Syr. "I do not speak of killing her; you do not take me, they would willingly get to bed to her."

Soc. "Suppose it were so, why must the girl be ruined therefore?"

Syr. "Ay, doubtless."

Soc. "Do not you lie in bed with her yourself?"

Syr. “Most certainly, all night long.”

Soc. “By Hera, you are a happy fellow to be the only man in the world that do not ruin those you lie with. Well, then, according to your account, what you are proudest of must be, that you are so wholesome and so harmless a bedfellow?”

Syr. “But you are mistaken; it is not her I value myself for neither.”

Soc. “What then?”

Syr. “That there are so many fools in the world; for it is these kind of gentlemen, who come to see my children dance and sing, that supply me with the necessaries of life, which otherwise I might want.”

“I suppose then,” said Philip, “that was the meaning of your prayer you made the other day before the altar, when you asked the gods that there might be plenty of every thing in this world wherever you came, but of judgment and good sense?”

“Immortal beings, grant my humble prayer;
Give Athens all the blessings you can spare;
Let them abound in plenty, peace, and pence,
But never let them want a dearth of sense.”

“All is well hitherto,” said Callias: “But, Socrates, what reason have you to make us believe you are fond of the profession you attributed to yourself just now, for really I take it for a scandalous one?”

Soc. “First, let us understand one another; and know in few words what this artist is properly to do, whose very name has made you so merry: but, to be brief, let us, in short, fix upon some one thing that we may all agree in. Shall it be so?”

“Doubtless,” answered all the company: and during the thread of his discourse they made him no other answer but “doubtless.” Having began so, “Is it not certainly true,” said Socrates, “that the business of an artist of that kind is to manage so as that the person they introduce be perfectly agreeable to one that employs him?”

“Doubtless,” they replied.

“Is it not certain, too, that a good face and fine clothes do mightily contribute towards the making such a person agreeable?”

“Doubtless.”

“Do you not observe that the eyes of the same person look at some times full of pleasure and kindness, and at other times with an air of aversion and scorn?”

“Doubtless.”

“What, does not the same voice sometimes express itself with modesty and sweetness, and sometimes with anger and fierceness?”

“Doubtless.”

“Are there not some discourses that naturally beget hatred and aversion, and others that conciliate love and affection?”

“Doubtless.”

“If, then, this artist be excellent in his profession, ought he not to instruct those that are under his direction which way to make themselves agreeable to others in all these things I have mentioned?”

“Doubtless.”

“But who is most to be valued; he who renders them agreeable to one person only, or he that renders them agreeable to many? Are you not for the last?” Some of them answered him as before, with “doubtless and the rest said, it was very plain that it was much better to please a great many than a few.”

"That is very well," said Socrates; "we agree upon every head hitherto: but what if the person we are speaking of can instruct his pupil to gain the hearts of a whole state, will not you say he is excellent in his art?"

This, they all agreed, was clear.

"And if he can raise his scholars to such perfection, has he not reason to be proud of his profession? And deserves he not to receive a handsome reward?"

Every one answered, it was their opinion he did.

"Now," said Socrates, "if there is such a man to be found in the world, it is Antisthenes, or I am mistaken."

Ant. "How, Socrates! Will you make me one of your scurvy profession?"

Soc. "Certainly, for I know you are perfectly skilled in what may properly be called an appendix to it."

Ant. "What is that?"

Soc. "Bringing people together."

To this Antisthenes, with some concern, replied, "Did you ever know me guilty of a thing of this kind."

Soc. "Yes, but keep your temper. You procured Callias for Prodicus, finding the one was in love with philosophy, and the other in want of money: you did the same before, in procuring Callias for Hippias, who taught him the art of memory; and he is become such a proficient, that he is more amorous now than ever; for every woman he sees, that is tolerably handsome, he can never forget her, so perfectly has he learnt of Hippias the art of memory. You have done yet more than this, Antisthenes; for lately praising a friend of yours, of Heraclea, to me, it gave me a great desire to be acquainted with him: at the same time you praised me to him, which occasioned his desire to be acquainted with me; for which I am mightily obliged to you, for I find him a very worthy man.

Praising likewise in the same manner Esquilius to me, and me to him, did not your discourse inflame us both with such mutual affection, that we searched every day for one another with the utmost impatience till we came acquainted? Now, having observed you capable of bringing about such desirable things, had not I reason to say you are an excellent bringer of people together? I know very well, that one who is capable of being useful to his friend, in fomenting mutual friendship and love between that friend and another he knows to be worthy of him, is likewise capable of begetting the same disposition between towns and states: he is able to make state-marriages; nor has our republic or our allies a subject that may be more useful to them: and yet you were angry with me, as if I had affronted you, when I said you were master of this art."

Ant. "That is true, Socrates; but my anger is now over; and were I really what you say I am, I must have a soul incomparably rich."

Now you have heard in what manner every one spoke, when Callias began again, and said to Critobulus, "Will you not then venture into the lists with Socrates, and dispute beauty with him?"

Soc. "I believe not; for he knows my art gives me some interest with the judges."

Crit. "Come, I will not refuse to enter the lists for once with you; pray then use all your eloquence, and let us knowhow you prove yourself to be handsomer than I."

Soc. "That shall be done presently; bring but a light, and the thing is done."

Crit. "But, in order to state the question well, you will give me leave to ask a few questions?"

Soc. "I will."

Crit. "But, on second thoughts, I will give you leave to ask what questions you please first."

Soc. “Agreed. Do you believe beauty is no where to be found but in man?”

Crit. “Yes certainly, in other creatures too, whether animate, as a horse or bull, or inanimate things, as we say that is a handsome sword, or a fine shield, etc.”

Soc. “But how comes it then, that things so very different as these should yet all of them be handsome?”

Crit. “Because they are well made, either by art or nature, for the purposes they are employed in.”

Soc. “Do you know the use of eyes?”

Crit. “To see.”

Soc. “Well! it is for that very reason mine are handsomer than yours.”

Crit. “Your reason?”

Soc. “Yours see only in a direct line; but, as for mine, I can look not only directly forward, as you, but sideways too, they being seated on a kind of ridge on my face, and staring out.”

Crit. “At that rate, a crab has the advantage of all other animals in matter of eyes?”

Soc. “Certainly: for theirs are incomparably more solid, and better situated than any other creature’s.”

Crit. “Be it so as to eyes; but as to your nose, would you make me believe that yours is better shaped than mine?”

Soc. “There is no room for doubt, if it be granted that God made the nose for the sense of smelling; for your nostrils are turned downward, but mine are wide and turned up towards heaven, to receive smells that come from every part, whether from above or below.”

Crit. “What! is a short flat nose, then, more beautiful than another?”

Soc. “Certainly; because being such, it never hinders the sight of both eyes at once; whereas a high nose parts the eyes so much by its rising, that it hinders their seeing both of them in a direct line."

Crit. "As to your mouth, I grant it you; for if God has given us a mouth to eat with, it is certain yours will receive and chew as much at once as mine at thrice."

Soc. "Don't you believe too that my kisses are more luscious and sweet than yours, having my lips so thick and large?"

Crit. "According to your reckoning, then, an ass's lips are more beautiful than mine."

Soc. "And lastly, I must excel you in beauty, for this reason: the Naiades, notwithstanding they are sea-goddesses, are said to have brought forth the Sileni; and sure I am much more like them than you can pretend to be. What say you to that?"

Crit. "I say it is impossible to hold a dispute with you, Socrates; and therefore let us determine this point by balloting; and so we shall know presently who has the best of it, you or I: but pray let it be done in the dark, lest Antisthenes's riches and your eloquence should corrupt the judges."

Whereupon the little dancing boy and girl brought in the balloting box, and Socrates called at the same time for a flambeau to be held before Critobulus, that the judges might not be surprised in their judgment. He desired likewise that the conqueror, instead of garters and ribands, as were usual in such victories, should receive a kiss from every one of the company. After this they went to balloting, and it was carried unanimously for Critobulus. Whereupon Socrates said to him, "Indeed, Critobulus, your money has not the same effect with Callias's, to make men juster; for yours, I see, is able to corrupt a judge upon the bench."

VI. After this, some of the company told Critobulus he ought to demand the kisses due to his victory; and the rest said, it was proper to begin with him who made the proposition. In short, every one was pleasant in his way except Hermogenes, who spoke not one word all the time; which obliged Socrates to ask him, "If he knew the meaning of the word *paroinia*?"

Her. "If you ask me what it is precisely, I do not know; but if you ask my opinion of it, perhaps I can tell you what it may be."

Soc. "That is enough."

Her. "I believe, then, that *paroinia* signifies the pain and uneasiness we undergo in the company of people that we are not pleased with."

"Be assured then," said Socrates, "this is what has occasioned that prudent silence of yours all this time."

Her. "How my silence! when you were all speaking?"

Soc. "No, but your silence when we have done speaking and made a full stop."

Her. "Well said, indeed! No sooner one has done but another begins to speak; and I am so far from being able to get in a sentence, that I cannot find room to edge in a syllable."

"Ah, then," said Socrates to Callias, "cannot you assist a man that is thus out of humor?"

"Yes," said Callias; "for I will be bold to say, when the music begins again, every body will be silent as well as Hermogenes."

Her. "You would have me do then as the poet Nicostratus, who used to recite his grand iambics to the sound of his flute: and it would be certainly very pretty if I should talk to you all the time the music played."

"For God's sake do so," said Socrates; "for as the harmony is the more agreeable that the voice and the instrument go together, so your discourse will be more entertaining for the music that accompanies it; and the more delightful still, if you give life to your words by your gesture and motion, as the little girl does with her flute.”

“But when Antisthenes,” said Callias, “ is pleased to be angry in company, what flute will be tunable enough to his voice?”

Ant. “I do not know what occasion there will be for flutes tuned to my voice; but I know, that when I am angry with any one in dispute, I am loud enough, and I know my own weak side.”

As they were talking thus, the Syracusan observing they took no great notice of any thing he could show them, but that they entertained one another on subjects out of his road, was out of all temper with Socrates, who he saw gave occasion at every turn for some new discourse.

“Are you,” said he to him, “that Socrates who is surnamed the *Contemplative*?’

Soc. “Yes,” said Socrates: “and is it not much more preferable to be called so, than by another name, for some opposite quality?”

Syr. “Let that pass. But they do not only say in general that Socrates is contemplative, but that he contemplates things that are sublime.”

Soc. “Know you any thing in the world so sublime and elevated as the gods?”

Syr. “No. But I am told your contemplations run not that way. They say they are but trifling; and that, in searching after things above your reach, your inquiries are good for nothing.”

Soc. “It is by this, if I deceive not myself, that I attain to the knowledge of the gods: for it is from above that the gods make us sensible of their assistance; it is from above they inspire us with knowledge. But if what I have said appears dry and insipid, you are the cause, for forcing me to answer you.”

Syr. “Let us then talk of something else. Tell me then the just measure of the skip of a flea; for I hear you are a subtle geometrician, and understand the mathematics perfectly well.”

But Antisthenes, who was displeased with his discourse, addressing himself to Philip, told him: “You are wonderfully happy, I know, in making comparisons. 2 Pray who is this Syracusan like, Philip? Does he not resemble a man that is apt to give affronts, and say shocking things in company?”

“Faith,” said Philip, “he appears so to me, and I believe to every body else.”

“Have a care,” said Socrates; “do not affront him, lest you fall under the character yourself that you would give him.”

Phil. “Suppose I compare him to a well-bred person: I hope nobody will say I affront him then?”

Soc. “So much the more,” said Socrates; “such a comparison must needs affront him to some purpose.”

Phil. “Would you then that I compare him to some one that is neither honest nor good?”

Soc. “By no means.”

Phil. “Who must I compare him to then? To “nobody?”

Soc. Nobody.”

Phil. “But it is not proper we should be silent at a feast.”

Soc. “That is true; but it is as true we ought rather be silent than say any thing we ought not to say.”

Thus ended the dispute between Socrates and Philip.

VII. However, some of the company were for having Philip make his comparisons; others were against it, as not liking that sort of diversion; so that there was a great noise about it in the room: which Socrates observing, “Very well,” said he, “since you are for speaking all together, it were as well, in my opinion, that we should sing all together and with that he began to sing himself. When he had done, they brought the dancing girl one of those wheels the potters use, with which she was to divert the company in turning herself round it. Upon which Socrates, turning to the Syracusan: "I believe I shall pass for a contemplative person indeed," said he, "as you called me just now, for I am now considering how it comes to pass that those two little actors of yours give us pleasure in seeing them perform their tricks, without any pain to themselves, which is what I know you design. I am sensible that for the little girl to jump head foremost into the hoop of swords, with their points upwards, as she has done just now, must be a very dangerous leap; but I am not convinced that such a spectacle is proper for a feast. I confess likewise, it is a surprising sight to see a person writing and reading at the same time that she is carried round with the motion of the wheel, as the girl has done; but yet I must own it gives me no great pleasure. For would it not be much more agreeable to see her in a natural easy posture, than putting her handsome body into an unnatural agitation, merely to imitate the motion of a wheel? Neither is it so rare to meet with surprising and wonderful sights; for here is one before our eyes, if you please to take notice of it. Why does that lamp, whose flame is pure and bright, give all the light to the room, when that looking-glass gives none at all, and yet represents distinctly all objects in its surface? Why does that oil, which is in its own nature wet, augment the flame; and that water, which is wet likewise, extinguish it?

But these questions are not proper at this time. And, indeed, if the two children were to dance to the sound of the flute, dressed in the habits of nymphs, the graces, or the four seasons of the year, as they are commonly painted, they might undergo less pain, and we receive more pleasure."

"You are in the right, sir," said the Syracusan to Socrates; "and I am going to represent something of that kind, that certainly must divert you and at the same time went out to make it ready, when Socrates began a new discourse.

VIII. “What then,” said he, “must we part without saying a word of the attributes of that great demon, or power, who is present here, and equals in age the immortal gods, though, to look at, he resembles but a child? That demon, who by his mighty power is master of all things, and yet is engrafted into the very essence and constitution of the soul of man; I mean Love. We may indeed with reason extol his empire, as having more experience of it than the vulgar, who are not initiated into the mysteries of that great god as we are. Truly, to speak for one, I never remember I was without being in love: I know, too, that Charmides has had a great many lovers, and being much beloved, has loved again. As for Critobulus, he is still of an age to love, and to be beloved; and Nicerates too, who loves so passionately his wife, at least as report goes, is equally beloved by her. And who of us does not know that the object of that noble passion and love of Hermogenes, is virtue and honesty? Consider, pray, the severity of his brows, his piercing and fixed eyes, his discourse so composed and strong, the sweetness of his voice, the gaiety of his manners. And what is yet more wonderful in him, that, so beloved as he is by his friends the gods, he does not disdain us mortals. But for you, Antisthenes, are you the only person in the company that does not love?”

Ant. “No! for in faith I love you, Socrates, with all my heart.”

Then Socrates rallying him, and counterfeiting an angry air, said, “Do not trouble me with it now; you see I have other business upon my hands at present.”

Ant. “I confess you must be an expert master of the trade you valued yourself so much upon a while ago; for sometimes you will not be at the pains to speak to me, and at other times you pretend your demon will not permit you, or that you have other business.”

Soc. “Spare me a little, Antisthenes; I can bear well enough any other troubles that you give me, and I will always bear them as a friend; but I blush to speak of the passion you have for me, since I fear you are not enamored with the beauty of my soul, but with that of my body.”

“As for you, Callias, you love, as well as the rest of us: for who is it that is ignorant of your love for Autolycus? It is the town-talk; and foreigners, as well as our citizens, are acquainted with it. The reasons for your loving him, I believe to be, that you are both of you born of illustrious families; and, at the same time, are both possessed of personal qualities that render you yet more illustrious. For me, I always admired the sweetness and evenness of your temper; but much more, when I consider that your passion for Autolycus is placed on a person who has nothing luxurious or affected in him; but in all things shows a vigor and temperance worthy of a virtuous soul; which is a proof, at the same time, that if he is infinitely beloved, he deserves to be so.

“I confess, indeed, I am not firmly persuaded whether there be but one Venus or two, the celestial and the vulgar: and it may be with this goddess, as with Zeus, who has many different names, though there is still but one Zeus. But I know very well that both the Venuses have altogether different altars, temples, and sacrifices. The vulgar Venus is worshipped after a common, negligent manner; whereas the celestial one is adored in purity and sanctity of life. The vulgar inspires mankind with the love of the body only, but the celestial fires the mind with the love of the soul, with friendship, and a generous thirst after noble actions. I hope that it is this last kind of love that has touched the heart of Callias. This I believe, because the person he loves is truly virtuous; and whenever he desires to converse with him, it is in the presence of his father, which is a proof his love is perfectly honorable."

Upon which Hermogenes began to speak: "I have always admired you, Socrates, on every occasion, but much more now than ever. You are complaisant to Callias, and indulge his passion. And this your complaisance is agreeable to him; so it is wholesome and instructive, teaching him in what manner he ought to love."

"That is true," said Socrates; "and that my advice may please him yet the more, I will endeavor to prove that the love of the soul is incomparably preferable to that of the body. I say then, and we all feel the truth of it, that no company can be truly agreeable to us without friendship; and we generally say, whoever entertains a great value and esteem for the manners and behavior of a man, he must necessarily love him. We know, likewise, that among those who love the body only, they many times disapprove the humor of the person they so love, and hate perhaps at the same time the mind and temper, while they endeavor to possess the body. Yet further, let us suppose a mutual passion between two lovers of this kind; it is very certain that the power of beauty, which gives birth to that love, does soon decay and vanish: and how is it possible that love, built on such a weak foundation, should subsist, when the cause that produced it has ceased? But it is otherwise with the soul; for the more she ripens, and the longer she endures, the more lovely she becomes. Besides, as the constant use of the finest delicacies is attended, in progress of time, with disgust; so the constant enjoyment of the finest beauty palls the appetite at last. But that love that terminates on the bright qualities of the soul, becomes still more and more ardent: and, because it is in its nature altogether pure and chaste, it admits of no satiety. Neither let us think, with some people that this passion, so pure and so chaste, is less charming, or less strong than the other. On the contrary, those who love in this manner are possessed of all that we ask in that our common prayer to Venus: 'Grant, O goddess! that we may say nothing but what is agreeable, and do nothing but what does please.' Now, I think it is needless to prove, that a person of a noble mien, generous and polite, modest and well-bred, and in a fair way to rise in the state, ought first to be touched with a just esteem for the good qualities of the person he courts, for this will be granted by all. But I am going to prove, in few words, that the person thus addressed to must infallibly return the love of a man that is thus endued with such shining accomplishments. For, is it possible for a woman to hate a man, who she believes has infinite merit, and who makes his addresses to her upon the motive of doing justice to her honor and virtue, rather than from a principle of pleasing his appetite? And how great is the contentment we feel, when we are persuaded that no light faults or errors shall ever disturb the course of a friendship so happily begun, or that the diminution of beauty shall never lessen one's affection? How can it ever happen otherwise, but that persons who love one another thus tenderly, and with all the liberties of a pure and sacred friendship, should take the utmost satisfaction in one another's company, in discoursing together with an entire confidence, in mingling their mutual interests, and rejoicing in their good fortune, and bearing a share in their bad? Such lovers must needs partake of one another's joy or grief, be merry and rejoice with one another in health, and pay the closest and tenderest attendance on one another when sick, and express rather a greater concern for them when absent, than present. Does not Venus and the Graces shower down their blessings on those who love thus? For my part, I take such to be perfectly happy; and a friendship like this must necessarily persevere to the end of their lives, uninterrupted and altogether pure. But I confess I cannot see any reason why one that loves only the exterior beauty of the person he courts, should be loved again. Is it because he endeavors to obtain something from her, that gives him pleasure, but her shame? Or is it, because in the conduct of their passion they carefully conceal the knowledge of it from their parents or friends? Somebody, perhaps, may object, that we ought to make a different judgment of those who use violence, and of those who endeavor to gain their point by the force of persuasion; but, I say, these last deserve more hatred than the first. The first appear in their proper colors, for wicked persons; and so every one is on their guard against such open villainy; whereas the last, by sly insinuations, insensibly corrupt and defile the mind of the person they pretend to love. Besides, why should they, who barter their beauty for money, be supposed to have a greater affection for the purchasers, than the trader, who sells his goods in the market-place, has for his chapmen that pays him down the price. Do not be surprised, then, if such lovers as these meet often with the contempt they deserve. There is one thing more in this case worthy of your consideration; we shall never find that the love which terminates in the noble qualities of the mind has ever produced any dismal effects. But there are innumerable examples of tragic consequences, which have attended that love which is fixed only on the beauty of the body. Chiron and Phoenix loved Achilles, but after a virtuous manner, without any other design than to render him a more accomplished person. Achilles likewise loved and honored them in return, and held them both in the highest veneration. And indeed I should wonder, if one that is perfectly accomplished should not entertain the last contempt for those who admire only their personal beauty. Nor is it hard to prove, Callias, that gods and heroes have always had more passion and esteem for the charms of the soul, than those of the body: at least this seems to have been the opinion of our ancient authors. For we may observe in the fables of antiquity, that

Zeus, who loved several mortals upon the account of their personal beauty only, never conferred upon them immortality. Whereas it was otherwise with Hercules, Castor, Pollex, and several others; for having admired and applauded the greatness of their courage, and the beauty of their minds, he enrolled them in the number of the gods. And, whatever some affirm to the contrary of Ganymede, I take it he was carried up to heaven from mount Olympus, not for the beauty of his body, but that of his mind. At least his name seems to confirm my opinion, which in the Greek seems to express as much as, 'to take pleasure in good counsel, and in the practice of wisdom.' When Homer represents Achilles so gloriously revenging the death of Patroclus, it was not properly the passion of love that produced that noble resentment, but that pure friendship and esteem he had for his partner in arms. Why is it, that the memory of Pylades and Orestes, Theseus and Perithous, and other demigods, are to this day so highly celebrated? Was it for the love of the body, think you? No! by no means: it was the particular esteem and friendship they had for one another, and the mutual assistance every one gave to his friend, in those renowned and immortal enterprises, which are to this day the subject of our histories and hymns. And, pray, who are they that performed those glorious actions? Not they that abandoned themselves to pleasure, but they that thirsted after glory; and who, to acquire that glory, underwent the severest toils, and almost insuperable difficulties.

"You are then infinitely obliged to the gods, Callias, who have inspired you with love and friendship for Autolycus, as they have inspired Critobulus with the same for Amandra; for real and pure friendship knows no difference in sexes. It is certain Autolycus has the most ardent passion for glory; since, in order to carry the prize at the Olympic games, and be proclaimed victor by the heralds, with sound of trumpet, as he lately was, he must needs have undergone numberless hardships and the greatest fatigues: for no less was required towards gaining the victory in so many different exercises. But if he proposes to himself, as I am sure he does, to acquire further glory, to become an ornament to his family, beneficent to his friends, to extend the limits of his country by his valor, and by all honest endeavors to gain the esteem of Barbarians as well as Greeks: do not you believe he will always have the greatest value for one who he believes may be useful and assistant to him in so noble a design? If you would then prove acceptable, Callias, to any one you love, you ought to consider and imitate those methods by which Themistocles rose to the first dignities of the state, and acquired the glorious title of The Deliverer of Greece; the methods by which Pericles acquired that consummate wisdom, which proved so beneficial, and brought immortal honor to his native country. You ought to ponder well how it was, that Solon became the lawgiver to this republic of Athens, and by what honorable means the Lacedæmonians have arrived to such wonderful skill in the art of war: and this last you may easily acquire, by entertaining, as you do, at your house, some of the most accomplished Spartans. When you have sufficiently pondered all these things, and imprinted those noble images upon your mind, doubt not but your country will some time or other court you to accept the reins of government, you having already the advantage of a noble birth, and that important office of high priest, which gives you a greater luster already, than any of your renowned ancestors could ever boast of: and let me add that air of greatness, which shines in your person, and that strength and vigor that is lodged in so handsome a body, capable of the severest toils, and the most difficult enterprises."

Socrates having said all this to Callias, addressed himself to the company, and said: "I know very well this discourse is too serious for a feast, but you will not be surprised, when you consider that our commonwealth has been always fond of those who, to the goodness of their natural temper, have added an indefatigable search after glory and virtue. And in this fondness of mine for such men, I but imitate the genius of my country."

After this the company began to entertain one another, upon the subject of this last discourse of Socrates: when Callias, with a modest blush in his face, addressed himself to him: "You must then lend me," said he, "the assistance of your art, to which you gave such a surprising name a while ago, to render me acceptable to the commonwealth, and that when it shall please my country to entrust me with the care of its affairs, I may so behave myself as to preserve its good opinion, and never do any thing, but what tends to the public good."

"You will certainly succeed; do not doubt it," said Socrates. "You must apply yourself in good earnest to virtue, and not content yourself, as some people do, with the appearance of it only, as if that might suffice. For know, Callias, that false glory can never subsist long. Flattery or dissimulation may for a while varnish over such a rotten structure; but it must tumble down at last. On the contrary, solid glory will always maintain its post; unless God, for some secret reasons, hid from us, think fit to oppose its progress: otherwise, that sublime virtue, which every man of honor should aim at, does naturally reflect back upon him such rays of glory, as grow brighter and brighter every day, in proportion as his virtue rises higher and higher."

IX. The discourse being ended, Autolycus rose to take a walk, and his father following turned towards Socrates, and said, "Socrates, I must declare my opinion, that you are a truly honest man."

After this, there was an elbow chair brought into the middle of the room, and the Syracusan appearing at the same time; “Gentlemen,” said he, “Ariadne is just now entering; and Bacchus, who has made a debauch to day with the gods, is coming down to wait upon her: and I can assure you, they will both divert the company and one another. Immediately Ariadne entered the room, richly dressed, in the habit of a bride, and placed herself in the elbow chair. A little after Bacchus appeared, while at the same time the girl that played on the flute struck up an air that used to be sung at the festival of that god. It was then that the Syracusan was admired for an excellent master in his art: for Ariadne being perfectly well instructed in her part, failed not to show, by her pretty insinuating manner, that she was touched with the air of the music; and that though she rose not from her chair to meet her lover, she yet expressed sufficiently the great desire she had to do it. Bacchus perceiving it, came on dancing toward her, in the most passionate manner, then sat himself down on her lap, and taking her in his arms, kissed her. As for Ariadne, she personated to the life a bride’s modesty; and for a while, looking down to the ground, appeared in the greatest confusion; but at length recovering herself, she threw her arms about her lover’s neck, and returned his kisses. All the company expressed the great satisfaction the performance gave them; and, indeed nothing could be better acted, nor accompanied with more grace in the acting. But when Bacchus rose, and took Ariadne by the hand to lead her out, they were still more pleased; for the pretty couple appeared to embrace and kiss one another after a much more feeling manner than is generally acted on the stage. Then Bacchus addressing himself to Ariadne, said, “Dost you love me, my dearest creature?”

“Yes, yes,” answered she, “let me die if I do not; and will love you to the last moment of my life.” In fine, the performance was so lively and natural that the company came to be fully convinced of what they never dreamt of before; that the little boy and girl were really in love with one another: which occasioned both the married guests, and some of those that were not, to take horse immediately, and ride back full speed to Athens, with the briskest resolutions imaginable. I know not what happened afterwards; but for Socrates, and some who staid behind, they went a walking with Lycon, Autolycus, and Callias.

# THE SCIENCE OF GOOD HUSBANDRY;

## THE ECONOMICS OF XENOPHON.

Translated by R. Bradley, F. R. S.

Professor of Botany in the University of Cambridge.

I. I remember once to have heard the learned Socrates reasoning with Critobulus, concerning the management of a house, in the following manner:

Soc. "Tell me, Critobulus, whether the ordering of a house is a science, such as that of physic, or the braziers, and of the masons?"

Crit. "My opinion is, that the good management of a house is as great a science as either masonry, or physic, or any other; from whence we may infer there is a distinct business or duty belonging to an economist or housekeeper, as well as to any science whatever: a farmer or a master of a family ought to be a good judge of every particular which relates to the good ordering of his farm or house."

Soc. "But may we not find a trusty steward well skilled in this science, who may take the management of the household upon him, and save the master the trouble? for a master mason employs a deputy under him, who will do his work as well as himself; and for the same reason we may expect that a steward well skilled in the management of a house, may be as serviceable to his master as the mason's deputy."

Crit. "I am of the same opinion, good Socrates."

Soc. "Then the man who is well skilled in this science, though he has no property of his own, may gain a comfortable living by directing another man's house. For the man would be worthy of the master's favor, and a good steward, if in the discharging of his stewardship he could improve his master's house. But what do we mean by the word house, or the economy of it? Is it only the good distribution of the things that are in the house? or is it the good management and improvement of every thing belonging to a house, and the master of it."

Crit. "It is my opinion, that a man's estate, whether it lie in or about the house, or remote from it, yet every branch of that estate may be said to belong to the house; no every thing that a man has, except his enemies, which some men have in great numbers, but these are not to be reckoned among his goods or substance. It would be ridiculous if we were to say that the man who had been the occasion of making us more enemies than we had before, should be rewarded with favor or money; but a man's enemies, or any thing which he possesses to his hurt or prejudice, must not I suppose, be reckoned among his goods: therefore I conclude, that those things only which contribute to the welfare of a man may be reckoned among his riches, or be properly called his goods."

Soc. "I am of the same mind, that whatever is injurious to a man must not be esteemed a part of his goods; for if a man buy a horse, and for want of skill to manage him, he falls from him and hurts himself, can that horse be reckoned amongst his goods? No, certainly; because those things should be called goods that are beneficial to the master. Neither can those lands be called goods, which by a man's unskilful management put him to more expense than he receives profit by them; nor may those lands be called goods, which do not bring a good farmer such a profit as may give him a good living: so likewise if a man has a flock of sheep, and they come to damage by his unskillful management, he cannot reckon them among his goods."

Crit. "So these may only be called goods which are profitable, and those which are hurtful be deemed the contrary."

Soc. “You distinguish right, that nothing ought to be esteemed goods to any man which he does not receive advantage by; and that those things which bring him disprofit must be esteemed the contrary. A flute, when it is in the hands of a person who can play well upon it, is an advantage, and may be reckoned among his goods; but the same instrument in the possession of one who does not know the use of it, is no better to him than a stone, unless he sells it, and then the price of it may be accounted among his goods; but if he keeps it, when he has no knowledge of its use, it cannot be ranked among them.”

Crit. “I agree with you in this point, that those things only which are profitable may be called goods: the flute, while we keep it unemployed, is no part of our goods, for we have no advantage from it; but if we sell it, it is then profitable to us.”

Soc. “You say right, if a man has wit enough to sell it well: but when it is sold, and the man has not wisdom enough to use the value of it to his advantage, yet whatever price he gets for it cannot be esteemed to be good.”

Crit. “By this you seem to intimate that money itself is not good, if it is in the hands of one who does not knowhow to use it.”

Soc. “Yes, certainly; for we have already agreed that nothing may be esteemed good but what we can get profit by. If a man bestow the money he gets upon harlots, and by continual conversing with them he impairs his health, and abandons the care of his estate, then his money is no profit to him; but, on the contrary, is an errant poison, which will shortly bring him to destruction: therefore, friend Critobulus, money is good only to those who knowhow to use it; but to those who know not rightly the value of it, it were better for them to cast it away, to avoid the damage it would do them.”

Crit. “But what say you of friends? If a man knows how to use them, and make them profitable to him, what shall we esteem them to be?”

Soc. “These may truly be called goods; they ought to be preferred before our houses, our land, our cattle, or our flocks; the profit which may arise by them may be superior to all others.”

Crit. “Then by the same rule our enemies may be esteemed goods, if we knowhow to profit ourselves by them.”

Soc. “Undoubtedly they are so; therefore it behooves a master of a house to use his enemies with that discretion that he may make them advantageous to him by any means: for how many instances have we, good Critobulus, of ordinary men, as well as of noblemen and kings, who have increased and amplified their fortunes by law, and warring with their enemies.”

Crit. “You reason well, good Socrates, of these matters. But what think you of those who have good learning, and many other good properties, whereby they have every opportunity of improving their estates, and yet never put their minds to it? We have many instances of men with these qualifications, who never regard the advancement of their fortunes; shall we then reckon their learning, or their other properties, among their goods, seeing they make no advantage of them, or ought we to esteem them the contrary?”

Soc. “I imagine you mean bondmen, or such other vile persons.”

Crit. “No, good Socrates; but the persons I speak of are young gentlemen, who are expert in affairs of war, as well as peace; and yet they abandon their knowledge for trifles; and such as them I esteem in a worse condition than bondmen; for I suppose they do not employ themselves in the sciences they have been bred to, because they have not masters to direct them or set them to work.”

Soc. “How can that be, friend Critobulus, that they are without directors? they have many masters, which, when they would study their felicity and their advantage, lead them away from their virtuous inclinations.”

Crit. “These masters then are invisible!”

Soc. “Not so invisible, good Critobulus, but that we may easily discover them to be the most mischievous of any that reign upon earth. What think you of sloth, idleness, negligence, want of public spirit? Where these govern, what can we expect but mischief? But, besides these, there are others which govern under the name of pleasures; as gaming, lewd company, rioting, and such others, which in process of time teach their adherents that pleasures are not without their inconveniences. These rulers keep them so much in servitude, that they do not allow them the least liberty to do any thing for their advantage.”

Crit. “But there are others, friend Socrates, who have none of these directors to prevent their welfare, but apply themselves assiduously to business, and give their minds entirely to the advancement of their fortunes, and yet waste their estates, ruin their families, and destroy themselves, without hope of redemption.”

Soc. “These also are bondmen, and are rather worse slaves than the others, for these have the most severe masters of the two: some are under the tyranny of drunkenness, others slaves to gluttony, and some to vanity and vain-glory; all which keep their subjects in that severity of servitude, that as long as they find them young, lusty, and able to work, they make them bring all that they can get by any means to bestow upon these lusts and pleasures; but as soon as they perceive them to grow so old, that they can labor no longer for them, they are then turned off to lead the remainder of their days in want and misery, while their quondam masters are contriving to ensnare others in their room. Wherefore, good Critobulus, we ought by all means to resist such invaders of our liberties, even with as much force and resolution as we would oppose an enemy who with sword in hand attempts to bring us into slavery. There are some enemies who have wisdom and goodness enough, when they have brought men into their subjection, to learn them government and moderation, which before were proud and arrogant. But as for the tyrants I have mentioned before, they never cease harassing and tormenting both the bodies and estates of those which fall into their hands, till they have utterly destroyed them."

II. Crit. "You have sufficiently spoken to this point; and, now I examine myself, I verily believe I have conduct and courage enough to resist such deceitful invaders; and I now desire your advice concerning the management of my house, that both myself and fortune may be improved; for I am persuaded I shall not be overcome by those enemies to reason which you have so largely exposed. And therefore, good Socrates, give me your deliberate opinion how I shall act for the good of myself and estate; although perhaps you may think that we are already rich enough."

Soc. "For my own part, if I am one of those you speak of, I want nothing, I have riches enough; but for yourself, Critobulus, I esteem you a very poor man; and, by the faith I owe to the gods, I often pity you."

Crit. "Your discourse makes me laugh! If you are so very rich as you esteem yourself, pray inform me what may be the value of all your estate if it were sold, and what do you imagine is the worth of all my possessions?"

Soc. "Perhaps, if I sell all my possessions at a good market, I may gain five or six pounds for them: but I know very well, that were your whole estate to be sold, the price would be more than a thousand times as much; and yet though you know this, you are still desirous to increase your estate, and upbraid me with my poverty. What I possess is enough to supply me with necessaries; but to support your grandeur, and draw the respect due to your quality and the post you possess, I am of opinion, that were you master of four times as much as you have already, you would still be in want.”

Crit. “I do not conceive how that can be.”

Soc. “In the first place, your rank requires you to feast and make entertainments for the people, to gain their good-will, and command their respect. In the next place, you must live hospitably, and receive and entertain all strangers, and gain their esteem. And in the third place, you must continually be doing good offices to your fellow citizens, that upon an emergency you may find friends. Besides, I already observe that the city of Athens begins to put you upon expensive works; viz. to furnish them with horses, to raise public buildings, to muster men, to erect theatres, and to treat the citizens with plays. But if this nation should be once involved in war, I am sure their demand upon you in taxes, and other duties, will be as much as your purse will be able to bear. And when that happens, if you are discovered to conceal any of your riches, or do not answer their demands to your full power, you must undergo the same punishment as if you had robbed the common treasury. And, besides, I find you possessed with the opinion that you have riches enough, and therefore give yourself up to vain and trifling pleasures, which is the effect of your riches. It is for these reasons, good Critobulus, that I grieve for you lest you fall under misfortunes that may end in the greatest poverty without remedy: and for myself, if I should be necessitous, you know very well that many would relieve me; and if I received but a little of every one, I should have more money than would satisfy my wants:

but, as for your friends, though they have more riches in their stations, than you possess in yours, they have yet expectations of preferment from you."

Crit. "I confess I find nothing amiss in your discourse. I so much approve of it, that my greatest desire is, that you will instruct me with such good precepts as may preserve me from the misery you speak of, and that I may never be an object of your compassion, unless it be in a good cause."

Soc. "I suppose then, friend Critobulus, you are not now in the same laughing mind you was in, when I told you I had riches enough; do you now believe I know wherein consists the value of riches? You ridiculed me when you made me confess that I had not by a thousandth part so much as you have, and now you desire my most friendly instructions to keep you from extreme poverty."

Crit. "I perceive, good Socrates, that you have sufficient wisdom to instruct a man how to gain true riches, even in the greatest plenty: and I am persuaded, that the man who knows how to make the most of a little, is no less capable of managing the greatest fortune."

Soc. "You may remember, that towards the beginning of our discourse I told you that horses ought not to be reckoned among the goods of those who know not how to use them, nor land, nor sheep, nor money, or any other thing whatever; and yet every one of these are profitable, when they are used discreetly. As for my own part, I have never had any of these; and how then should I be able to inform you of the use of them? But though a man has neither money nor goods, yet I am persuaded there is such a science as the good ordering of a house. Why then, good Critobulus, should you not be master of this science? For the reason why every man cannot play well upon the flute, is either because he has not a flute of his own, or cannot borrow a flute of another to practice upon. The same impediment have I in the science of ordering a house; for I was never yet master of the implements belonging to housekeeping, neither goods nor money; nor was there ever any who entrusted me with the management of their house, or estate, although you now desire my directions. But you are sensible, that learners of music in the beginning spoil their instruments: so that were I now to begin my practice upon your estate, I should destroy it."

Crit. "Thus you endeavor to evade the business I desire you to undertake, and would shun taking share with me in the management of my affairs."

Soc. "That is not the case. I am willing to serve you in any thing within the bounds of my capacity. But suppose you was in want of fire, and came to me for it, and I had none, but directed you to a place where you might have it: would not that be of the same account? Or if you want water, and I have it not, but direct you where to have it, will not that be as agreeable to you? And if you would be instructed in music, and I directed you to a better judge in music than myself, would not that answer your design? Therefore, since I have no knowledge of myself in the affair you speak of, the best pleasure I can do you, is to recommend you to such persons who are most expert in the business you require; and that, I judge, I am able to do; for I have made it my business to search out the most ingenious of all sorts in every quarter of the city, having observed that among the practicers of the same service, and the same trade, some of the practitioners were hardly capable of subsisting, or getting their bread, while others got estates. This, I confess, made me admire; till at length I discovered that some men ran headlong upon their business without any consideration, and are so rash in their undertakings, that they always come off losers; while, on the other hand, I observed that all those who went about their work deliberately, and advised well upon their business before they set about it, these men accomplished their affairs with more facility, more dispatch, and to more advantage. Which observation may serve, as a lesson, to instruct you how your fortune may be advanced upon a sure foundation."

III. Crit. "Then I am resolved not to part from you till you have acquainted me with those wise men you speak of, who are capable of informing me of the matters I want."

Soc. "Will it be amiss if I show you some men who have been at vast expenses in building, and set about their work with so little judgment or consideration, that after an immense treasure has been spent by them, they have only raised an unprofitable pile to their discredit? And, on the contrary, there are other men, who with much less charge have erected useful and profitable buildings. Will not this be one step towards the good ordering of a house?"

Crit. "You are surely right."

Soc. "Will it then be improper, if I show you, in the next place, that some men have plenty of rich and useful furniture for their houses, and for all uses; and when any part of it should be used, it is out of the way, and to seek, and it is not known whether it be lost, or laid in safety? This, wherever it happens, discomposes the master of the house, and occasions him to be angry with his servants. But there are others, who have no more goods or furniture, or, perhaps, have not half so much, and yet have every thing ready, at hand to answer their occasions."

Crit. "The reason is plain, good Socrates; the first have no order in the distribution of their goods, but let them lie in confusion; the others have a regard that every thing should be laid up in its proper place."

Soc. "You are in the right, good Critobulus; but it is not only necessary that every thing should be set in its place, but also, that there should be a proper and convenient place to set it in."

Crit. "This also is necessary towards the good ordering of a house."

Soc. "Suppose I likewise show you, that in some places the slaves and servants are chained and strictly watched, and yet often run away from their masters; while in other places, where they are in freedom, and have their liberty, they work heartily for their masters, and are perpetually striving who shall act most for their advantage. Is not this a point worthy the regard of a housekeeper?"

Crit. "Certainly, it is very worthy the regard of a master."

Soc. "Nor will it be of less use, if I show you that some husbandmen continually complain of want, and are in a starving condition; while others, who practice the same science of husbandry, have every thing necessary about them, and live upon the fat of the land."

Crit. "This will surely be of good use. But perhaps the first you speak of bestow their money and goods improperly; or dispose of what they get to the disadvantage of themselves and their families."

Soc. "There are surely some such husbandmen; but I only speak of those who call themselves husbandmen, and yet can hardly find themselves with a sufficiency of meat and drink."

Crit. "What should be the cause of this?"

Soc. "I will bring you among them, that you may learn by their example."

Crit. "That is my desire, good Socrates."

Soc. "But first you must learn how to distinguish between the good and the bad, when you see them. I have known you rise early in the morning, and travel long journeys to see a comedy, and you have pressed my company with you; but you never invited me to such a sight as this we speak of."

Crit. "Dear Socrates, forbear your banter, and proceed in your good instructions."

Soc. "Suppose I show you some men, who by keeping great stables of horses are reduced to extreme poverty; while others, by the same means, have got great estates, and live splendidly?"

Crit. "I have seen them, and know them both; but I cannot discern what advantage that will be to me."

Soc. "The reason is, that you see them as you do plays, not with a design of becoming a poet, but purely for amusement and recreation; and perhaps you do not amiss in that, if your genius does not lead you to be a poet; but as you are obliged to keep horses, is it not necessary that you should understand what belongs to them, that by your skill you may reap an advantage by them?"

Crit. "You mean that I should breed horses."

Soc. "By no means; for you may have a good servant without the trouble of bringing him up from a child. There are ages both of horses and men wherein they are immediately profitable, and will improve every day upon your hands. Moreover, I can show you some men, who have been so discreet in the management of their wives, that their estates have been greatly advantaged by them; but there are others, and not a few, who by means of their wives have been utterly ruined."

Crit. "But who is to be blamed for this; the husband, or the wife?

Soc. "If a sheep is out of order, we commonly blame the shepherd; and if a horse have not his goings as he should, but is skittish and mischievous, we blame the breaker; and as for a wife, if her husband instruct her well in his affairs, and she neglect them, she is not wise: but if her husband does not his part, in giving her proper instructions for her government, and she behaves herself disorderly, and unbecoming her sex, or herself as a mistress of a house, is not then the man to blame?"

Crit. "Yes, without doubt; and it is a subject that I should be glad to discourse with you about; and, by the friendship we owe one another, tell me sincerely and freely, Is there any one among all your friends whom you entrust with so great a share of your household affairs as your wife?"

Soc. "It is true, I do not: but tell me likewise, is there one you converse with seldomer upon that subject than you do with your wife?"

Crit. "You judge right; for if there are any, there are very few, who know less of my affairs than my wife."

Soc• "You married her very young, before she had seen or heard much of the world; therefore it would be more to be admired if she acted as she ought to do, than if she did amiss."

Crit. "Then, good Socrates, do you imagine that those, who bear the character of good housewives, have been taught to be so?"

Soc. "I will not dispute that with you at present, but refer you to my wife Aspasia, who will inform you better than I can myself. But, to proceed; I esteem a wife to be a good and necessary companion for the master of a house, and one who ought to bear the next share of government under the master of the house; there is only a little more power in the husband than in the wife: the substance of the estate is generally increased by the industry and labor of the man; but the wife, for the most part, has the care upon her to distribute and order those things that are brought into the house; and if, therefore, the husband and wife agree in their management, the houses and estates improve; but where there is not this harmony, they must necessarily decay. I could likewise inform you in many other sciences, if the instruction were needful.”

Crit. “There is no occasion, good Socrates; for the richest man has not occasion to employ men of all faculties, nor is there any man who has occasion to practice them all. But such sciences as are honorable and becoming my province to understand, those I desire to learn, as well from the persons you may judge most capable of teaching me, as from yourself, whom principally I shall depend upon to give the finishing stroke.”

Soc. “You reason well, friend Critobulus; for there are many crafts which are not necessary for you to know: those are called handicraft, and are the least regarded in our city and commonwealth; for they destroy the health of those who practice them, by keeping their bodies in the shade, and confining them to a sedentary habit, or else by employing them all day over the fire, which is yet as unhealthful; and when once the body is tender and feeble, the stomach and spirits must certainly be weak. And besides, men of such occupations can have no time to bend their minds either to do their friends any good, or can have leisure to assist the commonwealth: therefore such people cannot readily serve their friends, if they should happen to be in distress; nor are persons fit to serve their country in time of adversity. For which reason, in some cities and commonwealths, especially such as are deeply engaged in war, a citizen is not suffered to practice any handicraft.”

Crit. “What faculties then, good Socrates, would you advise me to use?”

Soc. “The king of Persia, I think, may set us a good example; for we are told that the sciences which are most esteemed by him are war and husbandry; these, of all others, he reckons the most honorable as well as the most necessary, and accordingly gives them encouragement.”

Crit. And can you imagine, good Socrates, that the king of Persia has any regard for husbandry?”

Soc. “I shall endeavor to satisfy you whether he has or not. You will allow with all the world that he delights in war, because of his obligations on the princes under him to furnish him with certain numbers of troops by way of tribute; either to keep his subjects in awe and prevent rebellion, or to guard his country against foreign enemies that may come to invade it. Besides these, he keeps large garrisons in several castles, and appoints a treasurer to pay their wages duly, that they may be kept in good order. His tributary troops are all mustered once in twelve months, that they may be disciplined and ready for an engagement, if any commotion or invasion should happen; but the garrisoned forces and his own guards he reviews himself, and entrusts the inspection of his remoter troops to such a lieutenant as he can best confide in, upon whose report he either rewards or punishes the leaders of the several legions, according as they have acted for his honor in their several stations. Those especially who have their troops in the best order and discipline, he confers on them the greatest honors, and rewards them with such presents as may put them above the world ever after; and for those who have neglected their duty and abused the soldiers under them, he dismisses them from their governments, and loads them with shame. It cannot be doubted but a prince that acts with this conduct must understand war, and is well skilled in the military science.

“On the other hand, he employs great part of his time in riding about his neighboring part of the country, and observing the state of husbandry, whether the lands are tilled as they ought to be; and for the remote parts, he sends such deputies to examine them as are esteemed to be the proper judges; and when he finds that his governors and deputies have kept their several countries well inhabited, and the ground well cultivated, with such produce as it will best bear, he raises them in honors, loads them with presents, and enlarges their governments; but if he finds the country thin of people, or the ground uncultivated, or that extortions or cruelties have been committed by his governors, he inflicts severe punishments on them, and discharges them from their employments. From these examples, do you believe that the king of Persia has not as great regard to the peopling his country, and the science of husbandry, as he has to keeping an army in such an order as may defend it? But it is to be observed among his high officers, that no one of them has the charge of two commissions at one time; for some are appointed to be overseers of his lands and husbandmen, and to receive his tributes that arise by them, while others are employed to overlook the soldiery and garrisons; so that if the governor of the garrison neglects his duty in keeping good order or defending his country, the lieutenant over the affairs of husbandry accuses him, that his land is not cultivated for want of a sufficient defense against the encroaching parties, which are common enough in those parts. But if the governor of the garrison performs his duty, and keeps the country under his jurisdiction in peace; and the director of affairs of husbandry neglects his business, so that the country is in want of people, and the lands are not ordered as they ought to be, then he is accused by the governor of the garrison; for if the husbandry is neglected, the soldiers must starve, and the king himself must lose his tribute. But in some part of Persia there is a great prince called Satrap, who takes upon him the office both of soldiery and husbandry."

Crit. "If the king acts as you inform me, he seems to take as much delight in husbandry as he does in war."

Soc. “I have not yet done concerning him; for in every country where he resides, or passes a little time, he takes care to have excellent gardens, filled with every kind of flower or plant that can by any means be collected, and in these places are his chief delight.”

Crit. “By your discourse it appears also, that he has a great delight in gardening; for, as you intimate, his gardens are furnished with every tree and plant that the ground is capable of bringing forth.”

Soc. “We are told likewise, that when the king distributes any rewards, he first appoints the principal officers of his soldiery, who have the greatest right to his favor, to appear before him, and then bestows on them presents according to their deserts: for the tilling of ground would be of no effect, unless there were forces well managed to defend it. And after the soldiers he next distributes his honors and preferments among those who have taken good care that his lands were well cultivated and the people kept from idleness; observing at the same time that vigilant soldiers could not subsist without the care of the industrious husbandmen. We are told likewise, that Cyrus, a king famed for his wisdom and warlike disposition, was of the same mind with regard to husbandry; and used to distribute rewards to his most deserving soldiers and husbandmen, telling them at the same time, that he himself had deserved the presents he gave away, because he had taken care of the tillage of his country, and had also taken care to defend it.”

Crit. “If this is true of Cyrus, it is evident enough that he had as much love for husbandry as he had for war.”

Soc. “If Cyrus had lived, he would have proved a very wise prince, for we have many extraordinary proofs of his wisdom and conduct: one passage in particular I may take notice of, which is, when he met his brother in battle to decide the dispute who should be king, from Cyrus no man deserted, but many thousands deserted from the king to Cyrus; which surely must be the effect of his virtue, for there is no greater argument of a prince’s goodness, than the love of the people, and especially when they pay him a voluntary obedience, and stand by him in time of distress; In this great contest, the friends of Cyrus stood fighting about him while he was yet alive, and even after his fall, maintained their post till they were all slain by his side, except Ariaeus, who was posted in the left wing of the army. When Lysander brought presents to Cyrus from the cities of Greece that were his confederates, he received him with the greatest humanity, and among other things showed him his garden, which was called “the Paradise of Sardis which when Lysander beheld, he was struck with admiration of the beauty of the trees, the regularity of their planting, the evenness of their rows, and their making regular angles one to another; or, in a word, the beauty of the quincunx order in which they were planted, and the delightful odors which issued from them. Lysander could no longer refrain from extolling the beauty of their order, but more particularly admired the excellent skill of the hand that had so curiously disposed them; which Cyrus perceiving, answered him: ‘All the trees that you here behold are of my own appointment; I it was that contrived, measured, and laid out the ground for planting these trees, and I can even show you some of them that I planted with my own hands.’ When Lysander heard this, and saw the richness of his robes, and the splendor of his dress, his chains of gold, and the number and curiosity of the jewels about him, he cried out with astonishment, ‘Is it possible, great king, that you could condescend to plant any of these trees with your own hands?—‘Do you wonder at that, Lysander?’ answered Cyrus. ‘I assure you, that whenever I have leisure from war, or am the most at ease, I never dine till I have either done some exercise in arms, or employed myself in some point of husbandry, till I sweat.’ To which Lysander replied: ‘You are truly fortunate, great king, in being a wise and good man.’

V. “This, good Critobulus, I thought proper to acquaint you of, that you may knowhow much the richest and most fortunate among men delight themselves in husbandry: for it is a business of that nature, that at the same time it is delightful and profitable, both to the body and estate, affording such exercise as will increase a man’s health and strength, and such advantages as may greatly improve his fortune. By husbandry the ground gives us every thing necessary for our food and nourishment, and such things likewise as afford the greatest pleasures. Moreover, it furnishes us with beautiful flowers, and other excellent materials for the ornament and decoration of the temples and altars, affording the richest gayety, and most fragrant odors. So likewise it produces meats for the use of men; some without much trouble, others with more labor; for the keeping of sheep is a branch of husbandry. But though it gives us plenty of all kinds of things, yet it does not allow us to reap them in sloth and idleness, but excites us to health and strength by the labor it appoints us. In the winter, by reason of the cold; and in summer, by reason of heat; and for them who labor with their hands, it makes them robust and mighty; and those who only oversee their works, are quickened and prompted to act like men; for they must rise early in the morning, and must exercise themselves with walking from one place to another. For, both in the fields and in cities, whatever is undertaken to the purpose, must be done in a proper time and season. Again: if a man is inclined to practice horsemanship, and grow expert in that science for the defense of his country, a horse can be nowhere better kept, than in the country; or if a man choose to exercise himself on foot, or in running, husbandry gives him strength of body, and he may exercise himself in hunting: here is also meat for his dogs, as well as entertainment for wild beasts, and beasts of the game: and the horses and dogs, thus assisted by husbandry, return as good service to the ground; for the horse may carry his master early in the morning to oversee that the workmen and laborers do their duty in the fields, and returns with the master again at night at the latest hour, if his presence should be required till that time; and the dogs are a defense against wild beasts, that they spoil not the fruits of the earth, nor destroy the sheep, and even keep a man safe in a wilderness. Again; the practice of husbandry makes men strong and bold enabling them to defend their country; for in open countries the husbandmen are not without robbers, who would invade their lands, and carry off their crops, if they had not strength and courage enough to resist them. What faculty will sooner encourage a man to leap, to run, or draw a bow, than husbandry? and what science is there that brings a man more advantage for his labor? What science is more agreeable to a studious man? for he finds in it every thing he can have occasion for. Where shall a stranger be better received and entertained? or where shall a man live more commodiously in winter, than in the place where he may be accommodated with firing enough and hot baths? Where can we abide with greater pleasure in summer, than near rivers, springs, woods, groves, and fields, where gentle breezes fan the air? Where may a man treat his guests more agreeably or make more triumphant banquets? What place do servants delight in more? Or what other place is more agreeable to the wife? Where do children covet more to be? Or where are friends better received, or better satisfied? There is no science, in my mind, more delightful than this, if a man has a convenient substance to put him to work; nor any business more profitable to a man, if he has skill and industry. Again: the ground may teach men justice, if they have discretion enough to observe it; for it rewards those very liberally, who take care of it and assist it. But if it should happen that a country, by means of wars, should be obliged to lie uncultivated; yet those who have been bred up to husbandry are hardy and fit for soldiers, and may by that means get their living; and often it is more certain seeking a livelihood with weapons of war, in time of war, than with instruments of husbandry.

"The science of husbandry also brings men to good discipline, and prepares them to go to war when there is occasion. For the ground cannot be tilled without men; and a good husbandman will always provide the strongest, lustiest workmen he can get for that purpose, and such especially as will readily obey his commands, and are tractable in their business; and this is much the same with the business of a general when he is ordering his army: in either case those are rewarded that behave themselves well, or those are punished who are obstinate and neglect their duty. A good husbandman must as often call upon his workmen and encourage them, as a general or leader of an army ought to encourage his soldiers; for bondmen should be no less encouraged and fed with hopes by their masters than freemen; no, rather more, that their inclinations may bind them to their masters, and keep them from running away. He was surely a wise man who said, that husbandry was the mother and nurse of all other sciences; for if husbandry flourish, all other sciences and faculties fare the better; but whenever the ground lies uncultivated, and brings no crop, all other sciences are at a loss both by sea and land."

Crit. "Good Socrates, you reason well of this matter; but you are sensible there are many unforeseen accidents that happen in husbandry, which sometimes will destroy all our hopes of profit, though a husbandman has acted with the greatest skill and diligence; sometimes hail, droughts, mildews, or continual rains, spoil our crops, or vermin will even eat up the seed in the ground; and also sheep, though they never have so good pasture, are sometimes infected with distempers, which destroy them."

Soc. "I thought, good Critobulus, that you allowed the gods to have the direction of husbandry, as well as the battle. We all know that before our generals lead forth their armies, they make vows, prayers, and offer sacrifices to the gods, to bribe them in favor of their enterprise, and consult the oracles what is best to do. And think you that, in the business of husbandry, we ought not to implore the favor of the gods as much as we do in the affair of war? Be assured, friend Critobulus, that all virtuous men attend the temples with sacrifices, prayers, and oblations for the welfare of all their fruits, their oxen, their sheep, their horses, and of every thing else that they possess."

VI. Crit. "I agree with you, good Socrates, that in all our undertakings we ought, before we set about them, to consult and implore the pleasure of the gods, as their power is superior to all others, as well in war as in peace r but our purpose is to consult about the well-ordering of a house; therefore I desire you will resume your discourse, and proceed to the purport of our design: for I confess you have already made such an impression on me with regard to the ordering of a house, and how a man ought to live, that I long for your further instructions."

Soc. "Will it not then be proper to have a respect to our foregoing arguments, and make a recapitulation of those things that we have agreed in, that in the progress of our discourse we may know what has been settled between us?"

Crit. "It wall be a great pleasure; for when two men have lent money to one another, there is nothing more agreeable to them both, than to agree in their reckoning; so now in our discourse it will be no less agreeable to know what particulars we have settled between us."

Soc. “We first agreed, that the ordering of a house is the name of a science; and that to act for the increase and welfare of a house, is that science.

“Secondly, we agreed, that by the word house, we mean all a man’s possessions, and such goods as are useful to a man’s life; and we found that every thing was profitable to a man that he knew how to use with judgment: wherefore we concluded it was impossible for a man to learn all manner of sciences: and as for the handicrafts, we thought proper to exclude them, as many cities and commonwealths do, because they seem to destroy bodily health; and this particularly where there is danger of enemies invading the country, or where there are wars; for were we on that occasion to set the handicraftsmen on one side, and the husbandmen on the other, and ask them whether they would rather go out against their enemies, or give up their fields and defend the cities; those who had been used to the labor of the field would rather go out to fight and deliver their country, and the artificers would choose rather to sit still in the way they had been brought up, than put themselves into the least danger: we, moreover, recommended husbandry as a good exercise, and a calling of that profit that will bring its master every thing that is necessary: besides, it is a business soon learned, and extremely pleasant to them who practice it; it also makes the body robust and strong, gives a bloom to the face, and qualifies a man with a generosity of spirit to assist his friends and his country: besides this, we have also joined in opinion, that the practice of husbandry makes men hardy and courageous, and able to defend their country; because, by the fields lying open and exposed to invaders, they have frequent skirmishes, and therefore know the better how to fight. It is for these reasons that husbandry is esteemed the mother of sciences and the most honorable in all governments; it is healthful, and breeds good men, and occasions generosity of spirit and good will towards one's friends and country."

Crit. "You have fully persuaded me that husbandry is a most pleasant and profitable occupation; but I remember in your discourse you told me of some husbandmen who get plentiful fortunes by their practice, and that there were others who through mismanagement became beggars by it: I desire you would clear up these two things to me, that when I come to practice this science, I may follow that way which will be the most advantageous, and avoid the contrary."

Soc. "But suppose I should first tell you, good Critobulus, of a discourse I once had with a man who might truly be called good and honest; for it will assist in what you desire."

Crit. "I shall be glad to hear that discourse, which may inform me how to gain the worthy name of a truly good and honest man."

Soc. "That which first led me to consider the value of one man more than of another, was by finding among the artificers, such as builders, painters, and statuaries, those were always esteemed the best and most worthy whose works were the most perfect; so that it was their works that gained them the applause of the people. I had likewise heard that there were those among the people, who had so behaved themselves, that they were esteemed good and honest men: these men, above all others, I coveted to converse with, that I might learn how they gained that character; and because I observed that good and honest were companions in their character, I saluted the first man I met that had a goodly presence, expecting to find the character of good and honest in the most comely personage, rather than any other: but I soon found I was far from my aim, and began to recollect myself that there are many fair faces, and personages of graceful appearance, that possess the most sordid dispositions, and ungenerous souls; so that now I was sensible the good and honest man was not to be known by the external appearance, but that the surest way to find what I sought for, was to search for one of those that bore the character. In the course of my inquiries I was recommended to one whose name is Ischomachus, a man esteemed by both the sexes, citizens and strangers, as truly worthy the character I sought for; and I soon made it my business to find him out.

VII. “When I first saw him, I found him sitting in a portico of one of the temples alone; and as I concluded he was then at leisure, I placed myself by him, and addressed myself to him in the following manner;—

“Good Ischomachus, I much wonder to see you thus unemployed, whose industry leads you ever to be stirring for the good of some one or other.”

“Nor should you now have found me here, good Socrates,” said Ischomachus, “if I had not appointed some strangers to meet me at this place.”

”And if you had not been here,” said Socrates, “where would you have been? or, I pray you, how would you have employed yourself? for I wish to learn what it is that you do to gain the character from all people of a good and honest man: the good complexion of your features seems to denote, that you do not always confine yourself to home.” At this, Ischomachus, smiling, seemed to express a satisfaction in what I had said, and replied; “I know not that people give me the character of a good and honest man, for when I am obliged to pay money either for taxes, subsidies, or on other occasions, the people call me plainly Ischomachus: and for what you say concerning my not being much at home, you conjecture right, for my wife is capable of ordering such things as belong to the house.”

“But pray tell me,” said Socrates, “did you instruct your wife how to manage your house, or was it her father and mother that gave her sufficient instructions to order a house before she came to you?”

“My wife,” answered Ischomachus, “was but fifteen years old when I married her; and till then she had been so negligently brought up, that she hardly knew any thing of worldly affairs.”

“I suppose,” said Socrates, “she could spin, and card, or set her servants to work.”

“As for such things, good Socrates,” replied Ischomachus, “she had her share of knowledge.”

“And did you teach her all the rest,” said Socrates, “which relates to the management of a house?”

“I did,” replied Ischomachus, “but not before I had implored the assistance of the gods, to show me what instructions were necessary for her; and that she might have a heart to learn and practice those instructions to the advantage and profit of us both.”

“But, good Ischomachus, tell me,” said Socrates, “did your wife join with you in your petition to the gods?”

“Yes,” replied Ischomachus, “and I looked upon that to be no bad omen of her disposition to receive such instructions as I should give her.”

“I pray you, good Ischomachus, tell me,” said Socrates, “what was the first thing you began to show her? for to hear that, will be a greater pleasure to me, than if you were to describe the most triumphant feast that had ever been celebrated.”

“To begin then, good Socrates, when we were well enough acquainted, and were so familiar that we began to converse freely with one another, I asked her for what reason she thought I had taken her to be my wife, that it was not purely to make her a partner of my bed, for that she knew I had women enough already at my command; but the reason why her father and mother had consented she should be mine, was because we concluded her a proper person to be a partner in my house and children: for this end I informed her it was, that I chose her before all other women; and with the same regard her father and mother chose me for her husband: and if we should be so much favored by the gods that she should bring me children, it would be our business jointly to consult about their education, and how to bring them up in the virtues becoming mankind; for then we may expect them to be profitable to us, to defend us, and comfort us in our old age. I further added, that our house was now common to us both, as well as our estates; for all that I had I delivered into her care, and the same she did likewise on her part to me; and likewise that all these goods were to be employed to the advantage of us both, without upbraiding one or the other, which of the two had brought the greatest fortune; but let our study be, who shall contribute most to the improvement of the fortunes we have brought together; and accordingly wear the honor they may gain by their good management.

"To this, good Socrates, my wife replied,

'How can I help you in this? or wherein can the little power I have do you any good? for my mother told me, both my fortune, as well as yours, was wholly at your command, and that it must be my chief care to live virtuously and soberly.'

'This is true, good wife,' answered Ischomachus, 'but it is the part of a sober husband and virtuous wife to join in their care, not only to preserve the fortune they are possessed of, but to contribute equally to improve it.'

'And what do you see in me,' said the wife of Ischomachus, 'that you believe me capable of assisting in the improvement of your fortune?'

‘Use your endeavor, good wife,’ said Ischomachus, ‘to do those things which are acceptable to the gods, and are appointed by the law for you to do.’

‘And what things are those, dear husband?’ said the wife of Ischomachus. ‘They are things,’ replied he, ‘which are of no small concern, unless you think that the bee which remains always in the hive, is unemployed: it is her part to oversee the bees that work in the hive, while the others are abroad to gather wax and honey; and it is,’ in my opinion, a great favor of the gods to give us such lively examples, by such little creatures, of our duty to assist one another in the good ordering of things; for, by the example of the bees, a husband and wife may see the necessity of being concerned together towards the promoting and advancing of their stock: and this union between the man and woman is no less necessary to prevent the decay and loss of mankind, by producing children which may help to comfort and nourish their parents in their old age. It is ordained also for some creatures to live in houses, while it is as necessary for others to be abroad in the fields: wherefore it is convenient for those who have houses and would furnish them with necessary provisions, to provide men to work in their fields, either for tilling the ground, sowing of grain, planting of trees, or grazing of cattle; nor is it less necessary, when the harvest is brought in, to take care in the laying our corn and fruits up properly, and disposing of them discreetly. Little children must be brought up in the house, bread must be made in the house, and all kinds of meats must be dressed in the house; likewise spinning, carding, and weaving, are all works to be done within doors; so that both the things abroad, and those within the house, require the utmost care and diligence; and it appears plainly, by many natural instances, that the woman was born to look after such things as are to be done within the house: for a man naturally is strong of body, and capable of enduring the fatigue of heat and cold, of travelling and undergoing the harsher exercise; so that it seems as if nature had appointed him to look after the affairs without doors: the woman being also to nurse and bring up children, she is naturally of a more soft and tender nature than the man; and it seems likewise that nature has given the woman a greater share of jealousy and fear than to the man, that she may be more careful and watchful over those things which are entrusted to her care; and it seems likely, that the man is naturally made more hardy and bold than the woman, because his business is abroad in all seasons, and that he may defend himself against all assaults and accidents. But because both the man and the woman are to be together for both their advantages, the man to gather his substance from abroad, and the woman to manage and improve it at home, they are indifferently endowed with memory and diligence. It is natural also to both to refrain from such things as may do them harm, and likewise they are naturally given to improve in every thing they study, by practice and experience; but as they are not equally perfect in all things, they have the more occasion of one another's assistance: for when the man and woman are thus united, what the one has occasion for is supplied by the other: therefore, good wife, seeing this is what the gods have ordained for us, let us endeavor, to the utmost of our powers, to behave ourselves in our several stations to the improvement of our fortune: and the law, which brought us together, exhorts us to the same purpose. And also, as it is natural, when we are thus settled, to expect children, the law exhorts us to live together in unity, and to be partakers of one another's benefits: so nature, and the law which is directed by it, ordains that each severally should regard the business that is appointed for them. From whence it appears, that it is more convenient for a woman to be at home and mind her domestic affairs, than to" gad abroad; and it is as shameful for a man to be at home idling, when his business requires him to be abroad: if any man acts in a different capacity from that he is born to, he breaks through the decrees of nature, and will certainly meet his punishment, either because he neglects the business which is appointed for him, or because he invades the property of another. I think that the mistress bee is an excellent example for the wife.’

‘And what is the business of the mistress bee,’ said the wife of Ischomachus, ‘that I may follow the example of that which you so much recommend to me, for it seems you have not yet fully explained it?’

‘The mistress bee,’ replied Ischomachus, ‘keeps always in the hive, taking care that all the bees, which are in the hive with her, are duly employed in their several occupations; and those whose business lies abroad, she sends out to their several works. These bees, when they bring home their burden, she receives, and appoints them to lay up their harvest, till there is occasion to use it, and in a proper season dispenses it among those of her colony, according to their several offices. The bees who stay at home, she employs in disposing and ordering the combs, with a neatness and regularity becoming the nicest observation and greatest prudence. She takes care likewise of the young bees, that they are well nourished, and educated to the business that belongs to them; and when they are come to such perfection that they are able to go abroad and work for their living, she sends them forth under the direction of a proper leader.’

‘And is this my business, dear Ischomachus?’ said his wife.

‘This example, good wife,’ replied Ischomachus, ‘is what I give you as a lesson worthy your practice: your case requires your presence at home, to send abroad the servants whose business lies abroad, and to direct those whose business is in the house. You must receive the goods that are brought into the house, and distribute such a part of them as you think necessary for the use of the family, and see that the rest be laid up till there be occasion for it; and especially avoid the extravagance of using that in a month which is appointed for twelve months' service. When the wool is brought home, observe that it be carded and spun for weaving into cloth; and particularly take care that the corn, which is brought in, be not laid up in such a manner that it grow musty and unfit for use. But, above all, that which will gain you the greatest love and affection from your servants, is to help them when they are visited with sickness, and that to the utmost of your power.' Upon which his wife readily answered, 'That is surely an act of charity, and becoming every mistress of good nature; for, I suppose, we cannot oblige people more than to help them when they are sick: this will surely engage the love of our servants to us, and make them doubly diligent upon every occasion.'—-This answer, Socrates," said Ischomachus, "was to me an argument of a good and honest wife; and I replied to her, 'That by reason of the good care and tenderness of the mistress bee, all the rest of the hive are so affectionate to her, that whenever she is disposed to go abroad, the whole colony belonging to her, accompany, and attend upon her.'—To this the wife replied: 'Dear Ischomachus, tell me sincerely, Is not the business of the mistress bee, you tell me of, rather what you ought to do, than myself; or have you not a share in it? For my keeping at home and directing my servants, will be of little account, unless you send home such provisions as are necessary to employ us.'

'And my providence,' answered Ischomachus, 'would be of little use unless there is one at home who is ready to receive and take care of those goods that I send in. Have you not observed,' said Ischomachus, 'what pity people show to those who are punished by pouring water into sieves till they are full? The occasion of pity is, because those people labor in vain.’

‘I esteem these people,’ said the wife of Ischomachus, ‘to be truly miserable, who have no benefit from their labors.’

‘Suppose, dear wife,’ replied Ischomachus, ‘you take into your service one who can neither card nor spin, and you teach her to do those works, will it not be an honor to you? Or if you take a servant which is negligent, or does not understand how to do her business, or has been subject to pilfering, and you make her diligent, and instruct her in the manners of a good servant, and teach her honesty, will not you rejoice in your success? and will you not be pleased with your action? So again, when you see your servants sober and discreet, you should encourage them and show them favor; but as for those who are incorrigible and will not follow your directions, or prove larcenaries, you must punish them. Consider, how laudable it will be for you to excel others in the well-ordering your house; be therefore diligent, virtuous, and modest, and give your necessary attendance on me, your children, and your house, and your name shall be honorably esteemed, even after your death; for it is not the beauty of your face and shape, but your virtue and goodness, which will bring you honor and esteem, which will last for ever.’—After this manner, good Socrates,” cried Ischomachus, “I first discoursed with my wife concerning her duty and care of my house.”

VIII. “And did you perceive,” said Socrates, “that she improved by what you taught her?”

“Yes,” replied Ischomachus, “she was as extremely diligent to learn and practice what was under her care, as one of her tender years could be, who knew nothing of her duty before. Once I saw her under a great concern, because she could not readily find a parcel which I had brought home; but when I perceived her grieved, I bid her take no further thought about it, for it was time enough to grieve when we wanted a thing which we could not purchase, but this was not our case; and even though what I asked for was then out of the way, it was not her fault, because I had not yet appointed proper places or repositories for the several things that belonged to the house; but that I would take care to do it, that she might put every thing in proper order, allotting to every particular thing its place, where it' might be found when there was occasion for it. 'There is nothing, dear wife,' said Ischomachus, 'which is more commendable or profitable to mankind, than to preserve good order in every thing.

"'In comedies and other plays, where many people are required to act their parts, if the actors should rashly do or say whatever their fancy led them to, there must of necessity be such confusion as would disgust the audience: but, when every person has his part perfect, and the scenes are regularly performed, it is that order which makes the play agreeable and pleasing to the beholders.

"'So likewise, good wife, an army, when it is once in disorder, is under the greatest confusion and consternation, if the enemy is at hand; for the enemy has little to do to overcome them; their own hurry and confusion will contribute more to their overthrow than the attacks of the adversary. Here you may imagine wagons, footmen, horsemen, chariots, elephants, and baggage, all intermixed and crowded together: obstructing and hindering one another. If one runs, he is stopped by him that would stand the battle; and he that stands is jostled by every messenger that passes him; the chariots overrun the men of arms; and the elephants and horsemen, which in their proper places would be useful, are intermixed among the foot, trampling on them, and in a great measure doing them as much mischief as their enemies would do. And suppose, while an army is in this confusion, they are attacked by their enemy in good order, what can they expect but destruction? But an army drawn up in good order, how glorious a sight is it to their friends, and how terrible to their enemies! How delightful it is to see the infantry drawn up and exercising in good order, or marching with so much exactness and regularity, that the whole body moves like one man! How agreeable is this to their friends! And to observe an army drawn up in a line of battle, well-disciplined, and advancing in good order, have not their enemies reason to fear them? Or what makes a galley, well-furnished with men, so terrible to the enemy, and so pleasant a sight to their friends, but because of its swift passage upon the waters? And what is the reason that the men within it do not hinder one another, but that they sit in order, make their signs in order, lie down in order, rise up in order, and handle their oars in order.

"'As for confusion and disorder, I can compare it to nothing better, than if a countryman should put together in one heap, oats, wheat, barley, and peas, and when he had occasion to use any one of them, he must be obliged to pick out that sort grain by grain. Wherefore, good wife, by all means avoid confusion as much as possible, and study good order in every thing, for it will be both pleasant and profitable to you. Every thing then, as you have occasion for it, will be ready at hand to use as you please, and what I may happen to ask for will not be to seek; let us therefore fix upon some proper place where our stores may be laid up, not only in security, but where they may be so disposed, that we may presently know where to look for every particular thing. And when once we have done this in the best order we can, then acquaint the steward of it, that when any thing is wanted he may know where to find it; or when any thing is brought into the house, he may at once judge of the proper place to lay it in. By this means we shall know what we gain and what we loose; and, in surveying our storehouses, we shall be able to judge what is necessary to be brought in, and what may want repairing, or what will be impaired by keeping. When we have visited these a few times, we shall grow perfect in the knowledge of all our goods, and readily find what we seek for.'

"I remember, good Socrates," said Ischomachus, "I once went aboard a Phoenician ship, where I observed the best example of good order that I ever met with: and, especially, it was surprising to observe the vast number of implements, which were necessary for the management of such a small vessel.

"What numbers of oars, stretchers, ship-hooks, and spikes, were there for bringing the ship in and out of the harbor! What numbers of shrouds, cables, hawsers, ropes, and other tackling, for the guiding of the ship! With how many engines of war was it armed for its defense! What variety and what numbers of arms, for the men to use in time of battle! What a vast quantity of provisions were there for the sustenance and support of the sailors!. And, besides all these, the loading of the ship was of great bulk, and so rich, that the very freight of it would gain enough to satisfy the captain and his people for their voyage: and all these were stowed so neatly together, that a far larger place would not have contained them, if they had been removed. Here, I took notice, the good order and disposition of every thing was so strictly observed, that, notwithstanding the great variety of materials the ship contained, there was not any thing on board which the sailors could not find in an instant; nor was the captain himself less acquainted with these particulars than his sailors: he was as ready in them, as a man of learning would be to know the letters that composed the name Socrates, and how they stand in that name. Nor did he only know the proper places for every thing on board his ship; but, while he stood upon the deck, he was considering with himself what things might be wanting in his voyage, what things wanted repair, and what length of time his provisions and necessaries would last: for, as he observed to me, it is no proper time, when a storm comes upon us, to have the necessary implements to seek, or to be out of repair, or to want them on board; for the gods are never favorable to those who are negligent or lazy; and it is their goodness that they do not destroy us when we are diligent. When I had observed the good order which was here practiced, I informed my wife of it; at the same time admonishing her to observe the great difficulty there must needs be to keep up such a regular decorum on board a ship, where there were such numerous varieties of materials, and such little space to lay them in: 'But how much easier, good wife,' said Ischomachus, 'will it be for us, who have large and convenient storehouses for every thing to its degree, to keep a good decorum and order, than for those people on board a ship, who yet are bound to remember where, and how, every thing is distributed in the midst of a storm at sea? But we have none of these dangers to disturb and distract our thoughts from the care of our business; therefore we should deserve the greatest shame, and be inexcusable, if we were not diligent enough to preserve as good order in our family as they do on board their vessel. But we have already said enough,' continued Ischomachus, 'concerning the necessity and advantage of good order; nor is it less agreeable to see every thing belonging to the dress, or wearing apparel, laid carefully up in the wardrobe; the things belonging to the kitchen, let them be there; and so those belonging to the dairy, likewise in the dairy; and, in a word, every thing which regards any kind of office belonging to the house, let it be neatly kept and laid up in its proper office. And this is reputable both to the master and mistress of the house; and no one will ridicule such good management, but those who are laughed at for their own ill management. This, good wife,' said Ischomachus, 'you may be sensible of at an easy rate, with little trouble. Nor will it be difficult to find out a steward, who will soon learn from you the proper places or repositories for every thing which belongs to the house; for in the city there is a thousand times more variety of things than ever we shall have occasion for; and yet if we want any thing, and send a servant to buy it for us, he will readily go to the place where it is to be had, from the good disposition of things in the several shops which are proper for them, and from the remembrance he will have of observing them in such and such places. There can be no other reason for this, than the disposing every thing in the market or city in its proper place, as all kinds of fowls at the poulterers', all sorts of fish at the fishmongers', and the like of other things which have places determined for them; but if we go about to seek a man who at the same time is seeking us, how shall we find one another, unless we have beforehand appointed a meeting place? Then, as for setting our household goods in order, I spoke to her in the following manner."

IX. "But tell me, good Ischomachus," said Socrates, "did your wife understand and practice what you taught her?"

"She promised me," answered Ischomachus, "both by words and by her countenance, that she agreed to what I said, and was delighted that method and good order would take off so great a share of her trouble; she rejoiced to think she should be delivered from the perplexed state she was in before, and desired that I would not delay putting my promise in practice as soon as possible, that she might reap the fruits of it."

"And how did you proceed, good Ischomachus?" said Socrates. "I answered her," said Ischomachus, "in such a manner, that she might learn first what a house was properly designed for; that it was not ordained to be filled with curious paintings or carvings, or such unnecessary decorations; but that the house should be built with due consideration, and for the convenience of the inhabitants; and as a proper repository for those necessaries which properly belong to a family, and, in some measure, directs us to the proper places wherein every particular ought to be placed the most private and strongest room in the house seems to demand the money, jewels, and those other things that are rich and valuable; the dry places expect the corn; the cooler parts are the most convenient for the wine; and the more lightsome and airy part of the house for such things as require such a situation. I showed her likewise," continued Ischomachus, "which were the most convenient places for parlors and dining-rooms, that they might be cool in summer and warm in winter; and also, that as the front of the house stood to the south, it had the advantage of the winter's sun; and in the summer it rejoiced more in the shade, than it could do in any other situation. Then," said Ischomachus, "I appointed the bed-chambers, and the nursery, and apartments for the women, divided from the men's lodging, that no inconvenience might happen by their meeting without our consent or approbation; for those who behave themselves well, and we allow to come together to have children, they will love us the better for it; but those, who through subtlety will endeavor to gain their ends with any of the women without our consent, will be always contriving and practicing ways to our disadvantage, to compass or carry on their lewd designs. When we were come thus far," proceeded Ischomachus, "we began to set our goods in order. In the first place, we assorted all the materials belonging to sacrifices: after that, my wife's apparel was assigned to their proper places; her richest habits by themselves, and those which were in more common use by themselves. Next to these, we appointed a wardrobe for the master's clothes; one part for his armor and such accoutrements as he used in war, and another for his wearing apparel, to be used upon common occasions: after these, we directed places for the instruments which belong to spinning, and for the bake-house, the kitchen, and the baths; and took care, in the appointment of all these things, to make a division between those things which are most commonly required to be in use, and such as are only in use now and then: we likewise separated those things which were for a month's service from those which were to serve twelve months; for by this means we might know the better how our stock is employed. When we had done this, we instructed every servant respectively where every thing belonging to his office might be found, and directed them carefully to observe, that every implement under their care should be put into the same place where they took it from, when they had done using it; and as for such things as are but seldom required to be used, either upon festivals, or upon the reception of strangers; those we delivered into the care of a discreet woman, whom we instructed in her province; and when we had made an account with her of the goods delivered into her care, and taken it in writing, we directed her to deliver them out to those under her, as she saw proper occasions, and be careful to remember who were the persons to which she delivered every particular; and that upon receiving again the things which she had delivered out, they should be every one laid up in their proper place. In the next place, we chose a discreet, sober, and judicious woman to be our storekeeper or housekeeper, one who had a good memory, and was diligent enough to avoid faults, studying our pleasure and satisfaction in all her business, and endeavoring to gain our esteem, which we always signified by presents, by which means we gained her love and friendship for us; so that, whenever we had occasion to rejoice, we made her partaker of our mirth; or if any accident happened which brought sorrow with it, we made her acquainted with that likewise, and consulted her in it: this made her bend her mind to the advancement of our fortunes. We instructed her to show more esteem for those servants in the house whom she found were deserving of favor, than the others who neglected their duty; for we took care to observe to her, that those who did well were worthy reward in the world; while those who were deceitful and evil-minded, were rejected of the people. And then, good Socrates," said Ischomachus, "I let my wife know that all this would be of little effect, unless she was careful to observe that every thing was preserved in the good order we had placed it: for in cities, and in other governments that are well ordered, it is not enough to make good laws for their conduct, unless there are proper officers appointed to see them put in execution, either to reward those who deserve well, or punish the malefactors.

'This, dear wife, I chiefly recommend to you,' continued Ischomachus, 'that you may look upon yourself as the principal overseer of the laws within our house.' And I informed her also, that it was within her jurisdiction to overlook, at her own pleasure, every thing belonging to the house, as a governor of a garrison inspects into the condition of his soldiers, or as the senate of Athens review the men of arms, and the condition of their horses; that she had as great power as a queen in her own house, to distribute rewards to the virtuous and diligent, and punish those servants who deserved it. But I further desired her, not to be displeased, if I entrusted her with more things, and more business, than I had done any of our servants; telling her at the same time, that such as were covenant-servants have no more goods under their care and trust, than are delivered to them for the use of the family; and none of those goods may be employed to their own use, without the master's or mistress's consent: for whoever is master or mistress of the house, has the rule of all that is within it, and has the power of using any thing at their pleasure; so that those who have the most profit by goods, have the most loss by them, if they perish or are destroyed. So it is therefore the interest of them that have possessions, to be diligent in the preservation of them."

"Then," said Socrates, "tell me, good Ischomachus, how did your wife receive this lesson?"

"My wife," replied Ischomachus, "received it like a woman ready to learn and practice what might be for the honor and welfare of us both, and seemed to rejoice at the instructions I gave her." 'It would have been a great grief to me,' said she, 'if, instead of those good rules you instruct me in, for the welfare of our house, you had directed me to have no regard to the possessions I am endowed with; for as it is natural for a good woman to be careful and diligent about her own children, rather than have a disregard for them; so it is no less agreeable and pleasant to a woman, who has any share of sense, to look after the affairs of her family, rather than neglect them.'

X. "When I heard," continued Socrates, "the answer which the wife of Ischomachus gave him, I could not help admiring her wisdom."

"But I shall tell you yet much more of her good understanding," said Ischomachus: "there was not one thing I recommended to her, but she was as ready to practice it, as I was willing she should go about it."

"Go on, I pray you, good Ischomachus," said Socrates, "for it is far more delightful to hear the virtues of a good woman described, than if the famous painter Zeuxis was to show me the portrait of the fairest woman in the 'world."

"Then," continued Ischomachus, "I remember, on a particular day, she had painted her face with a certain cosmetic, attempting to make her skin look fairer than it was; and with another mixture had endeavored to increase the natural bloom of her cheeks; and also had put on higher shoes than ordinary, to make her look taller than she naturally was.

When I perceived this," said Ischomachus, "I saluted her in the following manner: 'Tell me, good wife, which would make me the most acceptable in your eyes, to deal sincerely by you, in delivering into your possession those things which are really my own, without making more of my estate than it is; or for me to deceive you, by producing a thousand falsities which have nothing in them: giving you chains of brass instead of gold, false jewels, false money, and false purple, instead of that which is true and genuine?' To which she presently replied: 'May the gods forbid that you should be such a man! for, should you harbor such deceit in your heart, I should never love you.'

'I tell you then, dear wife,' replied Ischomachus, 'we are come together, to love one another, and to delight in each other's perfections: do you think I should be the more agreeable to you in my person, or should you love me the better, if I was to put a false luster upon myself, that I might appear better complexioned, more fair in body, or more manly than what nature has made me; or that I should paint and anoint my face, when you receive me to your arms, and give you this deceit instead of my natural person?'

'Surely, dear Ischomachus,' replied his wife, 'your own person, in its natural perfections, is preferable to all the paints and ointments you can use to set it off; nor can all the art you might use be comparable to your natural appearance.'

'Believe then, good wife,' said Ischomachus, 'that I have the same abhorrence of false luster that you have: can there be any thing more complete in nature than yourself? or would there be any thing less engaging to me than that you should use any means to hide or destroy those perfections in you which I so much admire? The God of nature has appointed beauties in all creatures, as well in the field as among the human race; the magnificence of the male to be admired by the female, and the tender and curious texture of the female to be admired by the male. It is natural for the creatures in the field to distinguish one another by the purity of their beauties; there is no deceit, there is no corruption: so the men always admire that body which is most pure, or the least deformed by art. Such wiles and deceits may, perhaps, deceive strangers, because they null not have opportunities of discovering and laughing at them; but if such things should be practiced between those who are daily conversant with one another, how soon will the imposition be discovered! how soon will they be ridiculed! For these deceits appear at the rising out of bed, and from that time till the persons have had opportunity of renewing them; as well as when they sweat, when they shed tears, when they wash, and when they bathe themselves.'

"What answer, good Ischomachus," said Socrates, "did your wife give you to this lecture?"

"The best that could be," replied Ischomachus, "for she has never since attempted any of these false glosses, but has constantly appeared in her natural beauties, and repeated her solicitations to me to instruct her, if there was any natural means of assisting them. I then directed her that she should not sit too much, but exercise herself about the house as a mistress, to examine how her several works went forward; sometimes to go among the spinners or weavers, to see that they did their duty, and to instruct those who were ignorant, and encourage the most deserving among them; sometimes to look into the bake-house, to see the neatness and order of the woman that looks after it; and sometimes visit her housekeeper, to account with her for the yarn, or other commodities, that are brought into her charge: and now and then to take a turn about her house, to see that every thing is disposed in its proper place. This method, I suppose," said Ischomachus, "would be a means of giving her a healthful exercise, and at the same time of leading her to that business which would be for her advantage, in benefiting our fortune. I also told her, the exercise of bolting, baking, and looking after the furniture of her house, to brush it and keep it clean, when she wanted something to do, would be commendable, and help to employ her; for I recommended exercise to her as a great benefit: 'for exercise,' said Ischomachus, 'will create you an appetite to your meat, and by that means you will be more healthful, and add, if possible, to the bloom of your beauty: and also the clean appearance of the mistress among the servants, and her readiness to set her hand to work, will encourage them to follow her example; for a good example does more than all the compulsion that can be used. Those who study nothing but their dress, may indeed be esteemed by those who understand nothing else; but the outside appearance is deceitful. And now, good Socrates, I have a wife who lives up to the rules given her."

XI. "Then," said Socrates, "good Ischomachus, you have fully satisfied me concerning the duty of a wife, as well as of your wife's good behavior, and your own management. I beg now you will acquaint me, good Ischomachus," continued Socrates, "what method it is that you have taken on your part towards the management of your fortune, and especially what it is that has gained you the character of a good and honest man; that when I have heard what you have done, I may give my thanks according to your deserts."

"I shall be glad," replied Ischomachus, "to satisfy you in any thing within my power, provided you will correct my errors, if I am guilty of any."

"But," answered Socrates, "how can I correct you, when you are already possessed of the character of a good and honest man? and especially when I am the man who is taken for the greatest trifler, and who employs himself in nothing but measuring the air; or, which is a far worse character, that I am a poor man, which is a token of the greatest folly? This, indeed, might have been a trouble to me, if I had not met the other day a horse belonging to Nicias, with a crowd of people about him, admiring his good qualities, and talking abundance in praise of his strength and spirit: this made me ask the question of the master of the horse, Whether his horse was very rich? but he stared upon me, and laughed at me, as if I had been a madman; and only gave me this short answer;

'How should a horse have any money?' When I heard this, I went my way contented, that it was lawful for a poor horse to be good, on the account only of his free heart and generous spirit; and therefore, I conclude, it is likewise possible for a poor man to be good: for which reason, I beseech you, good Ischomachus, tell me your manner of living, that I may endeavor to learn it, and model my life after your example; for that may well be called a good day, when a man begins to grow good and virtuous."

"Good Socrates, you seem to banter me," said Ischomachus: "however, I will tell you, as well as I can, the whole method of my living, which I design constantly to follow till the day of my death. I perceived, that except a man knew well what was necessary to be done, and diligently applied himself to put his knowledge in practice, the gods would not suffer him to prosper. And I also observed, that those who act with wisdom and diligence, the gods reward them with riches. Therefore, first of all, I paid my adoration to the gods, and implored their assistance in all that I had to do, that they would be pleased to give me health, strength of body, honor in my city, good will of my friends, safety in the day of battle, and that I might return home with an increase of riches and honor."

"When I heard that," said Socrates, "I asked him, are riches then so much worthy your esteem, good Ischomachus; seeing that the more riches you have, the more care and trouble you have to order and preserve them?"

Then Ischomachus replied: “I have no small care to provide me with riches, for I have great pleasure in serving the gods honorably with rich sacrifices; and also to serve my friends, if they happen to want; and likewise to help the city in time of danger or distress.”

“Truly, what you say, good Ischomachus,” said Socrates, “is honorable, and becoming a man of power and substance.”

To which Ischomachus answered: “These are my reasons, good Socrates, why I think riches worth my labor; for there are some degrees of men who cannot subsist without the help of others; and there are also some who think themselves rich enough, if they can get what is barely necessary for their support. But those who order their houses and estates with such discretion and good judgment, that they advance their fortunes and increase their riches; and by that means become serviceable and honorable to the city, and are capable of serving their friends; why should not such men be esteemed wise and generous, and deserve power?”

“You are in the right,” replied Socrates; “there are many of us that may well respect such men: but I pray you, good Ischomachus, go on to relate what method you take to support your health and strength of body, and what means you use to return home honorably from the war: and as for the ordering and increasing of the estate, we may hear that by and by.”

“I think,” said Ischomachus, “these things are so chained together, that they cannot well be separated; for when a man has a sufficient store of meat and drink, and uses a convenient share of exercise, his body must of necessity be healthful and strong; and such a body, when it is well exercised in the affairs of war, is most likely to return home from battle with honor. And he who is diligent and industrious in his business, must as surely improve his estate.”

"Good Ischomachus," said Socrates, "all that you have yet said, I grant to be good, that he who uses diligence and exercise will increase his fortune. But tell me, I beseech you, what exercise do you take to maintain your good complexion, and to get strength, and how do you exercise yourself to be expert in war, and what methods do you follow to increase your estate, that enables you to help your friends, and assist the city in honor and strength? These things I desire to learn."

"To tell you freely, good Socrates," said Ischomachus, "I rise so early in the morning, that if I have any one to speak with in the city, I am sure to find him at home; or if I have any other business to do in the city, I do it in my morning's walk: but when I have no matter of importance in the city, my page leads my horse into the fields, and I walk thither, for I esteem the walk into the free air of the country to be more healthful than to walk in the galleries or piazzas of the city; and when I arrive at my ground where my workmen are planting trees, tilling the ground, or sowing, or carrying in of the fruits, I observe how every thing is performed, and study whether any of these works may be mended or improved: and when I have diverted myself enough at my villa, I mount my horse, and make him perform the exercise of the academy, such as is serviceable in war; and then ride him through all the difficult paths, waters, through trenches, and over hedges, to make him acquainted with those difficulties as much as possible, without hurting him: and when I have done this, my page takes my horse, and leads him trotting home, and takes along with him to my house, such things out of the country as are wanted, and walk home myself: then I wash my hands, and go to such a dinner as is prepared for me, eating moderately, and never to excess, or too sparingly."

"Good Ischomachus," said Socrates, "you do your business very pleasantly; and your contrivance is excellent, in performing so many good things at one time, as increase your health, your strength, your exercise in war, your study for the increase of your estate: all these to be done under one exercise is a great token of your wisdom; and the good effect of this exercise is apparent enough to all that know that you are healthful and strong, and every one allows you to be the best horseman in this country, and one of the richest men in the city."

"Alas! good Socrates," answered Ischomachus; "and yet, though I believe this to be true, I cannot escape detraction. You thought, perhaps, I was going to say, that it was these things which gave me the name of an honest and good man."

"It was my thought," said Socrates; "but I have a mind to ask you, how you guard against detractors, and whether you speak in your own cause, or in such causes as relate to your friends?"

"Do you believe," answered Ischomachus, "that I do not sufficiently do my part against my detractors, if I defend myself by my good deeds, in doing no wrong, and acting as much as I can for many men's good? or do you not think I am in the right if I accuse men who are mischievous, and do injustice in private cases, and to the city?"

"I pray you explain yourself," said Socrates. "I must tell you," said Ischomachus, "I am always exercising myself in rhetoric and eloquence, and in the practice of justice; for if I hear one of my servants complain of another, or justify his own cause, I always endeavor to settle the truth between them; or if I discover any dispute among my friends or acquaintance, I endeavor to make it up, and recover their friendship for one another, by showing them the happiness and profit of friendship, and the distraction and inquietude which attend those who are at variance with one another. I praise and defend those who are accused wrongfully, or are oppressed without a cause; and before the lords of our government I accuse them who are promoted unworthily; I praise them who set about their business with care and deliberation, and blame such who go rashly about their work. But I am now brought to this dilemma, whether I am to bear with faults, or punish them."

"What is your meaning in that," said Socrates, "and who s the person you mean?"

"It is my wife." said Ischomachus.

"In what manner then are your disputes?" said Socrates.

"We have very little occasion for that," replied Ischomachus, "as yet; nor have we more words in our disputes than, such a thing is not done so carefully as it might have been; and that we may learn by a false step how to guide ourselves for the future: but if she should be unfortunate enough to give her mind to lying and deceit, there is no reforming her." To this Socrates answered: "If she should at any time tell you a lie, you will hardly insist upon the truth of the matter.

XII. "But, perhaps, good Ischomachus, I detain you from your business, and I would by no means hinder a man of your capacity and understanding from proceeding in your affairs."

"You are no hindrance to me," answered Ischomachus, "for I am determined to stay here till the court is up."

"This gives me another token of your justice," said Socrates; "it is an instance of your circumspection, and regard to maintain the noble character the world has given you, of being a good and honest man; for, notwithstanding the many employments you usually engage yourself in, and the delightful method you take in the exercise of them, yet because of your promise to these strangers, to wait for them in this place, you choose to neglect your own business and pleasure, rather than prove worse than your word."

“As for the business you speak of,” said Ischomachus, “I have taken care that nothing shall be neglected; and my greatest pleasure is in being punctual with those that I appoint; for in my farm I have my bailiff or steward of husbandry, and deputies who take care of my businesses.”

“Since we are fallen into this discourse, pray tell me, good Ischomachus,” said Socrates, “when you have occasion for a good bailiff or steward for your country affairs, do you use the same method as if you wanted a good builder, to inquire after one who is best skilled in the science? or do you teach and instruct those you hire into your service, in the business you want to employ them in?”

“Good Socrates,” answered Ischomachus, “I endeavor to teach them myself; for he whom I instruct in the management of my affairs, when I am absent, will know the better how to carry on my works agreeable to my liking; rather than if I was to employ one who already had a pretence to knowledge of the business I wanted him for: as I guess I have experience enough to set men to work, and to direct them how they shall go about their business, I therefore suppose I am able to teach a man what I can do myself.”

“Then, surely, your bailiff in husbandry,” replied Socrates, “must be always ready and willing to serve you; for, without he has a love for you, he will never use the utmost of his diligence for the advancement of your affairs, though he be never so expert in his business.”

“You say right,” answered Ischomachus: “but the first of my endeavors is to gain his love and affection to me and my family, by which means he has a regard to my welfare.”

“And what method do you take, good Ischomachus,” said Socrates, “to bring the man to love and respect you and your family? Is it by the benefit you do him, by learning him a profitable business?”

“I do not suppose that,” said Ischomachus; “but, whenever the gods are favorable to me in the advancement of my fortune, I always reward my steward.”

“So I suppose,” said Socrates, “that you mean by this, that such people as you assist with money or goods will bear you the best service and respect.”

“Yes, certainly,” said Ischomachus, “for there are no instruments in the world so engaging, or that will prevail so much over mankind, as money or profit.”

“But is it sufficient for him to love you?” replied Socrates; “for we have instances enough that men love themselves before all others; and we have also some examples of those who are lovers of themselves, and yet are so negligent to their own profit, that they never reap those things they wish for.”

Ischomachus answered: “But, good Socrates, before I choose them among my servants that I have brought to love me, to dignify with the places of stewards or deputies, I teach them the good consequence of diligence and industry.”

“Is it possible you can do that?” said Socrates; “for, in my opinion, we can hardly bring men to do another man’s business as punctually as he might do it himself.”

“That I allow,” said Ischomachus: “I mean, that we can never instruct a man to use the same diligence for another that he would do for himself.”

“But,” replied Socrates, “who are those, then, whom you think worthy of employment, or of receiving your instructions?”

To this Ischomachus answered: “Those, in the first place, who cannot avoid drunkenness, are excluded from this care; for drunkenness drowns the memory, and is the occasion of forgetfulness.”

“And is this the only vice,” said Socrates, “which is the occasion of negligence?”

“No,” replied Ischomachus, “for those who indulge themselves in sleep, are incapable of such employments.”

“And are there any more,” said Socrates, “whose vices make them unfit for your service?”

“Yes,” answered Ischomachus; “for I am persuaded those who are addicted to the flesh, bend their minds so much to that thought, that they neglect all other business; for their whole hope and study is upon those they love and if one was to order them to business, it would be the greatest punishment that could be inflicted on them; for there can be no greater pain laid upon any creatures in nature, than to prevent them from the object of their desires. For these reasons, when I find people engaged in such affairs, I set them aside, and never take the pains to instruct them in the matters that relate to my estate.”

“But what say you,” said Socrates, “of those who have a provident thought, and are saving on their own account; do you believe these would not be diligent in the management of your estate “These,” replied Ischomachus, “I choose to employ before all others; for they are sooner brought to be diligent than those who have contrary sentiments; and, besides, it is easy to show them the profit of diligence; and if such a man happens to come in my way, I commend him and reward him.”

“But how do you treat those servants,” said Socrates, “who are ready to obey you in all your commands, and are diligent at your word, and have a moderate share of good order in the management of themselves?”

“These,” said Ischomachus, “I have a great regard for; for I carefully reward those who are diligent, and lay as many hardships as I can upon those who are idle and careless.”

“But tell me, dear Ischomachus,” said Socrates, “is it possible to reform a man who is naturally negligent?”

“No more” answered Ischomachus, “than it would be for a man who is ignorant in music, to teach and instruct another man in that science; for it is impossible to make a good scholar, if the master does not know his business; and, by the same rule, no servant will be diligent when his master sets him the example of neglect. I have heard often enough, that bad masters made bad servants; and I have often seen a small reproof to a servant put him or her upon their duty. However, the best way to make a good servant, is for the master to set him a good example of industry, and be careful and watchful to oversee and regard, that every one about him is diligent in their respective office, and reward those who are deserving, and punish the negligent. The king of Persia once spoke much to the purpose in a case of this nature. When he was riding upon a fine horse, one of the company asked him what made his horse so fat: his reply was, ‘The eye of his master and we have many beside, good Socrates, who think that every thing whatever is improved by the same regard of the master.”

XIII. “But, good Ischomachus,” said Socrates, “when you have trained up your steward to be diligent, and to observe your directions, do you esteem him thoroughly qualified to be your steward or bailiff, or has he then any thing else to be instructed in?”

“Then,” answered Ischomachus, “there is yet more which is necessary for him to understand; for he must learn the particulars of his business, to know when and how he must dispose of every thing; for, without the knowledge of these particulars, a steward is an insignificant person; he is like a physician who has the care of a patient, and is up early and late to attend him, and at last knows nothing of his distemper.”

“But when he has learned all this, good Ischomachus,” said Socrates, “is he then perfectly qualified to be your steward, or director of your farm?”

“There is still more required of him,” replied Ischomachus, “for he must learn to rule, as well as direct the workmen.”

“And is it possible,” said Socrates, “that you can teach a man to govern, or know the great science of command?”

“I think,” said Ischomachus, “there is no difficulty in it; though, perhaps, the reasons I may give for it are ridiculous.”

“An affair of this consequence,” said Socrates, “is no laughing matter; for the man who can instruct others how to govern, must himself be a person of great wisdom, and deserve the highest character; for he, who can teach men how to rule, may teach them how to become masters: and he who can raise them to that dignity, may teach them those princely virtues, which will make them worthy the command of kingdoms.”

“Good Socrates,” answered Ischomachus, “let us look into the fields among the beasts for an example of the facility of learning to govern. Those creatures who are restive and stubborn are beaten into obedience; while, on the other hand, those who obey our directions are treated handsomely, and rewarded. Colts, when they are under the management of the breaker or jockey are caressed when they take their lessons kindly; but when they are restive or disobedient, they receive the correction of the lash? and by these means they are brought to make good horses. If we breed spaniels, we treat them in the same manner, to learn them to hunt, to take the water, to fetch and carry, and be watchful; but, as for men, we may persuade them, and bring them to obedience, by setting before them rewards and punishments, and teaching them that it will be for their advantage to obey; but, as for bondmen, or those of the lowest rank, they may be brought to obedience another way; provide well for their bellies and they will do any thing; while those, who have noble spirits, are best encouraged by praise, for praise is no less welcome to them, than meat and drink is to those of the meaner sort. And when

I have instructed my steward to govern by my example, I add this, as an instruction to him, that in the bestowing of clothes or apparel among my workmen, he should always give the best to those among them who are most diligent in their business; for industrious men ought always to have better dress, and have the pre-eminence in all things, before the lazy and negligent; for I am of opinion there is nothing more irksome to industrious servants, than to see those who are negligent in their business promoted or encouraged, while they themselves are neglected and overlooked. It discourages them from minding their business for the future; therefore I always take care to keep that difference among my servants. And when I observe that my bailiff shows the same regard for those servants under his care, I praise him for it; but when I perceive he has preferred any one unworthily, by means of flattery or some such deceit, I never suffer his award to pass, but blame him and reprimand him."

XIV. "Then," said Socrates, "tell me, good Ischomachus, when you have thus taught your steward to rule, and discipline the workmen and servants under his care, is he then completely qualified for your service? or is there any thing else that you are to instruct him in?" To this Ischomachus replied: "There is yet a very material point, which concerns the business and character of a good steward; and that is, honesty; for if after he has received all my former instructions, he gives his mind to pilfer, and clandestinely to make away with my goods, his diligence in overseeing the management of my lands will be but of little profit to me, or it may be I may happen to be out of pocket by his service, so that I had much better be without the industry of such a man."

"But, good Ischomachus, I pray you tell me," said Socrates, "Are you capable of teaching men justice and honesty?"

"Yes," replied Ischomachus; "but I find that it is not every one I teach or instruct in these ways of truth and equity, who follow my instructions: but, that I may yet make my servants follow the rules of justice which I teach them, I use those laws of Draco and Solon, which say, that little pilferers must be punished, but the great robbers must be imprisoned and put to death. Whereby it appears, that those, who enrich themselves by indirect methods, and amass to themselves fortunes by thievish practices, those goods shall not be profitable to them. And to these laws I likewise add some of the Persian laws: for those of Draco and Solon only inflict punishments on those who do amiss; but those of the king of Persia do not only punish those who do wrong, but reward those who do right. There are some men, who out of covetousness care not what they do, nor what indiscreet means they take, so that they gather riches together seeing that others can amass great fortunes in an honest way; believing that, so long as riches may be got by honest men, every one who is rich shall be accounted an honest man: but these have never any pleasure or good advantage in their ill-got goods; or it is very rarely that they preserve them: but those who get their riches by industry and honesty, are always prosperous, and have pleasure in what they have got, especially because they have wronged no man. If among my people I discover any such who have that covetous and deceitful temper, and do not receive benefit by my instructions, I discharge them out of my service. And, on the other hand, those who make honesty their rule and study, behave themselves as true and faithful servants, without having so much regard to profit, as honor and praise from me; if they are bondmen, I give them their liberty; and do not only pro -mote them and advance their fortunes, but take every opportunity of recommending them to the world as good and honest men; for I judge, that the man may be esteemed good and honest, who upon the principle of virtue will employ himself for his master's interest, and will not scruple going through a little difficulty for his master's service, when there is occasion, without a design of making his advantage of him by deceitful or indiscreet means.

XV. Such a man, when I have once gained his esteem and affection, by instructing him in the science of making a good advantage of the work he is employed in, and have sufficiently instructed him to rule; I am persuaded he will transact every thing for his master's advantage, as well as if the master was continually to be present: and, with these qualifications, I think a man sufficiently capable of the business of a steward, and worthy of being employed in that office."

"But, methinks," said Socrates, "the principal part of a steward's business you have not yet explained."

"What is that, good Socrates?" said Ischomachus.

"I remember," said Socrates, "in your discourse, you said, that before all things a steward ought to know every particular of his business, and how to order every thing for his master's profit; for, without that, you observed that diligence would be of little use."

"Then, I suppose, good Socrates," answered Ischomachus, "you would have me instruct you in the science of husbandry?"

"That is my desire," said Socrates; "for the science of husbandry is extremely profitable to those who understand it; but it brings the greatest trouble and misery upon those farmers who undertake it without knowledge."

"I shall first of all, good Socrates," said Ischomachus, "acquaint you, that husbandry is an honorable science, and the most pleasant and profitable of any other: it is favored by the gods, and beloved by mankind, and may be learned with ease. Husbandry, therefore, is becoming a gentleman; for if we were to take a view of all creatures upon earth, those only are esteemed, and worthy our regard, which are docile enough to become profitable to us; while the others, which are wild and fierce in their nature, and are not capable of becoming useful to us, are rejected."

"If I remember right," said Socrates, "you have already instructed me, that a steward or deputy should first love you, then be diligent; in the next place, he should be able to rule, and then be honest; but I am impatient to hear how he must behave himself in the practice of husbandry, with regard to the works, when and how they are to be done; but hitherto you have not explained those particulars, but passed them over as if you imagined I knew as much of the affair as yourself, or understood the business. For my part, I am in the same state, with regard to husbandry, that a man would be who does not understand letters, and you were to show him a writing; he will be never the better for seeing that writing, unless he know the use of the letters that composed it. So I imagine, that it is not enough to be diligent in the science of husbandry, but a man must understand every particular of it. This I suppose you are a master of, but you have not yet acquainted me with the matter. Therefore, if I was now to set about the business of husbandry, I should be like a quack in physic, who went about visiting of sick people, and neither knew their distempers, nor what medicines were proper for them. Therefore, good Ischomachus, I desire you will learn me every particular point of the husbandry you practice."

"Good Soc-rates," replied Ischomachus, "the science of husbandry is not like other sciences, which require length of time to study them, or a great deal of labor to compass them before a man can get his living by them; for husbandry is easily learned, by observing the workmen now and then, and by consulting those who understand it. By these means you may instruct your friends in it. Again, we may observe, that men of other sciences, which are artificers, will always keep some secret of their business to themselves; but the husbandmen are open and free in their discoveries, that every one may learn from them. The husbandman, who has the greatest knowledge in planting of trees, is proud of being observed, or that any man takes notice of his excellence in that art. And the sower is no less pleased to have any one stop to look upon him. And if you ask him about any thing which has been well done in his way, he will be free enough to inform you how it was done. And so, good Socrates, we may see by this, that husbandry teaches men good manners and good nature."

"This," said Socrates, "is a good beginning: and now you have come thus far, I cannot leave you till you have given me every particular relating to husbandry; and especially I insist upon it, because you say it is a science so easy to learn. You will therefore have the less trouble to instruct me; and it will be the greater shame to me, if I do not learn it by your instructions, particularly since it is so profitable a science,"

XVI "I am very willing to answer your desire," said Ischomachus, "and instruct you in every point of husbandry. The principal part, which men dispute about, is the soil. On this account, all the philosophers, who have busied themselves about it, have given us more words than truth; for they throw some occult quality in the way, which leaves us as we were before: and at the best tell us, that he, who designs to be a husbandman, must first know the nature of the soil."

"It is not contrary to my opinion," said Socrates, "that one ought to know the quality of the soil; for those who do not know what the ground will bring forth, how can they appoint either trees, plants, or seeds for it, which are natural to its intent, or are proper for it?'—"Dear Socrates," said Ischomachus, "this is easily discovered, by observing the grounds of other people, where you may see the diversities of plants growing on them, and, by a little observance that way, you will learn what they will produce, and what are contrary to their nature; and when a man has once made his due observation of this, he will see that it will be unprofitable to resist nature or the will of Providence. For when a man plants or sows those things which he accounts necessary for his use, and the soil does not delight in the nourishment or production of them, or has not a will to bring them forth, his expense and trouble is to no purpose. But if he cannot discover the nature of the grounds next about him, which either through idleness, or any other cause, have been mismanaged or neglected, let him consult other lands remoter from him; and if even they happen not to be cultivated, he may learn by the weeds that grow upon them, what they will produce: for those plants, which grow wild, show best the inclination and disposition of the soil; so that husbandmen may even learn their business by observing what the ground will produce of itself."

"Then," replied Socrates, "I perceive that a man need not abstain from husbandry purely because he does not knowhow to describe the nature of a soil; for, I remember, I have seen fishermen who have employed themselves continually upon the sea, without inquiring what the water is, or its principles, but pass over it, and when they find any thing to their advantage they take it, and leave the rest. The same, I suppose, is the design of the husbandmen; when they look upon soils, it is to observe what they bring forth, that is valuable, and what they mil not.'—"In what point of husbandry would you have me begin,' said Ischomachus, "dear Socrates, for you talk like an adept in that science? Your reasoning is good, and must proceed from understanding."

"All that I mean by my reasoning with you," replied Socrates, "is to knowhow I shall till the ground, so as to reap the most profitable crops of corn, or other fruits, from it; for it is becoming a philosopher to inquire into those things which are pleasant and profitable.”

“I suppose,” said Ischomachus, “you already understand that the stirring or breaking of the ground, which one may call fallowing, is of great advantage.”

“This,” answered Socrates, “I believe.”

“And suppose we were to fallow or plough the ground in winter?” said Ischomachus.

“That I don’t approve of,” said Socrates; “for the earth is then too wet, in my opinion.”

“And what do you think if we were to turn it up in the summer?” said Ischomachus.

“Then, I doubt,” said Socrates, “it would be too dry and hard for the plough.”

“Then let us plough,” said Ischomachus, “in the spring.”

“I think you are much in the right,” said Socrates, “for then the ground is most free and ready to open itself to the plough, and also is most ready to distribute its virtue.”

“It is not only so,” answered Ischomachus, “but then whatever weeds are upon the ground, being turned into the earth, enrich the soil as much as dung. And again, these plants are not grown to such a point of maturity or perfection that their seeds are ripe, and therefore cannot fill the ground with weeds; and besides, I suppose you know that both the fallowing and tilling of ground is always the better as the ground has the fewer weeds in it; for, besides the hindrance the weeds may give to corn, or other profitable herbs, they prevent the ground from receiving the benefit of the sun and free air.”

“This I agree to,” said Socrates.

“Then,” replied Ischomachus, “do not you think that often stirring the ground in summer will be the best way for it to enrich itself by the air and sun, as well as to destroy the weeds?”

“I am very sensible,” said Socrates, “that weeds will wither and dry quickly in the summer; and the ground can never receive more benefit from the sun, than if it is stirred with the plough, or fallowed in the heat of summer: and if a man dig his ground in summer, he will have the same advantage in destroying of weeds, which will then soon die; or else, by turning them in before they seed, they will enrich the ground: and by the turning up of the earth at that season, the sourness and rawness of that, which is turned up, will be corrected by the sun.”

XVII. “So I find,” said Ischomachus, “that we are both of one opinion concerning the stirring and fallowing of the ground.”

“It is true,” said Socrates; “but, to proceed to sowing, do you allow that the old opinion, which is agreed to and followed by the present operators in husbandry, concerning the season of putting the seed into the ground, is agreeable to reason, or are you of another opinion.”

To this Ischomachus replied; “When summer is once past, and September is upon us, all men then wait the pleasure of the gods to send rain to moisten the ground and prepare it for the seed; and, as soon as the rains fall, then every one employs himself in sowing, as the gods seem to direct.”

“Then,” said Socrates, “it seems that all men in the world have determined, by one assent, that it is not convenient to sow when the ground is dry; and those who act against this rule of nature are sufferers by it, as if they had offended the gods, by practicing against their laws.”

“We agree likewise in this,” said Ischomachus.”

“Then,” Socrates replied, “I perceive that mankind consent to the order of nature, which is the will of the gods; as, for example, every one thinks it convenient to wear furred gowns and warm clothes in the winter, and then also to make a good fire, if he can get wood."

"But there are many," said Ischomachus, "who vary in their opinions concerning the time of sowing; some will sow sooner, others later."

"There is good reason for that," replied Socrates, "for the gods do not always give us the same kind of weather one year as another. Therefore it is sometimes best to sow early, and at other times it is better to sow late."

"I allow what you say," said Ischomachus: "but whether is it best to sow much seed, or little?"

"I am of opinion," answered Socrates, "that it is best to allow seed enough, and distribute it truly and equally upon the ground: but one may sow the seed too thick, as well as employ too small a quantity of it."

"I agree with you," said Ischomachus, "in this point."

"I imagine," said Socrates, "there is a great art in sowing."

"It is surely so," replied Ischomachus; "for there are many sorts of grain, and all of them must be cast upon the ground by a man's hand."

"I have seen that," said Socrates.

"But some men," replied Ischomachus, "can cast it even, and distribute it equally upon the ground, and others cannot."

"Then, I suppose," said Socrates, "that the skill in sowing the seeds depends upon the frequent practice and exercise of the hand; as those who play upon the harp, or other instruments of music, must keep their hands continually in practice, that their fingers may readily follow their mind."

"You reason well," said Ischomachus: "but suppose the ground is light and open, or suppose it is stiff and heavy?"

“What would you have me understand by that?” said Socrates: “do you not take the lighter ground to be the weakest, and the heavy ground to be the strongest?”

“I am of that opinion,” said Ischomachus.

“I would then fain know of you,” said Socrates, “whether you would allow the same quantity of seed to one kind of ground as you would to another, or whether you make any difference?”

“You know, good Socrates,” said Ischomachus, “that it is as natural to put the most water to the strongest wines, and the stronger a man is, the greater burden he may carry; so some men are nourished with a very spare diet, while others require a greater share of nourishment: the same ought to be considered in our present case.”

“Will not the ground,” said Socrates, “grow more strong by the more use, as horses and mules are thought to do?”

“This I take as a jest,” said Ischomachus: “but what I think necessary to acquaint you of, is, that you sow your grain when the ground is moist, and has the best advantage of the air; and when the corn is come up, and is high in the blade, if you then turn it into the ground with a plough, it will greatly enrich the land, and give it as much strength as a good dunging would do: and we must also remark, that if we continue to sow for a long space the same sort of grain upon any ground, but upon that especially which is weak or overcharged with seed, it will impoverish the ground, and wear it out of heart. We may compare this to a sow which suckles many pigs, and sustains them till they grow large; the more pigs she suckles, the more will she be weakened.”

“You intimate by this,” said Socrates, “that one ought to sow the smaller quantity of grain upon the weakest soil.”

“It is true,” replied Ischomachus, “and is what we have partly agreed on before, that to overburden ground with seeds or corn, is the ready way to weaken it.”

“But for what reason, good Ischomachus, do you make ditches or furrows in the corn fields?”

“You know very well,” replied Ischomachus, “the winter is subject to wet weather.”

“What mean you by that?” said Socrates.

“When the rains fall in great quantity,” replied Ischomachus, “the wet is apt to do great damage to corn; for sometimes our corn fields are incommoded with waters, and the corn, in some of its parts, smothered with mud; and besides, the roots of the corn in other places will be washed bare; the waters also carry the seeds of weeds to the lower parts of the ground, and by that means fill the corn with weeds.”

“I presume,” said Socrates, “what you say is agreeable to reason.”

“And do you think,” said Ischomachus, “that corn which is subject to these inconveniences ought not to be assisted?”

“Undoubtedly,” answered Socrates.

“Then what shall we do,” said Ischomachus, “to prevent the waters from covering the corn with mud?”

“I find then,” said Socrates, “it is proper to ease the ground from wet to secure the corn.”

“But,” said Ischomachus, “if the roots of the corn should be laid bare, and the earth about them worn away?”

“Then I suppose,” continued he, “the best way to remedy that, is to find some means of covering the roots with earth, that they may be well nourished.”

“But if the weeds, which may come up by this management,” replied Socrates, “should suck up, or destroy the nourishment which the corn ought to receive, like the drone-bees in a hive, who are of no value in themselves, and yet live upon the industry of the working bees, and destroy the provisions which they have laid up to be manufactured into wax and honey.”

“The weeds,” replied Socrates, “should then be plucked up, as the drones in a hive are killed and discharged from it.”

“Do you think then,” said Ischomachus, “that water-furrows, or trenches in the ground to draw off the water, are not good to save corn?”

“I see now the use of similes,” said Socrates; “for there is nothing can instruct me so much as similes; for-by them you have learned me to know the disadvantage of weeds among corn, as well as instructed me that drones are not always advantageous to bees.

XVIII. “But now I desire of you, dear Ischomachus, to tell me what is the business of harvest?”

“This,” replied Ischomachus, “I shall be ready to do, if you are not already as wise as myself. I suppose,” continued he, “you have heard that corn must be reaped?”

“Certainly,” said Socrates; “but I am impatient till you proceed to inform me what are your sentiments in the affair of reaping, or getting in the harvest.”

“Which do you think, good Socrates, we ought to do;—to stand to reap with the wind, or to reap against it?”

“I suppose,” said Socrates, “it would be improper to reap against the wind, for it would increase the labor; it would hurt the eyes, and be likewise more difficult to the hands; for we sometimes meet with corn that is laid or beat down by the wind.”

“And then,” replied Ischomachus, “how will you cut it? will you cut the tops only? or cut it close to the ground?”

"If the straw is short," replied Socrates, "I would cut it near the ground, for the advantage of the straw; but if the straw is very long, then I would rather cut it about the middle, for two reasons. In the first place, because the corn will be separated more easily from the straw: and in the next place, the remaining straw, if it is burned, will enrich the ground very much; or if it is afterwards cut and mixed with dung, it will increase it."

"Good Socrates, your discourse," said Ischomachus, "shows me plainly, that you understand reaping as well as I do."

"As you agree with me," said Socrates, "in what I say concerning reaping, I suppose I am right in my argument; but let me now see if I understand how to separate the corn from the straw."

"You know, undoubtedly," said Ischomachus, "that horses do that work."

"I am sensible," said Socrates, "that it is not only horses that separate corn from the straw, by treading upon it, but asses and oxen also are used on the same occasion."

"But how do you think, good Socrates," said Ischomachus, "that horses, or the other creatures you speak of, can so equally tread the corn as to get it all clear of the straw?"

"The men who have the care of this work," said Socrates, "take care to stir the corn as they see occasion, that it may be all equally separated from the straw, flinging into the way of the cattle's feet such corn as they observe to lie still in the straw."

"I perceive," said Ischomachus, "that you understand this part of husbandry as well as myself."

"In the next place," said Socrates, "let us examine how we ought to clean corn from the husk or chaff."

“I suppose,” said Ischomachus, “you know that if you begin to winnow your corn on that side of the winnowing place which is next the wind, the chaff will be scattered all over the winnowing floor?”

“It must certainly be so,” said Socrates.

“And it must also fall upon the corn,” said Ischomachus.

“This,” said Socrates, “is certain; but it is the skill of a good husbandman to winnow his corn in such a manner that the chaff may fly from it, and be carried to its proper place.”

“But when you have cleaned the corn,” said Ischomachus, “as far as the middle of the winnowing place, will you rather let it remain there, or carry the clean corn to another place where you design to lodge it?”

“When I have a sufficient quantity of corn clean,” said Socrates, “I would set that by; lest, in cleaning the rest, the corn I have already cleaned, and lies scattered abroad upon the floor, should partake of the chaff from the corn that is cleaning, and then I shall be obliged to do my work twice over.”

“I find, good Socrates,” said Ischomachus, “that you are sufficiently skilled in the management of corn, even to the cleaning of it, for the markets; and I am of opinion, that you are well able to instruct, rather than to be instructed. In my discourse with you on this branch of husbandry, I find that I have yet some remembrance of the management of corn. If there is no more in it than what we have mentioned, I knew as much of it many years ago. And now I recollect that once I could play upon the harp, and the flute, could paint, and carve, and knew many other sciences, and yet I never had a master to teach me any of these sciences, no more than I had one to instruct me in this branch of husbandry; but I have seen men work as well in the sciences I speak of as in husbandry. You are satisfied,” said Ischomachus, “that husbandry is a pleasant science, and that it is easy to learn.”

XIX.”I am persuaded,” said Socrates, “that I now understand, and have long since known, the business of sowing and reaping of corn. But I was not certain in my judgment, till I had the opportunity of conversing with you about it: but I desire you to tell me, whether setting of trees is any part of husbandry?”

“Yes,” replied Ischomachus—”Then,” said Socrates, “though I know something relating to sowing and cleaning of corn, yet I doubt I am ignorant in the business of planting of trees.”

“I guess,” said Ischomachus, “you have as much knowledge in the one as in the other.”

“I must certainly be ignorant,” said Socrates, “in the art of planting trees, because I do not know what sort of earth a tree should be planted in, nor what depth, nor of what size the tree should be: nor yet, when it is planted, what is the best means to make it grow.”

“I am ready to instruct you,” said Ischomachus, “in any thing you are ignorant of. Have you observed, good Socrates, what holes or pits are commonly made to plant trees in?”

“I have observed that very often,” said Socrates. “Have you ever observed these deeper,” said Ischomachus, “than three feet?”

“No,” replied Socrates, “nor yet more than two feet and a half.”

“And the breadth of the trench which is made for planting a tree, did you ever observe that?” said Ischomachus; “for by such inquiries you may guess at the size of the trees which are fit to be transplanted.”

“I never,” said Socrates, “saw any wider than two feet and a half.”

“And have you ever seen any shallower than two feet?” said Ischomachus.

"I have not observed," said Socrates, "any of those trenches which are dug for planting trees less than two feet and a half deep; for if the trees were to be set shallow, the summer heats would soon make them wither, and scorch the roots."

"Then I suppose," said Ischomachus, "that your opinion is, that the trenches or holes, which are to be dug for planting of trees, ought to be no deeper than two feet and a half, and just as much over?"

"I guess," said Socrates, "they should be so."

"But do you consider the nature of the ground," said Ischomachus, "and make the proper differences—which is dry, and which is wet?"

"The ground," said Socrates, "which lies about Licabectus, I call dry ground; and the ground about Phalericus I call wet ground, for that is a marsh."

"I then desire to know," said Ischomachus, "whether you would plant trees deeper, or shallower, in wet than in dry soil?"

"My opinion is," said Socrates "that in the dry ground we ought to dig the trenches the deeper, for in wet ground we shall soon come to the water, and I do not think it convenient to plant trees deep in such wet places."

"You argue very rightly," said Ischomachus; "but do you know, good Socrates," continued he, "when you have the choice of these grounds, which are those trees which are most proper to plant in them?"

"I think I do," said Socrates.

"And do you think," replied Ischomachus, "that when you set a tree to the best advantage, it will be best to plant it in such earth as has been made very fine by working, or in such as has not been made loose and open by culture?"

“It is my opinion,” said Socrates, “that a tree planted in well-loosened earth will prosper much better than in that which has been uncultivated.”

“Do you allow, then,” said Ischomachus, “that the earth ought to be fine and prepared on this occasion?”

“I guess it should be so,” said Socrates.

“But concerning the branch or cutting of a vine, when you plant it,” continued Ischomachus, “will it grow better if you set it upright in the ground, or lay it along in the earth?” — ”Certainly,” said Socrates, “it will grow the stronger if we plant it, or lay it lengthwise in the ground; for the more roots it gains, the greater strength it will have in its shoots.”

“We are both of one opinion,” said Ischomachus. “But when you plant one of these cuttings or branches of vines, would you leave it with the earth loose about it, or tread it hard over the part of the cutting which you bury?”

“I am of the opinion,” said Socrates, “that it is best to tread down the earth very close about it, for else the ground would lie so hollow all round, that the air and moisture would come unequally to it, and rot and spoil the roots; or else the sun’s heat would too soon reach it, and prove of as bad consequence.”

“So far we are of one opinion,” said Ischomachus.

“And must I plant or raise a fig-tree,” answered Socrates, “as I do the vines?”

“I suppose so,” said Ischomachus; “for he who is master of the art of raising vines, may as well raise figs, or most sorts of trees.”

“But is there not,” replied Socrates, “something particular in the propagating of olive-trees?”

“You may observe that,” said Ischomachus, “on every highway side, when we set a large truncheon of an olive-tree, we dig deep holes, and plant them very deep in the ground, covering the top of the truncheon with clay, and yet we do not find that any other trees or plants are covered in this manner.”

“I know this,” replied Socrates, “for I have often seen it.”

“Surely then,” answered Ischomachus, “when you have seen an experiment, you must remember it; and especially in this common case you know that it is not sufficient to put clay over the large top of the olive truncheon, but also to cover the clay close with a shell.”

“All that you have said relating to this, I likewise know perfectly,” said Socrates: “but when we began to discourse whether I understood the planting of trees, I was not satisfied whether I was sure of the right method: and when you came to the particulars, I gave you my opinion, freely; and it happened to agree with you, who of all men upon the face of the earth are esteemed the most perfect husbandman. I am happy, good Ischomachus,’ continued Socrates, “in what you have taught me, which by degrees I brought you to do: you have taught me every particular of good husbandry; and have led me, by your instructions in those things I did not understand, to those that I find I have some knowledge in; and, by your easy way of reasoning, I shall be capable of remembering every thing you have laid before me.”

“Do you believe,” said Ischomachus, “that if I were to discourse with you concerning the goodness and fineness of silver and gold, that you could answer as pertinently as you have done to the affair of husbandry? or if I were to ask you concerning music and painting, do you think that you could reason about them so well as you have done in husbandry?”

“I think so,” said Socrates; “for you have satisfied me that I am not ignorant in husbandry, and yet I never had any master to instruct me in it.”

"You may remember," said Ischomachus, "that in this discourse I told you that husbandry was easily learned by a little observation and conversation; for the practice of it teaches us many particulars, which no master can ever teach us, or would ever have thought on. In the first place, the vine will, of its own accord, run up trees, if there are any near it. This natural disposition in the vine shows us, that we ought to sustain the vine with props. Again: we observe that it spreads its leaves abroad the most at that time of the year when its fruit is in its growth; which shows us, that the fruit, during its growth, should be shaded from the too scorching rays of the sun. And again, we may observe, that about the time when grapes ripen, the leaves shrink, and lay the fruit more open to the sun, that they may ripen the better: so it appears that shade is necessary to help the growth of fruit, and a full sun is natural to the good ripening of fruit. And also when we see the vine full of clusters, we find some ripe, and others green; then let the ripe clusters be gathered, for otherwise they would spoil and rot, as it is in the fruit of the fig-tree; gather those which you perceive are completely ripe, lest they drop and are lost."

XX. "It is surprising to me," said Socrates, "that seeing husbandry is so easy to learn, we find such a vast difference among the husbandmen: some we may observe to be very rich, while others have hardly bread to eat."

To this Ischomachus replied: "It is not the want of knowledge which makes the poor husbandman, for both the rich and the poor may have the same knowledge in sowing or planting, or in the virtue of the soil, and what is best to plant upon it, and in the ordering of vines, or that ground is improved by fallowing and by manuring: but that which makes some farmers poor and some rich, is because the first are negligent and lazy, and the latter are industrious and thrifty. The poor farmers often lose the profit of a year by neglecting to make proper provision either by fallowing, manuring, or sowing; nor has he any wine through his neglect in planting of vines, or taking care to prune and dress those vines he has already: such a man has neither oil, nor figs, for he neglects the care of his tree. It is for these causes, good Socrates, that you find one farmer richer than another; for the knowledge of farming, or any thing else, is of no service or advantage, if it is not industriously practiced. And so among generals of armies, it is likely that they all understand their business, but yet we perceive that some of them gain more honor and more riches than others. Their case is like that of the husbandmen; the industrious are always gainers, while the negligent always come off losers. If a general leads an army through an enemy's country, and be discreet and careful, he will march his forces in good order, and be vigilant; so that upon any occasion he is prepared for battle; and yet there are some generals who know these things, and do not act with that care, which ever brings them either honor or profit. All these are convinced that there is a necessity of keeping watches, and sending out scouts to reconnoiter the enemy, or observe their motion; but yet some neglect this business, and lose themselves by it. So likewise we all know that manuring the ground is necessary, but yet some are negligent, and never employ themselves about it, though it may as well be done by turning of cattle into it, as by other means. Some farmers use all their industry to gather together all the sorts of manures they can find; and others, though they might as well enrich their ground by the same means, yet never set their minds about it. The rain falls in hollow places, and remains there to the injury of -the ground; and where this happens, it shows the carelessness of the farmer; the weeds which rise on this occasion are witnesses of his negligence; for the diligent farmer always takes care to lay his ground in good order, and to clear it of weeds; and the very weeds he pulls up reward him for that work; for if he cast these weeds into a pit of water, and let them rot there, they will produce as good manure as dung itself. For there are no herbs or plants which will rot by lying in water, that will not make good manure for land; nor is there any sort of earth which will not make very rich manure, by being laid a due time in a standing water, till it is fully impregnated with the virtue of the water. We may yet remark further, that if the ground be too wet to sow upon, or too surly or sour to plant in, there is still a remedy for it: if it be wet, we may drain it by ditches or furrows; and if the ground be stiff and sour, mix it with such things as are light and dry, or of a contrary nature to the soil. We find some husbandmen have regard to this, and some have no thought of it, and throw away those things which might prove to their profit. But suppose we were to know nothing of ground, or what it would bring forth, or can see neither tree nor plant upon it; nor have the opportunity of consulting, or learning, from some experienced husbandman, the worth of the ground; may we not satisfy ourselves at a very easy rate, by trying what it will bear or bring forth, in making a few experiments upon it? Is not this more easy than to experience what a horse or a man is? for in all that we can discover by our experiments upon soils, we are sure of the truth of what we see; there is no dissimulation: therefore the ground is the best master or director for the husbandman, in showing him what things are proper for it, and what are the contrary; and it gives us satisfactory proofs who among the farmers are diligent and discerning, and who are not. For the science of husbandry is not like other sciences, or trades or callings; for in them the artificers may excuse themselves by saying they wanted skill in what they wanted to undertake; but husbandry, we know, is within the compass of every man’s knowledge; so that whenever we see that the ground is tilled and sown, it will always produce something beneficial, and is the most pleasant of all others; and therefore I suppose it is that husbandry, above all other sciences, encourages men to practice it: and besides, this is preferable to all others, because every man, who has the least regard to himself, must surely know that no man can live without necessaries: and what does not this produce? We may therefore know, that those who will not learn such sciences as they might get their living by, or do not fall into husbandry, are either downright fools, or else propose to get their living by robbery or by begging. But we will suppose that some of the husbandmen we speak of, are such as employ deputies or bailiffs to look over their workmen; and the overseers of some do right, and the greater part do wrong. Those who do right will take care to see their work done in season; but the negligent steward will not keep his workmen to their business; he will let them leave their business when they think convenient, without regard to his master's profit. And to compare the diligent and careless steward, there will be the difference, that he who sets his people to work regularly, and keeps them employed, gains half as much more as the man who is careless of his laborers: it is like two men who are sent out to travel fifty miles, who are both equally strong and in health; the man who is the most industrious shall perform his day's journey to the utmost of his power, and lose no time; while the other stops at every spring, at every shade, and at every refreshment he can get, and loses so much in his progress, that though they both run and walk alike, the lazy and negligent man makes two days of the same length that the industrious man makes in one day: so, in all sorts of works, there is a great deal of difference between the man who sets himself heartily about his business, and him who is careless and does not regard his work; for when these last happen to weed or clean the vines at such an improper season that the weeds spring again, they rather spoil than mend their vineyards: their absolute neglect would have been more excusable. Such errors as these are the occasion why many farmers are sufferers. A man who has a large family, and is at great expenses for the maintenance of his house, if he cannot get enough by his rents and by his husbandry to find him and his people with necessaries, must certainly come to poverty. But such as are diligent, and apply themselves to husbandry, will as certainly increase their substance, and may easily grow rich. I remember my father had an excellent rule, which he advised me to follow; that if ever I bought any land, I should by no means purchase that which had been already well improved, but should choose such as had never been tilled; either through the neglect of the owner, or for want of capacity to do it: for he observed, that if I was to purchase improved grounds, I must pay a high price for them, and then I could not propose to advance their value, and must also lose the pleasure of improving them myself, or seeing them thrive better by my endeavors. It was my father's opinion, that both land and cattle, with good management and industry, would doubly improve, and reward the master, and be no less pleasant than profitable to him. There is nothing which brings us a better return for our care and labor, than such ground as has lain a long time without culture; nor is there any thing so agreeable and pleasant, as to observe the good use such lands make of the industry and labor we bestow on them. Nothing rewards our labors so much as these; and I assure you," continued Ischomachus, "that I have often brought such land, as had never produced any thing of value, to bring such crops as were twice as much worth as the price I gave for the ground. This, I suppose, you will remember, and teach to those who fall into the way of your instructions. I may observe to you also, good Socrates, that my father neither learned this, nor any other branch of husbandry, from any one; his genius led him to study the reason of it, and even to assist in the working part;

for he delighted extremely to see the reward of his own labor and industry, and well knew that he could never expect so great a return from cultivated and improved grounds, as from uncultivated lands, which he took in hand. I believe, good Socrates, that you have heard of my father's excellence in husbandry above all the Athenians, and of his natural bent of fancy towards it."

Then Socrates replied: "Tell me, good Ischomachus, did your father, when he had improved such parcels of land, keep them to himself, or sell them to good advantage?"

"Now and then," replied Ischomachus, "he sold a parcel of land when he could receive a sufficient advantage for his improvements; and immediately bought fresh unimproved land in the room of it, that he might enjoy the pleasure of bringing it to his own mind."

"By what I can understand," said Socrates, "your father was wise and diligent in the science of husbandry, and had no less desire towards it, than the corn merchants have to find out where the best wheat is to be had; not even scrupling to pass the roughest seas, or run any other hazard to gain their intent; and when they have bought up as much corn as they can purchase, they then immediately dispatch it to their own houses; and reserve it in their warehouses till they see a good opportunity of selling it. I suppose then they do not sell it without consideration, or carelessly dispose of it at low markets; but are first assured where they may sell it at the dearest price."

"You seem to banter," replied Ischomachus; "but can we say the mason is in the wrong who builds houses and sells them, and perhaps has afterwards an advantage in repairing or improving them?"

XXI."I am very well persuaded," said Socrates, "from what you say, that your opinion is, every man ought to study that thing chiefly which may redound the most to his advantage, with the greatest facility. For, in the discourse we have had, you have insisted that husbandry is the science most easily learnt of any other, and particularly have given proofs of its being the most profitable study a man can pursue: and what you have observed in your discourse relating to it, has convinced me that husbandry is as pleasant and profitable as you represent it.”

“It is certain, as I have told you,” replied Ischomachus, “that husbandry is a most delightful and beneficial study; and it is as sure that it may be greatly advanced by the application, industry, and good management of the professors of it: we may compare it to a galley upon the sea, which is obliged to make its way as far in a day with oars, as it should with sails. We find that those masters or overseers of the rowers, who keep them encouraged with good words and proper rewards, gain so much upon the good-will of the laborers under their command, that they even outdo themselves, and perform almost as much work as double the number would do of such who are under the discipline of careless or surly masters: for, where such evil masters happen to rule over any sets of people, they never have their work done with a good-will, nor to the purpose: but a generous spirit in a master creates a free, hearty spirit in his servants, which makes them work merrily and heartily, sweating and pressing upon one another who shall excel in his business: so there are likewise some captains, who are of that ill disposition towards their soldiers, and use them with that vile barbarity, that they can never gain their will to perform any thing for their service either in peace or war; and in time of war especially, rather than assist, will expose their captains to the utmost danger. Nor can such leaders ever bring the men under their commission to be ashamed of any thing they do, even though they commit the worst actions; for the unmerciful or careless officer hardens the soldiers, that they have neither a regard for right or wrong: but there are other captains, who have discretion and prudence enough to manage their soldiers with so much good order, and gain so much upon their affections, that if these were to have the command of the same which we have been speaking of, would bring them to duty, and to act as one man in their officers' defense and service, in time of necessity; and instruct them to be ashamed of every thing that is base or dishonorable; exciting them to diligence, and to work with good will in such things as are becoming them to do, praising their labors, and rewarding them on all occasions. Such rule and management gains the captain victory and honor; for it is not only the business of the soldier to learn to draw the bow, or throw the javelin, but to know how and when to obey the word of command: and nothing will bring them sooner to this, than to gain their love and affection; for the general or captain who has good sense enough to gain the good esteem of the men under his command, may lead them through the greatest dangers. It is, therefore, such generals as have good generosity and discretion, who, in the management of their soldiers, commonly gain the characters of valiant and expert officers: for, though the number of the soldiers contribute to gain the battle, yet without the commanding officer gives them good instructions, and gains their love and affection to him, they never act to the purpose; nor can their captain gain any reputation by them; so that the great name is rather gained by wisdom and prudence, than by labor and strength of body: and it is no less to be observed in the science of husbandry, or other sciences, that those stewards, who have discretion and generosity enough to gain the goodwill of the men they employ, such will always find their work well done, and increase their riches, But if a master, or his overseer, be careless, and at the same time has the power of rewarding and punishing those under his direction, and, when he views his workmen, does not make them sensible, either one way or other, of his authority; whenever he comes, or goes, it is the same thing to them; they work or play at their discretion. Such a one is very little worth the regard of any man: but the man who ought to be admired and valued, is he, who, when he comes among his servants, creates in them a pleasant countenance, and makes them rejoice, every one running or striving in their business to serve him, and using all ways to get his praise and love. Such a man as this is worthy the rank of a king. A master of any science, as well as husbandry, who has good sense enough to bring his family to such affection toward him, and good order, he does not possess this by learning only, but he must receive his good nature and wisdom from the gods; he must be born with a generous nature, which must proceed from the gods; for I have never yet found the true gift of government, but it was attended with generosity. Where these excellent qualities appear, all under that direction are willing to obey, and especially if the power of rule be in the hands of those who are endowed with virtue and temperance: but where a master exercises himself in cruelty, or acts in a tyrannical way, against the good-will and reason of mankind, he can never hope for the least ease or comfort.”

## CHAPTER I.

*The two charges on which Socrates was condemned to death by the Athenians. The first charge refuted by several arguments: for Socrates used to sacrifice to the gods; he practiced divination, and his daemon was no new god; he recommended that the gods should be consulted by man in perplexing circumstances; he was guilty of no impiety, he avoided vain speculations respecting the gods, and said that the business of philosophy was the study of virtue; his life was in accordance with the precepts of morality.*

I have often wondered by what arguments the accusers of Socrates persuaded the Athenians that he deserved death from the state; for the indictment against him was to this effect: Socrates offends against the laws in not paying respect to those gods whom the city respects, and introducing other new deities; he also offends against the laws in corrupting the youth.

In the first place, that he did not respect the gods whom the city respects, what proof did they bring? For he was seen frequently sacrificing at home, and frequently on the public altars of the city; nor was it unknown that he used divination; as it was a common subject of talk, that "Socrates used to say that the divinity instructed him;" and it was from this circumstance, indeed, that they seem chiefly to have derived the charge of introducing new deities.

He however introduced nothing newer than those who, practicing divination, consult auguries, voices, omens, and sacrifices; for they do not imagine that birds, or people who meet them, know what is advantageous for those seeking presages, but that the gods, by their means, signify what will be so; and such was the opinion that Socrates entertained.

Most people say that they are diverted from an object, or prompted to it, by birds, or by the people who meet them; but Socrates spoke as he thought, for he said it was the divinity that was his monitor. He also told many of his friends to do certain things, and not to do others, intimating that the divinity had forewarned him; and advantage attended those who obeyed his suggestions, but repentance, those who disregarded them.

Yet who would not acknowledge that Socrates wished to appear to his friends neither a fool nor a boaster? But he would have seemed to be both, if, after saying that intimations were given him by a god, he had then been proved guilty of falsehood. It is manifest, therefore, that he would have uttered no predictions, if he had not trusted that they would prove true. But who, in such matters, would trust to anyone but a god? And how could he, who trusted the gods, think that there were no gods?

He also acted towards his friends according to his convictions, for he recommended them to perform affairs of necessary consequence in such a manner as he thought that they would be best managed; but concerning those of which it was doubtful how they would terminate, he sent them to take auguries whether they should be done or not.

Those who would govern families or cities well, he said, had need of divination; for to become skillful in architecture, or working in brass, or agriculture, or in commanding men, or to become a critic in any such arts, or a good reasoner, or a skillful regulator of a household, or a well-qualified general, he considered as wholly matters of learning, and left to the choice of the human understanding; but he said that the gods reserved to themselves the most important particulars attending such matters, of which nothing was apparent to men; for neither was it certain to him who had sown his field well, who should reap the fruit of it; nor certain to him who had built a house well, who should inhabit it; nor certain to him who was skilled in generalship, whether it would be for his advantage to act as a general; nor certain to him who was versed in political affairs, whether it would be for his profit to be at the head of the state; nor certain to him who had married a beautiful wife in hopes of happiness, whether he should not incur misery by her means; nor certain to him who had acquired powerful connections in the state, whether he might not be banished by them: and those who thought that none of these things depended on the gods, but that all were dependent on the human understanding, he pronounced to be insane; as he also pronounced those to be insane who had recourse to omens respecting matters which the gods had granted to men to discover by the exercise of their faculties; as if, for instance, a man should inquire whether it would be better to take for the driver of his chariot, one who knows how to drive, or one who does not know; or whether it would be better to place over his ship one who knows how to steer it, or one who does not know; or if men should ask respecting matters which they may learn by counting, or measuring, or weighing; for those who inquired of the gods concerning such matters he thought guilty of impiety, and said that it was the duty of men to learn whatever the gods had enabled them to do by learning, and to try to ascertain from the gods by augury whatever was obscure to men; as the gods always afford information to those to whom they are rendered propitious.

He was constantly in public, for he went in the morning to the places for walking and the gymnasia; at the time when the market was full he was to be seen there; and the rest of the day he was where he was likely to meet the greatest number of people; he was generally engaged in discourse, and all who pleased were at liberty to hear him; yet no one ever either saw Socrates doing, or heard him saying, anything impious or profane; for he did not dispute about the nature of things as most other philosophers disputed, speculating how that which is called by sophists the world was produced, and by what necessary laws everything in the heavens is effected, but endeavored to show that those who chose such objects of contemplation were foolish; and used in the first place to inquire of them whether they thought that they already knew sufficient of human affairs, and therefore proceeded to such subjects of meditation, or whether, when they neglected human affairs entirely, and speculated on celestial matters, they thought that they were doing what became them. He wondered, too, that it was not apparent to them that it is impossible for man to satisfy himself on such points, since even those who pride themselves most on discussing them, do not hold the same opinions one with another, but are, compared with each other, like madmen; for of madmen some have no fear of what is to be feared, and others fear what is not to be feared; some think it no shame to say or do anything whatever before men, and others think that they ought not to go among men at all; some pay no respect to temple, or altar, or anything dedicated to the gods, and others worship stones, and common stocks, and beasts: so of those who speculate on the nature of the universe, some imagine that all that exists is one, others that there are worlds infinite in number; some that all things are in perpetual motion, others that nothing is ever moved; some that all things are generated and decay, and others that nothing is either generated or decays.

He would ask, also, concerning such philosophers, whether, as those who have learned arts practiced by men, expect that they will be able to carry into effect what they have learned, either for themselves, or for anyone else whom they may wish, so those who inquire into celestial things, imagine that, when they have discovered by what laws everything is effected, they will be able to produce, whenever they please, wind, rain, changes of the seasons, and whatever else of that sort they may desire, or whether they have no such expectation, but are content merely to know how everything of that nature is generated.

Such were the observations which he made about those who busied themselves in such speculations; but for himself, he would hold discourse, from time to time, on what concerned mankind, considering what was pious, what impious; what was becoming, what unbecoming; what was just, what unjust; what was sanity, what insanity; what was fortitude, what cowardice; what a state was, and what the character of a statesman; what was the nature of government over men, and the qualities of one skilled in governing them; and touching on other subjects, with which he thought that those who were acquainted were men of worth and estimation, but that those who were ignorant of them might justly be deemed no better than slaves.

As to those matters, then, on which Socrates gave no intimation what his sentiments were, it is not at all wonderful that his judges should have decided erroneously concerning him; but is it not wonderful that they should have taken no account of such things as all men knew?

For when he was a member of the senate, and had taken the senator’s oath, in which it was expressed that he would vote in accordance with the laws, he, being president in the assembly of the people when they were eager to put to death Thrasyllus, Erasinides, and all the nine generals, by a single vote contrary to the law, refused, though the multitude were enraged at him, and many of those in power uttered threats against him, to put the question to the vote, but considered it of more importance to observe his oath than to gratify the people contrary to what was right, or to seek safety against those who menaced him; for he thought that the gods paid regard to men, not in the way in which some people suppose, who imagine that the gods know some things and do not know others, but he considered that the gods know all things, both what is said, what is done, and what is meditated in silence, and are present everywhere, and give admonitions to men concerning everything human.

I wonder, therefore, how the Athenians were ever persuaded that Socrates had not right sentiments concerning the gods; a man who never said or did anything impious towards the gods, but spoke and acted in such a manner with respect to them, that any other who had spoken and acted in the same manner, would have been, and have been considered, eminently pious.

## CHAPTER II.

*Reply to the other charge against Socrates. He did not corrupt the youth, for his whole teaching dissuaded them from vice, and encouraged them to temperance and virtue of every kind. He exhorted them to obey the laws. If Critias and Alcibiades, who listened to his discourses, became corrupt, the fault was not his; he endeavored to reclaim them, till they deserted him; and others, who resigned themselves wholly to his instructions, became virtuous and honorable men,—other frivolous assertions refuted. His benevolence, disinterestedness, and general merits.*

It also seems wonderful to me, that any should have been persuaded that Socrates corrupted the youth; Socrates, who, in addition to what has been said of him, was not only the most rigid of all men in the government of his passions and appetites, but also most able to withstand cold, heat, and every kind of labor; and, besides, so inured to frugality, that, though he possessed very little, he very easily made it a sufficiency. How, then, being of such a character himself, could he have rendered others impious, or lawless, or luxurious, or incontinent, or too effeminate to endure labor? On the contrary, he restrained many of them from such vices, leading them to love virtue, and giving them hopes, that if they would take care of themselves, they would become honorable and worthy characters. Not indeed that he ever professed to be an instructor in that way, but, by showing that he was himself such a character, he made those in his society hope that, by imitating him, they would become such as he was.

Of the body he was not neglectful, nor did he commend those who were. He did not approve that a person should eat to excess, and then use immoderate exercise, but recommended that he should work off, by a proper degree of exercise, as much as the appetite received with pleasure; for such a habit, he said, was peculiarly conducive to health, and did not prevent attention to the mind. He was not, however, fine or ostentatious in his clothes or sandals, or in any of his habits of life; yet he did not make those about him lovers of money, for he checked them in this as well as other passions, and asked no remuneration from those who desired his company. By refraining from such demand, he thought that he consulted his liberty, and called those who took money for their discourses their own enslavers, since they must of necessity hold discussions with those from whom they received pay.

He expressed wonder, too, that anyone who professed to teach virtue, should demand money, and not think that he gained the greatest profit in securing a good friend, but fear that he whom he had made an honorable and worthy character would not retain the greatest gratitude towards his greatest benefactor. Socrates, indeed, never expressed so much to anyone; yet he believed that those of his associates who imbibed what he approved, would be always good friends both to himself and to each other. How then could a man of such a character corrupt the young, unless, indeed, the study of virtue be corruption?

“But assuredly,” said the accuser, “he caused those who conversed with him to despise the established laws, by saying how foolish it was to elect the magistrates of a state by beans, when nobody would be willing to take a pilot elected by beans, or an architect, or a flute-player, or a person in any other profession, which, if erroneously exercised, would cause far less harm than errors in the administration of a state;” and declared that “such remarks excited the young to condemn the established form of government, and disposed them to acts of violence.” But I think that young men who exercise their understanding, and expect to become capable of teaching their fellow-citizens what is for their interest, grow by no means addicted to violence, knowing that on violence attend enmity and danger, but that, by persuasion, the same results are attained without peril, and with goodwill; for those who are compelled by us, hate us as if despoiled of something, while those who are persuaded by us, love us as if they had received a favor. It is not the part, therefore, of those who cultivate the intellect to use violence; for to adopt such a course belongs to those who possess brute force without intellect, it. Besides, he who would venture to use force, had need of no small number of allies, but he who can succeed with persuasion, has need of none, for, though left alone, he would think himself still able to persuade; and it by no means belongs to such men to shed blood, for who would wish to put another man to death rather than to have him as a living subject persuaded to obey?

“But,” said the accuser, “Critias and Alcibiades, after having been associates of Socrates, inflicted a great number of evils on the state; for Critias was the most avaricious and violent of all that composed the oligarchy, and Alcibiades was the most intemperate, insolent, and turbulent of all those in the democracy.” For whatever evil they did the state, I shall make no apology; but as to their intimacy with Socrates, I will state how it took place. These two men were by nature the most ambitious of all the Athenians, and wished that everything should be done by their means, and that they themselves should become the most celebrated of all men. But they knew that Socrates lived with the utmost contentment on very small means, that he was most abstinent from every kind of pleasure, and that he swayed those with whom he conversed just as he pleased by his arguments; and, seeing such to be the case, and being such characters as they have just been stated to be, whether will anyone say that they sought his society from a desire to lead such a life as Socrates led, and to practice such temperance as he practiced, or from an expectation that, if they associated with him, they would become eminently able to speak and act? I myself, indeed, am of opinion, that if a god had given them their choice, whether they would live their whole lives as they saw Socrates living, or die, they would have chosen rather to die; and they showed this disposition by what they did; for as soon as they considered themselves superior to their associates, they at once started away from Socrates, and engaged in political life, to qualify themselves for which they had sought the society of Socrates.

Perhaps someone may observe on this point, that Socrates should not have taught his followers politics before he taught them self-control. To this remark I make no reply at present; but I see that all teachers make themselves examples to their pupils how far they practice what they teach, and stimulate them by precepts; and I know that Socrates made himself an example to those who associated with him as a man of honorable and excellent character, and that he discoursed admirably concerning virtue and other things that concern mankind. I know, too, that those men exercised self-control as long as they conversed with Socrates, not from fear lest they should be fined or beaten by him, but from a persuasion at the time that it was best to observe such conduct.

Perhaps, however, many of those who profess to be philosophers, may say that a man once just, can never become unjust, or once modest, immodest; and that, with regard to any other qualification, (among such as can be taught,) he who has once learned it can never become ignorant of it But regarding such points I am not of that opinion; for I see that as those who do not exercise the body, cannot perform what is proper to the body, so those who do not exercise the mind, cannot perform what is proper to the mind; for they can neither do that which they ought to do, nor refrain from that from which they ought to refrain. For which reason fathers keep their sons, though they be of a virtuous disposition, from the society of bad men, in the belief that association with the good is an exercise of virtue, but that association with the bad is the destruction of it. One of the poets also bears testimony to this truth, who says,

From good men you will learn what is good;
but if you associate with the bad,
you will lose the understanding which is in you.

And another, who observes,

A good man is at one time good,
and at another bad.

I also concur with them; for I see that as people forget metrical compositions when they do not practice the repetition of them, so forgetfulness of precepts of instruction is produced in those who neglect them. But where a person forgets moral admonitions, he forgets also what the mind felt when it had a desire for self-government; and, when he forgets this, it is not at all wonderful that he forgets self-government also.

I see, too, that those who are given up to a fondness for drinking, and those who have fallen in love, are less able to attend to what they ought to do, and to refrain from what they ought not to do; for many, who can be frugal in their expenses before they fall in love, are, after falling in love, unable to continue so; and, when they have exhausted their resources, they no longer abstain from means of gain from which they previously shrunk as thinking them dishonorable.

How is it impossible, then, that he who has once had a control over himself, may afterwards cease to maintain it, and that he who was once able to observe justice, may subsequently become unable? To me everything honorable and good seems to be maintained by exercise, and self-control not the least; for sensual desires, generated in the same body with the soul, are constantly exciting it to abandon self-control, and to gratify themselves and the body as soon as possible.

Critias and Alcibiades, then, as long as they associated with Socrates, were able, with the assistance of his example, to maintain a mastery over their immoral inclinations; but, when they were separated from him, Critias, fleeing to Thessaly, formed connections there with men who practiced dishonesty rather than justice; and Alcibiades also, being sought by many women, even of high rank, for his beauty, and being corrupted by many men, who were well able to seduce him by their flattery, on account of his influence in the city and among the allies, and being also honored by the people, and easily obtaining the pre-eminence among them, became like the wrestlers in the gymnastic games, who, when they are fairly superior to others, neglect their exercise; so he grew neglectful of self-control.

When such was their fortune, and when they were proud of their birth, elated with their wealth, puffed up with their power, corrupted by many associates, demoralized by all these means, and long absent from Socrates, what wonder is it if they became headstrong? And then, if they did anything wrong, does the accuser blame Socrates for it? and does Socrates seem to the accuser deserving of no praise, for having, when they were young, and when it is likely that they were most inconsiderate and intractable, rendered them discreet? Yet other affairs are not judged of in such a way; for what flute-player, or what teacher of the harp, or what other instructor, if he produces competent pupils, and if they, attaching themselves to other masters, become less skillful, is blamed for their deterioration? Or what father, if his son, while he associated with one man, should be virtuous, but afterwards, on uniting himself to some other person, should become vicious, would blame the former of the two? Would he not rather, the more corrupt his son became with the second, bestow the greater praise on the first? Not even parents themselves, when they have their sons in their society, are blamed if their sons do anything wrong, provided they themselves are correct in their conduct.

In the same manner it would be right to judge of Socrates; if he had done anything immoral, he would justly be thought to be a bad man; but if he constantly observed morality, how can he reasonably bear the blame of vice which was not in him?

Or even if he himself did nothing wrong, but commended others when he saw them doing wrong, he would justly be censured. When he perceived, however, that Critias was enamored of Euthydemus, and was seeking to have the enjoyment of his society, like those who abuse the persons of others for licentious purposes, he dissuaded him from his intention, by saying that it was illiberal, and unbecoming a man of honor and proper feeling, to offer supplications to the object of his affections, with whom he wished to be held in high esteem, beseeching and entreating him, like a beggar, to grant a favor, especially when such favor was for no good end.

But as Critias paid no regard to such remonstrances, and was not diverted from his pursuit, it is said that Socrates, in the presence of many others as well as of Euthydemus, observed that "Critias seemed to him to have some feeling like that of a pig, as he wished to rub against Euthydemus as swine against stones." Critias, in consequence, conceived such a hatred to Socrates, that when he was one of the Thirty Tyrants, and was appointed a law-maker with Charicles, he remembered the circumstance to his disadvantage, and inserted in his laws that "none should teach the art of disputation," intending an insult to Socrates, yet not knowing how to affect him in particular, but laying to his charge what was imputed to the philosophers by the multitude, and calumniating him to the people; at least such is my opinion; for I myself never heard this from Socrates, nor do I remember having known anyone say that he heard it from him.

Bat Critias showed that such was the case; for when the Thirty had put to death many of the citizens, and those not of the inferior class, and had encouraged many to acts of injustice, Socrates happened to observe, that "it seemed surprising to him if a man, becoming herdsman of a number of cattle, and rendering the cattle fewer and in worse condition, should not confess that he was a bad herdsman, and still more surprising if a man, becoming governor of a city, and rendering the people fewer and in worse condition, should not feel ashamed, and be conscious of being a bad governor of the city." This remark being repeated to the Thirty, Critias and Charicles summoned Socrates before them, showed him the law, and forbade him to hold discourse with the youth. Socrates inquired of them, if he might be permitted to ask a question as to any point in the prohibitions that might not be understood by him. They gave him permission. "Then," said he, "I am prepared to obey the laws; but that I may not unconsciously transgress through ignorance, I wish to ascertain exactly from you, ' whether it is because you think that the art of reasoning is an auxiliary to what is rightly spoken, or to what is not rightly spoken, that you give command to abstain from it; for if it be an adjunct to what is rightly spoken, it is plain that we have to abstain from speaking rightly; but if to what is not rightly spoken, it is plain that we ought to endeavor to speak rightly."

Charicles, falling into a passion with him, said, "Since, Socrates, you are ignorant of this particular, we give you an order more easy to be understood, not to discourse at all with the young? "That it may not be doubtful, then," said Socrates, "whether I do anything contrary to what is enjoined, define for me till what age I must consider men to be young."

"As long," replied Charicles, "as they are not allowed to fill the office of senator, as not being yet come to maturity of understanding; and do not discourse with such as are under thirty years of age."

"And if I wish to buy anything," said Socrates, "and a person under thirty years of age has it for sale, may I not ask him at what price he sells it?"

"Yes, such questions as these," replied Charicles, "but you are accustomed to ask most of your questions about things, when you know very well how they stand; such questions, therefore, do not ask."

"If then any young man," said he, "should ask me such a question as 'where does Charicles live?' or 'where is Critias?' may I not answer him, if I know?"

"Yes, you may answer such questions," said Charicles.

"But," added Critias, "it will be necessary for you to abstain from speaking of those shoemakers, and carpenters, and smiths; indeed I think that they must now be worn out, from being so often in your mouth."

"I must therefore," said Socrates, "abstain from the illustrations that I attach to the mention of those people, illustrations on justice, piety, and other such subjects."

"Yes, by Zeus," retorted Charicles, "and you must abstain from illustrations taken from herdsmen; for, if you do not, take care lest you yourself make the cattle fewer."

Hence it was evident that they were angry with Socrates on account of his remark about the cattle having been reported to them.

What sort of intercourse Critias had with Socrates, and how they stood towards each other, has now been stated. But I would say that no regular training is derived by anyone from a teacher who does not please him; and Critias and Alcibiades did not associate with Socrates, while their association with him lasted, as being an instructor that pleased them, but they were, from the very first, eager to be at the head of the state, for, while they still attended Socrates, they sought to converse with none more than with those who were most engaged in affairs of government. Alcibiades, it is said, before he was twenty years of age, held the following discourse with Pericles, who was his guardian, and chief ruler of the state, about laws.

"Tell me," said he, "Pericles, can you teach me what a law is."

"Certainly," replied Pericles. "Teach me then, in the name of the gods," said Alcibiades, "for I, hearing some persons praised as being obedient to the laws, consider that no one can fairly obtain such praise who does not know what a law is."

"You desire no very difficult matter, Alcibiades," said Pericles, "when you wish to know what a law is; for all those regulations are laws, which the people, on meeting together and approving them, have enacted, directing what we should do and what we should not do."

"And whether do they direct that we should do good things, or that we should do bad things?"

“Good, by Zeus, my child,” said he, “but bad by no means.”

“And if it should not be the whole people, but a few, as where there is an oligarchy, that should meet together, and enact what we are to do, what are such enactments?”

“Everything,” replied Pericles, “which the supreme power in the state, on determining what the people ought to do, has enacted, is called a law.”

“And if a tyrant, holding rule over the state, prescribes to the citizens what they must do, is such prescription called a law.”

“Whatever a tyrant in authority prescribes,” returned Pericles, “is also called a law.”

“What then, Pericles,” asked Alcibiades, “is force and lawlessness? Is it not when the stronger obliges the weaker, not by persuasion, but by compulsion, to do what he pleases?”

“So it appears to me,” replied Pericles. “Whatever then a tyrant compels the people to do, by enacting it without gaining their consent, is that an act of lawlessness?”

“Yes,” said Pericles, “it appears to me that it is, for I retract my admission that what a tyrant prescribes to the people without persuading them, is a law.”

“But what the few enact, not from gaining the consent of the many, but from having superior power, should we say that that is force, or that it is not?”

“Everything,” said Pericles, “which one man obliges another to do without gaining his consent, whether he enact it in writing or not, seems to me to be force rather than law.”

“Whatever, then, the whole people, when they are stronger than the wealthier class, enact without their consent, would be an act of force rather than a law?”

“Certainly, Alcibiades,” said Pericles; “and I, when I was of your age, was very acute at such disquisitions; for we used to meditate and argue about such subjects as you now appear to meditate.”

“Would therefore,” said Alcibiades, “that I had conversed with you, Pericles, at the time when you were most acute in discussing such topics!”

When Alcibiades and Critias, therefore, began to think themselves superior to those who were then governing the state, they no longer attended Socrates, (for he was not agreeable to them in other respects, and they were offended, if they went to him at all, at being reproved for any error that they had committed,) but devoted themselves to political employments, with a view to which they had at first associated with Socrates. But Crito was also an attendant on Socrates, as well as Chærephon, Chærecrates, Hermocrates, Simmias, Cebes, and Phædondes, who, with others that attended him, did not seek hi society that they might be fitted for popular orators or forensic pleaders, but that, becoming honorable and good men, they might conduct themselves irreproachably towards their families, connections, dependents, and friends, as well as towards their country and their fellow-citizens;

and no one of all these, whether in youth or at a more advanced age, either was guilty, or was accused, of any crime.

"But Socrates," said the accuser, "taught children to show contempt for their parents, persuading his followers that he rendered them wiser than their fathers, and observing that a son was allowed by the law to confine his father on convicting him of being deranged, using that circumstance as an argument that it was lawful for the more ignorant to be confined by the wiser." But what Socrates said was, that he thought he who confined another for ignorance, might justly be himself confined by those who knew what he did not know; and, with a view to such cases, he used to consider in what respect ignorance differed from madness, and expressed his opinion that madmen might be confined with advantage to themselves and their friends, but that those who did not know what they ought to know, might reasonably learn from those who did know.

"But Socrates," proceeded the accuser, "not only caused parents, but other relations, to be held in contempt by his followers, saying that relatives, as relatives, were of no profit to people who were sick, or to people going to law, but that physicians aided the one, and lawyers the other." The accuser asserted, too, that Socrates said concerning friends that "it was of no profit that they were well-disposed, unless they were able also to assist; and that he insisted that those only were deserving of honor who knew what was for the advantage of others and could make it intelligible to them; and that by thus persuading the young that he himself was the wisest of mankind, and most capable of making others wise, he so disposed his pupils towards him, that other people were of no account with them in comparison with himself." I am aware, indeed, that he did express himself concerning parents and other relatives, and concerning friends, in such a manner as this; and used to say, besides, that when the soul has departed, in which alone intelligence exists, men take away the body of their dearest friend, and put it out of sight as soon as possible. He was accustomed to say, also, that every man, while he is alive, removes of himself from his own body, which he loves most of all things, and allows others to remove from it, everything that is useless and unprofitable; since men themselves take off portions of their nails, and hair, and callous parts, and resign themselves to surgeons to cut and burn them with labor and pain, and think it their duty even to pay them money for their operations; and the saliva from the mouth, he said, men spit away as far as possible, because, while it is in the mouth, it profits them nothing, but is far more likely to harm them. But such observations Socrates uttered, not to teach anyone of his followers to bury his father alive, or to cut himself to pieces, but, by showing that what is senseless is worthless, he exhorted each to study to become as intelligent and useful as possible, so that, whether he wished to be honored by his father, by his brother, or by anyone else, he might not be neglectful of himself through trusting to his relationship, but might endeavor to be serviceable to those by whom he desired to be respected.

The accuser also said that Socrates, selecting the worst passages of the most celebrated poets, and using them as arguments, taught those who kept him company to be unprincipled and tyrannical. The verse of Hesiod, for example,

Work is no disgrace, but idleness is a disgrace,

they say that he used to explain as intimating that the poet bids us abstain from no kind of work, dishonest or dishonorable, but to do such work for the sake of profit. But when Socrates maintained that to be busy was useful and beneficial for a man, and that to be unemployed was noxious and ill for him, that to work was a good, and to be idle an evil, he at the same time observed that those only who do something good really work, and are useful workmen, but those who gamble, or do anything bad and pernicious, he called idle; and in this view the sentiment of the poet will be unobjectionable,

Work is no disgrace, but idleness is a disgrace.

That passage of Homer, too, the accuser stated that he often used to quote, in which it is said that Ulysses,

Whatever king or eminent hero he found,
Stood beside him, and detained him with gentle words:
"Illustrious chief, it is not fit that you should shrink back as a coward;
Sit down yourself, and make the rest of the people sit down." But whatever man of the people he noticed, and found clamoring, He struck him with his staff, and rebuked him with words:
"Worthless fellow, sit down in peace, and hear the exhortations of others,
Who are much better than you; for you are unwarlike and powerless.
Neither to be numbered in the field nor in the council."

And he said that he used to explain it as if the poet recommended that plebeians and poor people should be beaten. Socrates, however, said no such thing, (for he would thus have given an opinion that he himself ought to be beaten,) but what he did say was, that those who benefited others neither by word nor deed, and who were incapable of serving the army, or the state, or the common people, if they should ever be called upon to serve, should, especially if, in addition to their incapacity, they were of an insolent spirit, be curbed in every way, even though they might be ever so rich. But, contrary to the charge of the accuser, Socrates was evidently a friend to the common people, and of a liberal disposition; for though he received numbers of persons desirous to hear him discourse, as well citizens as foreigners, he never required payment for his communications from anyone, but imparted to everyone in abundance from his stores, of which some receiving fragments from him for nothing, sold them at a great price to others, and were not, like him, friends to the common people, for they declined to converse with such as had not money to give them. But Socrates, in the eyes of other men, conferred glory on the city, far more than Lichas, who was celebrated in this respect, on that of the Lacedaemonians; for Lichas indeed entertained the strangers that visited Lacedaemon at the Gymnopaediae, but Socrates, through the whole course of his life, freely imparted whatever he had to bestow, and thus benefited in the highest degree all who were willing to receive from him, making those who associated with him better before he let them go.

To me, therefore, Socrates, being a man of such a character, appeared to be worthy of honor rather than of death; and anyone, considering his case according to the laws, would find such to be the fact; for, by the laws, death is the punishment for a man if he be found stealing, or stripping people of their clothes, or cutting purses, or housebreaking, or kidnapping, or sacrilege, of which crimes Socrates was the most innocent of all men. Nor was he ever the cause of any war ending unfortunately for the state, or of any sedition or treachery; nor did he ever, in his private transactions, either deprive any man of what was for his good, or involve him in evil; nor did he ever lie under suspicion of any of the crimes which I have mentioned.

How then could he have been guilty of the charges brought against him? a man who, instead of not acknowledging the gods, as was stated in the indictment, evidently paid respect to the gods more than other men; and instead of corrupting the youth, as the accuser laid to his charge, plainly led such of his associates as had vicious inclinations, to cease from indulging them, and exhorted them to cherish a love of that most honorable and excellent virtue, by which men successfully govern states and families. How then, pursuing such a course of conduct, was he not deserving of great honor from the city?

## CHAPTER III.

*Confirmation of the character of Socrates given in the preceding chapters. He worshipped the gods, and exhorted others to worship them. His notions how the gods were to be supplicated, His judgment as to what was acceptable to them in a sacrifice, his regard for omens, his observance of temperance, and recommendation of it to others.*

But to show how he appeared to improve those who associated with him, partly by showing them what his character was, and partly by his conversation, I shall record whatever I can remember of him relating to these points.

As to what had reference to the gods, then, he evidently acted and spoke in conformity with the answer which the priestess of Apollo gives to those who inquire how they ought to proceed with regard to a sacrifice, to the worship of their ancestors, or to any such matter; for the priestess replies that they will act piously, if they act in agreement with the law of their country; and Socrates both acted in this manner himself, and exhorted others to act similarly; and such as acted in any other way he regarded as doing what was not to the purpose, and guilty of folly.

To the gods he simply prayed that they would give him good things, as believing that the gods knew best what things are good; and those who prayed for gold, or silver, or dominion, or anything of that kind, he considered to utter no other sort of requests than if they were to pray that they might play at dice, or fight, or do anything else of which it is quite uncertain what the result will be.

When he offered small sacrifices from his small means, he thought that he was not at all inferior in merit to those who offered numerous and great sacrifices from ample and abundant means; for he said that it would not become the gods to delight in large rather than in small sacrifices; since, if such were the case, the offerings of the bad would oftentimes be more acceptable to them than those of the good; nor would life be of any account in the eyes of men, if oblations from the bad were better received by the gods than oblations from the good; but he thought that the gods had most pleasure in the offerings of the most pious. He also used to quote, with approbation, the verse,

Perform sacrifices to the gods according to your ability,

and used to say that it was a good exhortation to men, with regard to friends, and guests, and all other relations of life, to perform according to their ability.

If anything appeared to be intimated to him from the gods, he could no more have been persuaded to act contrary to such intimation, than anyone could have persuaded him to take for his guide on a journey a blind man, or one who did not know the way, instead of one who could see, and did know it; and he condemned the folly of others, who act contrary to what is signified by the god, through anxiety to avoid the ill opinion of men. As for himself, he undervalued everything human, in comparison with counsel from the gods.

He disciplined his mind and body by such a course of life, that he who should adopt a similar one, would, if no supernatural influence prevented, live in good spirits and uninterrupted health; nor would he ever be in want of the necessary expenses for it. So frugal was he, that I do not know whether anyone could earn so little by the labor of his hands, as not to procure sufficient to have satisfied Socrates. He took only so much food as he could eat with a keen relish; and, to this end, he came to his meals so disposed that the appetite for his meat was the sauce to it Every kind of drink was agreeable to him, because he never drank unless he was thirsty. If he ever complied with an invitation to go to a feast, he very easily guarded, what is extremely difficult to most men, against loading his stomach to excess. Those who were unable to do so, he advised to be cautious of taking anything that would stimulate them to eat when they were not hungry, and to drink when they were not thirsty; for he said that those were the things that disordered the stomach, the head, and the mind; and he used to say, in jest, that he thought Circe transformed men into swine, by entertaining them with abundance of such luxuries, but that Ulysses, through the admonition of Mercury, and through being himself temperate, and forbearing to partake of such delicacies to excess, was in consequence not changed into a swine.

Such jests he would utter on these subjects, but with an earnest meaning. As to love, his counsel was to abstain rigidly from familiarity with beautiful persons; for he observed that it was not easy to be in communication with such persons, and observe continence. Hearing, on one occasion, that Critobulus, the son of Criton, had kissed the son of Alcibiades, a handsome youth, he asked Xenophon, in the presence of Critobulus, saying, “Tell me, Xenophon, did you not think that Critobulus was one of the modest rather than the forward, one of the thoughtful rather than of the thoughtless and inconsiderate?”

Certainly,” replied Xenophon. “You must now, then, think him extremely headstrong and daring; one who would even spring upon drawn swords, and leap into the fire.”

“And what,” said Xenophon, “have you seen him doing, that you form so unfavorable an opinion of him?”

“Why, has he not dared,” rejoined Socrates, “to kiss the son of Alcibiades, a youth extremely handsome, and in the flower of his age?”

“If such a deed,” returned Xenophon, “is one of daring and peril, I think that even I could undergo such peril.”

“Unhappy man!” exclaimed Socrates, “and what do you think that you incur by kissing a handsome person? Do you not expect to become at once a slave instead of a freeman? To spend much money upon hurtful pleasures? To have too much occupation to attend to anything honorable and profitable? And to be compelled to pursue what not even a madman would pursue?"

"By Hercules," said Xenophon, "what extraordinary power you represent to be in a kiss!"

"Do you wonder at this?" rejoined Socrates; "are you not aware that the Tarantula, an insect not as large as half an obolus, by just touching a part of the body with its mouth, wears men down with pain, and deprives them of their senses?"

"Yes, indeed," said Xenophon, "but the Tarantula infuses something at the bitten part?"

"And do you not think, foolish man," rejoined Socrates, "that beautiful persons infuse something when they kiss, something which you do not see? Do you not know that the animal, which they call a handsome and beautiful object, is so much more formidable than the Tarantula, as those insects instill something when they touch the body, but this creature, without even touching, but if a person only looks at it, though from a very great distance, instils something of such potency, as to drive people mad? Perhaps indeed Cupid are called archers for no other reason but because the beautiful wound from a distance. But I advise you, Xenophon, whenever you see any handsome person, to flee without looking behind you; and I recommend to you, Critobulus, to absent yourself from hence for a year, for perhaps you may in that time, though hardly indeed, be cured of your wound."

Thus he thought that those should act with regard to objects of love who were not secure against the attractions of such objects; objects of such a nature, that if the body did not at all desire them, the mind would not contemplate them, and which, if the body did desire them, should cause us no trouble. For himself, he was evidently so disciplined with respect to such matters, that he could more easily keep aloof from the fairest and most blooming objects than others from the most deformed and unattractive.

Such was the stale of his feelings in regard to eating, drinking, and amorous gratification; and he believed that he himself, with self-restraint, would have no less pleasure from them, than those who took great trouble to pursue such gratifications, and that he would suffer far less anxiety.

## CHAPTER IV.

*Socrates not only exhorted men to practice virtue, but led them to the practice of it; his dialogue with Aristodemus. Things formed for a purpose, must be the production, not of chance, but of reason. The human frame is a structure of great excellence, and admirably fitted for its purposes, and we must therefore suppose that man is the object of divine forethought. The order of things throughout the universe shows that it is under the providence of a superior nature. The superiority of man over the inferior animals proves that he is more immediately under the care of the higher powers. The gods also give instruction to man as to his conduct. That they care for man both individually and collectively is evident from various considerations. As the mind governs the body, so the providence of the gods governs the world. If men therefore worship the gods rightly, they may feel persuaded that the gods will be ready to aid them.*

But if any suppose that Socrates, as some write and speak of him on conjecture, was excellently qualified to exhort men to virtue, but incapable of leading them forward in it, let them consider not only what he said in refutation, by questioning, of those who thought that they knew everything, (refutations intended to check the progress of those disputants,) but what he used to say in his daily intercourse with his associates, and then form an opinion whether he was capable of making those who conversed with him better. I will first mention what I myself once heard him advance in a dialogue with Aristodemus, surnamed The Little, concerning the gods; for having heard that Aristodemus neither sacrificed to the gods, nor prayed to them, nor attended to auguries, but ridiculed those who regarded such matters, he said to him, “Tell me, Aristodemus, do you admire any men for their genius?”

“I do,” replied he.

“Tell us their names, then,” said Socrates.

“In epic poetry I most admire Homer, in dithyrambic Melanippides, in tragedy Sophocles, in statuary Polycletus, in painting Zeuxis.”

“And whether do those who form images without sense and motion, or those who form animals endowed with sense and vital energy, appear to you the more worthy of admiration?”

“Those who form animals, by Zeus, for they are not produced by chance, but by understanding.”

“And regarding things of which it is uncertain for what purpose they exist, and those evidently existing for some useful purpose, which of the two would you say were the productions of chance, and which of intelligence?”

“Doubtless those which exist for some useful purpose must be the productions of intelligence.”

“Does not he, then,” proceeded Socrates, “who made men at first, appear to you to have given them, for some useful purpose, those parts by which they perceive different objects, the eyes to see what is to be seen, the ears to hear what is to be heard? What would be the use of smells, if no nostrils had been assigned us? What perception would there have been of sweet and sour, and of all that is pleasant to the mouth, if a tongue had not been formed in it to have a sense of them? In addition to these things, does it not seem to you like the work of forethought, to guard the eye, since it is tender, with eyelids, like doors, which, when it is necessary to use the sight, are set open, but in sleep are closed? To make the eyelashes grow as a screen, that winds may not injure it? To make a coping on the parts above the eyes with the eye-brows, that the perspiration from the head may not annoy them? To provide that the ears may receive all kinds of sounds, yet never be obstructed? and that the front teeth in all animals may be adapted to cut, and the back teeth to receive food from them and grind it? To place the mouth, through which animals take in what they desire, near the eyes and the nose? And since what passes off from the stomach is offensive, to turn the channels of it away, and remove them as far as possible from the senses?—can you doubt whether such a disposition of things, made thus apparently with attention, is the result of chance or of intelligence?"

"No, indeed," replied Aristodemus, "but to one who looks at those matters in this light, they appear like the work of some wise maker who studied the welfare of animals?"

"And to have engendered in them a love of having offspring, and in mothers a desire to rear their progeny, and to have implanted in the young that are reared a desire of life, and the greatest dread of death?"

"Assuredly these appear to be the contrivances of someone who designed that animals should continue to exist."

"And do you think that you yourself have any portion of intelligence?"

"Question me, at least, and I will answer."

"And can you suppose that nothing intelligent exists anywhere else? When you know that you have in your body but a small portion of the earth, which is vast, and a small portion of the water, which is vast, and that your frame is constituted for you to receive only a small portion of each of other things, that are vast, do you think that you have seized for yourself, by some extraordinary good fortune, intelligence alone which exists nowhere else, and that this assemblage of vast bodies, countless in number, is maintained in order by something void of reason?"

"By Zeus, I can hardly suppose that there is any riding intelligence among that assemblage of bodies, for I do not see the directors, as I see the agents of things which are done here."

"Nor do you see your own soul, which is the director of your body; so that, by like reasoning, you may say that you yourself do nothing with understanding, but everything by chance."

"However, Socrates," said Aristodemus, "I do not despise the gods, but consider them as too exalted to need my attention."

“But,” said Socrates, “the more exalted they are, while they deign to attend to you, the more ought you to honor them.”

“Be assured,” replied Aristodemus, “that if I believed the gods took any thought for men, I would not neglect them.”

“Do you not, then, believe that the gods take thought for men? the gods who, in the first place, have made man alone, of all animals, upright, (which uprightness enables him to look forward to a greater distance, and to contemplate better what is above, and renders those parts less liable to injury in which the gods have placed the eyes, and ears, and mouth;) and, in the next place, have given to other animals only feet, which merely give them the capacity of walking, while to men they have added hands, which execute most of those things through which we are better off than they. And though all animals have tongues, they have made that of man alone of such a nature, as, by touching sometimes one part of the mouth, and sometimes another, to express articulate sounds, and to signify everything that we wish to communicate one to another. Do you not see, too, that to other animals they have so given the pleasures of sexual intercourse as to limit them to a certain season of the year, but that they allow them to us uninterruptedly till extreme old age? Nor did it satisfy the gods to take care of the body merely, but, what is most important of all, they implanted in him the soul, his most excellent part. For what other animal has a soul to understand, first of all, that the gods, who have arranged such a vast and noble order of things, exist? What other species of animal, besides man, offers worship to the gods? What other animal has a mind better fitted than that of man, to guard against hunger or thirst, or cold or heat, or to relieve disease, or to acquire strength by exercise, or to labor to attain knowledge; or more capable of remembering whatever it has heard, or seen, or learned? Is it not clearly evident to you, that, in comparison with other animals, men live like gods, excelling them by nature, both in body and mind? For an animal, having the body of an ox, and the understanding of a man, would be unable to execute what it might meditate; and animals which have hands, but are without reason, have no advantage over others; and do you, who share both these excellent endowments, think that the gods take no thought for you? What then must they do, before you will think that they take thought for you?”

“I will think so,” observed Aristodemus, “when they send me, as you say that they send to you, monitors, to show what I ought, and what I ought not, to do.”

“But when they send admonitions to the Athenians, on consulting them by divination, do you not think that they admonish you also? Or when they give warnings to the Greeks by sending portents, or when they give them to the whole human race, do they except you alone from the whole, and utterly neglect you? Do you suppose, too, that the gods would have engendered a persuasion in men that they are able to benefit or injure them, unless they were really able to do so, and that men, if they had been thus perpetually deluded, would not have become sensible of the delusion? Do you not see that the oldest and wisest of human communities, the oldest and wisest cities and nations, are the most respectful to the gods, and that the wisest age of man is the most observant of their worship? Consider also, my good youth,” continued Socrates, “that your mind, existing within your body, directs your body as it pleases; and it becomes you therefore to believe that the intelligence pervading all things directs all things as may be agreeable to it, and not to think that while your eye can extend its sight over many furlongs, that of the divinity is unable to see all things at once, or that while your mind can think of things here, or things in Egypt or Sicily, the mind of the deity is incapable of regarding everything at the same time. If, however, as you discover, by paying court to men, those who are willing to pay court to you in return, and, by doing favors to men, those who are willing to return your favors, and as, by asking counsel of men, you discover who are wise, you should, in like manner, make trial of the gods by offering worship to them, whether they will advise you concerning matters hidden from man, you will then find that the divinity is of such power, and of such a nature, as to see all things and hear all things at once, to be present everywhere, and to have a care for all things at the same time."

By delivering such sentiments, Socrates seems to me to have led his associates to refrain from what was impious, or unjust, or dishonorable, not merely when they were seen by men, but when they were in solitude, since they would conceive that nothing that they did would escape the knowledge of the gods.

## CHAPTER V.

*Temperance and self-control recommended: he that is destitute of temperance can be profitable or agreeable neither to himself nor others. Without temperance nothing can be learned or done with due effect, Socrates not only encouraged to temperance by precepts, but by his example.*

If temperance, moreover, be an honorable and valuable quality in a man, let us consider whether he at all promoted its observance by reflections of the following kind concerning it. "If, my friends, when a war was coming upon us, we should wish to choose a man by whose exertions we might ourselves be preserved, and might gain the mastery over our enemies, should we select one whom we knew to be unable to resist gluttony, or wine, or sensuality, or fatigue, or sleep? How could we think that such a man would either serve us, or conquer our adversaries? Or if, being at the close of life, we should wish to commit to anyone the guardianship of our sons, or the care of our unmarried daughters, or the preservation of our property, should we think an intemperate man worthy of confidence for such purposes? Should we entrust to an intemperate slave our herds, our granaries, or the superintendence of our agriculture? Should we be willing to accept such a slave as an agent, or purveyor, even for nothing? But if we would not even accept an intemperate slave, how can it be otherwise than important for every man to take care that he himself does not become such a character? For the intemperate man is not injurious to his neighbor and profitable to himself, (like the avaricious, who, by despoiling others of their property, seem to enrich themselves,) but, while he is mischievous to others, is still more mischievous to himself, for it is, indeed, mischievous in the highest degree, to ruin not only his family, but his body and mind. In society, too, who could find pleasure in the company of such a man, who, he would be aware, felt more delight in eating and drinking than in intercourse with his friends, and preferred the company of harlots to that of his fellows? Is it not the duty of every man to consider that temperance is the foundation of every virtue, and to establish the observance of it in his mind before all things? For who, without it, can either learn anything good, or sufficiently practice it? Who, that is a slave to pleasure, is not in an ill condition both as to his body and his mind? It appears to me, by Hera, that a freeman ought to pray that he may never meet with a slave of such a character, and that he who is a slave to pleasure should pray to the gods that he may find well-disposed masters; for by such means only can a man of that sort be saved."

While such were the remarks that he made, he proved himself more a friend to temperance by his life than by his words; for he was not only superior to all corporeal pleasures, but also to those attendant on the acquisition of money; thinking that he who received money from anyone, set up a master over himself, and submitted to a slavery as disgraceful as any that could be.

## CHAPTER VI.

*Three dialogues of Socrates with Antipho. Antipho ridicules the poverty and frugality of Socrates, and his forbearance to receive pay for his instructions. Socrates replies that, by not receiving remuneration, he is more at liberty to choose his audience; that there are various advantages attendant on plainness of diet and dress; that the frugal man has the advantage over the man of pleasure in facilities for self-improvement, for doing his duty to his country, and for securing general happiness. Antipho asserts that Socrates might be a just man, but was by no means wise, in accepting no payment; Socrates replies that to sell wisdom is to degrade it, and that more good is gained by the acquisition of friends than of money. Antipho asks Socrates why, when he trained others to manage public affairs, he took no part in public affairs himself; Socrates replies that he was of more service to his country by training many to govern it, than he could have been by giving his single aid in the government of it.*

It is due to Socrates, also, not to omit the dialogues which he held with Antipho the sophist. Antipho, on one occasion, wishing to draw away his associates from him, came up to Socrates, when they were present, and said, "I thought, Socrates, that those who studied philosophy were to become happier than other men; but you seem to have reaped from philosophy fruits of an opposite kind; at least you live in a way in which no slave would continue to live with his master; you eat food, and drink beverages, of the worst kind; you wear a dress, not only bad, but the same both summer and winter, and you continue shoeless and coatless. Money, which cheers men when they receive it, and enables those who possess it to live more generously and pleasantly, you do not take; and if, therefore, as teachers in other professions make their pupils imitate themselves, you also shall produce a similar effect on your followers, you must consider yourself but a teacher of wretchedness."

Socrates, in reply to these remarks, said, "You seem to me, Antipho, to have conceived a notion that I live so wretchedly, that I feel persuaded you yourself would rather choose to die than pass your life as I pass mine. Let us then consider what it is that you find disagreeable in my mode of life. Is it that while others, who receive money, must perform the service for which they receive it, while I, who receive none, am under no necessity to discourse with anyone that I do not like? Or do you despise my way of living, on the supposition that I eat less wholesome or less strengthening food than yourself? Or is it that my diet is more difficult to procure than yours, as being more rare and expensive? Or is it that -what you procure for yourself is more agreeable to you than what I provide for myself is to me? Do you not know that he who eats with the most pleasure is he who least requires sauce, and that he who drinks with the greatest pleasure is he who least desires other drink than that which he has? You know that those who change their clothes, change them because of cold and heat, and that men put on sandals that they may not be prevented from walking through annoyances to the feet; but have you ever observed me remaining at home, c« account of cold, more than any other man, or fighting with anyone for shade because of heat, or not walking wherever I please because my feet suffer? Do you not know that those who are by nature the weakest, become, by exercising their bodies, stronger in those things in which they exercise them, than those who neglect them, and bear the fatigue of exercise with greater ease? And do you not think that I, who am constantly preparing my body by exercise to endure whatever may happen to it, bear everything more easily than you who take no exercise? And to prevent me from being a slave to gluttony, or sleep, or other animal gratifications, can you imagine any cause more efficient than having other objects of attention more attractive than they, which not only afford pleasure in the moment of enjoying them, but give hopes that they will benefit me perpetually? You are aware of this also, that those who think themselves successful in nothing, are far from being cheerful, but that those who regard their agriculture, their seamanship, or whatever other occupation they pursue, as going on favorably for them, are delighted as with present success? But do you think that from ail these gratifications so much pleasure can arise as from the consciousness that you are growing better yourself, and are acquiring more valuable friends? Such is the consciousness, then, which I continue to enjoy.

"But if there should be occasion to assist our friends or our country, which of the two would have most leisure to attend to such objects, he who lives as I live now, or he who lives, as you think, in happiness? Which of the two would most readily seek the field of battle, he who cannot exist without expensive dishes, or he who is content with whatever comes before him? Which of the two would sooner be reduced by a siege, he who requires what is most difficult to be found, or he who is fully content with what is easiest to be met with? You, Antipho, seem to think that happiness consists in luxury and extravagance; but I think that to want nothing is to resemble the gods, and that to want as little as possible is to make the nearest approach to the gods; that the Divine nature is perfection, and that to be nearest to the Divine nature is to be nearest to perfection."

On another occasion, Antipho. in a conversation with Socrates, said, "I consider you indeed to be a just man, Socrates, but by no means a wise one; and you appear to me yourself to be conscious of this; for you ask money from no one for the privilege of associating with you; although, if you considered a garment of yours, or a house, or any other thing that you possess, to be worth money, you would not only not give it to anybody for nothing, but you would not take less than its full value for it. It is evident, therefore, that if you thought your conversation to be worth anything, you would demand for it no less remuneration than it is worth. You may, accordingly, be a just man, because you deceive nobody from covetousness, but wise you cannot be, as you have no knowledge that is of any value."? Socrates, in reply, said, "It is believed among us, Antipho, that it is possible to dispose of beauty, or of wisdom, alike honorably or dishonorably; for if a person sells his beauty for money to anyone that wishes to purchase, men call him a male prostitute; but if anyone makes a friend of a person whom he knows to be an honorable and worthy admirer, we regard him as prudent: and, in like manner, those who sell their wisdom for money, to any that will buy, men call sophists, or, as it were, prostituters of wisdom; but whoever makes a friend of a person whom he knows to be deserving, by teaching him all the good that he knows, we consider him to act the part which becomes an honorable and good citizen. As any other man, therefore, Antipho, takes delight in a good horse, or dog, or bird, so I, to a still greater degree, take delight in valuable friends; and, if I know anything good, I communicate it to them, and recommend them, also, to any other teachers by whom I conceive that they will be at all advanced in virtue. The treasures, too, of the wise men of old, which they have left written in books, I turn over and peruse in company with my friends, and if we find anything good in them, we remark it, and think it a great gain if we thus become more attached to one another." To me, who heard him utter these sentiments, Socrates appeared to be both happy himself, and to lead those that listened to him to honor and virtue.

Again, when Antipho asked him how he imagined that he could make men skillful statesmen, when he himself took no part in state affairs, if indeed he knew anything of them, "In which of the two ways," said he, "Antipho, should I better promote the management of affairs; if I myself engage in them alone, or if I make it my care that as many as possible may be qualified to engage in them?"

## CHAPTER VII.

*Dissuasions from ostentation. He that desires to be distinguished, should endeavor to be what he would wish to seem. He that pretends to be what he is not, exposes himself to great inconvenience and ridicule, and may bring disgrace and detriment on his country.*

Let us consider also, whether, by dissuading his followers from ostentation, he excited them to pursue virtue. He always used to say that there was no better road to honorable distinction, than that by which a person should become excellent in that in which he wished to appear excellent.

That he said what was just, he used to prove by the following arguments. “Let us consider,” he would say, “what a person must do, if, not being a good flute-player, he should wish to appear so? Must he not imitate good flute-players in the adjuncts of their art? In the first place, as flute-players procure fine dresses, and go about with a great number of attendants, he must act in a similar manner; and as many people applaud them, he must get many to applaud him; yet he must never attempt to play, or he will at once be shown to be ridiculous, and not only a bad flute-player, but a vain boaster. Thus, after having been at great expense without the least benefit, and having, in addition, incurred evil repute, how will he live otherwise than in uneasiness, unprofitableness, and derision?

“In like manner, if anyone should wish to be thought a good general, or a good steersman of a ship, without being so, let us reflect what would be his success. If, when he longed to seem capable of performing the duties of those characters, he should be unable to persuade others of his capability, would not this be a trouble to him? and, if he should persuade them of it, would it not be still more unfortunate for him? For it is evident that lie who is appointed to steer a vessel, or to lead an army, without having the necessary knowledge, would be likely to destroy those whom he would not wish to destroy, and would come off himself with disgrace and suffering.”

By similar examples he showed that it was of no profit for a man to appear rich, or valiant, or strong, without being so; for he said that demands were made upon such persons too great for their ability, and that, not being able to comply with them, when they seemed to be able, they met with no indulgence.

He called him, also, no small impostor, who, obtaining money or furniture from his neighbor by persuasion, should defraud him; but pronounced him the greatest of all impostors, who, possessed of no valuable qualifications, should deceive men by representing himself capable of governing his country. To me he appeared, by discoursing in this manner, to deter his associates from vain boasting.

# BOOK II.

## CHAPTER I.

*Socrates, suspecting that Aristippus, a man of pleasure, was aspiring to a place in the government, admonishes him that temperance is an essential qualification in a statesman. But as Aristippus says that he looked only to a life of leisure and tranquil enjoyment, Socrates introduces the question, whether those who govern, or those who are governed, live the happier life. Aristippus signifies that he wished neither to govern nor to be governed, but to enjoy liberty; and Socrates shows that such liberty as he desired is inconsistent with the nature of human society. Aristippus still adhering to his own views, and declaring his intention not to remain in anyone country, but to visit and sojourn in many, Socrates shows him the dangers of such a mode of life. But as Aristippus proceeds to accuse those of folly who prefer a life of toil in the affairs of government to a life of ease, Socrates shows the difference between those who labor voluntarily, and those who labor from compulsion, and observes that nothing good is given to mortals without labor; in illustration of which remark he relates the fable of Prodicus, The Choice of Hercules.*

He appeared also to me, by such discourses as the following, to exhort his hearers to practice temperance in their desires for food, drink, sensual gratification, and sleep, and endurance of cold, heat, and labor. But finding that one of his associates was too intemperately disposed with regard to such matters, he said to him, “Tell me, Aristippus, if it were required of you to lake two of our youths and educate them, the one in such a manner that he would be qualified to govern, and the other in such a manner that he would never seek to govern, how would you train them respectively? Will you allow us to consider the matter by commencing with their food, as with the first principles?”

“Food, indeed,” replied Aristippus, “appears to me one of the first principles; for a person could not even live if he were not to take food.”

“It will be natural for them both, then,” said Socrates, “to desire to partake of food when a certain hour comes.”

“It will be natural,” said Aristippus. “And which of the two, then,” said Socrates, “should we accustom to prefer the discharge of any urgent business to the gratification of his appetite?”

“The one undoubtedly,” rejoined Aristippus, “who is trained to rule, that the business of the state may not be neglected during his administration.”

“And on the same person,” continued Socrates, “we must, when they desire to drink, impose the duty of being able to endure thirst?”

“Assuredly,” replied Aristippus.

“And or which of the two should we lay the necessity of being temperate in sleep, so as to be able to go to rest late, to rise early, or to remain awake if it should be necessary?”

“Upon the same, doubtless.”

"And on which of the two should we impose the obligation to control his sensual appetites, that he may not be hindered by their influence from discharging whatever duty may be required of him?"

"Upon the same."

"And on which of the two should we enjoin the duty of not shrinking from labor, but willingly submitting to it?"

"This also is to be enjoined on him who is trained to rule."

"And to which of the two would it more properly belong to acquire whatever knowledge would assist him to secure the mastery over his rivals?"

"Far more, doubtless, to him who is trained to govern, for without such sort of acquirements there would be no profit in any of his other qualifications."

"A man, then, who is thus instructed, would appear to you less liable to be surprised by his enemies than other animals, of which some, we know, are caught by their greediness; and others, though very shy, are yet attracted to the bait by their desire to swallow it, and consequently taken; while others also are entrapped by drink."

"Indisputably," replied Aristippus. "Are not others, too, caught through their salaciousness, as quails and partridges, which, being attracted to the call of the female by desire and hope of enjoyment, and losing all consideration of danger, fall into traps?" To this Aristippus expressed his assent. "Does it not then," proceeded Socrates, "appear to you shameful for a man to yield to the same influence as the most senseless of animals; as adulterers, for instance, knowing that the adulterer is in danger of suffering what the law threatens, and of being watched, and disgraced if caught, yet enter into closets; and, though there are such dangers and dishonors hanging over the intriguer, and so many occupations that will free him from the desire of sensual gratification, does it not seem to you the part of one tormented with an evil genius, to run, nevertheless, into imminent peril?"

"It does seem so to me," said Aristippus.

"And since the greater part of the most necessary employments of life, such as those of war and agriculture, and not a few others, are to be carried on in the open air, does it not appear to you to show great negligence, that the majority of mankind should be wholly unexercised to bear cold and heat?" Aristippus replied in the affirmative. "Does it not then appear to you that we ought to train him who is intended to rule, to bear these inconveniences also without difficulty?"

"Doubtless," answered Aristippus. "If, therefore, we class those capable of enduring these things among those who are qualified to govern, shall we not class such as are incapable of enduring them among those who will not even aspire to govern?" Aristippus expressed his assent. "In conclusion, then, since you know the position of each of these classes of men, have you ever considered in which of them you can reasonably place yourself?"

"I have indeed," said Aristippus, "and I by no means place myself in the class of those desiring to rule; for it appears to me that, when it is a task of great difficulty to procure necessaries for one's self, it is the mark of a very foolish man not to be satisfied with that occupation, but to add to it the labor of procuring for his fellow-countrymen whatever they need. And is it not the greatest folly in him, that while many things which he desires are out of his reach, he should, by setting himself at the head of the state, subject himself, if he does not accomplish all that the people desire, to be punished for his failure? For the people think it right to use their governors as I use my slaves; for I require my slaves to supply me with the necessaries of life in abundance, but to take no part of them themselves; and the people think it the duty of their governors to supply them with as many enjoyments as possible, but themselves to abstain from all of them. Those, therefore, who wish to have much trouble themselves, and to give trouble to others, I would train in this manner, and rank among those qualified to govern; but myself I would number with those who wish to pass their lives in the greatest possible ease and pleasure."

Socrates then said, "Will you allow us to consider this point also, whether the governors or the governed live with the greater pleasure?"

"By all means," said Aristippus. "In the first place, then, of the nations of which we have any knowledge, the Persians bear rule in Asia, and the Syrians, Phrygians, and Lydians are under subjection; the Scythians govern in Europe, and the Maeotians are held in subjection; the Carthaginians rule in Africa, and the Libyans are under subjection. Which of these do you regard as living with the greater pleasure? Or among the Greeks, of whom you yourself are, which of the two appear to you to live more happily, those who rule, or those who are in subjection?"

"Yet, on the other hand," said Aristippus, "I do not consign myself to slavery; but there appears to me to be a certain middle path between the two, in which I endeavor to proceed, and which leads, not through slavery, but through liberty, a path that most surely conducts to happiness."

"If this path of yours, indeed," said Socrates, "as it lie neither through sovereignty nor servitude, did not also lie through human society, what you say would perhaps be worth consideration; but if, while living among mankind, you shall neither think proper to rule nor to be ruled, and shall not willingly pay respect to those in power, I think that you will see that the stronger know how to treat the weaker as slaves, making them to lament both publicly and privately. Do those escape your knowledge who fell and destroy the corn and trees of others that have sown and planted them, and who assail in every way such as are inferior to them, and are unwilling to flatter them, until they prevail on them to prefer slavery to carrying on war against their superiors? In private life, too, do you not see that the spirited and strong enslave the timorous and weak, and enjoy the fruits of their labors?"

"But for my part," answered Aristippus, "in order that I may nor suffer such treatment, I shall not shut myself up in anyone state, but shall be a traveler everywhere."

"Doubtless," rejoined Socrates, "this is an admirable plan that you propose; for since Sinnis, and Sciron, and Procrustes were killed, nobody injures travelers. Yet those who manage the government in their several countries, even now make laws, in order that they may not be injured, and attach to themselves, in addition to such as are called their necessary connections, other supporters; they also surround their cities with ramparts, and procure weapons with which they may repel aggressors, securing, besides all these means of defense, other allies from abroad; and yet those who have provided themselves with all these bulwarks, nevertheless suffer injury; and do you, having no protection of the sort, spending a long time on roads on which a very great number are outraged, weaker than all the inhabitants of whatever city you may arrive at, and being such a character as those who are eager to commit violence most readily attack, think, nevertheless, that you will not be wronged because you are a stranger? Or are you without fear, because these cities proclaim safety to anyone arriving or departing? Or because you think that you would prove a slave of such a character as would profit no master, for who, you perhaps ask yourself, would wish to keep in his house a man not at all disposed to labor, and delighting in the most expensive fare? But let us consider how masters treat slaves of such a sort. Do they not tame down their fondness for dainties by hunger? Do they not hinder them from stealing by excluding them from every place from whence they may take anything? Do they not prevent them from running away by putting fetters on them? Do they not overcome their laziness by stripes? Or how do you yourself act, when you find anyone of your slaves to be of such a disposition?”

“I chastise him,” said Aristippus, “with every kind of punishment, until I compel him to serve me? But how do those, Socrates, who are trained to the art of ruling, which you seem to me to consider as happiness, differ from those who undergo hardships from necessity, since they will have (though it be with their own consent) to endure hunger, and thirst, and cold, and want of sleep, and suffer all other inconveniences of the same kind? For I, for my own part, do not know what difference it makes to a man who is scourged on the same skin, whether it be voluntarily or involuntarily, or, in short, to one who suffers with the same body in all such points, whether he suffer with his consent or against it, except that folly is to be attributed to him who endures troubles voluntarily.”

“What then, Aristippus,” said Socrates, “do not voluntary endurances of this kind seem to you to differ from the involuntary, inasmuch as he who is hungry from choice may eat when lie pleases, and he who is thirsty from choice may drink when he pleases, the same being the case with regard to other voluntary sufferings, while he who endures such hardships from necessity has no liberty to relieve himself from them when he wishes? Besides, he who undergoes trouble willingly, is cheered in undergoing it with some expectation of good, as the hunters of wild animals bear fatigue with pleasure in the hope of capturing them. And such rewards of toil are indeed but of small worth; but as for those who toil that they may acquire valuable friends, or that they may subdue their enemies, or they may, by becoming vigorous in body and mind, manage their own household judiciously, and be of service to their friends and of advantage to their country, how can you think that they labor for such objects otherwise than cheerfully, or that they do not live in happiness, esteeming themselves, and being praised and envied by others? But indolence, moreover, and pleasures enjoyed at the moment of desire, are neither capable of producing a good constitution of body, as the teachers of gymnastic exercises say, nor do they bring to the mind any knowledge worthy of consideration; but exercises pursued with persevering labor lead men to the attainment of honorable and valuable objects, as worthy men inform us; and Hesiod somewhere says,

> Vice it is possible to find in abundance and with ease; for the way to it is smooth, and lies very near. But before the temple of Virtue the immortal gods have placed labor, and the way to it is long and steep, and at the commencement rough; but when the traveler has arrived at the summit, it then becomes easy, however difficult it was at first.

A sentiment to which Epicharmus gives his testimony in this verse,

> The gods for labor sell us all good things; and in another place he says,
>
> O wretched mortal, desire not what is soft, lest you find what is hard.

Prodicus the sophist, also, in his narrative concerning Hercules, which indeed he declaims to most people as a specimen of his ability, expresses a similar notion respecting virtue, speaking, as far as I remember, to the following effect: For he says that Hercules, when he was advancing from boyhood to manhood, a period at which the young, becoming their own masters, begin to give intimations whether they will enter on life by the path of virtue or that of vice, went forth into a solitary place, and sat down, perplexed as to which of these two paths he should pursue; and that two female figures, of lofty stature, seemed to advance towards him, the one of an engaging and graceful mien, gifted by nature with elegance of form, modesty of look, and sobriety of demeanor, and clad in a white robe; the other fed to plumpness and softness, but assisted by art both in her complexion, so as to seem fairer and rosier than she really was, and in her gesture, so as to seem taller than her natural height; she had her eyes wide open, and a robe through which her beauty would readily show itself; she frequently contemplated her figure, and looked about to see if anyone else was observing her; and she frequently glanced back at her own shadow. As they approached nearer to Hercules, she, whom I first described, came forward at the same pace, but the other, eager to get before her, ran up to Hercules, and exclaimed, “I see that you are hesitating, Hercules, by what path you shall enter upon life; if, then, you make a friend of me, I will conduct you by the most delightful and easy road, and you shall taste of every species of pleasure, and lead a life free from every sort of trouble. In the first place, you shall take no thought of wars or state affairs, but shall pass your time considering what meat or drink you may find to gratify your appetite, what you may delight yourself by seeing or hearing, what you may be pleased with smelling or touching, with what objects of affection you may have most pleasure in associating, how you may sleep most softly, and how you may secure all these enjoyments with the least degree of trouble.

If an apprehension of want of means, by which such delights may be obtained, should ever arise in you, there is no fear that I shall urge you to procure them by toil or suffering either of body or mind; but you shall enjoy what others acquire by labor, abstaining from nothing by which it may be possible to profit, for I give my followers liberty to benefit themselves from any source whatever."

Hercules, on hearing this address, said, "And what, O woman, is your name?"

"My friends," she replied, "call me Happiness, but those who hate me, give me, to my disparagement, the name of Vice."

In the meantime the other female approached, and said, "I also am come to address you, Hercules, because I know your parents, and have observed your disposition in the training of your childhood, from which I entertain hopes, that if you direct your steps along the path that leads to my dwelling, you will become an excellent performer of whatever is honorable and noble, and that I shall appear more honorable and attractive through your illustrious deeds. I will not deceive you, however, with promises of pleasure, but will set before you things as they really are, and as the gods have appointed them; for of what is valuable and excellent, the gods grant nothing to mankind without labor and care; and if you wish the gods, therefore, to be propitious to you, you must worship the gods; if you seek to be beloved by your friends, you must serve your friends; if you desire to be honored by any city, you must benefit that city; if you long to be admired by all Greece for your merit, you must endeavor to be of advantage to all Greece; if you are anxious that the earth should yield you abundance of fruit, you must cultivate the earth; if you think that you should enrich yourself from herds of cattle, you must bestow care upon herds of cattle; if you are eager to increase your means by war, and to secure freedom to your friends and subdue your enemies, you must learn the arts of war, and learn them from such as understand them, and practice how to use them with advantage; or if you wish to be vigorous in body, you must accustom your body to obey your mind, and exercise it with toil and exertion."

Here Vice, interrupting her speech, said, (as Prodicus relates,) "Do you see, Hercules, by how difficult and tedious a road this woman conducts you to gratification, while I shall lead you, by an easy and short path, to perfect happiness?"

"Wretched being," rejoined Virtue, "of what good are you in possession? Or what real pleasure do you experience, when you are unwilling to do anything for the attainment of it? You, who do not even wait for the natural desire of gratification, but fill yourself with all manner of dainties before you have an appetite for them, eating before you are hungry, drinking before you are thirsty, procuring cooks that you may eat with pleasure, buying costly wines that you may drink with pleasure, and running about seeking for snow in summer; while, in order to sleep with pleasure, you prepare not only soft beds, but couches, and rockers under your couches, for you do not desire sleep in consequence of labor, but in consequence of having nothing to do; you force the sensual inclinations before they require gratification, using every species of contrivance for the purpose, and abusing male and female; for thus it is that you treat your friends, insulting their modesty at night, and making them sleep away the most useful part of their day. Though you are one of the immortals, you are cast out from the society of the gods, and despised by the good among mankind; the sweetest of all sounds, the praises of yourself, you have never heard, nor have you ever seen the most pleasing of all sights, for you have never beheld one meritorious work of your own hand. Who would believe you when you give your word for anything? Or who would assist you when in need of anything? Or who, that has proper feeling, would venture to join your company of revelers? for while they are young they grow impotent in body, and when they are older they are impotent in mind; they live without labor, and in fatness, through their youth, and pass laboriously, and in wretchedness, through old age; ashamed of what they have done, oppressed with what they have to do, having run through their pleasures in early years, and laid up afflictions for the close of life. But I am the companion of the gods; I associate with virtuous men; no honorable deed, divine or human, is done without me; I am honored, most of all, by the deities, and by those among men to whom it belongs to honor me, being a welcome co-operator with artisans, a faithful household guardian to masters, a benevolent assistant to servants, a benign promoter of the labors of peace, a constant auxiliary to the efforts of war, an excellent sharer in friendship. My friends have a sweet and untroubled enjoyment of meat and drink, for they refrain from them till they feel an appetite. They have also sweeter sleep than the idle; and are neither annoyed if they lose a portion of it, nor neglect to do their duties for the sake of it. The young are pleased with praises from the old; the old are delighted with honors from the young. They remember their former acts with pleasure, and rejoice to perform their present occupations with success; being, through my influence, dear to the gods, beloved by their friends, and honored by their country. And when the destined end of life comes, they do not lie in oblivion and dishonor, but, celebrated with songs of praise, flourish forever in the memory of mankind. By such a course of conduct, O Hercules, son of noble parents, you may secure the most exalted happiness."

Nearly thus it was that Prodicus related the instruction of Hercules by Virtue; adorning the sentiments, however, with far more magnificent language than that in which I now give them. It becomes you, therefore, Aristippus, reflecting on these admonitions, to endeavor to think of what concerns the future period of your life.

## CHAPTER II.

*A dialogue between Socrates and his son Lamprocles, who had expressed resentment against his mother, on the duty of children to their parents. The ungrateful are to be deemed unjust. The greater benefits a person has received, the more unjust is he if he is ungrateful; and there are no greater benefits than those which children experience from their parents. Hence it follows that a son ought to reverence his mother, though she be severe, when he knows that her severity proceeds from kind motives. How great a crime the neglect of filial duty is, appears from the fact that it is punished by the laws and execrated by mankind.*

Having learned, one day, that Lamprocles, the eldest of his sons, had exhibited anger against his mother, "Tell me, my son," said he, "do you know that certain persons are called ungrateful?"

"Certainly," replied the youth. "And do you understand how it is they act that men give them this appellation?"

"I do," said Lamprocles, "for it is those that have received a kindness, and that do not make a return when they are able to make one, whom they call ungrateful."

"They then appear to you to class the ungrateful with the unjust?"

"I think so."

"And have you ever considered whether, as it is thought unjust to make slaves of our friends, but just to make slaves of our enemies, so it is unjust to be ungrateful towards our friends, but just to be so towards our enemies?"

"I certainly have," answered Lamprocles, "and from whomsoever a man receives a favor, whether friend or enemy, and does not endeavor to make a return for it, he is in my opinion unjust."

"If such, then, be the case," pursued Socrates, "ingratitude must be manifest injustice?" Lamprocles expressed his assent. "The greater benefits, therefore, a person has received, and makes no return, the more unjust he must be." He assented to this position also. "Whom, then," asked Socrates, "can we find receiving greater benefits from any persons than children receive from their parents? children whom their parents have brought from non-existence into existence, to view so many beautiful objects, and to share in so many blessings, as the gods grant to men; blessings which appear to us so inestimable, that we shrink, in the highest degree, from relinquishing them; and governments have made death the penalty for the most heinous crimes, in the supposition that they could not suppress injustice by the terror of any greater evil. You do not, surely, suppose that men: beget children merely to gratify their passions, since the streets are full, as well as the brothels, of means to allay desire; but what we evidently consider, is, from what sort of women the finest children may be born to us, and, uniting with them, we beget children. The man maintains her who joins with him to produce offspring, and provides, for the children that are likely to be born to him, whatever he thinks will conduce to their support, in as great abundance as he can;

while the woman receives and bears the burden, oppressed and endangering her life, and imparting a portion of the nutriment with which she herself is supported; and, at length, after bearing it the full time, and bringing it forth with great pain, she suckles and cherishes it, though she has received no previous benefit from it, nor does the infant know by whom it is tended, nor is it able to signify what it wants, but she, conjecturing what will nourish and please it, tries to satisfy its calls, and feeds it for a long time, both night and day, submitting to the trouble and not knowing what return she will receive for it. Nor does it satisfy the parents merely to feed their offspring, but as soon as the children appear capable of learning anything, they teach them whatever they know that may be of use for their conduct in life; and whatever they consider another more capable of communicating than themselves, they send their sons to him at their own expense, and take care to adopt every course that their children may be as much improved as possible."

Upon this the young man said, "But, even if she has done all this, and many times more than this, no one, assuredly, could endure her ill-humor."

"And which do you think," asked Socrates, more difficult to be endured, "the ill-humor of a wild beast, or that of a mother?"

"I think," replied Lamprocles, "that of a mother, at least of such a mother as mine is."

"Has she ever then inflicted any hurt upon you, by biting or kicking you, as many have often suffered from wild beasts?"

"No; but, by Zeus, she says such things as no one would endure to hear for the value of all that he possesses."

"And do you reflect," returned Socrates, "how much grievous trouble you have given her by your peevishness, by voice and by action, in the day and in the night, and how much anxiety you have caused her when you were ill?"

"But I have never said or done anything to her," replied Lamprocles, "at which she could feel ashamed."

"Do you think it, then," inquired Socrates, "a more difficult thing for you to listen to what she says, than for actors to listen when they utter the bitterest reproaches against one another in tragedies?"

"But actors, I imagine, endure such reproaches easily, because they do not think that, of the speakers, the one who utters reproaches, utters them with intent to do harm, or that the one who utters threats, utters them with any evil purpose."

"Yet you are displeased at your mother, although you well know that whatever she says, she not only says nothing with intent to do you harm, but that she wishes you more good than any other human being. Or do you suppose that your mother meditates evil towards you?"

"No indeed," said Lamprocles, "that I do not imagine."

"Do you then say that this mother," rejoined Socrates, "who is so benevolent to you, who, when you are ill, takes care of you, to the utmost of her power, that you may recover your health, and that you may want nothing that is necessary for you, and who, besides, entreats the gods for many blessings on your head, and pays vows for you, is a harsh mother? For my part, I think that if you cannot endure such a mother, you cannot endure anything that is good? But tell me," continued he, "whether you think that you ought to pay respect to any other human being, or whether you are resolved to try to please nobody, and to follow or obey neither a general nor any other commander?"

"No indeed," replied Lamprocles, "I have formed no such resolution."

"Are you then willing," inquired Socrates, "to cultivate the good-will of your neighbor, that he may kindle a fire for you when you want it, or aid you in obtaining some good, or, if you happen to meet with any misfortune, may assist you with willing and ready help?"

"I am," replied he. "Or would it make no difference," rejoined Socrates, "whether a fellow-traveler, or fellow-voyager, or any other person that you met with, should be your friend or enemy? Or do you think that you ought to cultivate their good-will?"

"I think that I ought," replied Lamprocles. "You are then prepared," returned Socrates, "to pay attention to such persons; and do you think that you ought to pay no respect to your mother, who loves you more than anyone else? Do you not know that the state takes no account of any other species of ingratitude, nor allows any action at law for it, overlooking such as receive a favor and make no return for it, but that if a person does not pay due regard to his parents, it imposes a punishment on him, rejects his services, and does not allow him to hold the archonship, considering that such a person cannot piously perform the sacrifices offered for the country, or discharge any other duty with propriety and justice. Indeed if anyone does not keep up the sepulchers of his dead parents, the state inquires into it in the examinations of candidates for office. You therefore, my son, if you are wise, will entreat the gods to pardon you if you have been wanting in respect towards your mother, lest, regarding you as an ungrateful person, they should be disinclined to do you good; and you will have regard, also, to the opinion of men, lest, observing you to be neglectful of your parents, they should all contemn you, and you should then be found destitute of friends; for if men surmise that you are ungrateful towards your parents, no one will believe that if he does you a kindness he will meet with gratitude in return."

## CHAPTER III.

*Socrates, hearing that two brothers, Chaerephon and Chaerecrates, had quarreled, recommends brotherly love to Chaerecrates by the following arguments. A brother ought to be regarded as a friend, and esteemed more than wealth; for wealth is an uncertain possession, if the possess or of it is destitute of friends. Fraternal love an appointment of Nature; and men who have brothers are more respected than those who have none, Even though a brother should conceive ill feelings towards us, we should still endeavor to conciliate him. How such conciliation may be effected. The endeavor to conciliate is still more the duty of a younger than of an elder brother, and the more noble the disposition of a brother is, the more easy will it be to conciliate him. Brothers should act in unison with one another, like different members of the same body.*

Socrates, having observed that Chaerephon and Chaerecrates, two brothers well known to him, were at variance with each other, and having met with Chaerecrates, said, “Tell me, Chaerecrates, you surely are not one of those men, are you, who think wealth more valuable than brothers, when wealth is but a senseless thing, and a brother endowed with reason, when wealth needs protection, while a brother can afford protection, and when wealth, besides, is plentiful, and a brother but one? It is wonderful, too, that a man should consider brothers to be a detriment to him, because he does not possess his brothers’ fortunes, while he does not consider his fellow-citizens to be a detriment, because he does not possess their fortunes; but, in the latter case, he can reason with himself, that it is better for him, living in society with many, to enjoy a competency in security, than, living alone, to possess all the property of his fellow-citizens in fear of danger, while, with regard to brothers, he knows not how to apply such reasoning. Those who are able, too, purchase slaves, that they may have helpers in their work, and procure friends, as being in need of supporters, while they neglect their brothers, as if friends could be made of fellow-citizens, but could not be made of brothers. Yet it surely conduces greatly to friendship to have been born of the same parents, and to have been brought up together, since, even among brutes, a certain affection springs up between those that are reared together. In addition to these considerations, men pay more respect to those who have brothers than to those who have none, and are less forward to commit aggression on them.”

To this Chaerecrates made answer, “If, indeed, Socrates, the dissension between us were not great, it might perhaps be my duty to bear with my brother, and not shun his society for slight causes; for a brother, as you say, is a valuable possession, if he be such as he ought to be; but when he is nothing of the sort, and is indeed quite the reverse of what he should be, why should I attempt impossibilities?”

“Whether, then, Chaerecrates,” rejoined Socrates, “is Chaerephon unable to please anybody, as he is unable to please you, or are there some whom he certainly can please?”

"Yes," replied Chaerecrates, "for it is for this very reason that I justly hate him, that he can please others, while to me he is on all occasions, whenever he comes in contact with me, a harm rather than a good, both in word and deed."

"Is the case then thus," said Socrates, "that as a horse is a harm to him who knows not how to manage him, and yet tries to do so, so a brother is a harm, when a person tries to manage him without knowing how to do it?"

"But how can I be ignorant," replied Chaerecrates, "how to manage my brother, when I know how to speak well of him who speaks well of me, and to do well to him who does well to me? As to one, however, who seeks to vex me both by word and deed, I should not be able either to speak well of him, or to act well towards him, nor will I try."

"You speak strangely, Chaerecrates," rejoined Socrates, "for if a dog of yours were of service to watch your sheep, and fawned upon your shepherds, but snarled when you approached him, you would forbear to show any ill feeling towards him, but would endeavor to tame him by kindness; but as for your brother, though you admit that he would be a great good to you if he were such as he ought to be, and though you confess that you know how to act and speak well with respect to him, you do not even attempt to make him of such service to you as he might be."

"I fear, Socrates," replied Chaerecrates, "that I have not wisdom enough to render Chaerephon such as he ought to be towards me."

"Yet there is no need to contrive anything artful or novel to act upon him," said Socrates, "as it appears to me; for I think that he may be gained over by means which you already know, and may conceive a high esteem for you."

"Tell me first," said the other, "whether you have observed that I possess any love-charm, which I was not aware that I knew?"

"Answer me this question," said Socrates: "if you wished to induce anyone of your acquaintance, when he offered sacrifice, to invite you to his feast, what would you do?"

"I should doubtless begin by inviting him when I offered sacrifice."

"And if you wished to prevail on any of your friends to take care of your property, when you went from home, what would you do?"

"I should certainly first offer to take care of his property, when he went from home."

"And if you wished to induce an acquaintance in a foreign land to receive you hospitably when you visited his country, what would you do?"

"I should unquestionably be the first to receive him hospitably when he came to Athens; and if I wished him to be desirous to effect for me the objects for which I went thither, it is clear that I must first confer a similar service on him."

"Have you not long been unawares acquainted, then, with all the love-charms that exist among mankind? Or are you afraid," continued Socrates, "to make the first advances, lest you should seem to degrade yourself, if you should be the first to propitiate your brother? Yet he is thought to be a man deserving of great praise, who is the first to do harm to the enemy, and to do good to his friends. If, then, Chaerephon had appeared to me more likely to bring you to this frame of mind, I would have endeavored to persuade him first to try to make you his friend; but, as things stand, you seem more likely, if you take the lead, to effect the desired object."

"You speak unreasonably, Socrates," rejoined Chaerecrates, "and not as might be expected from you, when you desire me, who am the younger, to take the lead; for the established practice among all men is quite the reverse, being that the elder should always be first, both to act and speak."

"How," said Socrates; "is it not the custom everywhere that the younger should yield the path to the elder when he meets him, rise from his seat before him, honor him with the softest couch, and give place to him in conversation? Do not therefore hesitate, my good young friend, but endeavor to conciliate your brother, and he will very soon listen to you. Do you not see how fond of honor, and how liberal-minded, he is? Mean-minded persons you cannot attract more effectually than by giving them something; but honorable and good men you may best gain by treating them in a friendly spirit."

"But what if he should become no kinder," said Chaerecrates, "after I have done what you advise?"

"It will be of no consequence," replied Socrates, "for what other risk will you run but that of showing that you are kind and full of brotherly affection, and that he is mean-spirited and unworthy of any kindness? But I apprehend no such result; for I conceive that when he finds you challenging him to such a contest, he will be extremely emulous to excel you in doing kindnesses both by word and deed. At present, you are in the same case as if the two hands, which the gods have made to assist each other, should neglect this duty, and begin to impede each other; or as if the two feet, formed by divine providence to co-operate with one another, should give up this office, and obstruct one another. Would it not be a great folly and misfortune to use for our hurt what was formed for our benefit? And indeed, as it appears to me, the gods have designed brothers to be of greater mutual service than the hands, or feet, or eyes, or other members which they have made in pairs for men; for the hands, if required to do things, at the same time, at greater distance than a fathom, would be unable to do them; the feet cannot reach two objects, at the same time, that are distant even a fathom; and the eyes, which seem to reach to the greatest distance, cannot, of objects that are much nearer, see at the same time those that are before and behind them; but brothers, if they are in friendship, can, even at the greatest distance, act in concert and for mutual benefit."

## CHAPTER IV.

*On the value of friendship. Many are more desirous to acquire property than friends. But no species of property is more valuable, lasting, and useful than a good friend: his qualities enumerated.*

I heard him, also, on one occasion, holding a discourse concerning friends, by which, as it seems to me, a person might be greatly benefited, both as to the acquisition and use of friends; for he said that he had heard many people observe that a true and honest friend was the most valuable of all possessions, but that he saw the greater part of mankind attending to anything rather than securing friends. He observed them, he added, industriously endeavoring to procure houses and lands, slaves, cattle, and furniture; but as for a friend, whom they called the greatest of blessings, he saw the majority considering neither how to procure one, nor how those whom they had might be retained. Even when friends and slaves were sick, he said that he noticed people calling in physicians to their slaves, and carefully providing other means for their recovery, but paying no attention to their friends; and. that, if both died, they grieved for their slaves, and thought that they had suffered a loss, but considered that they lost nothing in losing friends. Of their other possessions they left nothing untended or unheeded, but when their friends required attention, they utterly neglected them.

In addition to these remarks, he observed that he saw the greater part of mankind acquainted with the number of their other possessions, although they might be very numerous, but of their friends, though but few, they were not only ignorant of the number, but even when they attempted to reckon it to such as asked them, they set aside again some that they had previously counted among their friends; so little did they allow their friends to occupy their thoughts. Yet in comparison with what possession, of all others, would not a good friend appear far more valuable? What sort of horse, or yoke of oxen, is so useful as a truly good friend? What slave is so well-disposed or so attached, or what other acquisition so beneficial? For a good friend is ready to supply whatever is wanting on the part of his friend, whether in his private affairs, or for the public interests; if he is required to do a service to anyone, he assists him with the means; if any apprehension alarms him, he lends him his aid, sometimes sharing expenditure with him, sometimes co-operating with him, sometimes joining with him to persuade others, sometimes using force towards others; frequently cheering him when he is successful, and frequently supporting him when he is in danger of falling. What the hands do, what the eyes foresee, what the ears hear, what the feet accomplish, for each individual, his friend, of all such services, fails to perform no one; and oftentimes, what a person has not effected for himself, or has not seen, or has not heard, or has not accomplished, a friend has succeeded in executing for his friend; and yet, while people try to foster trees for the sake of their fruit, the greater portion of mankind are heedless and neglectful of that most productive possession which is called a friend.

## CHAPTER V.

*On the different estimation in which different friends are to be held. We ought to examine ourselves, and ascertain at what value we may expect our friends to hold us.*

I heard one day another dissertation of his, which seemed to me to exhort the hearer to examine himself, and ascertain of how much value he was to his friends. Finding that one of his followers was neglectful of a friend who was oppressed with poverty, he asked Antisthenes, in the presence of the man that neglected his friend, and of several others, saying, “Are there certain settled values for friends, Antisthenes, as there are for slaves? For, of slaves, one, perhaps, is worth two minae, another not even half a mina, another five minae, another ten. Nicias, the son of Niceratus, is said to have bought an overseer for his silver mines at the price of a whole talent. I am therefore considering whether, as there are certain values for slaves, there are also certain values for friends.”

“There are, undoubtedly,” replied Antisthenes; “at least I, for my part, should wish one man to be my friend rather than have two minae; another I should not value even at half a mina; another I should prefer to ten minae; and another I would buy for my friend at the sacrifice of all the money and revenues in the world.”

“If such be the case, therefore,” said Socrates, “it would be well for each of us to examine himself, to consider of what value he is in the estimation of his friends; and to try to be of as much value to them as possible, in order that his friends may be less likely to desert him; for I often hear one man saying that his friend has abandoned him, and another, that a person whom he thought to be his friend has preferred a mina to him. I am considering, accordingly, whether, as one sells a bad slave, and parts with him for whatever he will fetch, so it may be advisable to give up a worthless friend, when there is an opportunity of receiving more than he is worth. Good slaves I do not often see sold at all, or good friends abandoned.”

## CHAPTER VI.

*What sort of persons we should choose for our friends. How we may ascertain the characters of men, before we form a friendship with them. How we may attach men to us as friends. Friendship can exist only between the good and honorable; between whom it will continue to subsist in spite of differences of opinion. Deductions from the preceding remarks.*

He appeared to me, also, to make his followers wise in examining what sort of persons it was right to attach to themselves as friends, by such conversations as the following.. "Tell me, Critobulus," said he, "if we were in need of a good friend, how should we proceed to look for one? Should we not, in the first place, seek for a person who can govern his appetite, his inclination to wine or sensuality, and abstain from immoderate sleep and idleness? For one who is overcome by such propensities would be unable to do his duty either to himself or his friend."

"Assuredly he would not," said Critobulus. "It appears then to you that we must avoid one who is at the mercy of such inclinations?"

"Undoubtedly," replied Critobulus. "Besides," continued Socrates, "does not a man who is extravagant and yet unable to support himself, but is always in want of assistance from his neighbor, a man who, when he borrows, cannot pay, and when he cannot borrow, hates him who will not lend, appear to you to be a dangerous friend?"

"Assuredly," replied Critobulus. "We must therefore avoid such a character?"

"We must indeed."

"Again: what sort of friend would he be who has the means of getting money, and covets great wealth, and who, on this account, is a driver of hard bargains, and delights to receive, but is unwilling to pay?"

"Such a person appears to me," said Critobulus, "to be a still worse character than the former."

"What then do you think of him, who, from love of getting money, allows himself no time for thinking of anything else but whence he may obtain it?"

"We must avoid him, as it seems to me; for he would be useless to anyone that should make an associate of him."

"And what do you think of him who is quarrelsome, and likely to raise up many enemies against his friends?"

"We must avoid him also, by Zeus."

"But if a man have none of these bad qualities, but is content to receive obligations, taking no thought of returning them?"

"He also would be useless as a friend. But what sort of person, then, Socrates, should we endeavor to make our friend?"

"A person, I think, who, being the reverse of all this, is proof against the seductions of bodily pleasures, is upright and fair in his dealings, and emulous not to be outdone in serving those who serve him, so that he is of advantage to those who associate with him.”

“How then shall we find proof of these qualities in him, Socrates, before we associate with him?”

“We make proof of statuaries,” rejoined Socrates, “not by forming opinions from their words, but, whomsoever we observe to have executed his previous statues skillfully, we trust that he will execute others well.”

“You mean, then, that the man who is known to have served his former friends, will doubtless be likely to serve such as maybe his friends hereafter?”

“Yes; for whomsoever I know to have previously managed horses with skill, I expect to manage other horses also with skill.”

Be it so,” said Critobulus; “but by what means must we make a friend of him who appears to us worthy of our friendship?”

“In the first place,” answered Socrates, “we must consult the gods, whether they recommend us to make him our friend.”

“Can you tell me, then,” said Critobulus, “how he, who appears eligible to us, and whom the gods do not disapprove, is to be secured?”

“Assuredly,” returned Socrates, “he is not to be caught by tracking him like the hare, or by wiles, like birds, or by making him prisoner by force, like enemies; for it would be an arduous task to make a man your friend against his will, or to hold him fast if you were to bind him like a slave; for those who suffer such treatment are rendered enemies rather than friends.”

“How then are men made friends?” inquired Critobulus. “They say that there are certain incantations, which those who know them, chant to whomsoever they please, and thus make them their friends; and that there are also love-potions, which those who know them, administer to whomsoever they will, and are in consequence beloved by them.”

“And how can we discover these charms?”

“You have heard from Homer the song which the Sirens sung to Ulysses, the commencement of which runs thus:

‘Come hither, much-extolled Ulysses, great glory of the Greeks.’”

“Did the Sirens then, by singing this same song to other men also, detain them so that they were charmed and could not depart from them?”

“No; but they sang thus to those who were desirous of being honored for virtue.”

“You seem to mean that we ought to apply as charms to any person, such commendations as, when he hears them, he will not suspect that his eulogist utters to ridicule him; for, if he conceived such a suspicion, he would rather be rendered an enemy, and would repel men from him; as, for instance, if a person were to praise as beautiful, and tall, and strong, one who is conscious that he is short, and deformed, and weak.

But," added Critobulus, "do you know any other charms?"

"No," said Socrates, "but I have heard that Pericles knew many, which he used to chant to the city, and make it love him."

"And how did Themistocles make the city love him?"

"Not, by Zeus, by uttering charms to it, but by conferring on it some advantage."

"You appear to me to mean, Socrates, that if we would attach to us any good person as a friend, we ourselves should be good both in speaking and acting."

"And did you think it possible," said Socrates, "for a bad person to attach to himself good men as his friends?"

"I have seen," rejoined Critobulus, "bad orators become friends to good orators, and men bad at commanding an army become friends to men eminently good in the military art."

"Do you, then," said Socrates, "regarding the subject of which we are speaking, know any persons, who, being themselves useless, can make useful persons their friends?"

"No, by Zeus," replied Critobulus; "but if it is impossible for a worthless person to attach to himself good and honorable friends, it becomes now an object of consideration with me, whether it is possible for one who is himself honorable and good, to become, with ease, a friend to the honorable and good."

"What perplexes you, Critobulus, is, that you often see men who are honorable in their conduct, and who refrain from everything disgraceful, involved, instead of being friends, in dissensions with one another, and showing more severity towards each other than the worthless part of mankind."

"Nor is it only private persons," rejoined Critobulus, "that act in this manner, but even whole communities, which have the greatest regard for what is honorable, and are least inclined to anything disgraceful, are often hostilely disposed towards one another.

When I reflect on these differences," continued Critobulus, "I am quite in despair about the acquisition of friends; for I see that the bad cannot be friends with one another; for how can the ungrateful, or careless, or avaricious, or faithless, or intemperate, be friends to each other? Indeed the bad appear to me to be altogether disposed by nature to be mutual enemies rather than friends. Again, the bad, as you observe, can never harmonize in friendship with the good; for how can those who commit bad actions be friends with those who abhor such actions? And yet, if those also who practice virtue fall into dissensions with one another about pre-eminence in their respective communities, and even hate each other through envy, who will ever be friends, or among what class of mankind shall affection and attachment be found?"

"But these affections act in various ways," rejoined Socrates, "for men have by nature inclinations to attachment, since they stand in need of each other, and feel compassion for each other, and co-operate for mutual benefit, and, being conscious that such is the case, have a sense of gratitude towards one another;

but they have also propensities to enmity, for such as think the same objects honorable and desirable, engage in contention for them, and, divided in feelings, become enemies. Disputation and anger lead to war; the desire of aggrandizement excites ill-will; and envy is followed by hatred. But, nevertheless, friendship, insinuating itself through all these hindrances, unites together the honorable and good; for such characters, through affection for virtue, prefer the enjoyment of a moderate competency without strife, to the attainment of unlimited power by means of war; they can endure hunger and thirst without discontent, and take only a fair share of meat and drink, and, though delighted with the attractions of youthful beauty, they can control themselves, so as to forbear from offending those whom they ought not to offend. By laying aside all avaricious feelings too, they can not only be satisfied with their lawful share of the common property, but can even assist one another. They can settle their differences, not only without mutual offence, but even to their mutual benefit. They can prevent their anger from going so far as to cause them repentance; and envy they entirely banish, by sharing their own property with their friends, and considering that of their friends as their own.

"How, then, can it be otherwise than natural, that the honorable and good should be sharers in political distinctions, not only without detriment, but even with advantage, to each other? Those indeed who covet honor and power in states, merely that they may be able to embezzle money, to do violence to others, and to live a life of luxury, must be regarded as unprincipled and abandoned characters, and incapable of harmonious union with other men. But when a person wishes to attain honors in a community, in order, not merely that he may not suffer wrong himself, but that he may assist his friends as far as is lawful, and may endeavor, in his term of office, to do some service to his country, why should he not, being of such a character, form a close union with another of similar character? Will he be less able to benefit his friends if he unite himself with the honorable and good, or will he be less able to serve his country if he have the honorable and good for his colleagues? In the public games, indeed, it is plain, that if the strongest were allowed to unite and attack the weaker, they would conquer in all the contests, and carry off all the prizes; and accordingly people do not permit them, in those competitions, to act in such a manner; but since, in political affairs, in which honorable and good men rule, no one hinders another from serving his country in concert with whomsoever lie pleases, how can it be otherwise than profitable for him to conduct affairs with the best men as his friends, having these as colleagues and co-operators, rather than antagonists, in his proceedings? It is evident, too, that if one man commences hostilities against another, he will need allies, and will need a great number of them, if he oppose the honorable and good; and those who consent to be his allies must be well treated by him, that they may be zealous in his interests; and it is much better for him to serve the best characters, who are the fewer, than the inferior, who are more numerous; for the bad require far more favors than the good.

But strive with good courage, Critobulus," he continued, "to be good yourself, and, having become so, endeavor to gain the friendship of men of honor and virtue. Perhaps I myself also may be able to assist you in this pursuit of the honorable and virtuous, from being naturally disposed to love, for, for whatever persons I conceive a liking, I devote myself with ardor, and with my whole mind, to love them, and be loved in return by them, regretting their absence to have mine regretted by them, and longing for their society while they on the other hand long for mine. I know that you also must cultivate such feelings, whenever you desire to form a friendship with any person. Do not conceal from my knowledge, therefore, the persons to whom you may wish to become a friend; for, from my carefulness to please those who please me, I do not think that I am unskilled in the art of gaining men's affections."

"Indeed, Socrates," replied Critobulus, "I have long desired to receive such instructions as yours, especially if the same knowledge will have effect at once on those who are amiable in mind, and handsome in person."

"But, Critobulus," replied Socrates, "there is nothing in the knowledge that I communicate to make those who are handsome in person endure him who lays hands upon them; for I am persuaded that men shrunk from Scylla because she offered to put her hands on them; while everyone, they say, was ready to listen to the Sirens, and were enchanted as they listened, because they laid hands on no one, but sang to all men from a distance."

"On the understanding, then, that I shall lay my hands on no one," said Critobulus, "tell me if you know any effectual means for securing friends."

"But will you never," asked Socrates, "apply your lips to theirs?"

"Be of good courage, Socrates," said Critobulus, "for I will never apply my lips to those of any person, unless that person be beautiful."

"You have now said," rejoined Socrates, "the exact contrary to what will promote your object; for the beautiful will not allow such liberties, though the deformed receive them with pleasure, thinking that they are accounted beautiful for their mental qualities."

"As I shall caress the beautiful, then," said Critobulus, "and caress the good with the utmost ardor, teach me, with confidence, the art of attaching my friends to me."

"When, therefore, Critobulus," said Socrates, "you wish to become a friend to anyone, will you permit me to say to him concerning you, that you admire him, and desire to be his friend?"

"You may say so," answered Critobulus, "for I have never known anyone dislike those who praised him."

"But if I say of you, in addition, that, because you admire him, you feel kindly disposed towards him, will you not think that false information is given of you by me?"

"No: for a kind feeling springs up in myself also towards those whom I regard as kindly disposed towards me."

"Such information, then," continued Socrates, "I may communicate regarding you to such as you may wish to make your friends; but if you enable me also to say concerning you, that you are attentive to your friends; that you delight in nothing so much as in the possession of good friends; that you pride yourself on the honorable conduct of your friends not less than on your own; that you rejoice at the good fortune of your friends not less than at your own; that you are never weary of contriving means by which good fortune may come to your friends; and that you think it the great virtue of a man to surpass his friends in doing them good and his enemies in doing them harm, I think that I shall be a very useful assistant to you in gaining the affections of worthy friends."

"But why," said Critobulus, "do you say this to me, as if you were not at liberty to say of me anything you please?"

"No, by Zeus," replied Socrates; "I have no such liberty, according to a remark that I once heard from Aspasia; for she said that skillful matchmakers, by reporting with truth good points of character, had great influence in leading people to form unions, but that those who said what was false, did no good by their praises, for that such as were deceived hated each other and the match-maker alike; and as I am persuaded that this opinion is correct, I think that I ought not to say, when I praise you, anything that I cannot utter with truth."

"You are, therefore," returned Critobulus, "a friend of such a kind to me, Socrates, as to assist me, if I have myself any qualities adapted to gain friends; but if not, you would not be willing to invent anything to serve me."

"And whether, Critobulus," said Socrates, "should I appear to serve you more by extolling you with false praises, or by persuading you to endeavor to become a truly deserving man? If this point is not clear to you, consider it with the following illustrations: If, wishing to make the owner of a ship your friend, I should praise you falsely to him, pronouncing you a skillful pilot, and he, believing me, should entrust his ship to you to steer when you are incapable of steering it, would you have any expectation that you would not destroy both yourself and the ship? Or if, by false representations, I should persuade the state, publicly, to entrust itself to you as a man skilled in military tactics, in judicial proceedings, or in political affairs, what do you think that yourself and the state would suffer at your hands? Or if, in private intercourse, I should induce any of the citizens, by unfounded statements, to commit their property to your care, as being a good and diligent manager, would you not, when you came to give proof of your abilities, be convicted of dishonesty, and make yourself appear ridiculous? But the shortest, and safest, and best way, Critobulus, is, to strive to be really good in that in which you wish to be thought good. Whatever are called virtues among mankind, you will find, on consideration, capable of being increased by study and exercise. I am of opinion, that it is in accordance with these sentiments, that we ought to endeavor to acquire friends; if you know any other way, make me acquainted with it."

“I should be indeed ashamed,” replied Critobulus, “to say anything in opposition to such an opinion; for I should say what was neither honorable nor true.”

## CHAPTER VII.

*Socrates endeavored to alleviate the necessities of his friends by his instructions, and by exhorting them to assist each other. In this chapter it is particularly shown that any person of liberal education may, when oppressed by poverty, honorably use his talents and accomplishments for his support.*

Such difficulties of his friends as arose from ignorance, he endeavored to remedy by his counsel; such as sprung from poverty, by admonishing them to assist each other according to their means. With reference to this point, I will relate what I know of him from having been an ear-witness of what he said.

Observing Aristarchus, on one occasion, looking gloomily, “You seem,” said he, “Aristarchus, to be taking something to heart; but you ought to impart the cause of your uneasiness to your friends; for perhaps we may by some means lighten it.”

“I am indeed, Socrates,” replied Aristarchus, “in great perplexity; for since the city has been disturbed, and many of our people have fled to the Piraeus, my surviving sisters, and nieces, and cousins have gathered about me in such numbers, that there are now in my house fourteen freeborn persons. At the same time, we receive no profit from our lands, for the enemy are in possession of them; nor any rent from our houses, for but few inhabitants are left in the city; no one will buy our furniture, nor is it possible to borrow money from any quarter; a person, indeed, as it seems to me, would sooner find money by seeking it on the road, than get it by borrowing. It is a grievous thing to me, therefore, to leave my relations to perish; and it is impossible for me to support such a number under such circumstances.” Socrates, on hearing this, replied, “And how is it that Ceramon, yonder, though maintaining a great number of people, is not only able to procure what is necessary for himself and them, but gains so much more, also, as to be positively rich, while you, having many to support, are afraid lest you should all perish for want of necessaries?”

“Because, assuredly,” replied Aristarchus, “he maintains slaves, while I have to support free-born persons.”

“And which of the two,” inquired Socrates, “do you consider to be the better, the freeborn persons that are with you, or the slaves that are with Ceramon?”

“I consider the free persons with me as the better.”

“Is it not then a disgrace that he should gain abundance by means of the inferior sort, and that you should be in difficulties while, having with you those of the better class?”

“Such certainly is the case; but it is not at all wonderful; for he supports artisans; hut I, persons of liberal education.”

“Artisans, then,” asked Socrates, “are persons that know how to make something useful?”

“Unquestionably,” replied Aristarchus. “Is barley-meal, then, useful?”

"Very."

"Is bread?"

"Not less so."

"And are men's and women's garments, coats, cloaks, and mantles, useful?"

"They are all extremely useful."

"And do those who are residing with you, then, not know how to make any of these things?"

"They know how to make them all, as I believe."

"And are you not aware that from the manufacture of one of these articles, that of barley-meal, Nausicydes supports not only himself and his household, but a great number of swine and oxen besides, and gains, indeed, so much more than he wants, that he often even assists the government with his money? Are you not aware that Cyrebus, by making bread, maintains his whole household, and lives luxuriously; that Demea, of Collytus, supports himself by making cloaks, Menon by making woolen cloaks, and that most of the Megarians live by making mantles?"

"Certainly they do," said Aristarchus; "for they purchase barbarian slaves and keep them, in order to force them to do what they please; but I have with me free-born persons and relatives."

"Then," added Socrates, "because they are free and related to you, do you think that they ought to do nothing else but eat and sleep? Among other free persons, do you see that those who live thus spend their time more pleasantly, and do you consider them happier, than those who practice the arts which they know, and which are useful to support life? Do you find that idleness and carelessness are serviceable to mankind, either for learning what it becomes them to know, or for remembering what they have learned, or for maintaining the health and strength of their bodies, or for acquiring and preserving what is useful for the support of life, and that industry and diligence are of no service at all? And as to the arts which you say they know, whether did they learn them as being useless to maintain life, and with the intention of never practicing any of them, or, on the contrary, with a view to occupy themselves about them, and to reap profit from them? In which condition will men be more temperate, living in idleness, or attending to useful employments? In which condition will they be more honest, if they work, or if they sit in idleness meditating how to procure necessaries? Under present circumstances, as I should suppose, you neither feel attached to your relatives, nor they to you, for you find them burdensome to you, and they see that you are annoyed with their company. From such feelings there is danger that dislike may grow stronger and stronger, and that previous friendly inclinations may be diminished. But if you take them under your direction, so that they may be employed, you will love them, when you see that they are serviceable to you, and they will grow attached to you, when they find that you feel satisfaction in their society; and remembering past services with greater pleasure, you will increase the friendly feeling resulting from them, and consequently grow more attached and better disposed towards each other. If, indeed, they were going to employ themselves in anything dishonorable, death would be preferable to it; but the accomplishments which they know, are, as it appears, such as are most honorable and becoming to women; and all people execute what they know with the greatest ease and expedition, and with the utmost credit and pleasure. Do not hesitate, therefore," concluded Socrates, "to recommend to them this line of conduct, which will benefit both you and them; and they, as it is probable, will cheerfully comply with your wishes."

"By the gods," exclaimed Aristarchus, "you seem to me to give such excellent advice, Socrates, that though hitherto I did not like to borrow money, knowing that, when I had spent what I got, I should have no means of repaying it, I now think that I can endure to do so, in order to gain the necessary means for commencing work."

The necessary means were accordingly provided; wool was bought; and the women took their dinners as they continued at work, and supped when they had finished their tasks; they became cheerful instead of gloomy in countenance, and, instead of regarding each other with dislike, met the looks of one another with pleasure; they loved Aristarchus as their protector, and he loved them as being of use to him. At last he came to Socrates, and told him with delight of the state of things in his house; adding that "the women complained of him as being the only person in the house that ate the bread of idleness."

"And do you not tell them," said Socrates, "the fable of the dog? For they say that when beasts had the faculty of speech, the sheep said to her master, ' you act strangely, in granting nothing to us who supply you with wool, and lambs, and cheese, except what we get from the ground; while to the dog, who brings you no such profits, you give a share of the food which you take yourself.' The dog, hearing these remarks, said, 'And not indeed without reason; for I am he that protects even yourselves, so that you are neither stolen by men, nor carried off by wolves; while, if I were not to guard you, you would be unable even to feed, for fear lest you should be destroyed.' In consequence it is said that the sheep agreed that the dog should have superior honor. You, accordingly, tell your relations that you are, in the place of the dog, their guardian and protector, and that, by your means, they work and live in security and pleasure, without suffering injury from anyone."

## CHAPTER VIII.

*Socrates persuades Eutherus, who was working for hire, to seek some more eligible employment, as his present occupation was not suited for old age, and recommends to him the post of steward to some rich man. An objection on the part of Eutherus, that he should dislike to have to render an account to a master, Socrates opposes with the remark that there is no office in the world free from responsibility.*

Seeing an old friend one day, after a considerable interval of time, he said, “Whence do you come, Eutherus?”

“I am returned, Socrates,” replied Eutherus, “from my retirement abroad at the conclusion of the war; and I come now from the immediate neighborhood; for since we were robbed of all our possessions beyond the borders, and my father left me nothing in Attica, I am obliged to live in the city and work with my own hands to procure the necessaries of life; but this seems to me better than to ask aid of anybody, especially as I have nothing on which I could borrow.”

“And how long,” said Socrates, “do you think that your bodily labor will serve to earn what you require?”

“Not very long, by Zeus,” replied Eutherus. “Then,” said Socrates, “when you grow older, you will doubtless be in want of money, and no one will be willing to give you wages for your bodily labor.”

“What you say is true,” rejoined Eutherus. “It will be better for you, therefore,” continued Socrates, “to apply yourself immediately to some employment which will maintain you when you are old, and, attaching yourself to someone of those that have larger fortunes, (who requires a person to assist him,) and, superintending his works, helping to gather in his fruits, and preserve his property, to benefit him, and to be benefited by him in return.”

“I should with great reluctance, Socrates,” said he, “submit to slavery.”

“Yet those who have the superintendence in states, and who take care of the public interests, are not the more like slaves on that account, but are thought to have more of the freeman.”

“In a word, however,” rejoined Eutherus, “I am not at all willing to make myself liable to anyone’s censure.”

“But assuredly, Eutherus,” said Socrates, “it is not very easy to find an employment in which a person would not be exposed to censure; for it is difficult to do anything so as to commit no error; and it is difficult, even if you have done it without error, to meet with a considerate judge; for even in the occupation in which you are now engaged I should wonder if it be easy for you to go through it without blame. But you must endeavor to avoid such employers as are given to censure, and seek such as are candid; to undertake such duties as you are able to do, and to decline such as you cannot fulfil; and to execute whatever you take upon you in the best manner and with the utmost zeal; for I think that, by such conduct, you will be least exposed to censure, you will most readily find assistance in time of need, and you will live with the greatest ease and freedom from danger, and with the best provision for old age.

## CHAPTER IX.

*Crito, a rich man, complaining that he is harassed by informers, Socrates recommends him to secure the services of Archedemus, a poor man well skilled in the law, to defend him against them; a plan by which both are benefited. Archedemus also assists others, and gains both reputation and emolument.*

I know that he also heard Crito once observe, how difficult it was for a man who wished to mind his own business to live at Athens. “For at this very time,” added he, “there are people bringing actions against me, not because they have suffered any wrong from me, but because they think that I would rather pay them a sum of money than have the trouble of law proceedings.”

“Tell me, Crito,” said Socrates, “do you not keep dogs, that they may drive away the wolves from your sheep?”

“Certainly,” answered Crito, “for it is more profitable to me to keep them than not.”

“Would you not then be inclined to keep a man also, who would be willing and able to drive away from you those that try to molest you?”

“I would with pleasure,” returned Crito, “if I were not afraid that he would turn against me.”

“But do you not see,” said Socrates, “that it would be much more pleasant for him to serve himself by gratifying such a man as you than by incurring your enmity. And be assured that there are such characters here, who would be extremely ambitious to have you for a friend.”

In consequence of this conversation, they fixed upon Archedemus, a man of great ability both in speaking and acting, but poor; for he was not of a character to make money by every means, but was a lover of honesty, and a person of superior mind, so that, he could draw money from the informers. Crito, therefore, whenever he gathered in his corn, or oil, or wine, or wool, or anything else that grew on his land, used to select a portion of it, and give it to Archedemus; and used to invite him whenever he sacrificed, and paid him attention in every similar way. Archedemus, accordingly, thinking that Crito’s house would be a place of refuge for him, showed him much respect, and quickly discovered, on the part of Crito’s accusers, many illegal acts, and many persons who were enemies to those accusers, one of whom he summoned to a public trial, in which it would be settled what he should suffer or pay. This person, being conscious of many crimes, tried every means to get out of the hands of Archedemus; but Archedemus would not let him off, until he ceased to molest Crito, and gave himself a sum of money besides.

When Archedemus had succeeded in this and some other similar proceedings, then, as when any shepherd has a good dog, other shepherds wish to station their flocks near him, in order to have the benefit of his dog, so likewise many of the friends of Crito begged him to lend them the services of Archedemus as a protector.

Archedemus willingly gratified Crito in this respect, and thus not only Crito himself was left at peace, but his friends. And if any of those with whom he was at variance taunted him with receiving favors from Crito, and paying court to him, Archedemus would ask, “whether is it disgraceful to be benefited by honest men, and to make them your friends by serving them in return, and to be at variance with the unprincipled, or to make the honorable and good your enemies by trying to wrong them, and to make the bad your friends by co-operating with them, and associate with the vicious instead of the virtuous?” From this time Archedemus was one of Crito’s friends, and was honored by the other friends of Crito.

## CHAPTER X.

*Socrates exhorts Diodorus, a rich man, to aid his friend Hermogenes, who is in extreme poverty. A man endeavors to preserve the life of a slave, and ought surely to use greater exertions to save a friend, who will well repay our kindness.*

I am aware that he also held a conversation with Diodorus, one of his followers, to the following effect. “Tell me, Diodorus,” said he, “if one of your slaves runs away, do you use any care to recover him?”

“Yes, indeed,” answered he, “and I call others to my aid, by offering rewards for capturing him.”

“And if any of your slaves falls ill,” continued Socrates, “do you pay any attention to him, and call in medical men, that he may not die?”

“Certainly,” replied the other. “And if anyone of your friends, who is far more valuable to you than all your slaves, is in danger of perishing of want, do you not think that it becomes you to take care of him, that his life may be saved? But you are not ignorant that Hermogenes is not ungrateful, and would be ashamed, if, after being assisted by you, he were not to serve you in return; and indeed to secure such a supporter as he, willing, well-disposed, steady, and not only able to do what he is directed, but capable of being useful of himself, and of taking forethought, and forming plans for you, I consider equivalent to the value of many slaves. Good economists say that you ought to buy, when you can purchase for a little what is worth much; but now, in consequence of the troubled state of affairs, it is possible to obtain good friends at a very easy rate.”

“You say well, Socrates,” rejoined Diodorus; “and therefore tell Hermogenes to come to me.”

“No, by Zeus,” said Socrates, “I shall not; for I think it not so honorable for you to send for him as to go yourself to him; nor do I consider it a greater benefit to him than to you that this intercourse should take place.” Diodorus accordingly went to Hermogenes, and secured, at no great expense, a friend who made it his business to consider by what words or deeds he could profit or please Diodorus.

# BOOK III.

## CHAPTER I.

*Socrates used to exhort those who aspired to public offices to learn the duties that would be required in them. The duties of a military commander, and his responsibilities. He must know many things besides military tactics.*

I will now show that Socrates was of great service to those who aspired to posts of honor, by rendering them attentive to the duties of the offices which they sought.

Having heard that Dionysodorus had arrived at the city, offering to teach the art of a general, he said to one of those who were with him, whom he observed to be desirous of obtaining that honor in the state, "It is indeed unbecoming, young man, that he who wishes to be commander of an army in his country should neglect to learn the duties of that office when he has an opportunity of learning them; and such a person would be far more justly punished by his country than one who should contract to make statues for it, when he had not learned to make them; for as the whole state, in the perils of war, is entrusted to the care of the general, it is likely that great advantages will occur if he act well, and great evils if he fall into error. How, then, would not he, who neglects to learn the duties of the office, while he is eager to be elected to it, be deservedly punished?" By making such observations, he induced the young man to go and learn.

When, after having learned, he returned to Socrates again, he began to joke upon him, saying, "Since Homer, my friends, has represented Agamemnon as dignified, does not this young man, after learning to be a general, seem to you to look more dignified than before? For as he who has learned to play the lyre is a lyrist, though he may not use the instrument, and he who has learned the art of healing is a physician, though he may not practice his art, so this youth will from henceforth be a general, though no one may elect him to command; but he who wants the proper knowledge is neither general nor physician, even though he be chosen to act as such by all the people in the world. But," he continued, "in order that we may have a better knowledge of the military art, in case anyone of us should have to command a troop or company under you, tell us how he began to teach you generalship?"

"He began," replied the youth, "with the same thing with which he ended; for he taught me tactics, and nothing else."

"But," said Socrates, "how small a part of the qualifications of a general is this! For a general must be skillful in preparing what is necessary for war, able in securing provisions for his troops, a man of great contrivance and activity, careful, persevering, and sagacious; kind, and yet severe; open, yet crafty; careful of his own, yet ready to steal from others; profuse, yet rapacious; lavish of presents, yet eager to acquire money; cautious, yet enterprising; and many other qualities there are, both natural and acquired, which he, who would fill the office of general with ability, must possess. It is good, indeed, to be skilled in tactics; for a well-arranged army is very different from a disorderly one; as stones and bricks, wood and tiles, if thrown together in confusion, are of no use whatever; but when the stone and tiles, materials not likely to rot or decay, are placed at the bottom and the top, and the bricks and wood are arranged in the middle, (as in building,) a house, which is a valuable piece of property, is formed."

"What you have said, Socrates," rejoined the youth, "is an exact illustration of our practice; for in the field of battle we must place the bravest troops in the front and rear, and the cowardly in the middle, that they may be led on by those before them, and pushed forward by those behind."

"If indeed he has taught you to distinguish the brave and cowardly," rejoined Socrates, "that rule may be of use; but if not, what profit is there in what you have learned? for if he ordered you, in arranging a number of coins, to lay the best first and last, and the worst in the middle, and gave you no instructions how to distinguish the good and bad, his orders to you would be to no purpose."

"But indeed," he replied, "he did not teach me this; so that we must distinguish the brave from the cowardly ourselves."

"Why should we not consider then," said Socrates, "how we may avoid mistakes as to that matter?"

"I am willing," returned the young man.

"If then we had to capture a sum of money, and were to place the most covetous men in front, should we not arrange them properly?"

"It appears so to me."

"And what must generals do when entering on a perilous enterprise? Must they not place the most ambitious in front?"

"They at least," said the young man, "are those who are ready to brave danger for the sake of praise; and they are by no means difficult to discover, but will be everywhere conspicuous and easy to be selected."

"But did your instructor," inquired Socrates, "teach you to arrange an army, merely, or did he tell you for what purpose, and in what manner, you must employ each division of your forces?"

"Not at all," replied he. "Yet there are many occasions, on which it is not proper to draw up an army, or to conduct it, in the same way."

"But, by Zeus, he gave me no explanation as to such occasions."

"Go again, then, by all means," said Socrates, "and question him; for if he knows, and is not quite shameless, he will blush, after taking your money, to send you away in ignorance."

## CHAPTER II.

*A good general ought to take measures for the safety, maintenance, and success of his troops; and not to study his own honor alone, but that of his whole army.*

Haying met, on some occasion, a person who had been elected general, Socrates said to him, “Why is it, do you think, that Homer has styled Agamemnon ‘Shepherd of the people?’ Is it not for this reason, that as a shepherd must be careful that his sheep be safe, and have food, and the object may be effected for which they are kept, so a general must take care that his soldiers be safe, and have provisions, and that the object be effected for which they serve? And they serve, no doubt, that they may increase their gratifications by conquering the enemy. Or why has he praised Agamemnon in the following manner, saying that he was

Both characters, a good king, and an efficient warrior?

Does he not mean that he would not have been “an efficient warrior,” if he had fought courageously alone against the enemy, and if he had not been the cause of courage to his whole army; and that he would not have been “a good king,” if he had attended to his own subsistence only, and had not been the cause of comfort to those over whom he ruled?

For a man is chosen king, not that he may take good care of himself, but that those who have chosen him may prosper by his means; and all men, when they take the field, take it that their lives may be rendered as happy as possible, and choose generals that they may conduct them to the accomplishment of that object. It is incumbent on the leader of an army, therefore, to carry into execution the views of those who have chosen him their leader. Nor is it easy to find anything more honorable than such exertion, or more disgraceful than an opposite course of conduct.”

Thus considering what was the merit of a good leader, he omitted other points in his character, and left only this, that he should render those whom he commanded happy.

## CHAPTER III.

*The duty of a commander of cavalry is twofold, to improve the condition both of his men and his horses; and not to leave the care of the horses to the troops. How he should train his men, and how he should be himself qualified to do so. He should acquire oratorical power, that he may incite his men to exertion, and fire them with the desire of glory.*

I remember that he held a dialogue with a person who had been chosen Hipparch, to the following purport. “Could you tell me, young man,” said he, “with what object you desired to be a Hipparch? It certainly was not for the sake of riding first among the cavalry; for the horse-archers are honored with that dignity, as they ride even before the Hipparchs.”

“You say the truth,” said the youth.

“Nor was it, surely, for the sake of being noticed, for even madmen are noticed by everybody.”

“You say the truth in that respect also.”

“But was it, then, that you expect to render the cavalry better, and present them in that condition to your country, and that, if there should be need for the services of cavalry, you hope, as their leader, to be the author of some advantage to the state?”

“I do hope so, certainly.”

“And it will be truly honorable to you,” continued Socrates, “if you are able to effect that object. But the office, to which you have been chosen, takes charge of both the horses and riders?”

“It does so,” said the young man.

“Come then, tell me this first of all, how you propose to render the horses better?”

“That,” replied the other, “I do not consider to be my business; for I think that each man, individually, must take care of his own horse.”

“If, then,” said Socrates, “some of the men should present their horses before you so diseased in the feet, so weak in the legs, or so feeble in body, and others theirs so ill-fed, that they could not follow you; others, theirs so unmanageable, that they would not remain where you posted them; others, theirs so vicious that it would not be possible to post them at all; what would be the use of such cavalry to you? Or how would you be able, at the head of them, to be of any service to your country?”

“You admonish me well,” said the youth, “and I will try to look to the horses as far as may be in my power.”

“And will you not also endeavor,” asked Socrates, “to make the riders better?”

“I will,” said he.

“You will first of all, then, make them more expert in mounting their horses.”

“I ought to do so; for if any of them should fall off, they would thus be better prepared to recover themselves.”

“If, then,” said Socrates, “you should be obliged to hazard an engagement, whether will you order your men to bring the enemy down to the level sand on which you have been accustomed to ride, or will you try to exercise them on such ground as that on which the enemy may show themselves?”

“The latter method will be the better,” said the young man.

“Will you also take any care that the greatest possible number of your men may be able to hurl the dart on horseback?”

“That will be better too,” replied he. “And have you considered how to whet the courage of your cavalry, since you intend to make them more courageous, and animate them against the enemy?”

“If I have not yet considered,” said he, “I will now try to do so.”

“And have you at all considered how your cavalry may be induced to obey you? For without obedience you will have no profit either from horses or horsemen, spirited and valiant as they may be.”

“You say the truth, Socrates,” said he; “but by what means can a leader most effectually induce them to obedience?”

“You are doubtless aware that in all circumstances men most willingly obey those whom they consider most able to direct; for in sickness patients obey him whom they think the best physician; on ship-board, the passengers obey him whom they think the best pilot, and in agriculture, people obey him whom they deem the best husbandman.”

“Unquestionably,” said the young man.

“Is it not then likely,” said Socrates, “that in horsemanship also, others will be most willing to obey him who appears to know best what he ought to do?”

“If, therefore, Socrates, I should myself appear the best horseman among them, will that circumstance be sufficient to induce them to obey me?”

“If you convince them in addition,” said Socrates, “that it is better and safer for them to obey you.”

“How, then, shall I convince them of that?”

“With much more ease,” replied Socrates, “than if you had to convince them that bad things are better and more profitable than good.”

“You mean,” said the young man, “that a commander of cavalry, in addition to his other qualifications, should study to acquire some ability in speaking.”

“And did you think,” asked Socrates, “that you would command cavalry by silence? Have you not reflected, that whatever excellent principles we have learned according to law, principles by which we know how to live, we learned all through the medium of speech; and that whatever other valuable instruction any person acquires, he acquires it by means of speech likewise? Do not those who teach best, use speech most; and those who know the most important truths, discuss them with the greatest eloquence? Or have you not observed, that when a band of dancers and musicians is formed from this city, as that, for instance, which is sent to Delos, no one from any other quarter can compete with it; and that in no other city is manly grace shown by numbers of people like that which is seen here?"

"What you say is true," said he.

"But it is not so much in sweetness of voice, or in size and strength of body, that the Athenians excel other people, as in ambition, which is the greatest incitement to whatever is honorable and noble."

"This also is true," said he.

"Do you not think, then," said Socrates, "that if anyone should study to improve the cavalry here, the Athenians would excel other people in that department also, (as well in the decoration of their arms and horses as in the good order of the men, and in boldly defying danger to encounter the enemy,) if they thought that by such means they would acquire praise and honor?"

"It is probable," said the young man.

"Do not delay, therefore," added Socrates, "but try to excite your men to those exertions by which you will both be benefited yourself, and your countrymen through your means."

"I will assuredly try," replied he.

## CHAPTER IV.

*Nicomachides complaining that the Athenians had not chosen him general, though he was experienced in war, but Antisthenes, who had seen no military service, Socrates proceeds to show that Antisthenes, although he had never filled the office of commander, might have qualities to indicate that he would fill it with success.*

Seeing Nicomachides, one day, coming from the assembly for the election of magistrates, he asked him, “Who have been chosen generals, Nicomachides?”

“Are not the Athenians the same as ever, Socrates?” he replied; “for they have not chosen me, who am worn out with serving on the list, both as captain and centurion, and with having received so many wounds from the enemy, (he then drew aside his robe, and showed the scars of the wounds,) but have elected Antisthenes, who has never served in the heavy-armed infantry, nor done anything remarkable in the cavalry, and who indeed knows nothing, but how to get money.”

“Is it not good, however, to know this,” said Socrates, “since he will then be able to get necessaries for the troops?”

“But merchants,” replied Nicomachides, “are able to collect money; and yet would not, on that account, be capable of leading an army.”

“Antisthenes, however,” continued Socrates, “is given to emulation, a quality necessary in a general. Do you not know that whenever he has been chorus-manager he has gained the superiority in all his choruses?”

“But, by Zeus,” rejoined Nicomachides, “there is nothing similar in managing a chorus and an army.”

“Yet Antisthenes,” said Socrates, “though neither skilled in music nor in teaching a chorus, was able to find out the best masters in these departments.”

“In the army, accordingly,” exclaimed Nicomachides, “he will find others to range his troops for him, and others to fight for him!”

“Well, then,” rejoined Socrates, “if he find out and select the best men in military affairs, as he has done in the conduct of his choruses, he will probably attain superiority in this respect also; and it is likely that he will be more willing to spend money for a victory in war on behalf of the whole state, than for a victory with a chorus in behalf of his single tribe.”

“Do you say, then, Socrates,” said he, “that it is in the power of the same man to manage a chorus well, and to manage an army well?”

“I say,” said Socrates, “that over whatever a man may preside, he will, if he knows what he needs, and is able to provide it, be a good president, whether he have the direction of a chorus, a family, a city, or an army.”

“By Zeus, Socrates,” cried Nicomachides, “I should never have expected to hear from you that good managers of a family would also be good generals.”

"Come, then," proceeded Socrates, "let us consider what are the duties of each of them, that we may understand whether they are the same, or are in any respect different."

"By all means," said he. "Is it not, then, the duty of both," asked Socrates, "to render those under their command obedient and submissive to them?"

"Unquestionably."

"Is it not also the duty of both to entrust various employments to such as are fitted to execute them?"

"That is also unquestionable."

"To punish the bad, and to honor the good, too, belongs, I think, to each of them."

"Undoubtedly."

"And is it not honorable in both to render those under them well-disposed towards them?"

"That also is certain."

"And do you think it for the interest of both to gain for themselves allies and auxiliaries or not?"

"It assuredly is for their interest."

"Is it not proper for both also to be careful of their resources?"

"Assuredly."

"And is it not proper for both, therefore, to be attentive and industrious in their respective duties?"

"All these particulars," said Nicomachides, "are common alike to both; but it is not common to both to fight."

"Yet both have doubtless enemies," rejoined Socrates. "That is probably the case," said the other. "Is it not for the interest of both to gain the superiority over those enemies?"

"Certainly; but to say nothing on that point, what, I ask, will skill in managing a household avail, if it be necessary to fight?"

"It will doubtless, in that case, be of the greatest avail," said Socrates; "for a good manager of a house, knowing that nothing is so advantageous or profitable as to get the better of your enemies when you contend with them, nothing so unprofitable and prejudicial as to be defeated, will zealously seek and provide everything that may conduce to victory, will carefully watch and guard against whatever tends to defeat, will vigorously engage if he sees that his force is likely to conquer, and, what is not the least important point, will cautiously avoid engaging if he find himself insufficiently prepared. Do not therefore, Nicomachides," he added, "despise men skillful in managing a household; for the conduct of private affairs differs from that of public concerns only in magnitude; in other respects they are similar; but what is most to be observed, is, that neither of them are managed without men, and that private matters are not managed by one species of men, and public matters by another; for those who conduct public business make use of men not at all differing in nature from those whom the managers of private affairs employ; and those who know how to employ them, conduct either private or public affairs judiciously, while those who do not know, will err in the management of both.”

## CHAPTER V.

*Conversation of Socrates with Pericles the younger on the manner in which the Athenians might be made to recover their ancient spirit and ambition. They ought to be reminded of the deeds of their ancestors*; *and to be taught that indolence has been the cause of their degeneracy. They ought to revive the institutions of their forefathers*, *or imitate those of the Lacedaemonians*; *and to pay great attention to military affairs. How the territory of Attica might be best secured against invasion.*

Conversing, on one occasion, with Pericles, the son of the great Pericles, Socrates said, “I have hopes, Pericles, that under your leadership the city will become more eminent and famous in military affairs, and will get the better of her enemies.”

“I wish, Socrates,” said Pericles, “that what you say may happen; but how such effects are to be produced, I cannot understand.”

“Are you willing, then,” asked Socrates, “that we should have some conversation on these points, and consider how far there is a possibility of effecting what we desire.”

“I am quite willing,” replied Pericles.

“Are you aware, then,” said Socrates, “that the Athenians are not at all inferior in number to the Boeotians?”

“I am,” said Pericles. “

And whether do you think that a greater number of efficient and well-formed men could be selected from the Boeotians, or from the Athenians?”

“The Athenians do not appear to me to be inferior in this respect.”

“And which of the two peoples do you consider to be more united among themselves?”

“I think that the Athenians are; for many of the Boeotians, being oppressed by the Thebans, entertain hostile feelings towards them. But at Athens I see nothing of the kind.”

“But the Athenians are moreover of all people most eager for honor and most friendly in disposition; qualities which most effectually impel men to face danger in the cause of glory and of their country.”

“The Athenians are certainly not to be found fault with in these respects.”

“And assuredly there is no people that can boast of greater or more numerous exploits of their ancestors than the Athenians; a circumstance by which many are prompted and stimulated to cultivate manly courage and to become brave.”

“All that you say is true, Socrates, but you see that since the slaughter of the thousand occurred at Lebadeia under Tolmides, and that at Delium under Hippocrates, the reputation of the Athenians has suffered as far as regards the Boeotians, and the spirit of the Boeotians has been raised as far as regards the Athenians, so that the Boeotians, indeed, who formerly did not dare, even on their own soil, to meet the Athenians in the field without the aid of the Spartans and other Peloponnesians, now threaten to invade Attica single-handed; while the Athenians, who formerly, when the Boeotians were unsupported, ravaged Boeotia, are afraid lest the Boeotians should lay waste Attica."

"I perceive, indeed," said Socrates, "that such is the case; but the city seems to me now to be more favorably disposed for any good general; for confidence produces in men carelessness, indolence, and disobedience, but fear renders them more attentive, obedient, and orderly. You may form a notion of this from people in a ship; for as long as they fear nothing, they are all in disorder, but as soon as they begin to dread a storm, or the approach of an enemy, they not only do everything that they are told to do, but are hushed in silence, waiting for the directions to be given, like a band of dancers."

"Well then," said Pericles, "if they would now, assuredly, obey, it would be time for us to discuss how we might incite them to struggle to regain their ancient spirit, glory, and happiness."

"If then," said Socrates, "we wished them to claim property of which others were in possession, we should most effectively urge them to lay claim to it, if we proved that it belonged to their fathers, and was their rightful inheritance; and since we wish that they should strive for pre-eminence in valor, w« must show them that such preeminence was indisputably theirs of old, and that if they now exert themselves to recover it, they will be the most powerful of all people."

"How, then, can we convince them of this?"

"I think that we may do so, if we remind them that they have heard that their most ancient forefathers, of whom we have any knowledge, were the bravest of men."

"Do you allude to the dispute between the gods, of which Cecrops and his assessors had the decision on account of their valor?"

"I do allude to that, and to the education and birth of Erechtheus, and the war which occurred in his time with the people of the whole adjoining continent, as well as that which was waged under the Heracleidae against the Peloponnesians, and all the wars that were carried on under Theseus, in all of which they showed themselves the bravest people of their time; . and also, if you please, to what their descendants have since done, who lived not long before our day, not only contending, with their own unassisted strength, against the lords of all Asia and of Europe, as far as Macedonia, (who inherited vast power and wealth from their ancestors, and who had themselves performed great achievements,) but also distinguishing themselves, in conjunction with the Peloponnesians, both by land and sea. They, doubtless, are celebrated as having far surpassed other men of their time."

"They are so," said Pericles. "In consequence, though many migrations occurred in Greece, they remained in their own country; and many, when contending for their rights, submitted their claims to their arbitration, while many others, also, when persecuted by more powerful people, sought refuge with them."

"I wonder, indeed, Socrates," said Pericles, "how our city ever degenerated."

"I imagine," said Socrates, "that as some other nations have grown indolent through excessive exaltation and power, so likewise the Athenians, after attaining great pre-eminence, grew neglectful of themselves, and consequently became degenerate."

"By what means, then," said Pericles, "could they now recover their pristine dignity?"

"It appears to me," replied Socrates, "not at all difficult to discover; for I think that if they learn what were the practices of their ancestors, and observe them not less diligently than they, they will become not at all inferior to them; but if they do not take that course, yet, if they imitate those who are now at the head of Greece, adhere to their institutions, and attend to the same duties with diligence equal to theirs, they will stand not at all below them, and, if they use greater exertion, even above them."

"You intimate," returned Pericles, "that honor and virtue are far away from our city; for when will the Athenians reverence their elders as the Spartans do, when they begin, even by their own fathers, to show disrespect for older men? Or when will they exercise themselves like them, when they not only are regardless of bodily vigor, but deride those who cultivate it. Or when will they obey the magistrates like them, when they make it their pride to set them at naught? Or when will they be of one mind like them, when, instead of acting in concert for their mutual interests, they inflict injuries on one another, and envy one another more than they envy the rest of mankind? More than any other people, too, do they dispute in their private and public meetings; they institute more law-suits against one another, and prefer thus to prey upon one another than to unite for their mutual benefit. They conduct their public affairs as if they were those of a foreign state; they contend about the management of them, and rejoice, above all things, in having power to engage in such contests. From such conduct much ignorance and baseness prevail in the republic, and much envy and mutual hatred are engendered in the breasts of the citizens; on which accounts I am constantly in the greatest fear lest some evil should happen to the state too great for it to bear."

"Do not by any means suppose, Pericles," rejoined Socrates, "that the Athenians are thus disordered with an incurable depravity. Do you not see how orderly they are in their naval proceedings, how precisely they obey the presidents in the gymnastic games, and how, in the arrangement of the choruses, they submit to the directions of their teachers in a way inferior to none?"

"This is indeed surprising," said Pericles, "that men of that class should obey those who are set over them, and that the infantry and cavalry, who are thought to excel the ordinary citizens in worth and valor, should be the least obedient of all the people."

"The council of the Areopagus, too," said Socrates, "is it not composed of men of approved character?"

"Undoubtedly," replied Pericles. "And do you know of any judges who decide causes, and conduct all their business, with more exact conformity to the laws, or with more honor and justice?"

"I find no fault with them," said Pericles.

"We must not therefore despair," said Socrates, "as if we thought that the Athenians are not inclined to be lovers of order."

"Yet in military affairs," observed Pericles, "in which it is most requisite to act with prudence, and order, and obedience, they pay no regard to such duties."

"It may be so," returned Socrates, "for perhaps in military affairs men who are greatly deficient in knowledge have the command of them. Do you not observe that of harp-players, choristers, dancers, wrestlers, or pancratiasts, no one ventures to assume the direction who has not the requisite knowledge for it, but that all, who take the lead in such matters, are able to show from whom they learned the arts in which they are masters; whereas the most of our generals undertake to command without previous study. I do not however imagine you to be one of that sort; for I am sensible that you can tell when you began to learn generalship not less certainly than when you began to learn wrestling. I am sure, too, that you have learned, and keep in mind, many of your father's principles of warfare, and that you have collected many others from every quarter whence it was possible to acquire anything that would add to your skill as a commander. I have no doubt that you take great care that you may not unawares be ignorant of anything conducive to generalship, and that, if you have ever found yourself deficient in any such matters, you have applied to persons experienced in them, sparing neither presents nor civilities, that you might learn from them what you did not know, and might render them efficient helpers to you."

"You make me well aware, Socrates," said Pericles, "that you do not say this from a belief that I have diligently attended to these matters, but from a wish to convince me that he who would be a general must attend to all such studies; and I indeed agree with you in that opinion."

"Have you considered this also, Pericles," asked Socrates, "that on the frontier of our territories lie great mountains, extending down to Boeotia, through which there lead into our country narrow and precipitous defiles; and that our country is girded by strong mountains, as it lies in the midst of them?"

"Certainly," said he.

"Have you heard, too, that the Mysians and Pisidians, who occupy extremely strong positions in the country of the Great King, and who are lightly armed, are able to make descents on the king's territory, and do it great damage, while they themselves preserve their liberty?"

"This, too, I have heard," said Pericles.

"And do you not think that the Athenians," said Socrates, "if equipped with light arms while they are of an age for activity, and occupying the mountains that fence our country, might do great mischief to our enemies, and form a strong bulwark for the inhabitants of our country?"

"I think, Socrates," said he, "that all these arrangements would be useful."

"If these plans, then," concluded Socrates, "appear satisfactory to you, endeavor, my excellent friend, to act upon them; for whatsoever of them you carry into execution, it will be an honor to yourself and an advantage to the state; and if you fail in the attempt for want of power, you will neither injure the state nor disgrace yourself."

## CHAPTER VI.

*Socrates, by his usual process of interrogation, leads Glaucon, a young man who was extravagantly desirous of a post in the government, to confess that he was entirely destitute of the knowledge necessary for the office to which he aspired. He then shows that, unless a ruler has acquired an exact knowledge of state affairs, he can do no good to his country or credit to himself.*

When Glaucon, the son of Ariston, attempted to harangue the people, from a desire, though he was not yet twenty years of age, to have a share in the government of the state, no one of his relatives, or other friends, could prevent him from getting himself dragged down from the tribunal, and making himself ridiculous; but Socrates, who had a friendly feeling towards him on account of Charmides the son of Glaucon, as well as on account of Plato, succeeded in prevailing on him, by his sole dissuasion, to relinquish his purpose. Meeting him by chance, he first stopped him by addressing him as follows, that he might be willing to listen to him: “Glaucon,” said he, “have you formed an intention to govern the state for us?”

“I have, Socrates,” replied Glaucon.

“By Zeus,” rejoined Socrates, “it is an honorable office, if any other among men be so; for it is certain that, if you attain your object, you will be able yourself to secure whatever you may desire, and will be in a condition to benefit your friends; you will raise your father’s house, and increase the power of your country; you will be celebrated, first of all in your own city, and afterwards throughout Greece, and perhaps also," like Themistocles, among the Barbarians; and, wherever you may be, you will be an object of general admiration.”

Glaucon, hearing this, was highly elated, and cheerfully stayed to listen. Socrates next proceeded to say, “But it is plain, Glaucon, that if you wish to be honored, you must benefit the state.”

“Certainly,” answered Glaucon.

“Then, in the name of the gods,” said Socrates, “do not hide from us how you intend to act, but inform us with what proceeding you will begin to benefit the state?” But as Glaucon was silent, as if just considering how he should begin, Socrates said, “As, if you wished to aggrandize the family of a friend, you would endeavor to make it richer, tell me whether you will in like manner also endeavor to make the state richer?”

“Assuredly,” said he.

“Would it then be richer, if its revenues were increased?”

“That is at least probable,” said Glaucon.

“Tell me then,” proceeded Socrates, “from what the revenues of the state arise, and what is their amount; for you have doubtless considered, in order that if any of them fall short, you may make up the deficiency, and that if any of them fail, you may procure fresh supplies.”

“These matters, by Zeus,” replied Glaucon, “I have not considered.”

“Well then,” said Socrates, “if you have omitted to consider this point, tell me at least the annual expenditure of the state; for you undoubtedly mean to retrench whatever is superfluous in it.”

“Indeed,” replied Glaucon, “I have not yet had time to turn my attention to that subject.”

“We will therefore,” said Socrates, “put off making our state richer for the present; for how is it possible for him who is ignorant of its expenditure and its income to manage those matters?”

“But, Socrates,” observed Glaucon, “it is possible to enrich the state at the expense of our enemies.”

“Extremely possible indeed,” replied Socrates, “if we be stronger than they; but if we be weaker, we may lose all that we have.”

“What you say is true,” said Glaucon.

“Accordingly,” said Socrates, “he who deliberates with whom he shall go to war, ought to know the force both of his own country and of the enemy, so that, if that of his own country be superior to that of the enemy, he may advise it to enter upon the war, but, if inferior, may persuade it to be cautious of doing so.”

“You say rightly,” said Glaucon.

“In the first place, then,” proceeded Socrates, “tell us the strength of the country by land and sea, and next that of the enemy.”

“But, by Zeus,” exclaimed Glaucon, “I should not be able to tell you on the moment, and at a word.”

“Well, then, if you have it written down,” said Socrates, “bring it, for I should be extremely glad to hear what it is.”

“But to say the truth,” replied Glaucon, “I have not yet written it down.”

“We will therefore put off considering about war for the present,” said Socrates, “for it is very likely that, on account of the magnitude of those subjects, and as you are just commencing your administration, you have not yet examined into them. But to the defense of the country, I am quite sure that you have directed your attention, and that you know how many garrisons are in advantageous positions, and how many not so, what number of men would be sufficient to maintain them, and what number would be insufficient, and that you will advise your countrymen to make the garrisons in advantageous positions stronger, and to remove the useless ones.”

“By Jove,” replied Glaucon, “I shall recommend them to remove them all, as they keep guard so negligently, that the property is secretly carried off out of the country.”

“Yet if we remove the garrisons,” said Socrates, “do you not think that liberty will be given to anybody that pleases to pillage? But,” added he, “have you gone personally, and examined as to this fact, or how do you know that the garrisons conduct themselves with such negligence?”

"I form my conjectures," said he.

"Well then," inquired Socrates, "shall we settle about these matters also, when we no longer rest upon conjecture, but have obtained certain knowledge?"

"Perhaps that," said Glaucon, "will be the better course."

"To the silver mines, however," continued Socrates, "I know that you have not gone, so as to have the means of telling us why a smaller revenue is derived from them than came in some time ago."

"I have not gone thither," said he.

"Indeed the place," said Socrates, "is said to be unhealthy, so that, when it is necessary to bring it under consideration, this will be a sufficient excuse for you."

"You jest with me," said Glaucon.

"I am sure, however," proceeded Socrates, "that you have not neglected to consider, but have calculated, how long the corn, which is produced in the country, will suffice to maintain the city, and how much it requires for the year, in order that the city may not suffer from scarcity unknown to you, but that, from your own knowledge, you may be able, by giving your advice concerning the necessaries of life, to support the city, and preserve it."

"You propose a vast field for me," observed Glaucon, "if it will be necessary for me to attend to such subjects."

"Nevertheless," proceeded Socrates, "a man cannot order his house properly, unless he ascertains all that it requires, and takes care to supply it with everything necessary; but since the city consists of more than ten thousand houses, and since it is difficult to provide for so many at once, how is it that you have not tried to aid one first of all, suppose that of your uncle, for it stands in need of help? If you be able to assist that one, you may proceed to assist more; but if you be unable to benefit one, how will you be able to benefit many? Just as it is plain that, if a man cannot carry the weight of a talent, he need not attempt to carry a greater weight."

"But I would improve my uncle's house," said Glaucon, "if he would but be persuaded by me."

"And then," resumed Socrates, "when you cannot persuade your uncle, do you expect to make all the Athenians, together with your uncle, yield to your arguments? Take care, Glaucon, lest, while you are eager to acquire glory, you meet with the reverse of it. Do you not see how dangerous it is for a person to speak of, or undertake, what he does not understand? Contemplate, among other men, such as you know to be characters that plainly talk of, and attempt to do, what they do not know, and consider whether they appear to you, by such conduct, to obtain more applause or censure, whether they seem to be more admired or despised? Contemplate, again, those who have some understanding of what they say and do, and you will find, I think, in all transactions, that such as are praised and admired are of the number of those who have most knowledge, and that those who incur censure and neglect are among those that have least. If therefore you desire to gain esteem and reputation in your country, endeavor to succeed in gaining a knowledge of what you wish to do; for if, when you excel others in this qualification, you proceed to manage the affairs of the state, I shall not wonder if you very easily obtain what you desire."

## CHAPTER VII.

*Socrates exhorts Charmides, a man of ability, and acquainted with public affairs, to take part in the government, that he may not be charged with indolence. As Charmides distrusts his abilities for public speaking, Socrates encourages him by various observations.*

Observing that Charmides, the son of Glaucon, a man of worth, and of far more ability than those who then ruled the state, hesitated to address the people, or to take part in the government of the city, he said to him, “Tell me, Charmides, if any man, who was able to win the crown in the public games, and, by that means, to gain honor for himself, and make his birth-place more celebrated in Greece, should nevertheless refuse to become a combatant, what sort of person would you consider him to be?”

“I should certainly think him indolent and wanting in spirit,” replied Charm ides.

“And if anyone were able,” continued Socrates, “by taking part in public affairs, to improve the condition of his country, and thus to attain honor for himself, but should yet shrink from doing so, might not he be justly regarded as wanting in spirit?”

“Perhaps so,” said Charmides; “but why do you ask me that question?”

“Because,” replied Socrates, “I think that you yourself, though possessed of sufficient ability, yet shrink from engaging even in those affairs in which it is your duty as a citizen to take a share.”

“But in what transaction have you discovered my ability,” said Charmides, “that you bring this charge against me?”

“In those conferences,” answered Socrates, “in which you meet those who are engaged in the government of the state; for when they consult you on any point, I observe that you give them excellent advice, and that, when they are in any way in the wrong, you offer judicious objections.”

“But it is not the same thing, Socrates,” said he, “to converse with people in private, and to try one’s powers at a public assembly.”

“Yet,” said Socrates, “he that is able to count, can count with no less exactness before a multitude than alone, and those who can play the harp best in solitude are also the best performers on it in company.”

“But do you not see,” said Charmides, “that bashfulness and timidity are naturally inherent in mankind, and affect us far more before a multitude than in private conversations?”

“But I am prompted to remind you,” answered Socrates, “that while you neither feel bashfulness before the most intelligent, nor timid before the most powerful, it is in the presence of the most foolish and weak that you are ashamed to speak. And is it the fullers among them, or the cobblers, or the carpenters, or the copper-smiths, or the ship-merchants, or those who barter in the market, and meditate what they may buy for little and sell for more, that you are ashamed to address? For it is of all such characters that the assembly is composed.

How then do you think that your conduct differs from that of a wrestler, who, being superior to well-practiced opponents, should yet fear the unpracticed? For is not this the case with you, that though you converse at your ease with those who have attained eminence in state affairs, and of whom some undervalue you, and though you are far superior to many who make it their business to address the people, you yet shrink from uttering your sentiments before men who have never thought of political affairs, and who have shown no disrespect for your talents, from an apprehension that you may be laughed at?"

"And do not the people in the assembly," asked Charmides, "appear to you often to laugh at those who speak with great judgment?"

"Yes," said Socrates, "and so do the other sort of people; and therefore I wonder at you, that you so easily silence one class of persons when they do so, and yet think that you shall not be able to deal with another? Be not ignorant of yourself, my friend, and do not commit the error which the majority of men commit; for most persons, though they are eager to look into the affairs of others, give no thought to the examination of their own. Do not you, then, neglect this duty, but strive more and more to cultivate your own powers; and do not be regardless of the affairs of your country, if any department of them can be improved by your means; for, if they are in a good condition, not only the rest of your countrymen, but your own friends and yourself, will reap the greatest benefit."

## CHAPTER VIII.

*Socrates meets the captious questions of Aristippus about goodness and beauty in such a manner as to show that nothing is good or bad in itself, but only with reference to some object; and that nothing is beautiful or otherwise in itself, but that the beautiful must be considered with regard to the useful. His remarks on buildings, to the same effect.*

When Aristippus attempted to confute Socrates, as he himself had previously been confuted by him, Socrates, wishing to benefit those who were with him, gave his answers, not like those who are on their guard lest their words be perverted, but like those who are persuaded that they ought above all things to do what is right. What Aristippus had asked him, was, 'whether he knew anything good,' in order that if he should say any such thing as food, or drink, or money, or health, or strength, or courage, he might prove that it was sometimes an evil. But Socrates, reflecting that if anything troubles us, we want something to relieve us from it, replied, as it seemed best to do, "Do you ask me whether I know anything good for a fever?"

"I do not."

"Anything good for soreness of the eyes?"

"No."

"For hunger?"

"No, nor for hunger either."

"Well then," concluded Socrates, "if you ask me whether I know anything good that is good for nothing, I neither know anything, nor wish to know."

Aristippus again asking him if he knew anything beautiful, he replied,

"Many things."

"Are they then," inquired Aristippus, "all like each other?"

"Some of them," answered Socrates, "are as unlike one another as it is possible for them to be."

"How then," said he, "can what is beautiful be unlike what is beautiful?"

"Because, assuredly," replied Socrates, "one man, who is beautifully formed for wrestling, is unlike another who is beautifully formed for running; and a shield, which is beautifully formed for defense, is as unlike as possible to a dart, which is beautifully formed for being forcibly and swiftly hurled."

"You answer me," said Aristippus, "in the same manner as when I asked you whether you knew anything good."

"And do you imagine," said Socrates, "that the good is one thing, and the beautiful another? Do you not know that with reference to the same objects all things are both beautiful and good? Virtue, for instance, is not good with regard to some things and beautiful with regard to others; and persons, in the same way, are called beautiful and good with reference to the same objects; and human bodies, too, with reference to the same objects, appear beautiful and good; and in like manner all other things, whatever men use, are considered beautiful and good with reference to the objects for which they are serviceable."

"Can a dung-basket, then," said Aristippus, "be a beautiful thing?"

"Yes, by Zeus," returned Socrates, "and a golden shield may be an ugly thing, if the one be beautifully formed for its particular uses, and the other ill formed?"

"Do you say, then, that the same things may be both beautiful and ugly?"

"Yes, undoubtedly, and also that they may be good and bad; for oftentimes what is good for hunger is bad for a fever, and what is good for a fever is bad for hunger; oftentimes what is beautiful in regard to running is the reverse in regard to wrestling, and what is beautiful in regard to wrestling is the reverse in regard to running; for whatever is good is also beautiful, in regard to purposes for which it is well adapted, and whatever is bad is the reverse of beautiful, in regard to purposes for which it is ill adapted."

When Socrates said, too, that the same houses that were beautiful were also useful, he appeared to me to instruct us what sort of houses we ought to build. He reasoned on the subject thus, "Should not he, who purposes to have a house such as it ought to be, contrive that it may be most pleasant, and at the same time most useful, to live in?" This being admitted, he said, "Is it not then pleasant to have it cool in summer, and warm in winter?" When his hearers had assented to this, he said, "In houses, then, that look to the south, does not the sun, in the winter, shine into the porticoes, while, in the summer, it passes over our heads, and above the roof, and casts a shade? If it is well, therefore, that houses should thus be made, ought we not to build the parts towards the south higher, that the sun in winter may not be shut out, and the parts toward the north lower, that the cold winds may not fall violently on them? To sum up the matter briefly, that would be the most pleasant and the most beautiful residence, in which the owner, at all seasons, would find the most satisfactory retreat, and deposit what belongs to him with the greatest safety."

Paintings, and colored decorations of the walls, deprive us, he thought, of more pleasure than they give.

The most suitable ground for temples and altars, he said, was such as was most open to view, and least trodden by the public; for that it was pleasant for people to pray as they looked on them, and pleasant to approach them in purity.

## CHAPTER IX.

*Various definitions of fortitude, prudence and temperance, madness, envy, idleness, command, happiness, given by Socrates. Fortitude is not equal in all men; it may be increased by exercise. Prudence and temperance not distinct from each other, Justice, as well as other virtues, is wisdom, The opposite to prudence is madness; ignorance distinct from madness. Envy is uneasiness of mind at the contemplation of the happiness of others, Idleness is forbearance from useful occupation. Command is exercised, not by those who bear the name, merely, of kings and rulers, but by those who know how to command. The best object of human life is to act well; the difference between acting well and acting fortunately.*

Being asked, again, whether Fortitude was a quality acquired by education, or bestowed by nature, “I think,” said he, “that as one body is by nature stronger for enduring toil than another body, so one mind may be by nature more courageous in meeting dangers than another mind; for I see that men who are brought up under the same laws and institutions differ greatly from each other in courage. I am of opinion, however, that every natural disposition may be improved, as to fortitude, by training and exercise; for it is evident that the Scythians and Thracians would not dare to take bucklers and spears and fight with the Lacedaemonians; and it is certain that the Lacedaemonians would not like to fight the Thracians with small shields and javelins, or the Scythians with bows. In other things, also, I see that men differ equally from one another by nature, and make great improvements by practice; from which it is evident that it concerns all, as well the naturally ingenious as the naturally dull, to learn and study those arts in which they desire to become worthy of commendation.”

Prudence and Temperance he did not distinguish; for he deemed that he who knew what was honorable and good, and how to practice it, and who knew what was dishonorable, and how to avoid it, was both prudent and temperate. Being also asked whether he thought that those who knew what they ought to do, but did the contrary, were prudent and temperate, he replied, “No more than I think the [openly] imprudent and intemperate to be so; for I consider that all [prudent and temperate] persons choose from what is possible what they judge for their interest, and do it; and I therefore deem those who do not act [thus] judiciously to be neither prudent nor temperate.”

He said, too, that justice, and every other virtue, was [a part of] prudence, for that everything just, and everything done agreeably to virtue, was honorable and good; that those who could discern those things, would never prefer anything else to them; that those who could not discern them, would never be able to do them, but would even go wrong if they attempted to do them; and that the prudent, accordingly, did what was honorable and good, but that the imprudent could not do it, but went wrong even if they attempted to do it; and that since, therefore, all just actions, and all actions that are honorable and good, are done in agreement with virtue, it is manifest that justice, and every other virtue, is [comprehended in] prudence.

The opposite to prudence, he said, was Madness; he did not, however, regard ignorance as madness; though for a man to be ignorant of himself, and to fancy and believe that he knew what he did not know, he considered to be something closely bordering on madness. The multitude, he observed, do not say that those are mad who make mistakes in matters of which most people are ignorant, but call those only mad who make mistakes in affairs with which most people are acquainted; for if a man should think himself so tall as to stoop when going through the gates in the city wall, or so strong as to try to lift up houses, or attempt anything else that is plainly impossible to all men, they say that he is mad; but those who make mistakes in small matters are not thought by the multitude to be mad; but just as they call "strong desire" "love," so they call "great disorder of intellect" "madness."

Considering what Envy was, he decided it to be a certain uneasiness, not such as arises, however, at the ill success of friends, nor such as is felt at the good success of enemies, but those only he said were envious who were annoyed at the good success of their friends. When some expressed surprise, that anyone who had a friendly feeling for another should feel uneasy at his good fortune, he reminded them that many are so disposed towards others as to be incapable of neglecting them if they are unfortunate, but would relieve them in ill fortune, though they are uneasy at their good fortune. This feeling, he said, could never arise in the breast of a sensible man, but that the foolish were constantly affected with it.

Considering what Idleness was, he said that he found most men did something; for that dice-players and buffoons did something; but he said that all such persons were idle, for it was in their power to go and do something better; he observed that a man was not idle, however, in passing from a better employment to a worse, but that, if he did so, he, as he [previously] had occupation, acted in that respect viciously.

Kings and Commanders, he said, were not those who held scepters merely, or those elected by the multitude, or those who gained authority by lot, or those who attained it by violence or deceit, but those who knew how to command.

For when someone admitted that it was the part of a commander to enjoin what another should do, and the part of him who was commanded, to obey, he showed that in a ship the skillful man is the commander, and that the owner and all the other people in the ship were obedient to the man of knowledge; that, in agriculture, those who had farms, in sickness, those who were ill, in bodily exercises, those who practiced them, and indeed all other people, who had any business requiring care, personally took the management of it if they thought that they understood it, but if not, that they were not only ready to obey men of knowledge who were present, but even sent for such as were absent, in order that, by yielding to their directions, they might do what was proper. In spinning, too, he pointed out that women commanded men, as the one knew how to spin, and the other did not know.

But if anyone remarked in reply to these observations, that a tyrant is at liberty not to obey judicious advisers, he would say, "And how is he at liberty not to obey, when a penalty hangs over him that does not obey a wise monitor? for in whatever affair a person does not obey a prudent adviser, he will doubtless err, and, by erring, will incur a penalty." If anyone also observed that a tyrant might put to death a wise counsellor, "And do you think," he would say, "that he who puts to death the best of his allies will go unpunished, or that he will be exposed only to casual punishment? Whether do you suppose that a man who acts thus would live in safety, or would be likely, rather, by such conduct, to bring immediate destruction on himself?"

When someone asked him what object of study he thought best for a man, he replied, "good conduct." When he asked him again whether he thought "good fortune" an object of study, he answered, "'Fortune' and 'Conduct' I think entirely opposed; for, for a person to light on anything that he wants without seeking it, I consider to be 'good fortune,' but to achieve anything successfully by learning and study, I regard as 'good conduct;' and those who make this their object of study appear to me to do well."

The best men, and those most beloved by the gods, he observed, were those who, in agriculture, performed their agricultural duties well, those who, in medicine, performed their medical duties well, and those who, in political offices, performed their public duties well; but he who did nothing well, he said, was neither useful for any purpose, nor acceptable to the gods.

## CHAPTER X.

*Socrates was desirous to benefit artisans by discoursing with them on the principles of their several arts. Of painting. Of representing perfect beauty. Of expressing the affections of the mind. Of statuary. In what the excellence of a corslet consists.*

Whenever he conversed with any of those who were engaged in arts or trades, and who wrought at them for gain, he proved of service to them. Visiting Parrhasius the painter one day, and entering into conversation with him, he said, “Pray, Parrhasius, is not painting the representation of visible objects? At least you represent substances, imitating them by means of color, whether they be concave or convex, dark or light, hard or soft, rough or smooth, fresh or old.”

“What you say is true,” said Parrhasius. “And when you would represent beautiful figures, do you, since it is not easy to find one person with every part perfect, select, out of many, the most beautiful parts of each, and thus represent figures beautiful in every part?”

“We do so,” said he.

“And do you also,” said Socrates, “give imitations of the disposition of the mind, as it may be most .persuasive, most agreeable, most friendly, most full of regret, or most amiable? Or is this inimitable?”

“How can that be imitated, Socrates,” said he, “which has neither proportion, nor color, nor any of the qualities which you just now mentioned, and is not even a visible object?”

“Is it not often observable in a man that he regards others with a friendly or unfriendly look?”

“I think so,” said he. “Is this then possible to be copied in the eyes?”

“Assuredly.”

“And at the good or ill fortune of people’s friends, do those who are affected at it, and those who are not, appear to you to have the same sort of look?”

“No, indeed; for they look cheerful at their good, and sad at their evil, fortune.”

“Is it possible, then, to imitate these looks?”

“Unquestionably.”

“Surely, also, nobleness and generosity of disposition, meanness and illiberally, modesty and intelligence, insolence and stupidity, show themselves both in the looks and gestures of men, whether they stand or move.”

“What you say is just.”

“Can these peculiarities be imitated?”

“Certainly.”

“Whether, then,” said Socrates, “do you think that people look with more pleasure on paintings in which beautiful, and good, and lovely characters are exhibited, or those in which the deformed, and evil, and detestable are represented?”

“There is a very great difference indeed, Socrates,” replied Parrhasius.

Going once, too, into the workshop of Cleito, the statuary, and beginning to converse with him, he said, “I see and understand, Cleito, that you make figures of various kinds, runners and wrestlers, pugilists and pancratiasts, but how do you put into your statues that which most wins the minds of the beholders through the eye, the life-like appearance?”

As Cleito hesitated, and did not immediately answer, Socrates proceeded to ask, “Do you make your statues appear more life-like by assimilating your work to the figures of the living?”

“Certainly,” said he. “Do you not then make your figures appear more like reality, and more striking, by imitating the parts of the body, that are drawn up or drawn down, compressed or spread out, stretched or relaxed, by the gesture?”

“Undoubtedly,” said Cleito. “And the representation of the passions of men engaged in any act, does it not excite a certain pleasure in the spectators?”

“It is natural, at least, that it should be so,” said he. “Must you not, then, copy the menacing looks of combatants? And must you not imitate the countenance of conquerors, as they look joyful?”

“Assuredly,” said he. “A statuary, therefore,” concluded Socrates, “must express the workings of the mind by the form.”

Entering the shop of Pistias, a corslet-maker, and Pistias having shown him some well-made corslet, Socrates observed, “By Hera, Pistias, this is an excellent invention, that the corslet should cover those parts of a man’s body that need protection, and yet should not hinder him from using his hands. But tell me, Pistias,” he added, “why do you sell your corslets at a higher price than other makers, though you neither make them stronger nor of more costly materials?”

“Because, Socrates,” said he, “I make them better proportioned.”

“And do you make this proportion appear in the measure or weight of your corslets, that you set a higher price on them? For I suppose that you do not make them all equal or similar, if you make them to fit different persons." “Indeed,” replied he, “I do make them to fit, for there would be no use in a corslet without that quality.”

“Are not then,” said Socrates, “the bodies of some men well-proportioned, and those of others ill-proportioned?”

“Certainly,” said Pistias. “How, then,” asked Socrates, “do you make a well-proportioned corslet fit an ill-proportioned body?”

“As I make it fit,” answered Pistias; “for one that fits is well-proportioned.”

"You seem to me," said Socrates, "to speak of proportion considered not independently, but with respect to the wearer, as if you should say of a shield, or a cloak, that it is well-proportioned to him whom it suits; and such appears to be the case with regard to other things, according to what you say. But, perhaps, there may be some other considerable advantage attendant on being made to fit."

"Tell me, Socrates," said he, "if you know any."

"Those corslets which fit," answered Socrates, "are less oppressive by their weight, than those which do not fit, though they be both of equal weight; while those which do not 'fit, are, either from hanging wholly on the shoulders, or from pressing heavily on some other part of the body, inconvenient and uneasy; but those which fit, as they distribute their weight partly over the collar-bone and shoulder, partly over the upper part of the arm, and partly over the breast, back, and stomach, appear almost like, not a burden to be borne, but a natural appendage."

"You have hit upon the very quality," said Pistias, "for which I consider my manufacture deserving of the very highest price; some, however, prefer purchasing ornamented and gilded corslets."

"Yet if on this account," said Socrates, "they purchase such as do not fit, they appear to me to purchase an ornamented and gilded annoyance. But," added he, "since the body does not continue always in the same position, but is at one time bent, and at another straight, how can a corslet, which is exactly fitted to it, suit it?"

"It cannot by any means," said Pistias. "You mean, therefore," said Socrates, "that it is not those which are exactly fitted to the body that suit, but those that do not gall in the wearing."

"You say what is clearly the case, Socrates," replied he, "and exactly comprehend the matter."

## CHAPTER XI.

*The visit of Socrates to Theodota, and his discourse with her. He tells her that true friends are not acquired without the manifestation of kind and good feelings. He reminds her that in gratifying the appetites we must guard against satiety. His jests on taking leave of her.*

There being at one time a beautiful woman in the city, whose name was Theodota, a woman ready to form a connection with anyone that made advances to her, and somebody in company with Socrates making mention of her, and saying that her beauty was beyond description, and that painters went to her to take her portrait, to whom she showed as much of her person as she could with propriety, "We ought then to go and see her," remarked Socrates, "for it is not possible to comprehend by hearing that which surpasses description."

"You cannot be too quick in following me, then," said he who had mentioned her.

Going, accordingly, to the house of Theodota, and finding her standing to a painter, they contemplated her figure; and when the painter had left off, Socrates said, "My friends, whether ought we to feel obliged to Theodota for having shown us her beauty, or she to us for having viewed it with admiration? If the exhibition be rather of advantage to her, ought not she to feel grateful to us, or if the sight has given rather more pleasure to us, ought not we to feel grateful to her?" Somebody saying that he spoke reasonably, he added, "She, then, for the present, gains praise from us, and, when we have spoken of her to others, will gain profit in addition; but as for us, we now desire to embrace what we have seen, and shall go away excited, and long for her after we are away from her; the natural consequence of which is that we shall be her adorers, and that she will be worshipped as our mistress."

"If this be the case, indeed," said Theodota, "I must feel gratitude to you for coming to see me."

Soon after, Socrates, seeing her most expensively attired, and her mother with her in a dress and adornment above the common, with several handsome female attendants, not unbecomingly appareled, and her house richly furnished in other respects, said to her, "Tell me, Theodota, have you an estate?"

"Not I indeed," replied she. "But perhaps you have a house that brings you an income?"

"Nor a house either," said she. "Have you then any slaves that practice handicrafts?"

"No, nor any slaves."

"How then," said Socrates, "do you procure subsistence?"

"If anyone becomes my friend," she replied, "and is willing to benefit me, he is my means of subsistence."

"By Hera, Theodota," rejoined Socrates, "and he is an excellent acquisition to you; and it is much better to have a flock of friends than of sheep, oxen, and goats. But," added he, "do you leave it to chance whether a friend, like a fly, shall wing his way to you, or do you use any contrivance to attract them?"

"And how," said she, "can I find a contrivance for such a purpose?"

"Much more readily," said he, "than spiders can; for you know how they try to get subsistence; they weave fine nets, and feed upon whatever falls into them."

"And do you advise me, too," said she, "to weave a net?"

"Yes," said he, "for you ought not to think that you will catch friends, the most valuable prey that can be taken, without art. Do you not see how many arts hunters use to catch hares, an animal of but little worth? As the hares feed in the night, they procure dogs for hunting by night, with which they chase them; as they conceal themselves in the day, they provide other dogs, which, perceiving by the smell the way that they have gone from their feeding-place to their forms, trace them out; and as they are swift of foot, so as soon to escape from view by running, they procure also other dogs, of great speed, that they may be caught by pursuit; and because some of them escape even from these dogs, they stretch nets across the paths by which they flee, that they may fall into them and be entangled."

"By what art of this kind, then," said she, "can I catch friends?"

"If," said he, "instead of a dog, you get somebody to track and discover the lovers of beauty, and the wealthy, and who, when he has found them, will contrive to drive them into your nets."

"And what nets have I?" said she. io. "You have one at least," he replied, "and one that closely embraces its prey, your person; and in it you have a mind, by which you understand how you may gratify a person by looking at him, and what you may say to cheer him, and learn that you ought to receive with transport him who shows concern for you, and to shut out him who is insolent, to attend carefully on a friend when he is ill, to rejoice greatly with him when he has succeeded in anything honorable, and to cherish affection in your whole soul for the man who sincerely cares for you. To love I am sure that you know, not only tenderly, but with true kindness of heart; and your friends try to please you, I know, because you conciliate them, not with words merely, but by your behavior towards them."

"Indeed," replied Theodota, "I use none of these schemes."

"Yet," said Socrates, "it is of great importance to deal with a man according to his disposition, and with judgment; for by force you can neither gain nor keep a friend, but by serving and pleasing him the animal is easily taken and attached to you."

"What you say is true," said she.

"It becomes you, therefore," proceeded Socrates, "in the first place, to request of your lovers only such favors as they will perform with least cost to themselves;

and you must then make a return by obliging them in a similar way; for thus they will become most sincerely attached to you, and will love you longest, and benefit you most. But you will please them most, if you grant them favors only when they solicit them; for you see that even the most savory meats, if a person offer them to another before he has an appetite for them, appear to him distasteful; and in the satisfied they excite even loathing; but if one offers food to another after having raised an appetite in him, it seems, though it be of a very ordinary kind, extremely agreeable."

"How then can I," said she, "excite such an appetite in anyone of those that visit me?"

"If, when they are satiated," said he, "you, in the first place, neither offer yourself to them, nor remind them of you, until, coming to an end of their satiety, they again feel a desire for you; and, when they do feel such desire, remind them of your fondness by the most modest address, and by showing yourself willing to gratify them, holding back, at the same time, until they are filled with impatient longing; for it is far better to grant the same favors at such a time, than before they had an appetite for them."

"Why do not you, then, Socrates," said she, "become my helper in securing friends?"

"I will indeed," said he, "if you can persuade me."

"And how then," said she, "can I persuade you?"

"You yourself will seek and find means to do so, if you should at all need me."

"Come often to see me, then," said she. Then Socrates, joking upon his own easy i life, said, "But, Theodota, it is not easy for me to find leisure; for my own numerous occupations, private and public, allow > me no rest; and I have friends also, who will not suffer me to leave them day or night, learning from me love-charms and incantations."

"Do you then know such arts, too, Socrates?" said Theodota. "Through what other influence do you suppose that Apollodorus here, and Antisthenes, never leave me? and through what other influence do you suppose that Cebes and Simmias come to me from Thebes? Be assured, that such effects were not produced without many love-charms, incantations, and magic wheels."

"Lend me, then, your magic wheel," said she, "that I may set it a going, first of all, against yourself."

"But, by Zeus," exclaimed Socrates, "I do not wish that I should be drawn to you, but that you should come to me."

"I will come then," said she, "only take care to let me in."

"I will let you in, replied he, "if another more acceptable than you be not within."

## CHAPTER XII.

*Socrates shows the benefit of gymnastic exercises, as well on the health of the mind as on that of the body. The advantages of health and vigor.*

Noticing that Epigenes, one of his followers, was both very young and weak in body, he said to him, “How very unlike an athlete you are in frame, Epigenes!”

“I am not an athlete, Socrates,” replied he. “You are not less of an athlete,” rejoined Socrates, “than those who are going to contend at the Olympic Games. Does the struggle for life with the enemy, which the Athenians will demand of you when circumstances require, seem to you to be a trifling contest? Yet, in the dangers of war, not a few, through weakness of body, either lose their lives, or save them with dishonor; many, from the same cause, are taken alive, and, as prisoners of war, endure for the rest of their lives, if such should be their fate, the bitterest slavery; or, falling into the most grievous hardships, and paying for their ransom sometimes more than they possess, pass the remainder of their existence in want of necessaries, and in the endurance of affliction; and many, too, incur infamy, being thought to be cowards merely from the imbecility of their bodily frame. Do you think lightly of such penalties attached to weakness of body, or do you expect that you will endure such calamities with ease? I believe that what he must bear who attends to the health of his body, is far lighter and more pleasant than such afflictions. Or do you suppose that an ill condition of body is more salutary and advantageous than a good condition? Or do you despise the benefits secured by a good state of the body? Yet the lot which falls to those who have their bodies in good condition is exactly the reverse of that which falls to those who have them in ill condition; for those who have their bodies in a good state are healthy and strong; and many, from being possessed of this advantage, save themselves with honor amid the struggles of war, and escape every peril; many, also, assist their friends and benefit their country, and, for such services, are thought worthy of favor, acquire great glory, and attain the highest dignities; and, on these accounts, pass the rest of their lives with greater pleasure and honor, and bequeath finer fortunes to their children. Nor, because the city does not require warlike exercises publicly, ought we, on that account, to neglect them privately, but rather to practice them the more; for be well assured that neither in any other contest, nor in any affair whatever, will you at all come off the worse because your body is better trained than that of other men; since the body must bear its part in whatever men do; and in all the services required from the body, it is of the utmost importance to have it in the best possible condition; for even in that in which you think that there is least exercise for the body, namely, thinking, who does not know that many fail greatly from ill-health? and loss of memory, despondency, irritability, and madness, often, from ill-health of body, attack the mind with such force as to drive out all previous knowledge. But to those who have their bodies in good condition, there is the utmost freedom from anxiety, and no danger of suffering any such calamity from weakness of constitution; whilst it is likely, rather, that a healthy state of body will avail to produce consequences the reverse of those which result from an unhealthy state of it; and, indeed, to secure consequences the reverse of what we have stated, what would a man in his senses not undergo? It is disgraceful, too, for a person to grow old in self-neglect, before he knows what he would become by rendering himself well-formed and vigorous in body; but this a man who neglects himself cannot know; for such advantages are not wont to come spontaneously.

## CHAPTER XIII.

*Several brief sayings of Socrates. We should not be offended at rudeness of manner more than at personal defects. Fasting the best remedy for loathing of food, We should not be too nice as to food or drink, He that punishes his slave, should consider whether he himself deserves like punishment. Admonitions to travelers, It is disgraceful to him who has been trained in the gymnasium to be outdone by a slave in enduring toil.*

A person being angry, because, on saluting another, he was not saluted in return, “It is an odd thing,” said Socrates to him, “that if you had met a man ill-conditioned in body, you would not have been angry, but to have met a man rudely disposed in mind provokes you.”

Another person saying that he ate without pleasure, “Acumenus,” said Socrates, “prescribes an excellent remedy for that disease.”

The other asking, “What sort of remedy?”

“To abstain from eating,” said Socrates; “for lie says that, after abstaining, you will live with more pleasure, less expense, and better health.”

Another saying that the water which he had to drink at his house was warm, “When you wish to bathe in warm water, then,” said Socrates, “it will be ready for you.”

“But it is too cold to bathe in,” said the other.

“Are your slaves, then,” asked Socrates, “inconvenienced by drinking or bathing in it?”

“No, by Zeus,” replied he; “for I have often wondered how cheerfully they use it for both those purposes.”

“And is the water in your house,” said Socrates, “or that in the temple of Æsculapius, the warmer for drinking?”

“That at the temple of Æsculapius,” replied he.

“And which is the colder for bathing in, that at your house, or that in the temple of Amphiaraus?”

“That in the temple of Amphiaraus,” said he.

“Consider, then,” said Socrates, “that you seem to be harder to please than your slaves or the sick.”

Another person beating his attendant severely, Socrates asked him why he was so angry at the slave. “Because,” said he, “he is very gluttonous and very stupid, very covetous and very idle.”

“And have you ever reflected,” rejoined Socrates, “which of the two deserves the greater number of stripes, you or your slave?”

A person being afraid of the journey to Olympia, “Why,” said Socrates to him, “do you fear the journey? Do you not walk about at home almost all day? And, if you set out thither, you will walk and dine, walk and sup, and go to rest. Do you not know that if you were to extend in a straight line the walks which you take in five or six days, you would easily go from Athens to Olympia? But it will be better for you to start a day too soon than a day too late; for to be obliged to extend your days’ journeys beyond a moderate length is disagreeable; but to spend one day more on the road gives great ease; and it is better, therefore, to hasten to start than to hurry on the way.”

Another saying that he was utterly wearied with a long journey, Socrates asked him whether he carried any burden. “No, by Zeus,” said he, “I did not, except my cloak.”

“And did you travel alone,” said Socrates, “or did an attendant accompany you?”

“An attendant was with me.”

“Was he empty-handed, or did he carry anything?”

“He carried, certainly, the bedding and other utensils.”

“And how did he get over the journey?”

“He appeared to me to come off better than myself.”

“If you, then, had been obliged to carry his burden, how do you imagine that you would have fared?”

“Very ill,” by Zeus; “or rather, I should not have been able to carry it at all.”

“And how can you think that it becomes a man trained to exercise to be so much less able to bear fatigue than a slave?”

## CHAPTER XIV.

*Table-talk of Socrates in praise of frugality. In contributions to feasts, one guest should not strive to surpass another in the quality or quantity of what he contributes. He may be called flesh-eater, who eats flesh alone, or with very little bread. He that eats of many dishes at once acts foolishly in various ways. He may be truly to banquet, who lives on plain and wholesome food.*

When, among a number of persons who had met together to sup, some brought little meat, and others a great quantity, Socrates desired the attendant either to set the smallest dish on the table for common participation, or to distribute a portion of it to each. They, accordingly, who had brought a great deal, were ashamed not to partake of what was put on table for the company in general, and not, at the same time, to put their own on table in return. They therefore offered their own dishes for the participation of the company; and when they had no greater share than those who brought but little, they ceased to buy meat at great cost.

Observing one of those at table with him taking no bread, but eating meat by itself, and a discussion having arisen at the same time about names, for what cause any particular name was given, "Can we tell," said Socrates, "for what cause a man should be called *flesh-eater*. For everybody eats flesh with his bread when he has it; but I do not suppose that people are called *flesh-eater* on that account."

"I should think not," said one of the company. "But," said Socrates, "if a person should eat meat by itself without bread, not for the purpose of training, but of gratifying his appetite, whether would he seem to be a *flesh-eater* or not?"

"Scarcely any other would more justly seem so," said he. "And he that eats a great deal of meat with very little bread," said another of the company, "what should he be called?"

"To me," replied Socrates, "it appears that he would justly be called *flesh-eater*, and when other men pray to the gods for abundance of corn, he may pray for abundance of flesh." When Socrates said this, the young man, thinking that the words were directed at him, did not indeed leave off eating meat, but took some bread with it. Socrates, observing him do so, said, "Notice this young man, you that sit near him, whether he takes bread to his meat, or meat to his bread."

Seeing another of the company taste of several dishes with the same piece of bread, "Can any cookery be more extravagant," said he, "or more adapted to spoil dishes, than that which he practices who eats of several at the same time, putting all manner of sauces into his mouth at once? For as he mixes together more ingredients than the cooks, he makes what he eats more expensive; and as he mixes what they forbear to mix as being incongruous, he, if they do right, is in the wrong, and renders their art ineffectual. And how can it be otherwise than ridiculous," he added, "for a man to provide himself with cooks of the greatest skill, and then, though he pretends to no knowledge of their art, to undo what has been done by them? But there is another evil attendant on him who is accustomed to eat of several dishes at once; for, if he has not several sorts of meat before him, he thinks himself stinted, missing the variety to which he has been used. But he who is accustomed to make one piece of bread, and one piece of meat, go together, will be able to partake contentedly of one dish when several are just at hand."

He observed also that "to fare well," was in the language of the Athenians called "to eat;" and that the "well," was added to denote that we should eat such food as would disorder neither mind nor body, and such as would not be difficult to be procured; so that he applied "to fare well," to those who fared temperately.

# BOOK IV.

## CHAPTER I.

*Socrates liked the society of young men; how he judged of them; his desire that they should be well educated. The more powerful the mind in youth, the more likely it is, if ill trained, to run into vice,, Happiness does not depend on riches, but on knowledge, and on being useful to our fellow-creatures, and gaining their esteem.*

So serviceable was Socrates to others, in every kind of transaction, and by every possible means, that to anyone who reflects on his usefulness, (even though he possess but moderate discernment,) it is manifest that nothing was of greater benefit than to associate with Socrates, and to converse with him, on any occasion, or on any subject whatever; since even the remembrance of him, when he is no longer with us, benefits in no small degree those who were accustomed to enjoy his society, and heard him with approbation; for he sought to improve his associates not less in his humorous than in his serious conversation. He would often say that he loved some particular person; but he was evidently enamored, not of those formed by nature to be beautiful, but of those naturally inclined to virtue. He judged of the goodness of people's abilities from their quickness in learning the things to which they gave their attention, from their remembrance of what they learned, and from their desire for all those branches of knowledge by means of which it is possible to manage a family or an estate well, and to govern men and their affairs with success; for he thought that such characters, when instructed, would not only be happy themselves, and regulate their own families judiciously, but would be able to render other men, and other communities besides their own, happy. He did not however make advances to all in the same manner. Those who thought that they had good natural abilities, but despised instruction, he endeavored to convince that minds which show most natural power have most need n£ education, pointing out to them that horses of the best breed, which are high-spirited and obstinate, become, if they are broken in when young, most useful and valuable, but if they are left unbroken, remain quite unmanageable and worthless; and that hounds of the best blood, able to endure toil, and eager to attack beasts, prove, if they are well trained, most serviceable for the chase, and every way excellent, but, if untrained, are useless, rabid, and disobedient. In like manner, he showed that men of the best natural endowments, possessed of the greatest strength of mind, and most energetic in executing what they undertake, became, if well-disciplined and instructed in what they ought to do, most estimable characters, and most beneficent to society, (as they then performed most numerous and important services,) but that, if uninstructed, and left in ignorance, they proved utterly worthless and mischievous; for that, not knowing what line of conduct they ought to pursue, they often entered upon evil courses, and, being haughty and impetuous, were difficult to be restrained or turned from their purpose, and thus occasioned very many and great evils.

But those who prided themselves on their wealth, and thought that they required no education, but imagined that their riches would suffice to effect whatever they desired, and to gain them honor from mankind, he tried to reduce to reason by saying that the man was a fool who thought that he could distinguish the good and the evil in life without instruction; and that he also was a fool, who, though he could not distinguish them, thought that he would procure whatever he wished, and effect whatever was for his interest, by means of his wealth. He also said that the man was void of sense, who, not being qualified to pursue what was for his good, fancied that he would be prosperous in the world, and that everything necessary for his comfort was fully, or at least sufficiently, provided for him; and that he was equally void of sense, who, though he knew nothing, thought that he would seem good for something because of his riches, and, though evidently despicable, would gain esteem through their influence.

## CHAPTER II.

*No dependence to be placed on natural abilities without education. Socrates proceeds to show Euthydemus, a self-conceited young man, that in every art it is proper to have recourse to instructors. He shows the folly of a man who should pretend to have learned everything of himself. The necessity of instruction in the art of government. By a long series of interrogations Socrates reduces Euthydemus to acknowledge his ignorance and incompetence. The value of self-knowledge. Further instructions given to Euthydemus.*

I will now show how Socrates addressed himself to such as thought that they had attained the highest degree of knowledge, and prided themselves on their ability. Hearing that Euthydemus, surnamed the Handsome, had collected many writings of the most celebrated poets and sophists, and imagined that by that means he was outstripping his contemporaries in accomplishments, and had great hopes that he would excel them all in talent for speaking and acting, and finding, by his first inquiries about him, that .he had not yet engaged in public affairs on account of his youth, but that, when he wished to do any business, he usually sat in a bridle-maker's shop near the Forum, he went himself to it, accompanied by some of his hearers; and as somebody asked, first of all, "whether it was from his intercourse with some of the wise men, or from his own natural talents, that Themistocles attained such a pre-eminence above his fellow-citizens, that the republic looked to him whenever it wanted the service of a man of ability," Socrates, wishing to excite the attention of Euthydemus, said that "it was absurd to believe that men could not become skilled in the lowest mechanical arts without competent instructors, and to imagine that ability to govern a state, the most important of all arts, might spring up in men by the unassisted efforts of nature." On another occasion, when Euthydemus was one of the company, and Socrates saw him leaving it, from apprehension lest he should seem to admire him for his wisdom, he observed, "It is evident, my friends, from the studies that he pursues, that Euthydemus here, when he comes of age, and the government give liberty of discussion on any point, will not refrain from offering his counsel; and I imagine that he has already framed an exordium for his public oration, taking precaution that he may not be thought to have learned anything from anybody; and it is pretty certain, therefore, that when he begins to speak, he will make his opening thus: 'I, O men of Athens, have never learned anything from any person, nor, though I heard of some that were skilled in speaking and acting, have I sought to converse with them; nor have I been anxious that anyone of the learned should become my master; but I have done the exact contrary; for I have constantly avoided not only learning anything from anyone, but even the appearance of learning anything; nevertheless I will offer you such advice as may occur to me without premeditation. So it might be proper for a person to commence a speech who desired to obtain a medical appointment from the government: 'I, O men of Athens, have never learned the medical art from anyone, nor have been desirous that any physician should be my instructor; for I have constantly been on my guard, not only against learning anything of the art from anyone, but even against appearing to have learned anything; nevertheless confer on me this medical appointment; for I will endeavor to learn by making experiments upon you.'" At this mode of opening a speech all who were present burst out into laughter.

As Euthydemus had now evidently begun to attend to what Socrates was saying, but was cautious of speaking himself, as thinking by his silence to clothe himself with reputation for modesty, Socrates, wishing to cure him of that fancy, said, "It is indeed strange, that those who desire to play on the lyre, or on the flute, or to ride, or to become expert in any such accomplishment, should endeavor to practice, as constantly as possible, that in which they desire to excel, and not by themselves merely, but with the aid of such as are considered eminent in those attainments, attempting and undergoing everything, so as to do nothing without their sanction, as supposing that they can, by no other means, attain reputation; but that of those who wish to become able to speak and act in affairs of government, some think that they will be suddenly qualified to achieve their object, without preparation or study, and by their own unassisted efforts. Yet these pursuits are manifestly more difficult of attainment than those, inasmuch as of the very many who attempt them a much smaller number succeed in them; and it is evident, therefore, that those who pursue the one are required to submit to longer and more diligent study than those who pursue the other."

Socrates used at first to make such remarks, while Euthydemus merely listened; but when he observed that he stayed, while he conversed, with more willingness, and hearkened to him with more attention, he at last came to the bridle-maker's shop unattended. As Euthydemus sat down beside him, he said, "Tell me, Euthydemus, have you really, as I hear, collected many of the writings of men who are said to have been wise."

"I have indeed, Socrates," replied he, "and I am still collecting, intending to persevere till I get as many as I possibly can."

"By Hera," rejoined Socrates, "I feel admiration for you, because you have not preferred acquiring treasures of silver and gold rather than of wisdom; for it is plain you consider that silver and gold are unable to make men better, but that the thoughts of wise men enrich their possessors with virtue."

Euthydemus was delighted to hear this commendation, believing that he was thought by Socrates to have sought wisdom in the right course. Socrates, observing that he was gratified with the praise, said, "And in what particular art do you wish to become skillful, that you collect these writings?"

As Euthydemus continued silent, considering what reply he should make, Socrates again asked, "Do you wish to become a physician? for there are many writings of physicians."

"Not I, by Zeus," replied Euthydemus. "Do you wish to become an architect, then? for a man of knowledge is needed for that art also."

"No, indeed," answered he. "Do you wish to become a good geometrician, like Theodorus?"

"Nor a geometrician either," said he.

"Do you wish then to become an astronomer?" said Socrates.

As Euthydemus said "No," to this, "Do you wish then," added Socrates, "to become a rhapsodist, for they say that you are in possession of all the poems of Homer."

"No indeed," said he, "for I know that the rhapsodists, though eminently knowing in the poems of Homer, are, as men, extremely foolish."

"You are perhaps desirous then," proceeded Socrates, "of attaining that talent by which men become skilled in governing states, in managing households, able to command, and qualified to benefit other men as well as themselves."

"I indeed greatly desire," said he, "Socrates, to acquire that talent."

"By Zeus," returned Socrates, "you aspire to a most honorable accomplishment, and a most exalted art, for it is the art of kings, and is called the royal art. But," added he, "have you ever considered whether it is possible for a man who is not just to be eminent in that art?"

"I have certainly," replied he; "and it is not possible for a man to be even a good citizen without justice."

"Have you yourself, then, made yourself master of that virtue?"

"I think," said he, "Socrates, that I shall be found not less just than any other man."

"Are there then works of just men, as there are works of artisans?"

"There are, doubtless," replied he. "Then," said Socrates, "as artisans are able to show their works, would not just men be able also to tell their works?"

"And why should not I," asked Euthydemus, "be able to tell the works of justice; as also indeed those of injustice; for we may see and hear of no small number of them every day?"

"Are you willing then," said Socrates, "that we should make a delta on this side, and an alpha on that, and then that we should put whatever seems to us to be a work of justice under the delta, and whatever seems to be a work of injustice under the alpha?"

"If you think that we need those letters," said Euthydemus, "make them." Socrates, having made the letters as he proposed, asked, "Does falsehood then exist among mankind?"

"It does assuredly," replied he. "Under which head shall we place it?"

"Under injustice, certainly."

"Does deceit also exist?"

"Unquestionably."

"Under which head shall we place that?"

“Evidently under injustice.”

“Does mischievousness exist?”

“Undoubtedly.”

“And the enslaving of men?”

“That, too, prevails.”

“And shall neither of these things be placed by us under justice, Euthydemus?”

“It would be strange if they should be,” said he. “But,” said Socrates, “if a man, being chosen to lead an army, should reduce to slavery an unjust and hostile people, should we say that he committed injustice?”

“No, certainly,” replied he. “Should we not rather say that he acted justly?”

“Indisputably.”

“And if, in the course of the war with them, he should practice deceit?”

“That also would be just,” said he. “And if he should steal and carry off their property, would he not do what was just?”

“Certainly,” said Euthydemus; “but I thought at first that you asked these questions only with reference to our friends.”

“Then,” said Socrates, “all that we have placed under the head of injustice, we must also place under that of justice?”

“It seems so,” replied Euthydemus. “Do you agree, then,” continued Socrates, “that, having so placed them, we should make a new distinction, that it is just to do such things with regard to enemies, but unjust to do them with regard to friends, and that towards his friends our general should be as guileless as possible?”

“By all means,” replied Euthydemus. “Well, then,” said Socrates, “if a general, seeing his army dispirited, should tell them, inventing a falsehood, that auxiliaries were coming, and should, by that invention, check the despondency of his troops, under which head should we place such an act of deceit?”

“It appears to me,” said Euthydemus, “that we must place it under justice.”

“And if a father, when his son requires medicine, and refuses to take it, should deceive him, and give him the medicine as ordinary food, and, by adopting such deception, should restore him to health, under which head must we place such an act of deceit?”

“It appears to me that we must put it under the same head.”

“And if a person, when his friend was in despondency, should, through fear that he might kill himself, steal or take away his sword, or any other weapon, under which head must we place that act?”

“That, assuredly, we must place under justice.”

“You say, then,” said Socrates, “that not even towards our friends must we act on all occasions without deceit?”

“We must not indeed,” said he, “for I retract what I said before, if I may be permitted to do so.”

“It is indeed much better that you should be permitted,” said Socrates, “than that you should not place actions on the right side. But of those who deceive their friends in order to injure them, (that we may not leave even this point unconsidered,) which of the two is the more unjust, he who does so intentionally or he who does so involuntarily?”

“Indeed, Socrates,” said Euthydemus, “I no longer put confidence in the answers which I give; for all that I said before appears to me now to be quite different from what I then thought; however, let me venture to say that he who deceives intentionally is more unjust than he who deceives involuntarily?”

“Does it appear to you, then, that there is a way of learning and knowing what is just, as there is of learning and knowing bow to read and write?”

“I think there is.”

“And which should you consider the better scholar, him who should purposely write or read incorrectly, or him who should do so unawares?”

“Him who should do so purposely, for, whenever he pleased, he would be able to do both correctly.”

“He, therefore, that purposely writes incorrectly may be a good scholar, but he who does so involuntarily is destitute of scholarship?”

“How can it be otherwise?”

“And whether does he who lies and deceives intentionally know what is just, or he who does so unawares?”

“Doubtless he who does so intentionally.”

“You therefore say that he who knows how to write and read is a better scholar than he who does not know?”

“Yes.”

“And that he who knows what is just is more just than he who does not know?”

“I seem to say so; but I appear to myself to say this I know not how.”

“But what would you think of the man, who, wishing to tell the truth, should never give the same account of the same thing, but, in speaking of the same road, should say at one time that it led towards the east, and at another towards the west, and, in stating the result of the same calculation, should sometimes assert it to be greater and sometimes less, what, I say, would you think of such a man?”

“It would be quite clear that he knew nothing of what he thought he knew.”

“Do you know any persons called slave-like?”

“I do.”

“Whether for their knowledge or their ignorance?”

“For their ignorance, certainly.”

"Is it then for their ignorance of working in brass that they receive this appellation?"

"Not at all."

"Is it for their ignorance of the art of building?"

"Nor for that."

"Or for their ignorance of shoemaking?"

"Not on anyone of these accounts; for the contrary is the case, as most of those who know such trades are servile."

"Is this, then, an appellation of those who are ignorant of what is honorable, and good, and just?"

"It appears so to me."

"It therefore becomes us to exert ourselves in every way to avoid being like slaves."

"But, by the gods, Socrates," rejoined Euthydemus, "I firmly believed that I was pursuing that course of study, by which I should, as I expected, be made fully acquainted with all that was proper to be known by a man striving after honor and virtue; but now, how dispirited must you think I feel, when I see that, with all my previous labor, I am not even able to answer a question about what I ought most of all to know, and am acquainted with no other course which I may pursue to become better!"

Socrates then said, "Tell me, Euthydemus, have you ever gone to Delphi?"

"Yes, twice," replied he. "And did you observe what is written somewhere on the temple wall, Know thyself?"

"I did."

"And did you take no thought of that inscription, or did you attend to it, and try to examine yourself, to ascertain what sort of character you are?"

"I did not indeed try, for I thought that I knew very well already, since I should hardly know anything else if I did not know myself."

"But whether does he seem to you to know himself, who knows his own name merely, or he who, (like people buying horses, who do not think that they know the horse that they want to know, until they have ascertained whether he is tractable or unruly, whether he is strong or weak, swift or slow, and how he is as to other points which are serviceable or disadvantageous in the use of a horse, so he,) having ascertained with regard to himself how he is adapted for the service of mankind, knows his own abilities?"

"It appears to me, I must confess, that he who does not know his own abilities, does not know himself."

"But is it not evident," said Socrates, "that men enjoy a great number of blessings in consequence of knowing themselves, and incur a great number of evils, through being deceived in themselves? For they who know themselves know what is suitable for them, and distinguish between what they can do and what they cannot; and, by doing what they know how to do, procure for themselves what they need, and are prosperous, and, by abstaining from what they do not know, live blamelessly, and avoid being unfortunate. By this knowledge of themselves, too, they can form an opinion of other men, and, by their experience of the rest of mankind/ obtain for themselves what is good, and guard against what is evil. But they who do not know themselves, but are deceived in their own powers, are in similar case with regard to other men, and other human affairs, and neither understand what they require, nor what they are doing, nor the characters of those with whom they connect themselves, but, being in error as to all these particulars, they fail to obtain what is good, and fall into evil. They, on the other hand, who understand what they take in hand, succeed in what they attempt, and become esteemed and honored; those who resemble them in character willingly form connections with them; those who are unsuccessful in life desire to be assisted with their advice, and to prefer them to themselves; they place in them their hopes of good, and love them, on all these accounts, beyond all other men. But those, again, who do not know what they are doing, who make an unhappy choice in life, and are unsuccessful in what they attempt, not only incur losses and sufferings in their own affairs, but become, in consequence, disreputable and ridiculous, and drag out their lives in contempt and dishonor. Among states, too, you see that such as, from ignorance of their own strength, go to war with others that are more powerful, are, some of them, utterly overthrown, and others reduced from freedom to slavery."

"Be assured, therefore," replied Euthydemus, "that I feel convinced we must consider self-knowledge of the highest value; but as to the way in which we must begin to seek self-knowledge, I look to you for information, if you will kindly impart it to me."

"Well, then," said Socrates, "you doubtless fully understand what sort of things are good, and what sort are evil."

"Yes, by Zeus," replied Euthydemus, "for if I did not understand such things, I should be in a worse condition than slaves are."

"Come then," said Socrates, "tell me what they are."

"That is not difficult," said he, "for, in the first place, health I consider to be a good, and sickness an evil, and, in the next, looking to the causes of each of them, as drink, food, and employments, I esteem such as conduce to health to be good, and such as lead to sickness to be evil."

"Consequently," said Socrates, "health and sickness themselves, when they are the causes of any good, will be good, and when they are the causes of any evil, will be evil."

"But when," exclaimed Euthydemus, "can health be the cause of evil, and sickness of good?"

"When, for example," said Socrates, "some portion of a com-, munity, from being in good health, take part in a disgraceful expedition by land, or a ruinous voyage by sea, or in any other such matters, which are sufficiently common, and lose their lives, while others, who are left behind from ill-health, are saved."

"What you say is true," said Euthydemus, "but you see that some men share in successful enterprises from being in health, while others, from being in sickness, are left out of them."

"Whether then," said Socrates, "are those things which are sometimes beneficial, and sometimes injurious, goods, rather, or evils?"

"Nothing, by Zeus, is to be settled with regard to them by considering thus. But as to wisdom, Socrates, it is indisputably a good thing; for what business will not one who is wise conduct better than one who is untaught?"

"Have you not heard, then, of Daedalus," said Socrates, "how he was made prisoner by Minos and compelled to serve him as a slave; how he was cut off, at once, from his country and from liberty, and how, when he endeavored to escape with his son, he lost the child, and was unable to save himself, but was carried away among barbarians, and made a second time a slave?"

"Such a story is told, indeed," said Euthydemus. "Have you not heard, too, of the sufferings of Palamedes? For everybody says that it was for his wisdom he was envied and put to death by Ulysses."

"That, too, is said," replied Euthydemus. "And how many other men do you think have been carried off to the king on account of their wisdom, and made slaves there?"

"But as to happiness, Socrates," said Euthydemus, "that at least appears to be an indisputable good."

"Yes, Euthydemus," replied Socrates, "if we make it consist in things that are themselves indisputably good."

"But what," said he, "among things constituting happiness can be a doubtful good?"

"Nothing," answered Socrates, "unless we join with it beauty, or strength, or wealth, or glory, or any other such thing."

"But we must assuredly join them with it," said Euthydemus; "for how can a person be happy without them?"

"We shall then join with it, by Zeus," said Socrates, "things from which many grievous calamities happen to mankind; for many, on account of their beauty, are ruined by those who are maddened with passion for their youthful attractions; many, through confidence in their strength, have entered upon undertakings too great for it, and involved themselves in no small disasters; many, in consequence of their wealth, have become enervated, been plotted against, and destroyed; and many, from the glory and power that they have acquired in their country, have suffered the greatest calamities."

"Well, then," said Euthydemus, "if I do not say what is right when I praise happiness, I confess that I do not know what we ought to pray for to the gods."

"These points, however," proceeded Socrates, "you have perhaps not sufficiently considered, from too confident a belief that you were already well acquainted with them; but since you intend to be at the head of a democratic government, you doubtless know what a democracy is."

"Assuredly," said he.

"Do you think it possible for a person to know what a democracy is, without knowing what the Demos is?"

"No, indeed."

"And what do you conceive the Demos to be?"

"I conceive it to be the poorer class of citizens."

"Do you know, then, which are the poor?"

"How can I help knowing?"

"You know then which are the rich?"

"Just as well as I know which are the poor."

"Which sort of persons then do you call poor, and which sort rich?"

"Those who have not sufficient means to pay for the necessaries of life, I regard as poor; those who have more than sufficient, I consider rich."

"Have you ever observed, then, that to some who have very small means, those means are not only sufficient, but that they even save from them, while, to many, very large fortunes are not sufficient?"

"I have indeed," said Euthydemus, "(for you very properly put me in mind of it,) since I have known some princes, who, from poverty, have been driven to commit injustice like the very poorest people."

"Then," said Socrates, "if such be the case, we must rank such princes among the Demos, and those that have but little, we must rank, if they be good managers, among the rich?"

"My own want of knowledge, indeed," said Euthydemus, "obliges me to admit even this; and I am considering whether it would not be best for me to be silent; for I seem to know absolutely nothing."

He went away, accordingly, in great dejection, holding himself in contempt, and thinking that he was in reality no better than a slave.

Of those who were thus addressed by Socrates, many came to him no more; and these he regarded as too dull to be improved. But Euthydemus, on the contrary, conceived that he could by no other means become an estimable character, than by associating with Socrates as much as possible; and he in consequence never quitted him, unless some necessary business obliged him to do so. He also imitated many of his habits.

When Socrates saw that he was thus disposed, he no longer puzzled him with questions, but explained to him, in the simplest and clearest manner, what he thought that he ought to know, and what it would be best for him to study.

## CHAPTER III.

*The necessity of temperance or self-control, and of right notions concerning the gods. The gods have a providential care for mankind. Other animals are formed by the gods for the use of man, In addition to the senses common to man with the inferior animals, the gods have given him reason and speech. Though we do not see the gods, we are convinced of their existence from their works. We ought therefore to pay them honor according to our means.*

Socrates was never in haste that his followers should become skillful in speaking, in action, or in invention, but, previous to such accomplishments, he thought it proper that a love of self-control should be instilled into them; for he considered that those who had acquired those qualifications were, if devoid of self-control, only better fitted to commit injustice and to do mischief. In the first place, therefore, he endeavored to impress his associates with right feelings towards the gods Some, who were present with him when he conversed with others on this subject, have given an account of his discourses; but I myself was with him when he held a conversation with Euthydemus to the following effect.

"Tell me," said he, "Euthydemus, has it ever occurred to you to consider how carefully the gods have provided for men everything that they require?"

"It has indeed never occurred to me," replied he. "You know at least," proceeded Socrates, "that we stand in need, first of all, of light, with which the gods supply us."

"Yes, by Zeus," answered Euthydemus, "for if we had no light, we should be, as to the use of our eyes, like the blind."

"But, as we require rest, they afford us night, the most suitable season for repose."

"That is assuredly," said Euthydemus, "a subject for thankfulness."

"Then because the sun, being luminous, shows us the hours of the day, and everything else, while the night, being dark, prevents us from making such distinctions in it, have they not caused the stars to shine in the night, which show us the night-watches, and under the direction of which we perform many things that we require?"

"So it is," said he. "The moon, too, makes plain to us not only the divisions of the night, but also of the month."

"Assuredly," said he. "But that, since we require food, they should raise it for us from the earth, and appoint suitable seasons for the purpose, which prepare for us, in abundance and every variety, not only things which we need, but also things from which we derive pleasure, what do you think of such gifts?"

"They certainly indicate love for man."

“And that they should supply us with water, an element of such value to us, that it causes to spring up, and unites with the earth and the seasons in bringing to maturity, everything useful for us, and assists also to nourish ourselves, and, being mixed with all our food, renders it easier of digestion, more serviceable, and more pleasant; and that, as we require water in great quantities, they should supply us with it in such profusion, what do you think of such a gift?”

“That also,” said he, “shows thought for us.”

“That they should also give us fire, a protection against cold and darkness, an auxiliary in every art and in everything that men prepare for their use, (for, in a word, men produce nothing, among the various things necessary to life, without the aid of fire,) what do you think of such a gift?”

“That likewise,” said he, “gives eminent proof of regard for man.” [“That they should diffuse the air also around us everywhere in such abundance, as not only to preserve and support life, but to enable us to cross the seas by means of it, and to get provisions by sailing hither and thither among foreign lands, is not this a boon inexpressibly valuable?”

“It is indeed inexpressibly so,” replied he. “That the sun, too, when it turns towards us in the winter, should approach to mature some things, and to dry up others whose season for ripening has passed away; and that, having effected these objects, he should not come nearer to us, but turn back, as if taking care lest he should hurt us by giving us more heat than is necessary; and that when again, in his departure, he arrives at the point at which it becomes evident that, if he were to go beyond it, we should be frozen by the cold, he should again turn towards us, and approach us, and revolve in that precise part of the heaven in which he may be of most advantage to us, what do you think of things so regulated?”

“By Zeus,” replied Euthydemus, “they appear to be appointed solely for the sake of man.”

“Again, that the sun, because it is certain that we could not endure such heat or cold if it should come upon us suddenly, should approach us so gradually, and retire from us so gradually, that we are brought imperceptibly to the greatest extremes of both, what do you think of that appointment?”

“I am reflecting, indeed,” said Euthydemus, “whether the gods can have any other business than to take care of man; only this thought embarrasses me, that other animals partake in these benefits.” “But is not this also evident,” said Socrates, “that these animals are produced and nourished for the sake of man?” For what other animal derives so many benefits from goats, sheep, horses, oxen, asses, and other such creatures, as man? To me it appears that he gains more advantages from them than from the fruits of the earth; at least he is fed and enriched not less from the one than from the other; and a great portion of mankind do not use the productions of the earth for food, but live by herds of cattle, supported by their milk, and cheese, and flesh; and all men tame and train the useful sort of animals, and use their services for war and other purposes.”

"I agree with what you say on that point," said Euthydemus, "for I see some animals, much stronger than we, rendered so subservient to men that they use them for whatever they please."

"But that, since there are numberless beautiful and useful objects in the world, greatly differing from one another, the gods should have bestowed on men senses adapted to each of them, by means of which we enjoy every advantage from them; that they should have implanted understanding in us, by means of which we reason about what we perceive by the senses, and, assisted by the memory, learn how far everything is beneficial, and contrive many plans by which we enjoy good and avoid evil; and that they should have given us the faculty of speech, by means of which we convey information to one another, and mutually impart whatever is good, and participate in it, enact laws, and enjoy constitutional government, what think you of such blessings?"

"The gods certainly appear, Socrates, to exercise the greatest care for man in every way."

"And that, since we are unable to foresee what is for our advantage with regard to the future, they should assist us in that respect, communicating what will happen to those who inquire of them by divination, and instructing them how their actions may be most for their benefit, what thoughts does that produce in you?"

"The gods seem to show you, Socrates," rejoined he, "more favor than other men, since they indicate to you, without being asked, what you ought to do, and what not to do."

"And that I speak the truth, you yourself also well know, if you do not expect to see the bodily forms of the gods, but will be content, as you behold their works, to worship and honor them. Reflect, too, that the gods themselves give us this intimation; for the other deities that give us blessings, do not bestow any of them by coming manifestly before our sight; and he that orders and holds together the whole universe, in which are all things beautiful and good, and who preserves it always unimpaired, undisordered, and undecaying, obeying his will swifter than thought and without irregularity, is himself manifested only in the performance of his mighty works, but is invisible to us while he regulates them. Consider also that the sun, which appears manifest to all, does not allow men to contemplate him too curiously, but, if anyone tries to gaze on him steadfastly, deprives him of his sight. The instruments of the deities you will likewise find imperceptible; for the thunderbolt, for instance, though it is plain that it is sent from above, and works its will with everything with which it comes in contact, is yet never seen either approaching, or striking, or retreating; the winds, too, are themselves invisible, though their effects are evident to us, and we perceive their course. The soul of man, moreover, which partakes of the divine nature if anything else in man does, rules, it is evident, within us, but is itself unseen. Meditating on these facts, therefore, it behooves you not to despise the unseen gods, but, estimating their power from what is done by them, to reverence what is divine."

“I feel clearly persuaded, Socrates,” said Euthydemus, “that I shall never fail, in the slightest degree, in respect for the divine power, but I am dejected at the thought that no one among mankind, as it seems to me, can ever requite the favors of the gods with due gratitude.”

“Bui be not dejected at that reflection, Euthydemus,” said Socrates, “for you know that the deity at Delphi, whenever anyone consults him how he may propitiate the gods, answers, According to The Law of your country; and it is the law, indeed, everywhere, that every man should propitiate the gods with offerings according to his ability; and how, therefore, can any man honor the gods better or more piously, than by acting as they themselves direct? It behooves us, however, not to do less than we are able, for, when anyone acts thus, he plainly shows that he does not honor the gods. But it becomes him who fails, in no respect, to honor the gods according to his means, to be of good courage, and to hope for the greatest blessings; for no one can reasonably hope for greater blessings from others than from those who are able to benefit him most; nor on any other grounds than by propitiating them; and how can he propitiate them better than by obeying them to the utmost of his power?”

By uttering such sentiments, and by acting according to them himself, he rendered those who conversed with him more pious and prudent.

## CHAPTER IV.

*Socrates inculcated a love of justice into his followers. He gave them an example of adherence to justice in his own life. He commences a conversation with Hippias, a sophist. It is better to be just than merely to talk of justice; it is a part of justice to obey the laws; what a law is; who are the best magistrates in states; a general observance of the laws maintains concord; there are certain unwritten laws, which it is not possible to transgress without incurring punishment; to observe the divine laws is to he just.*

Concerning justice, too, he did not conceal what sentiments he entertained, but made them manifest even by his actions, for he conducted himself, in his private capacity, justly and beneficently towards all men, and, as a citizen, he obeyed the magistrates in all that the laws enjoined, both in the city and on military expeditions, so that he was distinguished above other men for his observance of order. When he was president in the public assembly, he would not permit the people to give a vote contrary to law, but opposed himself, in defense of the laws, to such a storm of rage on the part of the populace as I think that no other man could have withstood. When the Thirty Tyrants commanded him to do anything contrary to the laws, he refused to obey them; for both when they forbade him to converse with the young, and when they ordered him, and some others of the citizens, to lead a certain person away to death, he alone did not obey, because the order was given contrary to the laws. When he was accused by Meletus, and others were accustomed, before the tribunal, to speak so as to gain the favor of the judges, and to flatter them, and supplicate them, in violation of the laws, and many persons, by such practices, had often been acquitted by the judges, he refused, on his trial, to comply with any practices opposed to the laws, and though he might easily have been acquitted by his judges, if he had but in a slight degree adopted any of those customs, he chose rather to die abiding by the laws than to save his life by transgressing them.

He held conversations to this effect with others on several occasions, and I know that he once had a dialogue of the following kind, concerning justice, with Hippias of Elis; for Hippias, on his return to Athens after an absence of some time, happened to come in the way of Socrates as he was observing to some people how surprising it was that, if a man wished to have another taught to be a shoemaker, or a carpenter, or a worker in brass, or a rider, he was at no loss whither he should send him to effect his object; [nay, that every place, as some say, was full of persons who would make a horse or an ox observant of right for anyone that desired;] while as to justice, if anyone wished either to learn it himself, or to have his son or his slave taught it, he did not know whither he should go to obtain his desire. Hippias, hearing this remark, said, as if jesting with him, “What! Are you still saying the same things, Socrates, that I heard from you so long ago?”

“Yes,” said Socrates, “and what is more wonderful, I am not only still saying the same things, but am saying them on the same subjects; but you, perhaps, from being possessed of such variety of knowledge, never say the same things on the same subjects."

"Certainly," replied Hippias, "I do always try to say something new."

"About matters of which you have certain knowledge, then," said Socrates, "as, for instance, about the letters of the alphabet, if anyone were to ask you how many and what letters are in the word 'Socrates' would you try to say sometimes one thing, and sometimes another; or to people who might ask you about numbers, as whether twice five are ten, would you not give the same answer at one time as at another?"

"About such matters, Socrates," replied Hippias, "I, like you, always say the same thing; but concerning justice I think that I have certainly something to say now which neither you nor any other person can refute."

"By Hera," returned Socrates, "it is a great good that you say you have discovered, since the judges will now cease from giving contradictory sentences, the citizens will cease from disputing about what is just, from going to law, and from quarrelling, and communities will cease from contending about their rights and going to war; and I know not how I can part with you till I have learned so important a benefit from its discoverer."

"You shall not hear it, by Zeus," rejoined Hippias, "until you yourself declare what you think justice to be; for it is enough that you laugh at others, questioning and confuting everybody, while you yourself are unwilling to give a reason to anybody, or to declare your opinion on any subject."

"What then, Hippias," said Socrates, "have you not perceived that I never cease declaring my opinion as to what I conceive to be just?"

"And what is this opinion of yours?" said Hippias. "If I make it known to you, not by words merely, but by actions, do not deeds seem to you to be a stronger evidence than words?"

"Much stronger. by Zeus," said Hippias, "For many who say what is just do what is unjust, but a man who does what is just cannot be himself unjust."

"Have you ever then found me bearing false witness, or giving malicious information, or plunging my friends or the state into quarrels, or doing anything else that is unjust?"

"I have not."

"And do you not think it justice to refrain from injustice?"

"You are plainly now," said Hippias, "endeavoring to avoid expressing an opinion as to what you think just; for what you say is, not what the just do, but what they do not do."

"But I thought," rejoined Socrates, "that to be unwilling to do injustice was a sufficient proof of justice. If this, however, does not satisfy you, consider whether what I next say will please you better; for I assert that what is in conformity with the laws is just."

"Do you say, Socrates, that to be conformable to the laws, and to be just, is the same thing?"

“I do indeed.”

“I am puzzled; for I do not understand what you call conformable to law, or what you call just.”

“Do you know the laws of the state?” said Socrates. “I do,” said the other. “And what do you consider them to be?”

“What the citizens in concert have enacted as to what we ought to do, and what we ought to avoid doing.”

“Would not he, therefore,” asked Socrates, “be an observer of the laws, who should conduct himself in the community agreeably to those enactments, and he be a violator of the laws who transgresses them?”

“Undoubtedly,” said Hippias. “Would not he then do what is just who obeys the laws, and he do what is unjust who disobeys them?”

“Certainly.”

“Is not he then just who does what is just, and he unjust who does what is unjust?”

“How can it be otherwise?”

“He therefore that conforms to the laws is just,” added Socrates, “and he who violates the laws, unjust.”

“But,” objected Hippias, “how can anyone imagine the laws, or obedience to them, to be a matter of absolute importance, when the very persons who make them often reject and alter them?”

“That objection is of no consequence,” said Socrates, “for states, which have commenced war, often make peace again.”

“Undoubtedly they do,” said Hippias. “What difference will there be in your conduct, then, think you, if you throw contempt on those who obey the laws, be« cause the laws may be changed, and if you blame those who act properly in war, because peace may be made? Do you condemn those who vigorously support their country in war?”

“I do not indeed,” replied Hippias. “Have you ever heard it said of Lycurgus the Lacedaemonian, then,” said Socrates, “that he would not have made Sparta at all different from other states, if he had not established in it, beyond others, a spirit of obedience to the laws? Do you not know, too, that of magistrates in states, those are thought the best who are most efficient in producing obedience to the laws, and that that state, in which the citizens pay most respect to the laws, is in the best condition in peace, and invincible in war? The greatest blessing to states, moreover, is concord; and the senates and principal men in them often exhort the citizens to unanimity; and everywhere throughout Greece it is a law that the citizens shall take an oath to observe concord, an oath which they everywhere do take; but I conceive that this is done, not that the citizens may approve of the same choruses, or that they may praise the same flute-players, or that they may prefer the same poets, or that they may take delight in the same spectacles, but that they may obey the laws; for while the citizens adhere to these, states will be eminently powerful and happy; but without such unanimity, no state can be well governed, nor any family well regulated. As an individual citizen, too, how could any person render himself less liable to penalties from the government, or more likely to have honors bestowed upon him, than by being obedient to the laws? How else would he incur fewer defeats in the Courts of justice, or how more certainly obtain sentence in his favor? To whom would anyone believe that he could more safely confide his money, or his sons or daughters? Whom would the whole community deem more trustworthy than him who respects the laws? From whom would parents, or relatives, or domestics, or friends, or citizens, or strangers, more certainly obtain their rights? To whom would the enemy sooner trust in cessations of arms, or in making a truce, or articles of peace? To whom would people more willingly become allies than to the observer of the laws, and to whom would the allies more willingly trust the leadership, or command of a fortress, or of a city? From whom would anyone expect to meet with gratitude, on doing him a kindness, sooner than from the observer of the laws? Or whom would anyone rather serve than him from whom he expects to receive a return? To whom would anyone more desire to be a friend, or less desire to be an enemy, than such a man? With whom would anyone be less inclined to go to war, than with him to whom he would most wish to be a friend, and least of all an enemy, and to whom the greatest part of mankind would wish to be friends and allies, and but a small number to' be antagonists and enemies? I, therefore, Hippias, pronounce that to obey the laws and to be just is the same if you hold an opinion to the contrary, tell me."

"Indeed, Socrates," rejoined Hippias, "I do not know that I entertain any sentiments opposed to what you have said of justice."

"But are you aware, Hippias," continued Socrates, "that there are unwritten laws?"

"You mean those," said Hippias, "that are in force about the same points everywhere."

"Can you affirm, then, that men made those laws?"

"How could they," said Hippias, "when they could not all meet together, and do not all speak the same language?"

"Whom then do you suppose to have made these laws?"

"I believe," said he, "that it was the gods who made these laws for men, for among all men the first law is to venerate the gods."

"Is it not also a law everywhere to honor parents?"

"It is so."

"Is it not a law, too, that parents shall not intermarry with their children, nor children with their parents?"

"This does not as yet, Socrates, appear to me to be a law of the gods?"

"Why?"

"Because I find that some nations transgress it."

“Many others, too, they transgress,” said Socrates; “but those who violate the laws made by the gods incur punishment which it is by no means possible for man to escape, as many transgressors of the laws made by men escape punishment, some by concealment, others by open violence.”

“And what sort of punishment, Socrates,” said he, “cannot parents escape who intermarry with their children, and children who intermarry with their parents?”

“The greatest of all punishments, by Zeus,” replied Socrates, “for what greater penalty can those who beget children incur, than to have bad children?”

“How then,” said Hippias, “do they necessarily have bad children, when nothing hinders but that they may be good themselves, and have children by good partners?”

“Because,” returned Socrates, “it is not only necessary that those who have children by each other should be good, but that they should be in full bodily vigor. Or do you suppose that the seed of those who are at the height of maturity is similar to that of those who have not yet reached maturity, or to that of those who are far past it?”

“By Zeus,” replied Hippias, “it is not at all likely that it should be similar.”

“Which of the two then is the better?”

“Doubtless that of those at full maturity.”

“That of those who are not at full maturity, then, is not sufficiently energetic.”

“Probably not.”

“Accordingly they ought not to have children?”

“No.”

“Do not those, therefore, who have children under such circumstances, have them as they ought not?”

“So it appears to me.”

“What other persons, therefore, will have bad children, if not these?”

“Well,” said Hippias, “I agree with you on this point also.”

“Is it not everywhere a law, also,” said Socrates, “that men should do good to those who do good to them?”

“It is a law,” answered Hippias, “but it is transgressed.”

“Do not those therefore who transgress it incur punishment,” continued Socrates, “by being deprived of good friends, and being compelled to have recourse to those who hate them? Are not such as do service to those who seek it of them good friends to themselves, and are not those who make no return to such as serve them hated by them for their ingratitude; and yet, because it is for their advantage to have their support, do they not pay the greatest court to them?”

“Indeed, Socrates,” replied Hippias, “all these things seem to suit the character of the gods; for that the laws themselves should carry with them punishments for those who transgress them, appears to me to be the appointment of a lawgiver superior to man.”

“Whether, therefore, Hippias,” added Socrates, “do you consider that the gods appoint as laws, what is agreeable to justice, or what is at variance with justice?” Not what is at variance with justice, certainly,” said Hippias, “for scarcely would any other make laws in conformity with justice, if a god were not to do so.”

“It is the pleasure of the gods, therefore, Hippias,” concluded Socrates, “that what is in conformity with justice should also be in conformity with the laws.”

By uttering such sentiments, and acting in agreement with them, he rendered those who conversed with him more observant of justice.

## CHAPTER V.

*Socrates rendered his followers better qualified for public life. The necessity of temperance; the evils of intemperance; the benefits arising from temperance: the conduct of the temperate man.*

I will now relate how he rendered his followers better qualified for the management of public business. Thinking it expedient that temperance should be observed by him who would succeed in anything honorable, he first made it evident to those who conversed with him, that he practiced this virtue beyond all other men, and then, by his discourse, he exhorted his followers, above everything, to the observance of temperance. He continued always, therefore, to make allusions to whatever was conducive to virtue; and I know that he once held a conversation on temperance with Euthydemus to the following effect: “Tell me,” said he, “Euthydemus, do you regard liberty as an excellent and honorable possession for an individual or a community?”

“The most excellent and honorable that can be,” replied he. “Do you consider him, then, who is held under control by the pleasures of the body, and is rendered unable, by their influence, to do what is best for him, to be free?”

“By no means,” replied Euthydemus. “Perhaps, then, to have the power of doing what is best seems to you to be freedom, but to be under influences which will hinder you from doing it, you consider to be want of freedom?”

“Assuredly,” said he. “Do not the intemperate appear to you, then, to be absolutely without freedom?”

“Yes, by Zeus, and naturally so.”

“And whether do the intemperate appear to you to be merely prevented from doing what is best, or to be forced, also, to do what is most dishonorable?”

“They appear to me,” replied Euthydemus, “to be not less forced to do the one than they are hindered from doing the other.”

“And what sort of masters do you consider those to be, who hinder men from doing what is best, and force them to do what is worst?”

“The very worst possible, by Zeus,” replied he. “And what sort of slavery do you consider to be the worst?”

“That.” said he, “under the worst masters.”

“Do not then the intemperate,” said Socrates, “endure the very worst of slavery?”

“It appears so to me,” answered Euthydemus. “And does not intemperance seem to you, by banishing from men prudence, the greatest good, to drive them into the very opposite evil? Does it not appear to you to hinder them from attending to useful things, and learning them, by drawing them away to pleasure, and frequently, by captivating those who have a perception of good and evil, to make them choose the worse instead of the better?”

"Such is the case," said he. "And whom can we suppose, Euthydemus, to have less participation in self-control than the intemperate man? for assuredly the acts of self-control and of intemperance are the very opposite to each other."

"I assent to this also," said he. "And do you think that anything is a greater hindrance to attention to what is becoming, than intemperance?"

"I do not."

"And do you imagine that there is any greater evil to man, than that which makes him prefer the noxious to the beneficial, which prompts him to pursue the one and to neglect the other, and which forces him to pursue a contrary course of conduct to that of the wise?"

"There is none," said Euthydemus.

"Is it not natural, then," said Socrates, "that temperance should be the cause of producing in men effects contrary to those which intemperance produces?"

"Undoubtedly," said Euthydemus. "Is it not natural, therefore, also, that what produces those contrary effects should be best for man?"

"It is natural," said he. "Is it not consequently natural, then, Euthydemus, that temperance should be best for man?"

"It is so, Socrates," said he. "And have you ever reflected upon this, Euthydemus?"

"What?"

"That even to those pleasures, to which alone intemperance seems to lead men, it cannot lead them, but that temperance produces greater pleasure than anything else?"

"How?" said he. "Because intemperance, by not allowing men to withstand hunger, thirst, or the desire of sensual gratification, or want of sleep, (through which privations alone is it possible for them to eat, and drink, and gratify other natural appetites, and go to rest and sleep with pleasure, waiting and restraining themselves until the inclinations may be most happily indulged,) hinders them from having any due enjoyment in acts most necessary and most habitual; but temperance, which alone enables men to endure the privations which I have mentioned, alone enables them to find delight in the gratifications to which I have alluded."

"What you say," observed Euthydemus, "is indisputably true."

"From learning what is honorable and good, moreover, and from the study of those accomplishments by which a man may ably govern himself, judiciously regulate his household, become useful to his friends and the state, and gain the mastery over his enemies, (from which studies arise not only the greatest advantages, but also the greatest pleasures,) the temperate have enjoyment while they practice them, but the intemperate have no share in any of them; for to whom can we say that it less belongs to participate in such advantages, than to him who has the least power to pursue them, being wholly occupied in attention to present pleasures?"

. “You seem to me, Socrates,” said Euthydemus, “to say that the man who is under the influence of bodily pleasures, has no participation in anyone virtue.”

“For what difference is there, Euthydemus,” said he, “between an intemperate man and the most ignorant brute? How will he, who has no regard to what is best, but seeks only to enjoy what is most seductive by any means in his power, differ from the most senseless cattle? To the temperate alone it belongs to consider what is best in human pursuits, to distinguish those pursuits, according to experience and reason, into their several classes, and then to choose the good and refrain from the evil.”

Thus it was, he said, that men became most virtuous and happy, and most skillful in reasoning; and he observed that the expression “to reason,” had its origin in people’s practice of meeting together to reason on matters, and distinguishing them, to reason, according to their several kinds. It was the duty of everyone, therefore, he thought, to make himself ready in this art, and to study it with the greatest diligence; for that men, by the aid of it, became most accomplished, most able to guide others, and most acute in discussion.

## CHAPTER VI.

*The value of skill in argument and definition. Definition of piety*; *of justice*; *of wisdom*; *of goodness and beauty*; *of courage. Some other definitions*, *Remarks on the Socratic method of argument.*

I will now endeavor to show that Socrates rendered those who associated with him more skillful in argument. For he thought that those who knew the nature of things severally, would be able to explain them to others; but as to those who did not know, he said that it was not surprising that they fell into error themselves, and led others into it. He therefore never ceased to reason with his associates about the nature of things. To go through all the terms that he defined, and to show how he defined them, would be a long task; but I will give as many instances as I think will suffice to show the nature of his reasoning.

In the first place, then, he reasoned of piety, in some such way as this. "Tell me," said he, "Euthydemus, what sort of feeling do you consider piety to be?"

"The most noble of all feelings," replied he. "Can you tell me, then, who is a pious man?"

"The man, I think, who honors the gods."

"Is it allowable to pay honor to the gods in any way that one pleases?"

"No; there are certain laws in conformity with which we must pay our honors to them."

"He, then, who knows these laws, will know how he must honor the gods?"

"I think so."

"He therefore who knows how to pay honor to the gods, will not think that he ought to pay it otherwise than as he knows?"

"Doubtless not."

"But does anyone pay honors to the gods otherwise than as he thinks that he ought to pay them?"

"I think not."

"He therefore who knows what is agreeable to the laws with regard to the gods, will honor the gods in agreement with the laws?"

"Certainly."

"Does not he, then, who honors the gods agreeably to the laws honor them as he ought?"

"How can he do otherwise?"

"And he who honors them as he ought, is pious?"

"Certainly."

"He therefore who knows what is agreeable to the laws with regard to the gods, may be justly defined by us as a pious man?"

“So it appears to me,” said Euthydemus.

“But is it allowable for a person to conduct himself towards other men in whatever way he pleases?”

“No; but with respect to men also, he who knows what is in conformity with the laws, and how men ought, according to them, to conduct themselves towards each other, will be an observer of the laws.”

“Do not those, then, who conduct themselves towards each other according to what is in conformity with the laws, conduct themselves towards each other as they ought?”

“How can it be otherwise?”

“Do not those, therefore, who conduct themselves towards each other as they ought, conduct themselves well?”

“Certainly.”

“Do not those, then, that conduct themselves well towards each other, act properly in transactions between man and man?”

“Surely.”

“Do not those, then, who obey the laws, do what is just?”

“Undoubtedly.”

“And do you know what sort of actions are called just?”

“Those which the laws sanction.”

“Those, therefore, who do what the laws sanction, do what is just, and what they ought?”

“How can it be otherwise?”

“Those who do just things, therefore, are just?”

“I think so.”

“Do you think that any persons yield obedience to the laws who do not know what the laws sanction?”

“I do not.”

“'And do you think that any who know what they ought to do, think that they ought not to do it?”

“I do not think so.”

“And do you know any persons that do other things than those which they think they ought to do?”

“I do not.”

“Those, therefore, who know what is agreeable to the laws in regard to men, do what is just?”

“Certainly.”

“And are not those who do what is just, just men?”

“Who else can be so?”

“Shall we not define rightly, therefore,” concluded Socrates, “if we define those to be just who know what is agreeable to the laws in regard to men?”

“It appears so to me,” said Euthydemus.

“And what shall we say that wisdom is? Tell me, whether do men seem to you to be wise, in things which they know, or in things which they do not know?”

“In what they know, certainly; for how can a man be wise in things of which he knows nothing?”

“Those, then, who are wise, are wise by their knowledge?”

“By what else can a man be wise, if not by his knowledge?”

“Do you think wisdom^ then, to be anything else than that by which men are wise?'

“I do not.”

“Is knowledge, then, wisdom?”

“It appears so to me.”

“Does it appear to you, however, that it is possible for a man to know all things that are?”

“No, by Zeus; not even, as I think, a comparatively small portion of them?”

“It is not therefore possible for a man to be wise in all things?”

“No, indeed.”

“Every man is wise, therefore, in that only of which he has a knowledge?”

“So it seems to me.”

“Shall we thus, too, Euthydemus,” said he, “inquire what is good?”

“How?” said Euthydemus. “Does the same thing appear to you to be beneficial to everybody?”

“No.”

“And does not that which is beneficial to one person appear to you to be sometimes hurtful to another?”

“Assuredly.”

“Would you say, then, that anything is good that is not beneficial?”

“I would not.”

“What is beneficial, therefore, is good, to whomsoever it is beneficial?”

“It appears so to me,” said Euthydemus.

“And can we define the beautiful in any other way than if you term whatever is beautiful, whether a person, or a vase, or anything else whatsoever, beautiful for whatever i purpose you know that it is beautiful?”

"No, indeed," said Euthydemus. "For whatever purpose, then, anything may be useful, for that purpose it is beautiful to use it?"

"Certainly."

"And is anything beautiful for any other purpose than that for which it is beautiful to use it?"

"For no other purpose," replied he. "What is useful is beautiful, therefore, for that purpose for which it is beautiful?"

"So I think," said he.

"As to courage, Euthydemus," said Socrates, "do you think it is to be numbered among excellent things?"

"I think it one of the most excellent," replied Euthydemus. "But you do not think courage a thing of use for small occasions."

"No, by Zeus, but for the very greatest."

"Does it appear to you to be useful, with regard to formidable and dangerous things, to be ignorant of their character?"

"By no means."

"They, therefore, who do not fear such things, because they do not know what they are, are not courageous?"

"Certainly not; for, in that case, many madmen and even cowards would be courageous."

"And what do you say of those who fear things that are not formidable?"

"Still less, by Zeus, should they be called courageous."

"Those, then, that are good, with reference to formidable and dangerous things, you consider to be courageous, and those that are bad, cowardly?"

"Certainly."

"But do you think that any other persons are good, with reference to terrible and dangerous circumstances, except those who are able to conduct themselves well under them?"

"No, those only," said he.

"And you think those bad with regard to them, who are of such a character as to conduct themselves badly under them?"

"Whom else can I think so?"

"Do not each, then, conduct themselves under them as they think they ought?"

"How can it be otherwise?"

"Do those, therefore, who do not conduct themselves properly under them, know how they ought to conduct themselves under them?"

"Doubtless not."

"Those then who know how they ought to conduct themselves under them, can do so?"

"And they alone."

"Do those, therefore, who do not fail under such circumstances, conduct themselves badly under them?"

"I think not.' "Those, then, who do conduct themselves badly under them, do fail?"

"It seems so."

"Those, therefore, who know how to conduct themselves well in terrible and dangerous circumstances are courageous, and those who fail to do so are cowards?"

"They at least appear so to me," said Euthydemus.

"Monarchy and tyranny he considered to be both form of government, but conceived that they differed greatly from one another; for a government over men with their own con sent, and in conformity with the laws of free states, he regarded as a monarchy; but a government over men against their will, and not according to the law of free states, but jus as the ruler pleased, a tyranny; and wherever magistrate were appointed from among those who complied with the injunctions of the laws, he considered the government to be a aristocracy; wherever they were appointed according to the' wealth, a plutocracy; and wherever they were appointed from among the whole people, a democracy.

Whenever any person contradicted him on any point who had nothing definite to say, and who perhaps asserted, without proof, that some person, whom he mentioned, was wiser, or better skilled in political affairs, or possessed of greater courage, or worthier in some such respect, [than some other whom Socrates had mentioned,] he would recall the whole argument, in some such way as the following, to the primary proposition: "Do you say that he whom you commend, is a better citizen than he whom I commend?"

"I do say so."

"Why should we not then consider, in the first place, what is the duty of a good citizen?"

"Let us do so."

"Would not he then be superior in the management of the public money who should make the state richer?"

"Undoubtedly."

"And he in war who should make it victorious over its enemies?"

"Assuredly."

"And in an embassy he who should make friends of foes?"

“Doubtless.”

“And he in addressing the people who should check dissension and inspire them with unanimity?”

“I think so.” When the discussion was thus brought back to fundamental principles, the truth was made evident to those who had opposed him.

When he himself went through any subject in argument, he proceeded upon propositions of which the truth was generally acknowledged, thinking that a sure foundation was thus formed for his reasoning. Accordingly, whenever he spoke, he, of all men that I have known, most readily prevailed on his hearers to assent to his arguments; and he used to say that Homer had attributed to Ulysses the character of a sure orator, as being able to form his reasoning on points acknowledged by all mankind.

## CHAPTER VII.

*How Socrates rendered his followers ingenious and adapted for business; his frankness and sincerity. How far he thought that Geometry should be studied. How far he recommended that Astronomy should be pursued. Vain investigations to be avoided. Regard to be paid to health. Counsel to be asked of the gods.*

That Socrates expressed his sentiments with sincerity to those who conversed with him, is, I think, manifest from what I have said. I will now proceed to show how much it was his care that his followers should be competently qualified for employments suited to their powers. Of all men that I have known, he was the most anxious to discover in what occupation each of those who attended him was likely to prove skillful; and of all that it becomes a man of honor and virtue to know, he taught them himself, whatever he knew, with the utmost cheerfulness; and what he had not sufficient knowledge to teach, he took them to those who knew, to learn.

He taught them also how far it was proper that a well-educated man should be versed in any department of knowledge. Geometry, for instance, he said that a man should study until he should be capable, if occasion required, to take or give land correctly by measurement; or to divide it or portion it out for cultivation; and this, he observed, it was so easy to learn, that he who gave any attention at all to mensuration, might find how large the whole earth was, and perfectly understand how it was measured. But of pursuing the study of geometry to diagrams hard to understand, he disapproved; for he said that he could not see of what profit they were, though he himself was by no means unskilled in them; but he remarked that they were enough to consume a man's whole life, and hinder him from attaining many other valuable branches of knowledge.

He recommended his followers to learn astronomy also, but only so far as to be able to know the hour of the night, the month, and the season of the year, with a view to travelling by land or sea, or distinguishing the night-watches; and to be competent, by knowing the divisions of the above-mentioned times, to profit by the signs for whatever other things are done at a certain period of the night, or month, or year. These particulars, he said, were easily learned from men who hunted by night, from pilots, and from many others whose business it was to know them. But to continue the study of astronomy so far as to distinguish the bodies which do not move in the same circle with the heaven, the planets, and the irregular stars, and to weary ourselves in inquiring into their distances from the earth, the periods of their revolutions, and the causes of all these things, was what he greatly discountenanced; for he saw, he said, no profit in these studies either, though he had himself given attention to them; since they also, he remarked, were enough to wear out the life of a man, and prevent him from attending to many profitable pursuits.

Concerning celestial matters in general, he dissuaded every man from becoming a speculator how the divine power contrives to manage them; for he did not think that such points were discoverable by man, nor did he believe that those acted dutifully towards the gods who inquired into things which they did not wish to make known. He observed, too, that a man who was anxious about such investigations, was in danger of losing his senses, not less than Anaxagoras, who prided himself highly on explaining the plans of the gods, lost his. For Anaxagoras, when he said that fire and the sun were of the same nature, did not reflect that people can easily look upon fire, but cannot turn their gaze on the sun, and that men, if exposed to the rays of the sun, have complexions of a darker shade, but not if exposed to fire; he omitted to consider, too, that of the productions of the earth, none can come fairly to maturity without the rays of the sun, while, if warmed by the heat of fire, they all perish; and when he said that the sun was a heated stone, he forgot that a stone placed in the fire does not shine, or last long, but that the sun continues perpetually the most luminous of all bodies.

He advised his followers also to learn computations, but in these, as in other things, he exhorted them to avoid useless labor; as far as it was of any profit, he investigated everything himself, and went through it with his associates.

He earnestly recommended those who conversed with him to take care of their health, both by learning whatever they could respecting it from men of experience, and by attending to it, each for himself, throughout his whole life, studying what food or drink, or what exercise, was most suitable for him, and how he might act in regard to them so as to enjoy the best health; for he said it would be difficult for a person who thus attended to himself to find a physician that would tell better than himself what was conducive to his health.

But if anyone desired to attain to what was beyond human wisdom, he advised him to study divination; for he said that he who knew by what signs the gods give indications to men respecting human affairs, would never fail of obtaining counsel from the gods.

## CHAPTER VIII.

*Socrates, though condemned to death, was not convicted of falsehood with regard to his Daemon. His resolution to die. His innocence inspires mm with courage. He thinks it good to die and escape the evils of old age. Summary of the arguments of the Memorabilia.*

But if anyone thinks that he was convicted of falsehood with regard to his Dæmon, because sentence of death was pronounced on him by the judges although he said that the daemon admonished him what he ought and what he ought not to do, let him consider, in the first place, that he was already so advanced in years, that he must have ended his life, if not then, at least not long after; and, in the next, that he relinquished only the most burdensome part of life, in which all feel their powers of intellect diminished, while, instead of enduring this, he acquired great glory by proving the firmness of his mind, pleading his cause, above all men, with the greatest regard to truth, ingenuousness, and justice, and bearing his sentence at once with the utmost resignation and the utmost fortitude.

It is indeed acknowledged that no man, of all that are remembered, ever endured death with greater glory; for he was obliged to live thirty days after his sentence, because the Delian festival happened in that month, and the law allowed no one to be publicly put to death until the sacred deputation should return from Delos; and during that time he was seen by all his friends living in no other way than at any preceding period; and, let it be observed, throughout all the former part of his life he had been admired beyond all men for the cheerfulness and tranquility with which he lived. How could anyone have died more nobly than thus? Or what death could be more honorable than that which any man might most honorably undergo? Or what death could be happier than the most honorable? Or what death more acceptable to the gods than the most happy?

I will also relate what I heard respecting him from Hermogenes, the son of Hipponicus, who said that after Meletus had laid the accusation against him, he heard him speaking on any subject rather than that of his trial, and remarked to him that he ought to consider what defense he should make, but that he said at first, “Do I not appear to you to have passed my whole life meditating on that subject?” and then, when he asked him “How so?” he said that “he had gone through life doing nothing but considering what was just and what unjust, doing what was just and abstaining from what was unjust, which he conceived to be the best meditation for his defense.” Hermogenes said again, “Do you not see, Socrates, that the judges at Athens have already put to death many innocent persons, from being offended at their language, and have allowed many that were guilty to escape?”

“But, by Zeus, Hermogenes,” replied he, “when I was proceeding, a while ago, to study my address to the judges, the daemon testified disapprobation.”

“You say what is strange,” rejoined Hermogenes. “And do you think it strange,” inquired Socrates, “that it should seem better to the divinity that I should now close my life? Do you not know, that, down to the present time, I would not admit to any man that he has lived either better or with more pleasure than myself? for I consider that those live best who study best to become as good as possible; and that those live with most pleasure who feel the most assurance that they are daily growing better and better. This assurance I have felt, to the present day, to be the case with respect to myself; and associating with other men, and comparing myself with others I have always retained this opinion respecting myself; and, not only I, but my friends also, maintain a similar feeling with regard to me, not because they love me, (for those who love others may be thus affected towards the objects of their love,) but because they think that while they associated with me they became greatly advanced in virtue. If I shall live a longer period, perhaps I shall be destined to sustain the evils of old age, to find my sight and hearing weakened, to feel my intellect impaired, to become less apt to learn, and more forgetful, and, in fine, to grow inferior to others in all those qualities in which I was once superior to them. If I should be insensible to this deterioration, life would not be worth retaining; and, if I should feel it, how could I live otherwise than with less profit, and with less comfort? If I am to die unjustly, my death will be a disgrace to those who unjustly kill me; for if injustice is a disgrace, must it not be a disgrace to do anything unjustly? But what disgrace will it be to me, that others could not decide or act justly with regard to me? Of the men who have lived before me, I see that the estimation left among posterity with regard to such as have done wrong, and such as have suffered wrong, is by no means similar; and I know that I also, if I now die, shall obtain from mankind far different consideration from that which they will pay to those who take my life; for I know that they will always bear witness to me that I have never wronged any man, or rendered any man less virtuous, but that I have always endeavored to make those better who conversed with me.” Such discourse he held with Hermogenes, and with others.

Of those who knew what sort of man Socrates was, such as were lovers of virtue, continue to regret him above all other men, even to the present day, as having contributed in the highest degree to their advancement in goodness. To me, being such as I have described him, so pious that he did nothing without the sanction of the gods; so just, that he wronged no man even in the most trifling affair, but was of service, in the most important matters, to those who enjoyed his society; so temperate, that he never preferred pleasure to virtue; so wise, that he never erred in distinguishing better from worse, needing no counsel from others, but being sufficient in himself to discriminate between them; so able to explain and settle such questions by argument; and so capable of discerning the character of others, of confuting those who were in error, and of exhorting them to virtue and honor, he seemed to be such as the best and happiest of men would be. But if any one disapproves of my opinion, let him compare the conduct of others with that of Socrates, and determine accordingly.

# THE MEMORABILIA

Recollections of Socrates by Xenophon Translated by H. G. Dakyns

Xenophon the Athenian was born 431 B.C. He was a pupil of Socrates. He marched with the Spartans, and was exiled from Athens. Sparta gave him land and property in Scillus, where he lived for many years before having to move once more, to settle in Corinth. He died in 354 B.C. The Memorabilia is a recollection of Socrates in word and deed, to show his character as the best and happiest of men.

## Recollections of Socrates

# BOOK I

### I

I have often wondered by what arguments those who indicted Socrates could have persuaded the Athenians that his life was justly forfeit to the state. The indictment was to this effect: “Socrates is guilty of crime in refusing to recognize the gods acknowledged by the state, and importing strange divinities of his own; he is further guilty of corrupting the young.”

In the first place, what evidence did they produce that Socrates refused to recognize the gods acknowledged by the state? Was it that he did not sacrifice? or that he dispensed with divination? On the contrary, he was often to be seen engaged in sacrifice, at home or at the common altars of the state. Nor was his dependence on divination less manifest. Indeed that saying of his, “A divinity gives me a sign,” was on everybody's lips. So much so that, if I am not mistaken, it lay at the root of the imputation that he imported novel divinities; though there was no greater novelty in his case than in that of other believers in oracular help, who commonly rely on omens of all sorts: the flight or cry of birds, the utterances of man, chance meetings, or a victim's entrails. Even according to the popular conception, it is not the mere fowl, it is not the chance individual one meets, who knows what things are profitable for a man, but it is the gods who vouchsafe by such instruments to signify the same. This was also the tenet of Socrates. Only, whereas men ordinarily speak of being turned aside, or urged onwards by birds, or other creatures encountered on the path, Socrates suited his language to his conviction. “The divinity,” said he, “gives me a sign.” Further, he would constantly advise his associates to do this, or beware of doing that, upon the authority of this same divine voice; and, as a matter of fact, those who listened to his warnings prospered, while he who turned a deaf ear to them repented afterwards. Yet, it will be readily conceded, he would hardly desire to present himself to his everyday companions in the character of either knave or fool. Whereas he would have appeared to be both, supposing the God-given revelations had but revealed his own proneness to deception. It is plain he would not have ventured on forecast at all, but for his belief that the words he spoke would in fact be verified. Then on whom, or what, was the assurance rooted, if not upon God? And if he had faith in the gods, how could he fail to recognize them?

But his mode of dealing with his intimates has another aspect. As regards the ordinary necessities of life, his advice was, "Act as you believe these things may best be done." But in the case of those darker problems, the issues of which are incalculable, he directed his friends to consult the oracle, whether the business should be undertaken or not. "No one," he would say, "who wishes to manage a house or city with success: no one aspiring to guide the helm of state aright, can afford to dispense with aid from above. Doubtless, skill in carpentering, building, smithing, farming, of the art of governing men, together with the theory of these processes, and the sciences of arithmetic, economy, strategy, are affairs of study, and within the grasp of human intelligence. Yet there is a side even of these, and that not the least important, which the gods reserve to themselves, the bearing of which is hidden from mortal vision. Thus, let a man sow a field or plant a farm never so well, yet he cannot foretell who will gather in the fruits: another may build him a house of fairest proportion, yet he knows not who will inhabit it. Neither can a general foresee whether it will profit him to conduct a campaign, nor a politician be certain whether his leadership will turn to evil or good. Nor can the man who weds a fair wife, looking forward to joy, know whether through her he shall not reap sorrow. Neither can he who has built up a powerful connection in the state know whether he shall not by means of it be cast out of his city. To suppose that all these matters lay within the scope of human judgment, to the exclusion of the preternatural, was preternatural folly. Nor was it less extravagant to go and consult the will of Heaven on any questions which it is given to us to decide by dint of learning. As though a man should inquire, "Am I to choose an expert driver as my coachman, or one who has never handled the reins?" "Shall I appoint a mariner to be skipper of my vessel, or a landsman?" And so with respect to all we may know by numbering, weighing, and measuring. To seek advice from Heaven on such points was a sort of profanity. "Our duty is plain," he would observe; "where we are permitted to work through our natural faculties, there let us by all means apply them. But in things which are hidden, let us seek to gain knowledge from above, by divination; for the gods," he added, "grant signs to those to whom they will be gracious."

Again, Socrates ever lived in the public eye; at early morning he was to be seen betaking himself to one of the promenades, or wrestling-grounds; at noon he would appear with the gathering crowds in the market-place; and as day declined, wherever the largest throng might be encountered, there was he to be found, talking for the most part, while any one who chose might stop and listen. Yet no one ever heard him say, or saw him do anything impious or irreverent. Indeed, in contrast to others he set his face against all discussion of such high matters as the nature of the Universe; how the "kosmos," as the savants phrase it, came into being; or by what forces the celestial phenomena arise. To trouble one's brain about such matters was, he argued, to play the fool. He would ask first: Did these investigators feel their knowledge of things human so complete that they betook themselves to these lofty speculations? Or did they maintain that they were playing their proper parts in thus neglecting the affairs of man to speculate on the concerns of God? He was astonished they did not see how far these problems lay beyond mortal ken; since even those who pride themselves most on their discussion of these points differ from each other, as madmen do. For just as some madmen, he said, have no apprehension of what is truly terrible, others fear where no fear is; some are ready to say and do anything in public without the slightest symptom of shame; others think they ought not so much as to set foot among their fellow-men; some honor neither temple, nor altar, nor aught else sacred to the name of God; others bow down to stocks and stones and worship the very beasts:—so is it with those thinkers whose minds are cumbered with cares concerning the Universal Nature. One sect has discovered that Being is one and indivisible. Another that it is infinite in number. If one proclaims that all things are in a continual flux, another replies that nothing can possibly be moved at any time. The theory of the universe as a process of birth and death is met by the counter theory, that nothing ever could be born or ever will die.

But the questioning of Socrates on the merits of these speculators sometimes took another form. The student of human learning expects, he said, to make something of his studies for the benefit of himself or others, as he likes. Do these explorers into the divine operations hope that when they have discovered by what forces the various phenomena occur, they will create winds and waters at will and fruitful seasons? Will they manipulate these and the like to suit their needs? or has no such notion perhaps ever entered their heads, and will they be content simply to know how such things come into existence? But if this was his mode of describing those who meddle with such matters as these, he himself never wearied of discussing human topics. What is piety? what is impiety? What is the beautiful? what the ugly? What the noble? what the base? What are meant by just and unjust? what by sobriety and madness? what by courage and cowardice? What is a state? what is a statesman? what is a ruler over men? what is a ruling character? and other like problems, the knowledge of which, as he put it, conferred a patent of nobility on the possessor, whereas those who lacked the knowledge might deservedly be stigmatized as slaves.

Now, in so far as the opinions of Socrates were unknown to the world at large, it is not surprising that the court should draw false conclusions respecting them; but that facts patent to all should have been ignored is indeed astonishing.

At one time Socrates was a member of the Council, he had taken the senatorial oath, and sworn "as a member of that house to act in conformity with the laws." It was thus he chanced to be President of the Popular Assembly, when that body was seized with a desire to put the nine generals, Thrasyllus, Erasinides, and the rest, to death by a single inclusive vote. Whereupon, in spite of the bitter resentment of the people, and the menaces of several influential citizens, he refused to put the question, esteeming it of greater importance faithfully to abide by the oath which he had taken, than to gratify the people wrongfully, or to screen himself from the menaces of the mighty. The fact being, that with regard to the care bestowed by the gods upon men, his belief differed widely from that of the multitude. Whereas most people seem to imagine that the gods know in part, and are ignorant in part, Socrates believed firmly that the gods know all things—both the things that are said and the things that are done, and the things that are counseled in the silent chambers of the heart. Moreover, they are present everywhere, and bestow signs upon man concerning all the things of man.

I can, therefore, but repeat my former words. It is a marvel to me how the Athenians came to be persuaded that Socrates fell short of sober-mindedness as touching the gods. A man who never ventured one impious word or deed against the gods we worship, but whose whole language concerning them, and his every act, closely coincided, word for word, and deed for deed, with all we deem distinctive of most devout piety.

## II

No less surprising to my mind is the belief that Socrates corrupted the young. This man, who, beyond what has been already stated, kept his appetites and passions under strict control, who was pre-eminently capable of enduring winter's cold and summer's heat and every kind of toil, who was so schooled to curtail his needs that with the scantiest of means he never lacked sufficiency—is it credible that such a man could have made others irreverent or lawless, or licentious, or effeminate in face of toil? Was he not rather the saving of many through the passion for virtue which he roused in them, and the hope he infused that through careful management of themselves they might grow to be truly beautiful and good—not indeed that he ever undertook to be a teacher of virtue, but being evidently virtuous himself he made those who associated with him hope that by imitating they might at last resemble him.

But let it not be inferred that he was negligent of his own body or approved of those who neglected theirs. If excess of eating, counteracted by excess of toil, was a dietary of which he disapproved, to gratify the natural claim of appetite in conjunction with moderate exercise was a system he favoured, as tending to a healthy condition of the body without trammeling the cultivation of the spirit. On the other hand, there was nothing dandified or pretentious about him; he indulged in no foppery of shawl or shoes, or other effeminacy of living.

Least of all did he tend to make his companions greedy of money. He would not, while restraining passion generally, make capital out of the one passion which attached others to himself; and by this abstinence, he believed, he was best consulting his own freedom; in so much that he stigmatized those who condescended to take wages for their society as vendors of their own persons, because they were compelled to discuss for the benefits of their paymasters. What surprised him was that any one possessing virtue should deign to ask money as its price instead of simply finding his reward in the acquisition of an honest friend, as if the new-fledged soul of honor could forget her debt of gratitude to her greatest benefactor.

For himself, without making any such profession, he was content to believe that those who accepted his views would play their parts as good and true friends to himself and one another their lives long. Once more then: how should a man of this character corrupt the young? unless the careful cultivation of virtue be corruption.

But, says the accuser, by all that's sacred! did not Socrates cause his associates to despise the established laws when he dwelt on the folly of appointing state officers by ballot? a principle which, he said, no one would care to apply in selecting a pilot or a flute-player or in any similar case, where a mistake would be far less disastrous than in matters political. Words like these, according to the accuser, tended to incite the young to contemn the established constitution, rendering them violent and headstrong. But for myself I think that those who cultivate wisdom and believe themselves able to instruct their fellow-citizens as to their interests are least likely to become partisans of violence. They are too well aware that to violence attach enmities and dangers, whereas results as good may be obtained by persuasion safely and amicably. For the victim of violence hates with vindictiveness as one from whom something precious has been stolen, while the willing subject of persuasion is ready to kiss the hand which has done him a service. Hence compulsion is not the method of him who makes wisdom his study, but of him who wields power untempered by reflection. Once more: the man who ventures on violence needs the support of many to fight his battles, while he whose strength lies in persuasiveness triumphs single-handed, for he is conscious of a cunning to compel consent unaided. And what has such a one to do with the spilling of blood? since how ridiculous it were to do men to death rather than turn to account the trusty service of the living.

But, the accuser answers, the two men who wrought the greatest evils to the state at any time—to wit, Critias and Alcibiades—were both companions of Socrates—Critias the oligarch, and Alcibiades the democrat. Where would you find a more arrant thief, savage, and murderer than the one? where such a portent of insolence, incontinence, and high-handedness as the other? For my part, in so far as these two wrought evil to the state, I have no desire to appear as the apologist of either. I confine myself to explaining what this intimacy of theirs with Socrates really was.

Never were two more ambitious citizens seen at Athens. Ambition was in their blood. If they were to have their will, all power was to be in their hands; their fame was to eclipse all other. Of Socrates they knew—first that he lived an absolutely independent life on the scantiest means; next that he was self-disciplined to the last degree in respect of pleasures; lastly that he was so formidable in debate that there was no antagonist he could not twist round his little finger. Such being their views, and such the character of the pair, which is the more probable: that they sought the society of Socrates because they felt the fascination of his life, and were attracted by the bearing of the man? or because they thought, if only we are leagued with him we shall become adepts in statecraft and unrivalled in the arts of speech and action? For my part I believe that if the choice from Heaven had been given them to live such a life as they saw Socrates living to its close, or to die, they would both have chosen death.

Their acts are a conclusive witness to their characters. They no sooner felt themselves to be the masters of those they came in contact with than they sprang aside from Socrates and plunged into that whirl of politics but for which they might never have sought his society.

It may be objected: before giving his companions lessons in politics Socrates had better have taught them sobriety. Without disputing the principle, I would point out that a teacher cannot fail to discover to his pupils his method of carrying out his own precepts, and this along with argumentative encouragement. Now I know that Socrates disclosed himself to his companions as a beautiful and noble being, who would reason and debate with them concerning virtue and other human interests in the noblest manner. And of these two I know that as long as they were companions of Socrates even they were temperate, not assuredly from fear of being fined or beaten by Socrates, but because they were persuaded for the nonce of the excellence of such conduct.

Perhaps some self-styled philosophers may here answer: “Nay, the man truly just can never become unjust, the temperate man can never become intemperate, the man who has learnt any subject of knowledge can never be as though he had learnt it not." That, however, is not my own conclusion. It is with the workings of the soul as with those of the body; want of exercise of the organ leads to inability of function, here bodily, there spiritual, so that we can neither do the things that we should nor abstain from the things we should not. And that is why fathers keep their sons, however temperate they may be, out of the reach of wicked men, considering that if the society of the good is a training in virtue so also is the society of the bad its dissolution.

To this the poet is a witness, who says:

"From the noble you shall be instructed in nobleness; but, and if you mingle with the base you will destroy what wisdom you have now";

And he who says:

"But the good man has his hour of baseness as well as his hour of virtue"—to whose testimony I would add my own. For I see that it is impossible to remember a long poem without practice and repetition; so is forgetfulness of the words of instruction engendered in the heart that has ceased to value them. With the words of warning fades the recollection of the very condition of mind in which the soul yearned after holiness; and once forgetting this, what wonder that the man should let slip also the memory of virtue itself! Again I see that a man who falls into habits of drunkenness or plunges headlong into licentious love, loses his old power of practicing the right and abstaining from the wrong. Many a man who has found frugality easy while passion was cold, no sooner falls in love than he loses the faculty at once, and in his prodigal expenditure of riches he will no longer withhold his hand from gains which in former days were too base to invite his touch. Where then is the difficulty of supposing that a man may be temperate to-day, and to-morrow the reverse; or that he who once has had it in his power to act virtuously may not quite lose that power? To myself, at all events, it seems that all beautiful and noble things are the result of constant practice and training; and pre-eminently the virtue of temperance, seeing that in one and the same bodily frame pleasures are planted and spring up side by side with the soul and keep whispering in her ear, "Have done with self-restraint, make haste to gratify us and the body."

But to return to Critias and Alcibiades, I repeat that as long as they lived with Socrates they were able by his support to dominate their ignoble appetites; but being separated from him, Critias had to fly to Thessaly, where he consorted with fellows better versed in lawlessness than justice. And Alcibiades fared no better. His personal beauty on the one hand incited bevies of fine ladies to hunt him down as fair spoil, while on the other hand his influence in the state and among the allies exposed him to the corruption of many an adept in the arts of flattery; honored by the democracy and stepping easily to the front rank he behaved like an athlete who in the games of the Palaestra is so assured of victory that he neglects his training; thus he presently forgot the duty which he owed himself.

Such were the misadventures of these two. Is the sequel extraordinary? Inflated with the pride of ancestry, exalted by their wealth, puffed up by power, sapped to the soul's core by a host of human tempters, separate moreover for many a long day from Socrates—what wonder that they reached the full stature of arrogancy! And for the offences of these two Socrates is to be held responsible! The accuser will have it so. But for the fact that in early days, when they were both young and of an age when dereliction from good feeling and self-restraint might have been expected, this same Socrates kept them modest and well-behaved, not one word of praise is uttered by the accuser for all this. That is not the measure of justice elsewhere meted. Would a master of the harp or flute, would a teacher of any sort who has turned out proficient pupils, be held to account because one of them goes away to another teacher and turns out to be a failure? Or what father, if he have a son who in the society of a certain friend remains an honest lad, but falling into the company of some other becomes a good-for-nothing, will that father straightway accuse the earlier instructor? Will not he rather, in proportion as the boy deteriorates in the company of the latter, bestow more heartfelt praise upon the former? What father, himself sharing the society of his own children, is held to blame for their transgressions, if only his own goodness be established? Here would have been a fair test to apply to Socrates: Was he guilty of any base conduct himself? If so let him be set down as a knave, but if, on the contrary, he never faltered in sobriety from beginning to end, how in the name of justice is he to be held to account for a baseness which was not in him?

I go further: if, short of being guilty of any wrong himself, he saw the evil doings of others with approval, reason were he should be held blameworthy. Listen then: Socrates was well aware that Critias was attached to Euthydemus, aware too that he was endeavoring to deal by him after the manner of those wantons whose love is carnal of the body. From this Endeavour he tried to deter him, pointing out how illiberal a thing it was, how ill befitting a man of honor to appear as a beggar before him whom he loved, in whose eyes he would fain be precious, ever petitioning for something base to give and base to get.

But when this reasoning fell on deaf ears and Critias refused to be turned aside, Socrates, as the story goes, took occasion of the presence of a whole company and of Euthydemus to remark that Critias appeared to be suffering from a swinish affection, or else why this desire to rub himself against Euthydemus like a herd of pigs scraping against stones.

The hatred of Critias to Socrates doubtless dates from this incident. He treasured it up against him, and afterwards, when he was one of the Thirty and associated with Charicles as their official lawgiver, he framed the law against teaching the art of words merely from a desire to vilify Socrates. He was at a loss to know how else to lay hold of him except by leveling against him the vulgar charge against philosophers, by which he hoped to prejudice him with the public. It was a charge quite unfounded as regards Socrates, if I may judge from anything I ever heard fall from his lips myself or have learnt about him from others. But the animus of Critias was clear. At the time when the Thirty were putting citizens, highly respectable citizens, to death wholesale, and when they were egging on one man after another to the commission of crime, Socrates let fall an observation: “It would be sufficiently extraordinary if the keeper of a herd of cattle who was continually thinning and impoverishing his cattle did not admit himself to be a sorry sort of herdsman, but that a ruler of the state who was continually thinning and impoverishing the citizens should neither be ashamed nor admit himself to be a sorry sort of ruler was more extraordinary still.” The remark being reported to the government, Socrates was summoned by Critias and Charicles, who proceeded to point out the law and forbade him to converse with the young. “Was it open to him,” Socrates inquired of the speaker, “in case he failed to understand their commands in any point, to ask for an explanation?”

“Certainly,” the two assented.

Then Socrates: I am prepared to obey the laws, but to avoid transgression of the law through ignorance I need instruction: is it on the supposition that the art of words tends to correctness of statement or to incorrectness that you bid us abstain from it? for if the former, it is clear we must abstain from speaking correctly, but if the latter, our Endeavour should be to amend our speech.

To which Charicles, in a fit of temper, retorted: In consideration of your ignorance, Socrates, we will frame the prohibition in language better suited to your intelligence: we forbid you to hold any conversation whatsoever with the young.

Then Socrates: To avoid all ambiguity then, or the possibility of my doing anything else than what you are pleased to command, may I ask you to define up to what age a human being is to be considered young?

For just so long a time (Charicles answered) as he is debarred from sitting as a member of the Council, as not having attained to the maturity of wisdom; accordingly you will not hold converse with any one under the age of thirty.

Soc. In making a purchase even, I am not to ask, what is the price of this? if the vendor is under the age of thirty?

Cha. Tut, things of that sort: but you know, Socrates, that you have a way of asking questions, when all the while you know how the matter stands. Let us have no questions of that sort.

Soc. Nor answers either, I suppose, if the inquiry concerns what I know, as, for instance, where does Charicles live? or where is Critias to be found?

Oh yes, of course, things of that kind (replied Charicles), while Critias added: But at the same time you had better have done with your shoemakers, carpenters, and coppersmiths. These must be pretty well trodden out at heel by this time, considering the circulation you have given them.

Soc. And am I to hold away from their attendant topics also—the just, the holy, and the like?

Most assuredly (answered Charicles), and from cowherds in particular; or else see that you do not lessen the number of the herd yourself.

Thus the secret was out. The remark of Socrates about the cattle had come to their ears, and they could not forgive the author of it.

Perhaps enough has been said to explain the kind of intimacy which had subsisted between Critias and Socrates, and their relation to one another. But I will venture to maintain that where the teacher is not pleasing to the pupil there is no education. Now it cannot be said of Critias and Alcibiades that they associated with Socrates because they found him pleasing to them. And this is true of the whole period. From the first their eyes were fixed on the headship of the state as their final goal. During the time of their intimacy with Socrates there were no disputants whom they were more eager to encounter than professed politicians.

Thus the story is told of Alcibiades—how before the age of twenty he engaged his own guardian, Pericles, at that time prime minister of the state, in a discussion concerning laws.

Alc. Please, Pericles, can you teach me what a law is?

Per. To be sure I can.

Alc. I should be so much obliged if you would do so. One so often hears the epithet "law-abiding" applied in a complimentary sense; yet, it strikes me, one hardly deserves the compliment, if one does not know what a law is.

Per. Fortunately there is a ready answer to your difficulty. You wish to know what a law is? Well, those are laws which the majority, being met together in conclave, approve and enact as to what it is right to do, and what it is right to abstain from doing.

Alc. Enact on the hypothesis that it is right to do what is good? or to do what is bad?

Per. What is good, to be sure, young sir, not what is bad.

Alc. Supposing it is not the majority, but, as in the case of an oligarchy, the minority, who meet and enact the rules of conduct, what are these?

Per. Whatever the ruling power of the state after deliberation enacts as our duty to do, goes by the name of laws.

Alc. Then if a tyrant, holding the chief power in the state, enacts rules of conduct for the citizens, are these enactments law?

Per. Yes, anything which a tyrant as head of the state enacts, also goes by the name of law.

Alc. But, Pericles, violence and lawlessness—how do we define them? Is it not when a stronger man forces a weaker to do what seems right to him—not by persuasion but by compulsion?

Per. I should say so.

Alc. It would seem to follow that if a tyrant, without persuading the citizens, drives them by enactment to do certain things—that is lawlessness?

Per. You are right; and I retract the statement that measures passed by a tyrant without persuasion of the citizens are law.

Alc. And what of measures passed by a minority, not by persuasion of the majority, but in the exercise of its power only? Are we, or are we not, to apply the term violence to these?

Per. I think that anything which any one forces another to do without persuasion, whether by enactment or not, is violence rather than law.

Alc. It would seem that everything which the majority, in the exercise of its power over the possessors of wealth, and without persuading them, chooses to enact, is of the nature of violence rather than of law?

To be sure (answered Pericles), adding: At your age we were clever hands at such quibbles ourselves. It was just such subtleties which we used to practice our wits upon; as you do now, if I mistake not.

To which Alcibiades replied: Ah, Pericles, I do wish we could have met in those days when you were at your cleverest in such matters.

Well, then, as soon as the desired superiority over the politicians of the day seemed to be attained, Critias and Alcibiades turned their backs on Socrates. They found his society unattractive, not to speak of the annoyance of being cross-questioned on their own shortcomings. Forthwith they devoted themselves to those affairs of state but for which they would never have come near him at all.

No; if one would seek to see true companions of Socrates, one must look to Crito, and Chaerephon, and Chaerecrates, to Hermogenes, to Simmias and Cebes, to Phaedondes and others, who clung to him not to excel in the rhetoric of the Assembly or the law-courts, but with the nobler ambition of attaining to such beauty and goodliness of soul as would enable them to discharge the various duties of life to house and family, to relatives and friends, to fellow-citizens, and to the state at large. Of these true followers not one in youth or old age was ever guilty, or thought guilty, of committing any evil deed.

“But for all that,” the accuser insists, “Socrates taught sons to pour contumely upon their fathers by persuading his young friends that he could make them wiser than their sires, or by pointing out that the law allowed a son to sue his father for aberration of mind, and to imprison him, which legal ordinance he put in evidence to prove that it might be well for the wiser to imprison the more ignorant.”

Now what Socrates held was, that if a man may with justice incarcerate another for no better cause than a form of folly or ignorance, this same person could not justly complain if he in his turn were kept in bonds by his superiors in knowledge; and to come to the bottom of such questions, to discover the difference between madness and ignorance was a problem which he was perpetually working at. His opinion came to this: If a madman may, as a matter of expediency to himself and his friends, be kept in prison, surely, as a matter of justice, the man who knows not what he ought to know should be content to sit at the feet of those who know, and be taught.

But it was the rest of their kith and kin, not fathers only (according to the accuser), whom Socrates dishonored in the eyes of his circle of followers, when he said that “the sick man or the litigant does not derive assistance from his relatives, but from his doctor in the one case, and his legal adviser in the other.” “Listen further to his language about friends,” says the accuser: “'What is the good of their being kindly disposed, unless they can be of some practical use to you? Mere goodness of disposition is nothing; those only are worthy of honor who combine with the knowledge of what is right the faculty of expounding it;’ and so by bringing the young to look upon himself as a superlatively wise person gifted with an extraordinary capacity for making others wise also, he so worked on the dispositions of those who consorted with him that in their esteem the rest of the world counted for nothing by comparison with Socrates."

Now I admit the language about fathers and the rest of a man's relations. I can go further, and add some other sayings of his, that "when the soul (which is alone the indwelling centre of intelligence) is gone out of a man, be he our nearest and dearest friend, we carry the body forth and bury it out of sight." "Even in life," he used to say, "each of us is ready to part with any portion of his best possession—to wit, his own body—if it be useless and unprofitable. He will remove it himself, or suffer another to do so in his stead. Thus men cut off their own nails, hair, or corns; they allow surgeons to cut and cauterize them, not without pains and aches, and are so grateful to the doctor for his services that they further give him a fee. Or again, a man ejects the spittle from his mouth as far as possible. Why? Because it is of no use while it stays within the system, but is detrimental rather."

Now by these instances his object was not to inculcate the duty of burying one's father alive or of cutting oneself to bits, but to show that lack of intelligence means lack of worth; and so he called upon his hearers to be as sensible and useful as they could be, so that, be it father or brother or any one else whose esteem he would deserve, a man should not hug himself in careless self-interest, trusting to mere relationship, but strive to be useful to those whose esteem he coveted.

But (pursues the accuser) by carefully culling the most immoral passages of the famous poets, and using them as evidences, he taught his associates to be evildoers and tyrannical: the line of Hesiod for instance—

No work is a disgrace; slackness of work is the disgrace—

"interpreted," says the accuser, "by Socrates as if the poet enjoined us to abstain from no work wicked or ignoble; do everything for the sake of gain."

Now while Socrates would have entirely admitted the propositions that "it is a blessing and a benefit to a man to be a worker," and that "a lazy do-nothing is a pestilent evil," that "work is good and idleness a curse," the question arises, whom did he mean by workers? In his vocabulary only those were good workmen who were engaged on good work; dicers and gamblers and others engaged on any other base and ruinous business he stigmatized as the "idle drones"; and from this point of view the quotation from Hesiod is unimpeachable—

No work is a disgrace; only idleness is disgrace.

But there was a passage from Homer for ever on his lips, as the accuser tells us—the passage which says concerning Odysseus,

What prince, or man of name, He found flight-given, he would restrain with words of gentlest blame: "Good sir, it fits you not to fly, or fare as one afraid, You should not only stay yourself, but see the people stayed." Thus he the best sort used; the worst, whose spirits brake out in noise, He cudgeled with his scepter, chide, and said, "Stay, wretch, be still, And hear your betters; you art base, and both in power and skill Poor and unworthy, without name in counsel or in war." We must not all be kings.

The accuser informs us that Socrates interpreted these lines as though the poet approved the giving of blows to commoners and poor folk. Now no such remark was ever made by Socrates; which indeed would have been tantamount to maintaining that he ought to be beaten himself. What he did say was, that those who were useful neither in word nor deed, who were incapable of rendering assistance in time of need to the army or the state or the people itself, be they never so wealthy, ought to be restrained, and especially if to incapacity they added effrontery.

As to Socrates, he was the very opposite of all this—he was plainly a lover of the people, and indeed of all mankind. Though he had many ardent admirers among citizens and strangers alike, he never demanded any fee for his society from any one, but bestowed abundantly upon all alike of the riches of his soul—good things, indeed, of which fragments accepted gratis at his hands were taken and sold at high prices to the rest of the community by some, who were not, as he was, lovers of the people, since with those who had not money to give in return they refused to discourse. But of Socrates be it said that in the eyes of the whole world he reflected more honor on the state and a richer luster than ever Lichas, whose fame is proverbial, shed on Lacedaemon. Lichas feasted and entertained the foreign residents in Lacedaemon at the Gymnopaediae most handsomely. Socrates gave a lifetime to the outpouring of his substance in the shape of the greatest benefits bestowed on all who cared to receive them. In other words, he made those who lived in his society better men, and sent them on their way rejoicing.

To no other conclusion, therefore, can I come but that, being so good a man, Socrates was worthier to have received honor from the state than death. And this I take to be the strictly legal view of the case, for what does the law require? "If a man be proved to be a thief, a filcher of clothes, a cut-purse, a housebreaker, a man-stealer, a robber of temples, the penalty is death." Even so; and of all men Socrates stood most aloof from such crimes.

To the state he was never the cause of any evil—neither disaster in war, nor faction, nor treason, nor any other mischief whatsoever. And if his public life was free from all offence, so was his private. He never hurt a single soul either by deprivation of good or infliction of evil, nor did he ever lie under the imputation of any of those misdoings. where then is his liability to the indictment to be found? Who, so far from disbelieving in the gods, as set forth in the indictment, was conspicuous beyond all men for service to heaven; so far from corrupting the young—a charge alleged with insistence by the prosecutor—was notorious for the zeal with which he strove not only to stay his associates from evil desires, but to foster in them a passionate desire for that loveliest and queenliest of virtues without which states and families crumble to decay. Such being his conduct, was he not worthy of high honor from the state of Athens?

## III

It may serve to illustrate the assertion that he benefited his associates partly by the display of his own virtue and partly by verbal discourse and argument, if I set down my various recollections on these heads. And first with regard to religion and the concerns of heaven. In conduct and language his behavior conformed to the rule laid down by the Pythia in reply to the question, “How shall we act?” as touching a sacrifice or the worship of ancestors, or any similar point. Her answer is: “Act according to the law and custom of your state, and you will act piously.” After this pattern Socrates behaved himself, and so he exhorted others to behave, holding them to be but busybodies and vain fellows who acted on any different principle.

His formula or prayer was simple: “Give me that which is best for me,” for, said he, the gods know best what good things are—to pray for gold or silver or despotic power were no better than to make some particular throw at dice or stake in battle or any such thing the subject of prayer, of which the future consequences are manifestly uncertain.

If with scant means he offered but small sacrifices he believed that he was in no wise inferior to those who make frequent and large sacrifices from an ampler store. It were ill surely for the very gods themselves, could they take delight in large sacrifices rather than in small, else oftentimes must the offerings of bad men be found acceptable rather than of good; nor from the point of view of men themselves would life be worth living if the offerings of a villain rather than of a righteous man found favour in the sight of Heaven. His belief was that the joy of the gods is greater in proportion to the holiness of the giver, and he was ever an admirer of that line of Hesiod which says,

According to your ability do sacrifice to the immortal gods.

“Yes,” he would say, “in our dealings with friends and strangers alike, and in reference to the demands of life in general, there is no better motto for a man than that: 'let a man do according to his ability.’“

Or to take another point. If it appeared to him that a sign from heaven had been given him, nothing would have induced him to go against heavenly warning: he would as soon have been persuaded to accept the guidance of a blind man ignorant of the path to lead him on a journey in place of one who knew the road and could see; and so he denounced the folly of others who do things contrary to the warnings of God in order to avoid some disrepute among men. For himself he despised all human aids by comparison with counsel from above.

The habit and style of living to which he subjected his soul and body was one which under ordinary circumstances would enable any one adopting it to look existence cheerily in the face and to pass his days serenely: it would certainly entail no difficulties as regards expense. So frugal was it that a man must work little indeed who could not earn the quantum which contented Socrates. Of food he took just enough to make eating a pleasure—the appetite he brought to it was sauce sufficient; while as to drinks, seeing that he only drank when thirsty, any draught refreshed. If he accepted an invitation to dinner, he had no difficulty in avoiding the common snare of over-indulgence, and his advice to people who could not equally control their appetite was to avoid taking what would allure them to eat if not hungry or to drink if not thirsty. Such things are ruinous to the constitution, he said, bad for stomachs, brains, and soul alike; or as he used to put it, with a touch of sarcasm, “It must have been by feasting men on so many dainty dishes that Circe produced her pigs; only Odysseus through his continency and the 'promptings of Hermes' abstained from touching them immoderately, and by the same token did not turn into a swine.” So much for this topic, which he touched thus lightly and yet seriously.

But as to the concerns of Aphrodite, his advice was to hold strongly aloof from the fascination of fair forms: once lay finger on these and it is not easy to keep a sound head and a sober mind. To take a particular case. It was a mere kiss which, as he had heard, Critobulus had some time given to a fair youth, the son of Alcibiades. Accordingly Critobulus being present, Socrates propounded the question.

Soc. Tell me, Xenophon, have you not always believed Critobulus to be a man of sound sense, not wild and self-willed? Should you not have said that he was remarkable for his prudence rather than thoughtless or foolhardy?

Xen. Certainly that is what I should have said of him.

Soc. Then you are now to regard him as quite the reverse—a hot-blooded, reckless libertine: this is the sort of man to throw somersaults into knives, or to leap into the jaws of fire.

Xen. And what have you seen him doing, that you give him so bad a character?

Soc. Doing? Why, has not the fellow dared to steal a kiss from the son of Alcibiades, most fair of youths and in the golden prime?

Xen. Nay, then, if that is the foolhardy adventure, it is a danger which I could well encounter myself.

Soc. Poor soul! and what do you expect your fate to be after that kiss? Let me tell you. On the instant you will lose your freedom, the indenture of your bondage will be signed; it will be yours on compulsion to spend large sums on hurtful pleasures; you will have scarcely a moment's leisure left for any noble study; you will be driven to concern yourself most zealously with things which no man, not even a madman, would choose to make an object of concern.

Xen. O Heracles! how fell a power to reside in a kiss!

Soc. Does it surprise you? Do you not know that the tarantula, which is no bigger than a three-penny bit, has only to touch the mouth and it will afflict its victim with pains and drive him out of his senses.

Xen. Yes, but then the creature injects something with its bite.

Soc. Ah, fool! and do you imagine that these lovely creatures infuse nothing with their kiss, simply because you do not see the poison? Do you not know that this wild beast which men call beauty in its bloom is all the more terrible than the tarantula in that the insect must first touch its victim, but this at a mere glance of the beholder, without even contact, will inject something into him—yards away—which will make him man. And may be that is why the Loves are called "archers," because these beauties wound so far off. But my advice to you, Xenophon, is, whenever you catch sight of one of these fair forms, to run helter-skelter for bare life without a glance behind; and to you, Critobulus, I would say, “Go abroad for a year: so long time will it take to heal you of this wound.”

Such (he said), in the affairs of Aphrodite, as in meats and drinks, should be the circumspection of all whose footing is insecure. At least they should confine themselves to such diet as the soul would dispense with, save for some necessity of the body; and which even so ought to set up no disturbance. But for himself, it was clear, he was prepared at all points and invulnerable. He found less difficulty in abstaining from beauty's fairest and fullest bloom than many others from weeds and garbage. To sum up: with regard to eating and drinking and these other temptations of the sense, the equipment of his soul made him independent; he could boast honestly that in his moderate fashion his pleasures were no less than theirs who take such trouble to procure them, and his pains far fewer.

## IV

A belief is current, in accordance with views maintained concerning Socrates in speech and writing, and in either case conjecturally, that, however powerful he may have been in stimulating men to virtue as a theorist, he was incapable of acting as their guide himself. It would be well for those who adopt this view to weigh carefully not only what Socrates effected “by way of castigation” in cross-questioning whose who conceived themselves to be possessed of all knowledge, but also his everyday conversation with those who spent their time in close intercourse with himself. Having done this, let them decide whether he was incapable of making his companions better.

So tell me, Aristodemus (he began), are there any human beings who have won your admiration for their wisdom?

Ar. There are.

Soc. Would you mention to us their names?

Ar. In the writings of epic poetry I have the greatest admiration for Homer.... And as a dithyrambic poet for Melanippides. I admire also Sophocles as a tragedian, Polycleitus as a sculptor, and Zeuxis as a painter.

Soc. Which would you consider the more worthy of admiration, a fashioner of senseless images devoid of motion or one who could fashion living creatures endowed with understanding and activity?

Ar. Decidedly the latter, provided his living creatures owed their birth to design and were not the offspring of some chance.

Soc. But now if you had two sorts of things, the one of which presents no clue as to what it is for, and the other is obviously for some useful purpose—which would you judge to be the result of chance, which of design?

Ar. Clearly that which is produced for some useful end is the work of design.

Soc. Does it not strike you then that he who made man from the beginning did for some useful end furnish him with his several senses—giving him eyes to behold the visible word, and ears to catch the intonations of sound? Or again, what good would there be in odors if nostrils had not been bestowed upon us? what perception of sweet things and pungent, and of all the pleasures of the palate, had not a tongue been fashioned in us as an interpreter of the same? And besides all this, do you not think this looks like a matter of foresight, this closing of the delicate orbs of sight with eyelids as with folding doors, which, when there is need to use them for any purpose, can be thrown wide open and firmly closed again in sleep? and, that even the winds of heaven may not visit them too roughly, this planting of the eyelashes as a protecting screen? this coping of the region above the eyes with cornice-work of eyebrow so that no drop of sweat fall from the head and injure them? again this readiness of the ear to catch all sounds and yet not to be surcharged? this capacity of the front teeth of all animals to cut and of the “grinders” to receive the food and reduce it to pulp? the position of the mouth again, close to the eyes and nostrils as a portal of ingress for all the creature's supplies? and lastly, seeing that matter passing out of the body is unpleasant, this backward direction of the passages, and their removal to a distance from the avenues of sense? I ask you, when you see all these things constructed with such show of foresight can you doubt whether they are products of chance or intelligence?

Ar. To be sure not! Viewed in this light they would seem to be the handiwork of some wise artificer, full of love for all things living.

Soc. What shall we say of this passion implanted in man to beget offspring, this passion in the mother to rear her babe, and in the creature itself, once born, this deep desire of life and fear of death?

Ar. No doubt these do look like the contrivances of some one deliberately planning the existence of living creatures.

Soc. Well, and doubtless you feel to have a spark of wisdom yourself?

Ar. Put your questions, and I will answer.

Soc. And yet you imagine that elsewhere no spark of wisdom is to be found? And that, too, when you know that you have in your body a tiny fragment only of the mighty earth, a little drop of the great waters, and of the other elements, vast in their extent, you got, I presume, a particle of each towards the compacting of your bodily frame? Mind alone, it would seem, which is nowhere to be found, you had the lucky chance to snatch up and make off with, you cannot tell how. And these things around and about us, enormous in size, infinite in number, owe their orderly arrangement, as you suppose, to some vacuity of wit?

Ar. It may be, for my eyes fail to see the master agents of these, as one sees the fabricators of things produced on earth.

Soc. No more do you see your own soul, which is the master agent of your body; so that, as far as that goes, you may maintain, if you like, that you do nothing with intelligence, but everything by chance.

At this point Aristodemus: I assure you, Socrates, that I do not disdain the Divine power. On the contrary, my belief is that the Divinity is too grand to need any service which I could render.

Soc. But the grander that power is, which deigns to tend and wait upon you, the more you are called upon to honor it.

Ar. Be well assured, if I could believe the gods take thought for all men, I would not neglect them.

Soc. How can you suppose that they do not so take thought? Who, in the first place, gave to man alone of living creatures his erect posture, enabling him to see farther in front of him and to contemplate more freely the height above, and to be less subject to distress than other creatures (endowed like himself with eyes and ears and mouth). Consider next how they gave to the beast of the field feet as a means of progression only, but to man they gave in addition hands—those hands which have achieved so much to raise us in the scale of happiness above all animals. Did they not make the tongue also? which belongs indeed alike to man and beast, but in man they fashioned it so as to play on different parts of the mouth at different times, whereby we can produce articulate speech, and have a code of signals to express our every want to one another. Or consider the pleasures of the sexual appetite; limited in the rest of the animal kingdom to certain seasons, but in the case of man a series prolonged unbroken to old age. Nor did it content the Godhead merely to watch over the interests of man's body. What is of far higher import, he implanted in man the noblest and most excellent type of soul. For what other creature, to begin with, has a soul to appreciate the existence of the gods who have arranged this grand and beauteous universe? What other tribe of animals save man can render service to the gods? How apt is the spirit of man to take precautions against hunger and thirst, cold and heat, to alleviate disease and foster strength! how suited to labor with a view to learning! how capable of garnering in the storehouse of his memory all that he has heard or seen or understood! Is it not most evident to you that by the side of other animals men live and move a race of gods—by nature excellent, in beauty of body and of soul supreme? For, mark you, had a creature of man's wit been encased in the body of an ox, he would have been powerless to carry out his wishes, just as the possession of hands divorced from human wit is profitless. And then you come, you who have obtained these two most precious attributes, and give it as your opinion, that the gods take no thought or care for you. Why, what will you have them to do, that you may believe and be persuaded that you too are in their thoughts?

Ar. When they treat me as you tell us they treat you, and send me counselors to warn me what I am to do and what abstain from doing, I will believe.

Soc. Send you counselors! Come now, what when the people of Athens make inquiry by oracle, and the gods' answer comes? Are you not an Athenian? Think you not that to you also the answer is given? What when they send portents to forewarn the states of Hellas? or to all mankind?

Are you not a man? a Hellene? Are not these intended for you also? Can it be that you alone are excepted as a signal instance of Divine neglect? Again, do you suppose that the gods could have implanted in the heart of man the belief in their capacity to work him weal or woe had they not the power? Would not men have discovered the imposture in all this lapse of time? Do you not perceive that the wisest and most perdurable of human institutions—be they cities or tribes of men—are ever the most God-fearing; and in the individual man the riper his age and judgment, the deeper his religiousness? Ay, my good sir (he broke forth), lay to heart and understand that even as your own mind within you can turn and dispose of your body as it lists, so ought we to think that the wisdom which abides within the universal frame does so dispose of all things as it finds agreeable to itself; for hardly may it be that your eye is able to range over many a league, but that the eye of God is powerless to embrace all things at a glance; or that to your soul it is given to dwell in thought on matters here or far away in Egypt or in Sicily, but that the wisdom and thought of God is not sufficient to include all things at one instant under His care. If only you would copy your own behavior where human beings are concerned. It is by acts of service and of kindness that you discover which of your fellows are willing to requite you in kind. It is by taking another into your counsel that you arrive at the secret of his wisdom. If, on like principle, you will but make trial of the gods by acts of service, whether they will choose to give you counsel in matters obscure to mortal vision, you shall discover the nature and the greatness of Godhead to be such that they are able at once to see all things and to hear all things and to be present everywhere, nor does the least thing escape their watchful care.

To my mind the effect of words like these was to cause those about him to hold aloof from unholiness, baseness, and injustice, not only while they were seen of men, but even in the solitary place, since they must believe that no part of their conduct could escape the eye of Heaven.

## V

I suppose it may be taken as admitted that self-control is a noble acquirement for a man. If so, let us turn and consider whether by language like the following he was likely to lead his listeners onwards to the attainment of this virtue. “Sirs,” he would say, “if a war came upon us and we wished to choose a man who would best help us to save ourselves and to subdue our enemy, I suppose we should scarcely select one whom we knew to be a slave to his belly, to wine, or lust, and prone to succumb to toil or sleep. Could we expect such an one to save us or to master our foes? Or if one of us were nearing the end of his days, and he wished to discover some one to whom he might entrust his sons for education, his maiden daughters for protection, and his property in general for preservation, would he deem a libertine worthy of such offices? Why, no one would dream of entrusting his flocks and herds, his storehouses and barns, or the superintendence of his works to the tender mercies of an intemperate slave. If a butler or an errand boy with such a character were offered to us we would not take him as a free gift. And if he would not accept an intemperate slave, what pains should the master himself take to avoid that imputation. For with the incontinent man it is not as with the self-seeker and the covetous. These may at any rate be held to enrich themselves in depriving others. But the intemperate man cannot claim in like fashion to be a blessing to himself if a curse to his neighbors; nay, the mischief which he may cause to others is nothing by comparison with that which redounds against himself, since it is the height of mischief to ruin—I do not say one's own house and property—but one's own body and one's own soul. Or to take an example from social intercourse, no one cares for a guest who evidently takes more pleasure in the wine and the viands than in the friends beside him—who stints his comrades of the affection due to them to dote upon a mistress. Does it not come to this, that every honest man is bound to look upon self-restraint as the very corner-stone of virtue: which he should seek to lay down as the basis and foundation of his soul? Without self-restraint who can lay any good lesson to heart or practice it when learnt in any degree worth speaking of? Or, to put it conversely, what slave of pleasure will not suffer degeneracy of soul and body? By Hera, well may every free man pray to be saved from the service of such a slave; and well too may he who is in bondage to such pleasures supplicate Heaven to send him good masters, seeing that is the one hope of salvation left him."

Well-tempered words: yet his self-restraint shone forth even more in his acts than in his language. Not only was he master over the pleasures which flow from the body, but of those also which are fed by riches, his belief being that he who receives money from this or that chance donor sets up over himself a master, and binds himself to an abominable slavery.

## VI

In this context some discussions with Antiphon the sophist deserve record. Antiphon approaches Socrates in hope of drawing away his associates, and in their presence thus accosts him.

Antiphon. Why, Socrates, I always thought it was expected of students of philosophy to grow in happiness daily; but you seem to have reaped other fruits from your philosophy. At any rate, you exist, I do not say live, in a style such as no slave serving under a master would put up with. Your meat and your drink are of the cheapest sort, and as to clothes, you cling to one wretched cloak which serves you for summer and winter alike; and so you go the whole year round, without shoes to your feet or a shirt to your back. Then again, you are not for taking or making money, the mere seeking of which is a pleasure, even as the possession of it adds to the sweetness and independence of existence. I do not know whether you follow the common rule of teachers, who try to fashion their pupils in imitation of themselves, and propose to mould the characters of your companions; but if you do you ought to dub yourself professor of the art of wretchedness.

Thus challenged, Socrates replied: One thing to me is certain, Antiphon; you have conceived so vivid an idea of my life of misery that for yourself you would choose death sooner than live as I do. Suppose now we turn and consider what it is you find so hard in my life. Is it that he who takes payment must as a matter of contract finish the work for which he is paid, whereas I, who do not take it, lie under no constraint to discourse except with whom I choose? Do you despise my dietary on the ground that the food which I eat is less wholesome and less strengthening than yours, or that the articles of my consumption are so scarce and so much costlier to procure than yours? Or have the fruits of your marketing a flavor denied to mine? Do you not know the sharper the appetite the less the need of sauces, the keener the thirst the less the desire for out-of-the-way drinks? And as to raiment, clothes, you know, are changed on account of cold or else of heat. People only wear boots and shoes in order not to gall their feet and be prevented walking. Now I ask you, have you ever noticed that I keep more within doors than others on account of the cold? Have you ever seen me battling with any one for shade on account of the heat? Do you not know that even a weakling by nature may, by dint of exercise and practice, come to outdo a giant who neglects his body? He will beat him in the particular point of training, and bear the strain more easily. But you apparently will not have it that I, who am for ever training myself to endure this, that, and the other thing which may befall the body, can brave all hardships more easily than yourself for instance, who perhaps are not so practiced. And to escape slavery to the belly or to sleep or lechery, can you suggest more effective means than the possession of some powerful attraction, some counter-charm which shall gladden not only in the using, but by the hope enkindled of its lasting usefulness? And yet this you do know; joy is not to him who feels that he is doing well in nothing—it belongs to one who is persuaded that things are progressing with him, be it tillage or the working of a vessel, or any of the thousand and one things on which a man may chance to be employed. To him it is given to rejoice as he reflects, “I am doing well.” But is the pleasured derived from all these put together half as joyous as the consciousness of becoming better oneself, of acquiring better and better friends? That, for my part, is the belief I continue to cherish.

Again, if it be a question of helping one's friends or country, which of the two will have the larger leisure to devote to these objects—he who leads the life which I lead to-day, or he who lives in the style which you deem so fortunate? Which of the two will adopt a soldier's life more easily—the man who cannot get on without expensive living, or he to whom whatever comes to hand suffices? Which will be the readier to capitulate and cry “mercy” in a siege—the man of elaborate wants, or he who can get along happily with the readiest things to hand? You, Antiphon, would seem to suggest that happiness consists of luxury and extravagance;

I hold a different creed. To have no wants at all is, to my mind, an attribute of Godhead; to have as few wants as possible the nearest approach to Godhead; and as that which is divine is mightiest, so that is next mightiest which comes closest to the divine.

Returning to the charge at another time, this same Antiphon engaged Socrates in conversation thus.

Ant. Socrates, for my part, I believe you to be a good and upright man; but for your wisdom I cannot say much. I fancy you would hardly dispute the verdict yourself, since, as I remark, you do not ask a money payment for your society; and yet if it were your cloak now, or your house, or any other of your possessions, you would set some value upon it, and never dream, I will not say of parting with it gratis, but of exchanging it for less than its worth. A plain proof, to my mind, that if you thought your society worth anything, you would ask for it not less than its equivalent in gold. Hence the conclusion to which I have come, as already stated: good and upright you may be, since you do not cheat people from pure selfishness; but wise you cannot be, since your knowledge is not worth a cent.

To this onslaught Socrates: Antiphon, it is a tenet which we cling to that beauty and wisdom have this in common, that there is a fair way and a foul way in which to dispose of them. The vendor of beauty purchases an evil name, but supposing the same person has discerned a soul of beauty in his lover and makes that man his friend, we regard his choice as sensible. So is it with wisdom; he who sells it for money to the first bidder we name a sophist, as though one should say a man who prostitutes his wisdom; but if the same man, discerning the noble nature of another, shall teach that other every good thing, and make him his friend, of such a one we say he does that which it is the duty of every good citizen of gentle soul to do. In accordance with this theory, I too, Antiphon, having my tastes, even as another finds pleasure in his horse and his hounds, and another in his fighting cocks, so I too take my pleasure in good friends; and if I have any good thing myself I teach it them, or I commend them to others by whom I think they will be helped forwards on the path of virtue. The treasures also of the wise of old, written and bequeathed in their books, I unfold and peruse in common with my friends. If our eye light upon any good thing we cull it eagerly, and regard it as great gain if we may but grow in friendship with one another.

As I listened to this talk I could not but reflect that he, the master, was a person to be envied, and that we, his hearers, were being led by him to beauty and nobility of soul.

Again on some occasion the same Antiphon asked Socrates how he expected to make politicians of others when, even if he had the knowledge, he did not engage in politics himself.

Socrates replied: I will put to you a question, Antiphon: Which were the more statesmanlike proceeding, to practice politics myself single-handed, or to devote myself to making as many others as possible fit to engage in that pursuit?

## VII

Let us here turn and consider whether by deterring his associates from quackery and false seeming he did not directly stimulate them to the pursuit of virtue. He used often to say there was no better road to renown than the one by which a man became good at that wherein he desired to be reputed good. The truth of the concept he enforced as follows: “Let us reflect on what a man would be driven to do who wanted to be thought a good flute player, without really being so. He would be forced to imitate the good flute player in the externals of his art, would he not? and first or all, seeing that these artists always have a splendid equipment, and travel about with a long train of attendants, he must have the same; in the next place, they can command the plaudits of a multitude, he therefore must pack a conclave of clackers. But one thing is clear: nothing must induce him to give a performance, or he will be exposed at once, and find himself a laughing-stock not only as a sorry sort of flute player, but as a wretched imposter. And now he has a host of expenses to meet; and not one advantage to be reaped; and worse than all his evil reputation. What is left him but to lead a life stale and unprofitable, the scorn and mockery of men? Let us try another case. Suppose a man wished to be thought a good general or a good pilot, though he were really nothing of the sort, let us picture to our minds how it will fare with him. Of two misfortunes one: either with a strong desire to be thought proficient in these matters, he will fail to get others to agree with him, which will be bad enough; or he will succeed, with worse result; since it stands to reason that anyone appointed to work a vessel or lead an army without the requisite knowledge will speedily ruin a number of people whom he least desires to hurt, and will make but a sorry exit from the stage himself." Thus first by one instance and then another would he demonstrate the unprofitableness of trying to appear rich, or courageous, or strong, without really being the thing pretended. "You are sure sooner or later to have commands laid upon you beyond your power to execute, and failing just where you are credited with capacity, the world will give you no commiseration." "I call that man a cheat, and a great cheat too," he would say, "who gets money or goods out of some one by persuasion, and defrauds him; but of all imposters he surely is the biggest who can delude people into thinking that he is fit to lead the state, when all the while he is a worthless creature."

# BOOK II

## I

Now, if the effect of such discourses was, as I imagine, to deter his hearers from the paths of quackery and false-seeming, so I am sure that language like the following was calculated to stimulate his followers to practice self-control and endurance: self-control in the matters of eating, drinking, sleeping, and the cravings of lust; endurance of cold and heat and toil and pain. He had noticed the undue license which one of his acquaintances allowed himself in all such matters. Accordingly he thus addressed him:

Tell me, Aristippus (Socrates said), supposing you had two children entrusted to you to educate, one of them must be brought up with an aptitude for government, and the other without the faintest propensity to rule—how would you educate them? What do you say? Shall we begin our inquiry from the beginning, as it were, with the bare elements of food and nutriment?

Ar. Yes, food to begin with, by all means, being a first principle, without which there is no man living but would perish.

Soc. Well, then, we may expect, may we not, that a desire to grasp food at certain seasons will exhibit itself in both the children?

Ar. It is to be expected.

Soc. Which, then, of the two must be trained, of his own free will, to prosecute a pressing business rather than gratify the belly?

Ar. No doubt the one who is being trained to govern, if we would not have affairs of state neglected during his government.

Soc. And the same pupil must be furnished with a power of holding out against thirst also when the craving to quench it comes upon him?

Ar. Certainly he must.

Soc. And on which of the two shall we confer such self-control in regard to sleep as shall enable him to rest late and rise early, or keep vigil, if the need arise?

Ar. To the same one of the two must be given that endurance also.

Soc. Well, and a continence in regard to matters sexual so great that nothing of the sort shall prevent him from doing his duty? Which of them claims that?

Ar. The same one of the pair again.

Soc. Well, and on which of the two shall be bestowed, as a further gift, the voluntary resolution to face toils rather than turn and flee from them?

Ar. This, too, belongs of right to him who is being trained for government.

Soc. Well, and to which of them will it better accord to be taught all knowledge necessary towards the mastery of antagonists?

Ar. To our future ruler certainly, for without these parts of learning all his other capacities will be merely waste.

Soc. Will not a man so educated be less liable to be entrapped by rival powers, and so escape a common fate of living creatures, some of which (as we all know) are hooked through their own greediness, and often even in spite of a native shyness; but through appetite for food they are drawn towards the bait, and are caught; while others are similarly ensnared by drink?

Ar. Undoubtedly.

Soc. And others again are victims of amorous heat, as quails, for instance, or partridges, which, at the cry of the hen-bird, with lust and expectation of such joys grow wild, and lose their power of computing dangers: on they rush, and fall into the snare of the hunter?

Aristippus assented.

Soc. And would it not seem to be a base thing for a man to be affected like the silliest bird or beast? as when the adulterer invades the innermost sanctum of the house, though he is well aware of the risks which his crime involves, the formidable penalties of the law, the danger of being caught in the toils, and then suffering the direst contumely. Considering all the hideous penalties which hang over the adulterer's head, considering also the many means at hand to release him from the thralldom of his passion, that a man should so drive headlong on to the quicksand of perdition—what are we to say of such frenzy? The wretch who can so behave must surely be tormented by an evil spirit?

Ar. So it strikes me.

Soc. And does it not strike you as a sign of strange indifference that, whereas the greater number of the indispensable affairs of men, as for instance, those of war and agriculture, and more than half the rest, need to be conducted under the broad canopy of heaven, yet the majority of men are quite untrained to wrestle with cold and heat?

Aristippus again assented.

Soc. And do you not agree that he who is destined to rule must train himself to bear these things lightly?

Ar. Most certainly.

Soc. And while we rank those who are self-disciplined in all these matters among persons fit to rule, we are bound to place those incapable of such conduct in the category of persons without any pretension whatsoever to be rulers?

Ar. I assent.

Soc. Well, then, since you know the rank peculiar to either section of mankind, did it ever strike you to consider to which of the two you are best entitled to belong?

Yes I have (replied Aristippus). I do not dream for a moment of ranking myself in the class of those who wish to rule. In fact, considering how serious a business it is to cater for one's own private needs, I look upon it as the mark of a fool not to be content with that, but to further saddle oneself with the duty of providing the rest of the community with whatever they may be pleased to want. That, at the cost of much personal enjoyment, a man should put himself at the head of a state, and then, if he fail to carry through every jot and title of that state's desire, be held to criminal account, does seem to me the very extravagance of folly. Why, bless me! states claim to treat their rulers precisely as I treat my domestic slaves. I expect my attendants to furnish me with an abundance of necessaries, but not to lay a finger on one of them themselves. So these states regard it as the duty of a ruler to provide them with all the good things imaginable, but to keep his own hands off them all the while. So then, for my part, if anybody desires to have a heap of pother himself, and be a nuisance to the rest of the world, I will educate him in the manner suggested, and he shall take his place among those who are fit to rule; but for myself, I beg to be enrolled amongst those who wish to spend their days as easily and pleasantly as possible.

Soc. Shall we then at this point turn and inquire which of the two are likely to lead the pleasanter life, the rulers or the ruled?

Ar. By all means let us do so.

Soc. To begin then with the nations and races known to ourselves. In Asia the Persians are the rulers, while the Syrians, Phrygians, Lydians are ruled; and in Europe we find the Scythians ruling, and the Maeotians being ruled. In Africa the Carthaginians are rulers, the Libyans ruled. Which of these two sets respectively leads the happier life, in your opinion? Or, to come nearer home—you are yourself a Hellene—which among Hellenes enjoy the happier existence, think you, the dominant or the subject states?

Nay, I would have you to understand (exclaimed Aristippus) that I am just as far from placing myself in the ranks of slavery; there is, I take it, a middle path between the two which it is my ambition to tread, avoiding rule and slavery alike; it lies through freedom—the high road which leads to happiness.

Soc. True, if only your path could avoid human beings, as it avoids rule and slavery, there would be something in what you say. But being placed as you are amidst human beings, if you purpose neither to rule nor to be ruled, and do not mean to dance attendance, if you can help it, on those who rule, you must surely see that the stronger have an art to seat the weaker on the stool of repentance both in public and in private, and to treat them as slaves. I daresay you have not failed to note this common case: a set of people has sown and planted, whereupon in comes another set and cuts their corn and fells their fruit-trees, and in every way lays siege to them because, though weaker, they refuse to pay them proper court, till at length they are persuaded to accept slavery rather than war against their betters. And in private life also, you will bear me out, the brave and powerful are known to reduce the helpless and cowardly to bondage, and to make no small profit out of their victims.

Ar. Yes, but I must tell you I have a simple remedy against all such misadventures. I do not confine myself to any single civil community. I roam the wide world a foreigner.

Soc. Well, now, that is a masterly stroke, upon my word! Of course, ever since the decease of Sinis, and Sciron, and Procrustes, foreign travelers have had an easy time of it. But still, if I bethink me, even in these modern days the members of free communities do pass laws in their respective countries for self-protection against wrong-doing. Over and above their personal connections, they provide themselves with a host of friends; they gird their cities about with walls and battlements; they collect armaments to ward off evil-doers; and to make security doubly sure, they furnish themselves with allies from foreign states. In spite of all which defensive machinery these same free citizens do occasionally fall victims to injustice. But you, who are without any of these aids; you, who pass half your days on the high roads where iniquity is rife; you, who, into whatever city you enter, are less than the least of its free members, and moreover are just the sort of person whom any one bent on mischief would single out for attack—yet you, with your foreigner's passport, are to be exempt from injury? So you flatter yourself. And why? Will the state authorities cause proclamation to be made on your behalf: “The person of this man Aristippus is secure; let his going out and his coming in be free from danger”? Is that the ground of your confidence? or do you rather rest secure in the consciousness that you would prove such a slave as no master would care to keep? For who would care to have in his house a fellow with so slight a disposition to work and so strong a propensity to extravagance? Suppose we stop and consider that very point: how do masters deal with that sort of domestic? If I am not mistaken, they chastise his wantonness by starvation; they balk his thieving tendencies by bars and bolts where there is anything to steal; they hinder him from running away by bonds and imprisonment; they drive the sluggishness out of him with the lash. Is it not so? Or how do you proceed when you discover the like tendency in one of your domestics?

Ar. I correct them with all the plagues, till I force them to serve me properly. But, Socrates, to return to your pupil educated in the royal art, which, if I mistake not, you hold to be happiness: how, may I ask, will he be better off than others who lie in evil case, in spite of themselves, simply because they suffer perforce, but in his case the hunger and the thirst, the cold shivers and the lying awake at nights, with all the changes he will ring on pain, are of his own choosing? For my part I cannot see what difference it makes, provided it is one and the same bare back which receives the stripes, whether the whipping be self-appointed or unasked for; nor indeed does it concern my body in general, provided it be my body, whether I am beleaguered by a whole armament of such evils of my own will or against my will—except only for the folly which attaches to self-appointed suffering.

Soc. What, Aristippus, does it not seem to you that, as regards such matters, there is all the difference between voluntary and involuntary suffering, in that he who starves of his own accord can eat when he chooses, and he who thirsts of his own free will can drink, and so for the rest; but he who suffers in these ways perforce cannot desist from the suffering when the humor takes him? Again, he who suffers hardship voluntarily, gaily confronts his troubles, being buoyed on hope—just as a hunter in pursuit of wild beasts, through hope of capturing his quarry, finds toil a pleasure—and these are but prizes of little worth in return for their labors; but what shall we say of their reward who toil to obtain to themselves good friends, or to subdue their enemies, or that through strength of body and soul they may administer their households well, befriend their friends, and benefit the land which gave them birth? Must we not suppose that these too will take their sorrows lightly, looking to these high ends? Must we not suppose that they too will gaily confront existence, who have to support them not only their conscious virtue, but the praise and admiration of the world? And once more, habits of indolence, along with the fleeting pleasures of the moment, are incapable, as gymnastic trainers say, of setting up a good habit of body, or of implanting in the soul any knowledge worthy of account; whereas by painstaking Endeavour in the pursuit of high and noble deeds, as good men tell us, through endurance we shall in the end attain the goal. So Hesiod somewhere says:

Wickedness may a man take wholesale with ease, smooth is the way and her dwelling-place is very nigh; but in front of virtue the immortal gods have placed toil and sweat, long is the path and steep that leads to her, and rugged at the first, but when the summit of the pass is reached, then for all its roughness the path grows easy.

And again in another passage he exclaims:

Set not your heart on soft things, you knave, lest you light upon the hard.

And that wise man Prodicus delivers himself in a like strain concerning virtue in that composition of his about Heracles, which crowds have listened to. This, as far as I can recollect it, is the substance at least of what he says:

“When Heracles was emerging from boyhood into the bloom of youth, having reached that season in which the young man, now standing upon the verge of independence, shows plainly whether he will enter upon the path of virtue or of vice, he went forth into a quiet place, and sat debating with himself which of those two paths he should pursue; and as he there sat musing, there appeared to him two women of great stature which drew nigh to him. The one was fair to look upon, frank and free by gift of nature, her limbs adorned with purity and her eyes with bashfulness; sobriety set the rhythm of her gait, and she was clad in white apparel. The other was of a different type; the fleshy softness of her limbs betrayed her nurture, while the complexion of her skin was embellished that she might appear whiter and rosier than she really was, and her figure that she might seem taller than nature made her; she stared with wide-open eyes, and the raiment wherewith she was clad served but to reveal the ripeness of her bloom. With frequent glances she surveyed her person, or looked to see if others noticed her; while ever and anon she fixed her gaze upon the shadow of herself intently.

“Now when these two had drawn near to Heracles, she who was first named advanced at an even pace towards him, but the other, in her eagerness to outstrip her, ran forward to the youth, exclaiming, 'I see you, Heracles, in doubt and difficulty what path of life to choose; make me your friend, and I will lead you to the pleasantest road and easiest. This I promise you: you shall taste all of life's sweets and escape all bitters. In the first place, you shall not trouble your brain with war or business; other topics shall engage your mind; your only speculation, what meat or drink you shall find agreeable to your palate; what delight of ear or eye; what pleasure of smell or touch; what darling lover's intercourse shall most enrapture you; how you shall pillow your limbs in softest slumber; how cull each individual pleasure without alloy of pain; and if ever the suspicion steal upon you that the stream of joys will one day dwindle, trust me I will not lead you where you shall replenish the store by toil of body and trouble of soul. No! others shall labor, but you shall reap the fruit of their labors; you shall withhold your hand from naught which shall bring you gain. For to all my followers I give authority and power to help themselves freely from every side.’

“Heracles hearing these words made answer: 'What, O lady, is the name you bear?’ To which she: 'Know that my friends call be Happiness, but they that hate me have their own nicknames for me, Vice and Naughtiness.’

“But just then the other of those fair women approached and spoke: 'Heracles, I too am come to you, seeing that your parents are well known to me, and in your nurture I have gauged your nature; wherefore I entertain good hope that if you choose the path which leads to me, you shall greatly bestir yourself to be the doer of many a doughty deed of noble emprise; and that I too shall be held in even higher honor for your sake, lit with the luster shed by valorous deeds. I will not cheat you with preluding of pleasure, but I will relate to you the things that are according to the ordinances of God in very truth. Know then that among things that are lovely and of good report, not one have the gods bestowed upon mortal men apart from toil and pains. Would you obtain the favour of the gods, then must you pay these same gods service; would you be loved by your friends, you must benefit these friends; do you desire to be honored by the state, you must give the state your aid; do you claim admiration for your virtue from all Hellas, you must strive to do some good to Hellas; do you wish earth to yield her fruits to you abundantly, to earth must you pay your court; do you seek to amass riches from your flocks and herds, on them must you bestow your labor; or is it your ambition to be potent as a warrior, able to save your friends and to subdue your foes, then must you learn the arts of war from those who have the knowledge, and practice their application in the field when learned; or would you even be powerful of limb and body, then must you habituate limbs and body to obey the mind, and exercise yourself with toil and sweat.’

“At this point, (as Prodicus relates) Vice broke in exclaiming: 'See you, Heracles, how hard and long the road is by which yonder woman would escort you to her festal joys. But I will guide you by a short and easy road to happiness.’

“Then spoke Virtue: 'Nay, wretched one, what good thing have you? or what sweet thing art you acquainted with—that will stir neither hand nor foot to gain it? You, that may not even await the desire of pleasure, but, or ever that desire springs up, are already satiated; eating before you hunger, and drinking before you thirst; who to eke out an appetite must invent an army of cooks and confectioners; and to whet your thirst must lay down costliest wines, and run up and down in search of ice in summer-time; to help your slumbers soft coverlets suffice not, but couches and feather-beds must be prepared thee and rockers to rock thee to rest; since desire for sleep in your case springs not from toil but from vacuity and nothing in the world to do. Even the natural appetite of love you force prematurely by every means you may devise, confounding the sexes in your service. Thus you educate your friends: with insult in the night season and drowse of slumber during the precious hours of the day. Immortal, you art cast forth from the company of gods, and by good men art dishonored: that sweetest sound of all, the voice of praise, has never thrilled your ears; and the fairest of all fair visions is hidden from your eyes that have never beheld one bounteous deed wrought by your own hand. If you open your lips in speech, who will believe your word? If you have need of aught, none shall satisfy thee. What sane man will venture to join your rabble rout? Ill indeed are your revelers to look upon, young men impotent of body, and old men witless in mind: in the heyday of life they batten in sleek idleness, and wearily do they drag through an age of wrinkled wretchedness: and why? they blush with shame at the thought of deeds done in the past, and groan for weariness at what is left to do. During their youth they ran riot through their sweet things, and laid up for themselves large store of bitterness against the time of old. But my companionship is with the gods; and with the good among men my conversation; no bounteous deed, divine or human, is wrought without my aid. Therefore am I honored in Heaven pre-eminently, and upon earth among men whose right it is to honor me; as a beloved fellow-worker of all craftsmen; a faithful guardian of house and lands, whom the owners bless; a kindly helpmeet of servants; a brave assistant in the labors of peace; an unflinching ally in the deeds of war; a sharer in all friendships indispensable. To my friends is given an enjoyment of meats and drinks, which is sweet in itself and devoid of trouble, in that they can endure until desire ripens, and sleep more delicious visits them than those who toil not. Yet they are not pained to part with it; nor for the sake of slumber do they let slip the performance of their duties. Among my followers the youth delights in the praises of his elders, and the old man glories in the honor of the young; with joy they call to memory their deeds of old, and in to-day's well-doing are well pleased. For my sake they are dear in the sight of God, beloved of their friends and honored by the country of their birth. When the appointed goal is reached they lie not down in oblivion with dishonor, but bloom afresh—their praise resounded on the lips of men for ever. Toils like these, O son of noble parents, Heracles, it is yours to meet with, and having endured, to enter into the heritage assured you of transcendent happiness.'"

This, Aristippus, in rough sketch is the theme which Prodicus pursues in his "Education of Heracles by Virtue," only he decked out his sentiments, I admit, in far more magnificent phrases than I have ventured on. Were it not well, Aristippus, to lay to heart these sayings, and to strive to bethink you somewhat of that which touches the future of our life?

## II

At another time, he had noticed the angry temper shown by Lamprocles, the elder of his sons, towards their mother, and thus addressed himself to the lad.

Soc. Pray, my son, did you ever hear of certain people being called ungrateful?

That I have (replied the young man).

Soc. And have you understood what it is they do to get that bad name?

Lamp. Yes, I have: when any one has been kindly treated, and has it in his power to requite the kindness but neglects to do so, men call him ungrateful.

Soc. And you admit that people reckon the ungrateful among wrongdoers?

Lamp. I do.

Soc. And has it ever struck you to inquire whether, as regards the right or wrong of it, ingratitude may not perhaps resemble some such conduct as the enslavement, say, of prisoners, which is accounted wrong towards friends but justifiable towards enemies?

Lamp. Yes, I have put that question to myself. In my opinion, no matter who confers the kindness, friend or foe, the recipient should Endeavour to requite it, failing which he is a wrongdoer.

Soc. Then if that is how the matter stands, ingratitude would be an instance of pure unadulterate wrongdoing?

Lamprocles assented to the proposition.

Soc. It follows, then, that in proportion to the greatness of the benefit conferred, the greater his misdoing who fails to requite the kindness?

Lamprocles again assented.

Socrates continued: And where can we hope to find greater benefits than those which children derive from their parents—their father and mother who brought them out of nothingness into being, who granted them to look upon all these fair sights, and to partake of all those blessings which the gods bestow on man, things so priceless in our eyes that one and all we shudder at the thought of leaving them, and states have made death the penalty for the greatest crimes, because there is no greater evil through fear of which to stay iniquity.

You do not suppose that human beings produce children for the sake of carnal pleasure merely; were this the motive, street and bordello are full of means to quit them of that thrall; whereas nothing is plainer than the pains we take to seek out wives who shall bear us the finest children. With these we wed, and carry on the race. The man has a twofold duty to perform: partly in cherishing her who is to raise up children along with him, and partly towards the children yet unborn in providing them with things that he thinks will contribute to their well-being—and of these as large a store as possible. The woman, conceiving, bears her precious burthen with travail and pain, and at the risk of life itself—sharing with that within her womb the food on which she herself is fed. And when with much labor she has borne to the end and brought forth her offspring, she feeds it and watches over it with tender care—not in return for any good thing previously received, for indeed the babe itself is little conscious of its benefactor and cannot even signify its wants; only she, the mother, making conjecture of what is good for it, and what will please it, essays to satisfy it; and for many months she feeds it night and day, enduring the toil nor reckoning what return she shall receive for all her trouble. Nor does the care and kindness of parents end with nurture; but when the children seem of an age to learn, they teach them themselves whatever cunning they possess, as a guide to life, or where they feel that another is more competent, to him they send them to be taught at their expense. Thus they watch over their children, doing all in their power to enable them to grow up to be as good as possible.

So be it (the youth answered); but even if she have done all that, and twenty times as much, no soul on earth could endure my mother's cross-grained temper.

Then Socrates: Which, think you, would be harder to bear—a wild beast's savagery or a mother's?

Lamp. To my mind, a mother's—at least if she be such as mine.

Soc. Dear me! And has this mother ever done you any injury—such as people frequently receive from beasts, by bite or kick?

Lamp. If she has not done quite that, she uses words which any one would sooner sell his life than listen to.

Soc. And how many annoyances have you caused your mother, do you suppose, by fretfulness and peevishness in word and deed, night and day, since you were a little boy? How much sorrow and pain, when you were ill?

Lamp. Well, I never said or did anything to bring a blush to her cheeks.

Soc. No, come now! Do you suppose it is harder for you to listen to your mother's speeches than for actor to listen to actor on the tragic stage, when the floodgates of abuse are opened?

Lamp. Yes; for the simple reason that they know it is all talk on their parts. The inquisitor may cross-question, but he will not inflict a fine; the threatener may hurl his menaces, but he will do no mischief—that is why they take it all so easily.

Soc. Then ought you to fly into a passion, who know well enough that, whatever your mother says, she is so far from meaning you mischief that she is actually wishing blessings to descend upon you beyond all others? Or do you believe that your mother is really ill disposed towards you?

Lamp. No, I do not think that.

Soc. Then this mother, who is kindly disposed to you, and takes such tender care of you when you are ill to make you well again, and to see that you want for nothing which may help you; and, more than all, who is perpetually pleading for blessings in your behalf and offering her vows to Heaven—can you say of her that she is cross-grained and harsh? For my part, I think, if you cannot away with such a mother, you cannot away with such blessings either.

But tell me (he proceeded), do you owe service to any living being, think you? or are you prepared to stand alone? Prepared not to please or try to please a single soul? to follow none? To obey neither general nor ruler of any sort? Is that your attitude, or do you admit that you owe allegiance to somebody?

Lamp. Yes; certainly I owe allegiance.

Soc. May I take it that you are willing to please at any rate your neighbor, so that he may kindle a fire for you in your need, may prove himself a ready helpmate in good fortune, or if you chance on evil and are stumbling, may friendlily stand by your side to aid?

Lamp. I am willing.

Soc. Well, and what of that other chance companion—your fellow-traveler by land or sea? what of any others, you may light upon? is it indifferent to you whether these be friends or not, or do you admit that the goodwill of these is worth securing by some pains on your part?

Lamp. I do.

Soc. It stands thus then: you are prepared to pay attention to this, that, and the other stranger, but to your mother who loves you more than all else, you are bound to render no service, no allegiance? Do you not know that while the state does not concern itself with ordinary ingratitude or pass judicial sentence on it; while it overlooks the thanklessness of those who fail to make return for kindly treatment, it reserves its pains and penalties for the special case? If a man render not the service and allegiance due to his parents, on him the finger of the law is laid; his name is struck off the roll; he is forbidden to hold the archonship—which is as much as to say, “Sacrifices in behalf of the state offered by such a man would be no offerings, being tainted with impiety; nor could aught else be 'well and justly' performed of which he is the doer.” Heaven help us! If a man fail to adorn the sepulcher of his dead parents the state takes cognizance of the matter, and inquisition is made in the scrutiny of the magistrates. And as for you, my son, if you are in your sober senses, you will earnestly entreat your mother, lest the very gods take you to be an ungrateful being, and on their side also refuse to do you good; and you will beware of men also, lest they should perceive your neglect of your parents, and with one consent hold you in dishonor; and so you find yourself in a desert devoid of friends. For if once the notion be entertained that here is a man ungrateful to his parents, no one will believe that any kindness shown you would be other than thrown away.

### III

At another time the differences between two brothers named Chaerephon and Chaerecrates, both well known to him, had drawn his attention; and on seeing the younger of the two he thus addressed him.

Soc. Tell me, Chaerecrates, you are not, I take it, one of those strange people who believe that goods are better and more precious than a brother; and that too although the former are but senseless chattels which need protection, the latter a sensitive and sensible being who can afford it; and what is more, he is himself alone, while as for them their name is legion. And here again is a marvelous thing: that a man should count his brother a loss, because the goods of his brother are not his; but he does not count his fellow-citizens loss, and yet their possessions are not his; only it seems in their case he has wits to see that to dwell securely with many and have enough is better than to own the whole wealth of a community and to live in dangerous isolation; but this same doctrine as applied to brothers they ignore. Again, if a man have the means, he will purchase domestic slaves, because he wants assistants in his work; he will acquire friends, because he needs their support; but this brother of his—who cares about brothers? It seems a friend may be discovered in an ordinary citizen, but not in a blood relation who is also a brother. And yet it is a great vantage-ground towards friendship to have sprung from the same loins and to have been suckled at the same breasts, since even among beasts a certain natural craving, and sympathy springs up between creatures reared together. Added to which, a man who has brothers commands more respect from the rest of the world than the man who has none, and who must fight his own battles.

Chaer. I daresay, Socrates, where the differences are not profound, reason would a man should bear with his brother, and not avoid him for some mere trifle's sake, for a brother of the right sort is, as you say, a blessing; but if he be the very antithesis of that, why should a man lay his hand to achieve the impossible?

Soc. Well now, tell me, is there nobody whom Chaerephon can please any more than he can please yourself; or do some people find him agreeable enough?

Chaer. Nay, there you hit it. That is just why I have a right to detest him. He can be pleasing enough to others, but to me, whenever he appears on the scene, he is not a blessing—no! but by every manner of means the reverse.

Soc. May it not happen that just as a horse is no gain to the inexpert rider who essays to handle him, so in like manner, if a man tries to deal with his brother after an ignorant fashion, this same brother will kick?

Chaer. But is it likely now? How should I be ignorant of the art of dealing with my brother if I know the art of repaying kind words and good deeds in kind? But a man who tries all he can to annoy me by word and deed, I can neither bless nor benefit, and, what is more, I will not try.

Soc. Well now, that is a marvelous statement, Chaerecrates. Your dog, the serviceable guardian of your flocks, who will fawn and lick the hand of your shepherd, when you come near him can only growl and show his teeth. Well; you take no notice of the dog's ill-temper, you try to propitiate him by kindness; but your brother? If your brother were what he ought to be, he would be a great blessing to you—that you admit; and, as you further confess, you know the secret of kind acts and words, yet you will not set yourself to apply means to make him your best of friends.

Chaer. I am afraid, Socrates, that I have no wisdom or cunning to make Chaerephon bear himself towards me as he should.

Soc. Yet there is no need to apply any recondite or novel machinery. Only bait your hook in the way best known to yourself, and you will capture him; whereupon he will become your devoted friend.

Chaer. If you are aware that I know some love-charm, Socrates, of which I am the happy but unconscious possessor, pray make haste and enlighten me.

Soc. Answer me then. Suppose you wanted to get some acquaintance to invite you to dinner when he next keeps holy day, what steps would you take?

Chaer. No doubt I should set him a good example by inviting him myself on a like occasion.

Soc. And if you wanted to induce some friend to look after your affairs during your absence abroad, how would you achieve your purpose?

Chaer. No doubt I should present a precedent in undertaking to look after his in like circumstances.

Soc. And if you wished to get some foreign friend to take you under his roof while visiting his country, what would you do?

Chaer. No doubt I should begin by offering him the shelter of my own roof when he came to Athens, in order to enlist his zeal in furthering the objects of my visit; it is plain I should first show my readiness to do as much for him in a like case.

Soc. Why, it seems you are an adept after all in all the potions known to man, only you chose to conceal your knowledge all the while; or is it that you shrink from taking the first step because of the scandal you will cause by kindly advances to your brother? And yet it is commonly held to redound to a man's praise to have outstripped an enemy in mischief or a friend in kindness. Now if it seemed to me that Chaerephon were better fitted to lead the way towards this friendship, I should have tried to persuade him to take the first step in winning your affection, but now I am persuaded the first move belongs to you, and to you the final victory.

Chaer. A startling announcement, Socrates, from your lips, and most unlike you, to bid me the younger take precedence of my elder brother. Why, it is contrary to the universal custom of mankind, who look to the elder to take the lead in everything, whether as a speaker or an actor.

Soc. How so? Is it not the custom everywhere for the younger to step aside when he meets his elder in the street and to give him place? Is he not expected to get up and offer him his seat, to pay him the honor of a soft couch, to yield him precedence in argument?

My good fellow, do not stand shilly-shallying, but put out your hand caressingly, and you will see the worthy soul will respond at once with alacrity. Do you not note your brother's character, proud and frank and sensitive to honor? He is not a mean and sorry rascal to be caught by a bribe—no better way indeed for such riff-raff. No! gentle natures need a finer treatment. You can best hope to work on them by affection.

Chaer. But suppose I do, and suppose that, for all my attempts, he shows no change for the better?

Soc. At the worst you will have shown yourself to be a good, honest, brotherly man, and he will appear as a sorry creature on whom kindness is wasted. But nothing of the sort is going to happen, as I conjecture. My belief is that as soon as he hears your challenge, he will embrace the contest; pricked on by emulous pride, he will insist upon getting the better of you in kindness of word and deed.

At present you two are in the condition of two hands formed by God to help each other, but which have let go their business and have turned to hindering one another all they can. You are a pair of feet fashioned on the Divine plan to work together, but which have neglected this in order to trammel each other's gait. Now is it not insensate stupidity to use for injury what was meant for advantage? And yet in fashioning two brothers God intends them, methinks, to be of more benefit to one another than either two hands, or two feet, or two eyes, or any other of those pairs which belong to man from his birth. Consider how powerless these hands of ours if called upon to combine their action at two points more than a single fathom's length apart; and these feet could not stretch asunder even a bare fathom; and these eyes, for all the wide-reaching range we claim for them, are incapable of seeing simultaneously the back and front of an object at even closer quarters. But a pair of brothers, linked in bonds of amity, can work each for the other's good, though seas divide them.

## IV

I have at another time heard him discourse on the kindred theme of friendship in language well calculated, as it seemed to me, to help a man to choose and also to use his friends aright.

He (Socrates) had often heard the remark made that of all possessions there is none equal to that of a good and sincere friend; but, in spite of this assertion, the mass of people, as far as he could see, concerned themselves about nothing so little as the acquisition of friends. Houses, and fields, and slaves, and cattle, and furniture of all sorts (he said) they were at pains to acquire, and they strove hard to keep what they had got; but to procure for themselves this greatest of all blessings, as they admitted a friend to be, or to keep the friends whom they already possessed, not one man in a hundred ever gave himself a thought. It was noticeable, in the case of a sickness befalling a man's friend and one of his own household simultaneously, the promptness with which the master would fetch the doctor to his domestic, and take every precaution necessary for his recovery, with much expenditure of pains; but meanwhile little account would be taken of the friend in like condition, and if both should die, he will show signs of deep annoyance at the death of his domestic, which, as he reflects, is a positive loss to him; but as regards his friend his position is in no wise materially affected, and thus, though he would never dream of leaving his other possessions disregarded and ill cared for, friendship's mute appeal is met with flat indifference.

Or to take (said he) a crowning instance: with regard to ordinary possessions, however multifarious these may be, most people are at least acquainted with their number, but if you ask a man to enumerate his friends, who are not so very many after all perhaps, he cannot; or if, to oblige the inquirer, he essays to make a list, he will presently retract the names of some whom he had previously included. Such is the amount of thought which people bestow upon their friends.

And yet what thing else may a man call his own is comparable to this one best possession! what rather will not serve by contrast to enhance the value of an honest friend! Think of a horse or a yoke of oxen; they have their worth; but who shall gauge the worth of a worthy friend? Kindlier and more constant than the most faithful of slaves—this is that possession best named all-serviceable. Consider what the post is that he assigns himself! to meet and supplement what is lacking to the welfare of his friends, to promote their private and their public interests, is his concern. Is there need of kindly action in any quarter? he will throw in the full weight of his support. Does some terror confound? he is at hand to help and defend by expenditure of money and of energy, by appeals to reason or resort to force. His the privilege alike to gladden the prosperous in the hour of success and to sustain their footing who have well-nigh slipped. All that the hands of a man may minister, all that the eyes of each are swift to see, the ears to hear, and the feet to compass, he with his helpful arts will not fall short of. Nay, not seldom that which a man has failed to accomplish for himself, has missed seeing or hearing or attaining, a friend acting in behalf of friend will achieve vicariously. And yet, albeit to try and tend a tree for the sake of its fruit is not uncommon, this copious mine of wealth—this friend—attracts only a lazy and listless attention on the part of more than half the world.

## V

I remember listening to another argument of his, the effect of which would be to promote self-examination. The listener must needs be brought to ask himself, “Of what worth am I to my friends?” It happened thus. One of those who were with him was neglectful, as he noted, of a friend who was at the pinch of poverty (Antisthenes). Accordingly, in the presence of the negligent person and of several others, he proceeded to question the sufferer.

Soc. What say you, Antisthenes?—have friends their values like domestic slaves? One of these latter may be worth perhaps two minae, another only half a mina, a third five, and a fourth as much as ten; while they do say that Nicias, the son of Niceratus, paid a whole talent for a superintendent of his silver mines. And so I propound the question to myself as follows: “Have friends, like slaves, their market values?”

Not a doubt of it (replied Antisthenes). At any rate, I know that I would rather have such a one as my friend than be paid two minae, and there is such another whose worth I would not estimate at half a mina, and a third with whom I would not part for ten, and then again a fourth whose friendship would be cheap if it cost me all the wealth and pains in the world to purchase it.

Well then (continued Socrates), if that be so, would it not be well if every one were to examine himself: “What after all may I chance to be worth to my friends?” Should he not try to become as dear as possible, so that his friends will not care to give him up? How often do I hear the complaint: “My friend So-and-so has given me up”; or “Such an one, whom I looked upon as a friend, has sacrificed me for a mina.” And every time I hear these remarks, the question arises in my mind: If the vendor of a worthless slave is ready to part with him to a purchaser for what he will fetch—is there not at least a strong temptation to part with a base friend when you have a chance of making something on the exchange? Good slaves, as far as I can see, are not so knocked down to the hammer; no, nor good friends so lightly parted with.

## VI

Again, in reference to the test to be applied, if we would gauge the qualifications of a friend worth the winning, the following remarks of Socrates could not fail, I think, to prove instructive.

Tell me (said Socrates, addressing Critobulus), supposing we stood in need of a good friend, how should we set about his discovery? We must, in the first place, I suppose, seek out one who is master of his appetites, not under the dominion, that is, of his belly, not addicted to the wine-cup or to lechery or sleep or idleness, since no one enslaved to such tyrants could hope to do his duty either by himself or by his friends, could he?

Certainly not (Critobulus answered).

Soc. Do you agree, then, that we must hold aloof from every one so dominated?

Cri. Most assuredly.

Well then (proceeded Socrates), what shall we say of the spendthrift who has lost his independence and is for ever begging of his neighbors; if he gets anything out of them he cannot repay, but if he fails to get anything, he hates you for not giving—do you not think that this man too would prove but a disagreeable friend?

Cri. Certainly.

Soc. Then we must keep away from him too?

Cri. That we must.

Soc. Well! and what of the man whose strength lies in monetary transactions? His one craving is to amass money; and for that reason he is an adept at driving a hard bargain—glad enough to take in, but loath to pay out.

Cri. In my opinion he will prove even a worse fellow than the last.

Soc. Well! and what of that other whose passion for money-making is so absorbing that he has no leisure for anything else, save how he may add to his gains?

Cri. Hold aloof from him, say I, since there is no good to be got out of him or his society.

Soc. Well! what of the quarrelsome and factious person whose main object is to saddle his friends with a host of enemies?

Cri. For God's sake let us avoid him also.

Soc. But now we will imagine a man exempt indeed from all the above defects—a man who has no objection to receive kindnesses, but it never enters into his head to do a kindness in return.

Cri. There will be no good in him either. But, Socrates, what kind of man shall we Endeavour to make our friend? what is he like?

Soc. I should say he must be just the converse of the above: he has control over the pleasures of the body, he is kindly disposed, upright in all his dealings, very zealous is he not to be outdone in kindness by his benefactors, if only his friends may derive some profit from his acquaintance.

Cri. But how are we to test these qualities, Socrates, before acquaintance?

Soc. How do we test the merits of a sculptor?—not by inferences drawn from the talk of the artist merely. No, we look to what he has already achieved. These former statues of his were nobly executed, and we trust he will do equally well with the rest.

Cri. You mean that if we find a man whose kindness to older friends is established, we may take it as proved that he will treat his newer friends as amiably?

Soc. Why, certainly, if I see a man who has shown skill in the handling of horses previously, I argue that he will handle others no less skillfully again.

Cri. Good! and when we have discovered a man whose friendship is worth having, how ought we to make him our friend?

Soc. First we ought to ascertain the will of Heaven whether it be advisable to make him our friend.

Cri. Well! and how are we to effect the capture of this friend of our choice, whom the gods approve? will you tell me that?

Not, in good sooth (replied Socrates), by running him down like a hare, nor by decoying him like a bird, or by force like a wild boar. To capture a friend against his will is a toilsome business, and to bind him in fetters like a slave by no means easy. Those who are so treated are apt to become foes instead of friends.

Cri. But how convert them into friends?

Soc. There are certain incantations, we are told, which those who know them have only to utter, and they can make friends of whom they list; and there are certain potions also which those who have the secret of them may administer to whom they like and win their love.

Cri. From what source shall we learn them?

Soc. You need not go farther than Homer to learn that which the Sirens sang to Odysseus, the first words of which run, I think, as follows:

Hither, come hither, you famous man, Odysseus, great glory of the Achaeans!

Cri. And did the magic words of this spell serve for all men alike? Had the Sirens only to utter this one incantation, and was every listener constrained to stay?

Soc. No; this was the incantation reserved for souls athirst for fame, of virtue emulous.

Cri. Which is as much as to say, we must suit the incantation to the listener, so that when he hears the words he shall not think that the enchanter is laughing at him in his sleeve. I cannot certainly conceive a method better calculated to excite hatred and repulsion than to go to some one who knows that he is small and ugly and a weakling, and to breathe in his ears the flattering tale that he is beautiful and tall and stalwart. But do you know any other love-charms, Socrates?

Soc. I cannot say that I do; but I have heard that Pericles was skilled in not a few, which he poured into the ear of our city and won her love.

Cri. And how did Themistocles win our city's love?

Soc. Ah, that was not by incantation at all. What he did was to encircle our city with an amulet of saving virtue.

Cri. You would imply, Socrates, would you not, that if we want to win the love of any good man we need to be good ourselves in speech and action?

And did you imagine (replied Socrates) that it was possible for a bad man to make good friends?

Cri. Why, I could fancy I had seen some sorry speech-monger who was fast friends with a great and noble statesman; or again, some born commander and general who was boon companion with fellows quite incapable of generalship.

Soc. But in reference to the point we were discussing, may I ask whether you know of any one who can attach a useful friend to himself without being of use in return? Can service ally in friendship with disservice?

Cri. In good sooth no. But now, granted it is impossible for a base man to be friends with the beautiful and noble, I am concerned at once to discover if one who is himself of a beautiful and noble character can, with a wave of the hand, as it were, attach himself in friendship to every other beautiful and noble nature.

Soc. What perplexes and confounds you, Critobulus, is the fact that so often men of noble conduct, with souls aloof from baseness, are not friends but rather at strife and discord with one another, and deal more harshly by one another than they would by the most good-for-nothing of mankind.

Cri. Yes, and this holds true not of private persons only, but states, the most eager to pursue a noble policy and to repudiate a base one, are frequently in hostile relation to one another. As I reason on these things my heart fails me, and the question, how friends are to be acquired, fills me with despondency. The bad, as I see, cannot be friends with one another. For how can such people, the ungrateful, or reckless, or covetous, or faithless, or incontinent, adhere together as friends? Without hesitation I set down the bad as born to be foes not friends, and as bearing the birthmark of internecine hate. But then again, as you suggest, no more can these same people harmonies in friendship with the good. For how should they who do evil be friends with those who hate all evil-doing? And if, last of all, they that cultivate virtue are torn by party strife in their struggle for the headship of the states, envying one another, hating one another, who are left to be friends? where shall goodwill and faithfulness be found among men?

Soc. The fact is there is some subtlety in the texture of these things. Seeds of love are implanted in man by nature. Men have need of one another, feel pity, help each other by united efforts, and in recognition of the fact show mutual gratitude. But there are seeds of war implanted also. The same objects being regarded as beautiful or agreeable by all alike, they do battle for their possession; a spirit of disunion enters, and the parties range themselves in adverse camps. Discord and anger sound a note of war: the passion of more-having, staunchless avarice, threatens hostility; and envy is a hateful fiend.

But nevertheless, through all opposing barriers friendship steals her way and binds together the beautiful and good among mankind. Such is their virtue that they would rather possess scant means painlessly than wield an empire won by war. In spite of hunger and thirst they will share their meat and drink without a pang. Not bloom of lusty youth, nor love's delights can warp their self-control; nor will they be tempted to cause pain where pain should be unknown. It is theirs not merely to eschew all greed of riches, not merely to make a just and lawful distribution of wealth, but to supply what is lacking to the needs of one another. Theirs it is to compose strife and discord not in painless oblivion simply, but to the general advantage. Theirs also to hinder such extravagance of anger as shall entail remorse hereafter. And as to envy they will make a clean sweep and clearance of it: the good things which a man possesses shall be also the property of his friends, and the goods which they possess are to be looked upon as his. Where then is the improbability that the beautiful and noble should be sharers in the honors of the state not only without injury, but even to their mutual advantage?

They indeed who covet and desire the honors and offices in a state for the sake of the liberty thereby given them to embezzle the public moneys, to deal violently by their fellow-creatures, and to batten in luxury themselves, may well be regarded as unjust and villainous persons incapable of harmony with one another. But if a man desire to obtain these selfsame honors in order that, being himself secure against wrong-doing, he may be able to assist his friends in what is right, and, raised to a high position, may essay to confer some blessing on the land of his fathers, what is there to hinder him from working in harmony with some other of a like spirit? Will he, with the "beautiful and noble" at his side, be less able to aid his friends? or will his power to benefit the community be shortened because the flower of that community are fellow-workers in that work? Why, even in the contests of the games it is obvious that if it were possible for the stoutest combatants to combine against the weakest, the chosen band would come off victors in every bout, and would carry off all the prizes. This indeed is against the rules of the actual arena; but in the field of politics, where the beautiful and good hold empery, and there is naught to hinder any from combining with whomsoever a man may choose to benefit the state, it will be a clear gain, will it not, for any one engaged in state affairs to make the best men his friends, whereby he will find partners and co-operators in his aims instead of rivals and antagonists? And this at least is obvious: in case of foreign war a man will need allies, but all the more if in the ranks opposed to him should stand the flower of the enemy. Moreover, those who are willing to fight your battles must be kindly dealt with, that goodwill may quicken to enthusiasm; and one good man is better worth your benefiting that a dozen knaves, since a little kindness goes a long way with the good, but with the base the more you give them the more they ask for.

So keep a good heart, Critobulus; only try to become good yourself, and when you have attained, set to your hand to capture the beautiful and good. Perhaps I may be able to give you some help in this quest, being myself an adept in Love's lore. No matter who it is for whom my heart is aflame; in an instant my whole soul is eager to leap forth. With vehemence I speed to the mark. I, who love, demand to be loved again; this desire in me must be met by counter desire in him; this thirst for his society by thirst reciprocal for mine. And these will be your needs also, I foresee, whenever you are seized with longing to contract a friendship. Do not hide from me, therefore, whom you would choose as a friend, since, owing to the pains I take to please him who pleases me, I am not altogether unversed, I fancy, in the art of catching men.

Critobulus replied: Why, these are the very lessons of instruction, Socrates, for which I have been long athirst, and the more particularly if this same love's lore will enable me to capture those who are good of soul and those who are beautiful of person.

Soc. Nay, now I warn you, Critobulus, it is not within the province of my science to make the beautiful endure him who would lay hands upon them. And that is why men fled from Scylla, I am persuaded, because she laid hands upon them; but the Sirens were different—they laid hands on nobody, but sat afar off and chanted their spells in the ears of all; and therefore, it is said, all men endured to listen, and were charmed.

Cri. I promise I will not lay violent hands on any; therefore, if you have any good device for winning friends, instruct your pupil.

Soc. And if there is to be no laying on of the hands, there must be no application either of the lips; is it agreed?

Cri. No, nor application of the lips to any one—not beautiful.

Soc. See now! you cannot open your mouth without some luckless utterance. Beauty suffers no such liberty, however eagerly the ugly may invite it, making believe some quality of soul must rank them with the beautiful.

Cri. Be of good cheer then; let the compact stand thus: "Kisses for the beautiful, and for the good a rain of kisses." So now teach us the art of catching friends.

Soc. Well then, when you wish to win some one's affection, you will allow me to lodge information against you to the effect that you admire him and desire to be his friend?

Cri. Lodge the indictment, with all my heart. I never heard of any one who hated his admirers.

Soc. And if I add to the indictment the further charge that through your admiration you are kindly disposed towards him, you will not feel I am taking away your character?

Cri. Why, no; for myself I know a kindly feeling springs up in my heart towards any one whom I conceive to be kindly disposed to me.

Soc. All this I shall feel empowered to say about you to those whose friendship you seek, and I can promise further help; only there is a comprehensive "if" to be considered: if you will further authorize me to say that you are devoted to your friends; that nothing gives you so much joy as a good friend; that you pride yourself no less on the fine deeds of those you love than on your own; and on their good things equally with your own; that you never weary of plotting and planning to procure them a rich harvest of the same; and lastly, that you have discovered a man's virtue is to excel his friends in kindness and his foes in hostility. If I am authorized thus to report of you, I think you will find me a serviceable fellow-hunter in the quest of friends, which is the conquest of the good.

Cri. Why this appeal to me?—as if you had not free permission to say exactly what you like about me.

Soc. No; that I deny, on the authority of Aspasia. I have it from her own lips. “Good matchmakers,” she said tome, “were clever hands at cementing alliances between people, provided the good qualities they vouched for were truthfully reported; but when it came to their telling lies, for her part she could not compliment them. Their poor deluded dupes ended by hating each other and the go-betweens as well.” Now I myself am so fully persuaded of the truth of this that I feel it is not in my power to say aught in your praise which I cannot say with truth.

Cri. Really, Socrates, you are a wonderfully good friend to me—in so far as I have any merit which will entitle me to win a friend, you will lend me a helping hand, it seems; otherwise you would rather not forge any petty fiction for my benefit.

Soc. But tell me, how shall I assist you best, think you? By praising you falsely or by persuading you to try to be a good man? Or if it is not plain to you thus, look at the matter by the light of some examples. I wish to introduce you to a ship-owner, or to make him your friend: I begin by singing your praises to him falsely thus, “You will find him a good pilot”; he catches at the phrase, and entrusts his ship to you, who have no notion of guiding a vessel. What can you expect but to make shipwreck of the craft and yourself together? or suppose by similar false assertions I can persuade the state at large to entrust her destinies to you—"a man with a fine genius for command," I say, "a practiced lawyer," "a politician born," and so forth. The odds are, the state and you may come to grief through you. Or to take an instance from everyday life. By my falsehoods I persuade some private person to entrust his affairs to you as "a really careful and business-like person with a head for economy." When put to the test would not your administration prove ruinous, and the figure you cut ridiculous? No, my dear friend, there is but one road, the shortest, safest, best, and it is simply this: In whatsoever you desire to be deemed good, Endeavour to be good. For of all the virtues namable among men, consider, and you will find there is not one but may be increased by learning and practice. For my part then, Critobulus, these are the principles on which we ought to go a-hunting; but if you take a different view, I am all attention, please instruct me.

Then Critobulus: Nay, Socrates, I should be ashamed to gainsay what you have said; if I did, it would neither be a noble statement nor a true.

## VII

He had two ways of dealing with the difficulties of his friends: where ignorance was the cause, he tried to meet the trouble by a dose of common sense; or where want and poverty were to blame, by lessoning them that they should assist one another according to their ability; and here I may mention certain incidents which occurred within my own knowledge. How, for instance, he chanced upon Aristarchus wearing the look of one who suffered from a fit of the "depression," and thus accosted him.

Soc. You seem to have some trouble on your mind, Aristarchus; if so, you should share it with your friends. Perhaps together we might lighten the weight of it a little.

Aristarchus answered: Yes, Socrates, I am in sore straits indeed. Ever since the party strife declared itself in the city, what with the rush of people to Piraeus, and the wholesale banishments, I have been fairly at the mercy of my poor deserted female relatives. Sisters, nieces, cousins, they have all come flocking to me for protection. I have fourteen free-born souls, I tell you, under my single roof, and how are we to live? We can get nothing out of the soil—that is in the hands of the enemy; nothing from my house property, for there is scarcely a living soul left in the city; my furniture? no one will buy it; money? there is none to be borrowed—you would have a better chance to find it by looking for it on the road than to borrow it from a banker. Yes, Socrates, to stand by and see one's relatives die of hunger is hard indeed, and yet to feed so many at such a pinch impossible.

After he listened to the story, Socrates asked: How comes it that Ceramon, with so many mouths to feed, not only contrives to furnish himself and them with the necessaries of life, but to realize a handsome surplus, while you being in like plight are afraid you will one and all perish of starvation for want of the necessaries of life?

Ar. Why, bless your soul, do you not see he has only slaves and I have free-born souls to feed?

Soc. And which should you say were the better human beings, the free-born members of your household or Ceramon's slaves?

Ar. The free souls under my roof without a doubt.

Soc. Is it not a shame, then, that he with his baser folk to back him should be in easy circumstances, while you and your far superior household are in difficulties?

Ar. To be sure it is, when he has only a set of handicraftsmen to feed, and I my liberally-educated household.

Soc. What is a handicraftsman? Does not the term apply to all who can make any sort of useful product or commodity?

Ar. Certainly.

Soc. Barley meal is a useful product, is it not?

Ar. Pre-eminently so.

Soc. And loaves of bread?

Ar. No less.

Soc. Well, and what do you say to cloaks for men and for women—tunics, mantles, vests?

Ar. Yes, they are all highly useful commodities.

Soc. Then your household do not know how to make any of these?

Ar. On the contrary, I believe they can make them all.

Soc. Then you are not aware that by means of the manufacture of one of these alone—his barley meal store—Nausicydes not only maintains himself and his domestics, but many pigs and cattle besides, and realizes such large profits that he frequently contributes to the state benevolences; while there is Cyrebus, again, who, out of a bread factory, more than maintains the whole of his establishment, and lives in the lap of luxury; and Demeas of Collytus gets a livelihood out of a cloak business, and Menon as a mantua-maker, and so, again, more than half the Megarians by the making of vests.

Ar. Bless me, yes! They have got a set of barbarian fellows, whom they purchase and keep, to manufacture by forced labor whatever takes their fancy. My kinswomen, I need not tell you, are free-born ladies.

Soc. Then, on the ground that they are free-born and your kinswomen, you think that they ought to do nothing but eat and sleep? Or is it your opinion that people who live in this way—I speak of free-born people in general—lead happier lives, and are more to be congratulated, than those who give their time and attention to such useful arts of life as they are skilled in? Is this what you see in the world, that for the purpose of learning what it is well to know, and of recollecting the lessons taught, or with a view to health and strength of body, or for the sake of acquiring and preserving all that gives life its charm, idleness and inattention are found to be helpful, while work and study are simply a dead loss? Pray, when those relatives of yours were taught what you tell me they know, did they learn it as barren information which they would never turn to practical account, or, on the contrary, as something with which they were to be seriously concerned some day, and from which they were to reap advantage? Do human beings in general attain to well-tempered manhood by a course of idling, or by carefully attending to what will be of use? Which will help a man the more to grow in justice and uprightness, to be up and doing, or to sit with folded hands revolving the ways and means of existence? As things now stand, if I am not mistaken, there is no love lost between you. You cannot help feeling that they are costly to you, and they must see that you find them a burthen? This is a perilous state of affairs, in which hatred and bitterness have every prospect of increasing, while the pre-existing bond of affection is likely to be snapped.

But now, if only you allow them free scope for their energies, when you come to see how useful they can be, you will grow quite fond of them, and they, when they perceive that they can please you, will cling to their benefactor warmly. Thus, with the memory of former kindnesses made sweeter, you will increase the grace which flows from kindnesses tenfold; you will in consequence be knit in closer bonds of love and domesticity. If, indeed, they were called upon to do any shameful work, let them choose death rather than that; but now they know, it would seem, the very arts and accomplishments which are regarded as the loveliest and the most suitable for women; and the things which we know, any of us, are just those which we can best perform, that is to say, with ease and expedition; it is a joy to do them, and the result is beautiful. Do not hesitate, then, to initiate your friends in what will bring advantage to them and you alike; probably they will gladly respond to your summons.

Well, upon my word (Aristarchus answered), I like so well what you say, Socrates, that though hitherto I have not been disposed to borrow, knowing that when I had spent what I got I should not be in a condition to repay, I think I can now bring myself to do so in order to raise a fund for these works.

Thereupon a capital was provided; wools were purchased; the good man's relatives set to work, and even while they breakfasted they worked, and on and on till work was ended and they supped. Smiles took the place of frowns; they no longer looked askance with suspicion, but full into each other's eyes with happiness. They loved their kinsman for his kindness to them. He became attached to them as helpmates; and the end of it all was, he came to Socrates and told him with delight how matters fared; “and now,” he added, “they tax me with being the only drone in the house, who sit and eat the bread of idleness.”

To which Socrates: Why do not you tell them the fable of the dog? Once on a time, so goes the story, when beasts could speak, the sheep said to her master, “What a marvel is this, master, that to us, your own sheep, who provide you with fleeces and lambs and cheese, you give nothing, save only what we may nibble off earth's bosom; but with this dog of yours, who provides you with nothing of the sort, you share the very meat out of your mouth." When the dog heard these words, he answered promptly, "Ay, in good sooth, for is it not I who keep you safe and sound, you sheep, so that you are not stolen by man nor harried by wolves; since, if I did not keep watch over you, you would not be able so much as to graze afield, fearing to be destroyed." And so, says the tale, the sheep had to admit that the dog was rightly preferred to themselves in honor. And so do you tell your flock yonder that like the dog in the fable you are their guardian and overseer, and it is thanks to you that they are protected from evil and evildoers, so that they work their work and live their lives in blissful security.

## VIII

At another time chancing upon an old friend whom he had not seen for a long while, he greeted him thus.

Soc. What quarter of the world do you hail from, Eutherus?

The other answered: From abroad, just before the close of the war; but at present from the city itself. You see, since we have been denuded of our possessions across the frontier, and my father left me nothing in Attica, I must needs bide at home, and provide myself with the necessaries of life by means of bodily toil, which seems preferable to begging from another, especially as I have no security on which to raise a loan.

Soc. And how long do you expect your body to be equal to providing the necessaries of life for hire?

Euth. Goodness knows, Socrates—not for long.

Soc. And when you find yourself an old man, expenses will not diminish, and yet no one will care to pay you for the labor of your hands.

Euth. That is true.

Soc. Would it not be better then to apply yourself at once to such work as will stand you in good stead when you are old—that is, address yourself to some large proprietor who needs an assistant in managing his estate? By superintending his works, helping to get in his crops, and guarding his property in general, you will be a benefit to the estate and be benefited in return.

I could not endure the yoke of slavery, Socrates! (he exclaimed).

Soc. And yet the heads of departments in a state are not regarded as adopting the badge of slavery because they manage the public property, but as having attained a higher degree of freedom rather.

Euth. In a word, Socrates, the idea of being held to account to another is not at all to my taste.

Soc. And yet, Eutherus, it would be hard to find a work which did not involve some liability to account; in fact it is difficult to do anything without some mistake or other, and no less difficult, if you should succeed in doing it immaculately, to escape all unfriendly criticism. I wonder now whether you find it easy to get through your present occupations entirely without reproach. No? Let me tell you what you should do. You should avoid censorious persons and attach yourself to the considerate and kind-hearted, and in all your affairs accept with a good grace what you can and decline what you feel you cannot do. Whatever it be, do it heart and soul, and make it your finest work. There lies the method at once to silence fault-finders and to minister help to your own difficulties. Life will flow smoothly, risks will be diminished, provision against old age secured.

## IX

At another time, as I am aware, he had heard a remark made by Crito that life at Athens was no easy matter for a man who wished to mind his own affairs.

As, for instance, at this moment (Crito proceeded) there are a set of fellows threatening me with lawsuits, not because they have any misdemeanor to allege against me, but simply under the conviction that I will sooner pay a sum of money than be troubled further.

To which Socrates replied: Tell me, Crito, you keep dogs, do you not, to ward off wolves from your flocks?

Cr. Certainly; it pays to do so.

Soc. Then why do you not keep a watchman willing and competent to ward off this pack of people who seek to injure you?

I should not at all mind (he answered), if I were not afraid he might turn again and rend his keeper.

What! (rejoined Socrates), do you not see that to gratify a man like yourself is far pleasanter as a matter of self-interest than to quarrel with you? You may be sure there are plenty of people here who will take the greatest pride in making you their friend.

Accordingly, they sought out Archedemus, a practical man with a clever tongue in his head but poor; the fact being, he was not the sort to make gain by hook or by crook, but a lover of honesty and of too good a nature himself to make his living as a pettifogger. Crito would then take the opportunity of times of harvesting and put aside small presents for Achedemus of corn and oil, or wine, or wool, or any other of the farm produce forming the staple commodities of life, or he would invite him to a sacrificial feast, and otherwise pay him marked attention. Archedemus, feeling that he had in Crito's house a harbor of refuge, could not make too much of his patron, and ere long he had hunted up a long list of iniquities which could be lodged against Crito's pettifogging persecutors themselves, and not only their numerous crimes but their numerous enemies; and presently he prosecuted one of them in a public suit, where sentence would be given against him “what to suffer or what to pay.” The accused, conscious as he was of many rascally deeds, did all he could to be quit of Archedemus, but Archedemus was not to be got rid of. He held on until he had made the informer not only loose his hold of Crito but pay himself a sum of money; and now that Archedemus had achieved this and other similar victories, it is easy to guess what followed. It was just as when some shepherd has got a very good dog, all the other shepherds wish to lodge their flocks in his neighborhood that they too may reap the benefit of him. So a number of Crito's friends came begging him to allow Archedemus to be their guardian also, and Archedemus was overjoyed to do something to gratify Crito, and so it came about that not only Crito abode in peace, but his friends likewise. If any of those people with whom Archedemus was not on the best of terms were disposed to throw it in his teeth that he accepted his patron's benefits and paid in flatteries, he had a ready retort: “Answer me this question—which is the more scandalous, to accept kindnesses from honest folk and to repay them, with the result that I make such people my friends but quarrel with knaves, or to make enemies of honorable gentlemen by attempts to do them wrong, with the off-chance indeed of winning the friendship of some scamps in return for my co-operation, but the certainty of losing in the tone of my acquaintances?”

The net result of the whole proceedings was that Archedemus was now Crito's right hand, and by the rest of Crito's friends he was held in honor.

## X

Again I may cite, as known to myself, the following discussion; the arguments were addressed to Diodorus, one of his companions. The master said:

Tell me, Diodorus, if one of your slaves runs away, are you at pains to recover him?

More than that (Diodorus answered), I summon others to my aid and I have a reward cried for his recovery.

Soc. Well, if one of your domestics is sick, do you tend him and call in the doctors to save his life?

Diod. Decidedly I do.

Soc. And if an intimate acquaintance who is far more precious to you than any of your household slaves is about to perish of want, you would think it incumbent on you to take pains to save his life? Well! now you know without my telling you that Hermogenes is not made of wood or stone. If you helped him he would be ashamed not to pay you in kind. And yet—the opportunity of possessing a willing, kindly, and trusty assistant well fitted to do your bidding, and not merely that, but capable of originating useful ideas himself, with a certain forecast of mind and judgment—I say such a man is worth dozens of slaves. Good economists tell us that when a precious article may be got at a low price we ought to buy. And nowadays when times are so bad it is possible to get good friends exceedingly cheap.

Diodorus answered: You are quite right, Socrates; bid Hermogenes come to me.

Soc. Bid Hermogenes come to you!—not I indeed! since for aught I can understand you are no better entitled to summon him that to go to him yourself, nor is the advantage more on his side than your own.

Thus Diodorus went off in a trice to seek Hermogenes, and at no great outlay won to himself a friend—a friend whose one concern it now was to discover how, by word or deed, he might help and gladden Diodorus.

# BOOK III

## I

Aspirants to honor and distinction derived similar help from Socrates, who in each case stimulated in them a persevering assiduity towards their several aims, as the following narratives tend to show. He had heard on one occasion of the arrival in Athens of Dionysodorus, who professed to teach the whole duty of a general. Accordingly he remarked to one of those who were with him—a young man whose anxiety to obtain the office of Strategos was no secret to him:

Soc. It would be monstrous on the part of any one who sought to become a general to throw away the slightest opportunity of learning the duties of the office. Such a person, I should say, would deserve to be fined and punished by the state far more than the charlatan who without having learnt the art of a sculptor undertakes a contract to carve a statue. Considering that the whole fortunes of the state are entrusted to the general during a war, with all its incidental peril, it is only reasonable to anticipate that great blessings or great misfortunes will result in proportion to the success or bungling of that officer. I appeal to you, young sir, do you not agree that a candidate who, while taking pains to be elected neglects to learn the duties of the office, would richly deserve to be fined?

With arguments like these he persuaded the young man to go and take lessons. After he had gone through the course he came back, and Socrates proceeded playfully to banter him.

Soc. Behold our young friend, sirs, as Homer says of Agamemnon, of mien majesty, so he; does he not seem to move more majestically, like one who has studied to be a general? Of course, just as a man who has learned to play the harp is a harper, even if he never touch the instrument, or as one who has studied medicine is a physician, though he does not practice, so our friend here from this time forward is now and ever shall be a general, even though he does not receive a vote at the elections. But the dunce who has not the science is neither general nor doctor, no, not even if the whole world appointed him. But (he proceeded, turning to the youth), in case any of us should ever find ourselves captain or colonel under you, to give us some smattering of the science of war, what did the professor take as the starting-point of his instruction in generalship? Please inform us.

Then the young man: He began where he ended; he taught me tactics—tactics and nothing else.

Yet surely (replied Socrates) that is only an infinitesimal part of generalship. A general must be ready in furnishing the material of war: in providing the commissariat for his troops; quick in devices, he must be full of practical resource; nothing must escape his eye or tax his endurance; he must be shrewd, and ready of wit, a combination at once of clemency and fierceness, of simplicity and of insidious craft; he must play the part of watchman, of robber; now prodigal as a spendthrift, and again close-fisted as a miser, the bounty of his munificence must be equaled by the narrowness of his greed; impregnable in defense, a very dare-devil in attack—these and many other qualities must he possess who is to make a good general and minister of war; they must come to him by gift of nature or through science. No doubt it is a grand thing also to be a tactician, since there is all the difference in the world between an army properly handled in the field and the same in disorder; just as stones and bricks, woodwork and tiles, tumbled together in a heap are of no use at all, but arrange them in a certain order—at bottom and atop materials which will not crumble or rot, such as stones and earthen tiles, and in the middle between the two put bricks and woodwork, with an eye to architectural principle, and finally you get a valuable possession—to wit, a dwelling-place.

The simile is very apt, Socrates (replied the youth), for in battle, too, the rule is to draw up the best men in front and rear, with those of inferior quality between, where they may be led on by the former and pushed on by the hinder.

Soc. Very good, no doubt, if the professor taught you to distinguish good and bad; but if not, where is the use of your learning? It would scarcely help you, would it, to be told to arrange coins in piles, the best coins at top and bottom and the worst in the middle, unless you were first taught to distinguish real from counterfeit.

The Youth. Well no, upon my word, he did not teach us that, so that the task of distinguishing between good and bad must devolve on ourselves.

Soc. Well, shall we see, then, how we may best avoid making blunders between them?

I am ready (replied the youth).

Soc. Well then! Let us suppose we are marauders, and the task imposed upon us is to carry off some bullion; it will be a right disposition of our forces if we place in the vanguard those who are the greediest of gain?

The Youth. I should think so.

Soc. Then what if there is danger to be faced? Shall the vanguard consist of men who are greediest of honor?

The Youth. It is these, at any rate, who will face danger for the sake of praise and glory. Fortunately such people are not hid away in a corner; they shine forth conspicuous everywhere, and are easy to be discovered.

Soc. But tell me, did he teach you how to draw up troops in general, or specifically where and how to apply each particular kind of tactical arrangement?

The Youth. Nothing of the sort.

Soc. And yet there are and must be innumerable circumstances in which the same ordering of march or battle will be out of place.

The Youth. I assure you he did not draw any of these fine distinctions.

He did not, did not he? (he answered). Bless me! Go back to him again, then, and ply him with questions; if he really has the science, and is not lost to all sense of shame, he will blush to have taken your money and then to have sent you away empty.

## II

At another time he fell in with a man who had been chosen general and minister of war, and thus accosted him.

Soc. Why did Homer, think you, designate Agamemnon "shepherd of the peoples"? Was it possibly to show that, even as a shepherd must care for his sheep and see that they are safe and have all things needful, and that the objects of their rearing be secured, so also must a general take care that his soldiers are safe and have their supplies, and attain the objects of their soldiering? Which last is that they may get the mastery of their enemies, and so add to their own good fortune and happiness; or tell me, what made him praise Agamemnon, saying—

He is both a good king and a warrior bold?

Did he mean, perhaps, to imply that he would be a 'warrior bold,' not merely in standing alone and bravely battling against the foe, but as inspiring the whole of his host with like prowess; and by a 'good king,' not merely one who should stand forth gallantly to protect his own life, but who should be the source of happiness to all over whom he reigns? Since a man is not chosen king in order to take heed to himself, albeit nobly, but that those who chose him may attain to happiness through him. And why do men go soldiering except to ameliorate existence? and to this end they choose their generals that they may find in them guides to the goal in question. He, then, who undertakes that office is bound to procure for those who choose him the thing they seek for. And indeed it were not easy to find any nobler ambition than this, or aught ignobler than its opposite.

After such sort he handled the question, what is the virtue of a good leader? and by shredding off all superficial qualities, laid bare as the kernel of the matter that it is the function of every leader to make those happy whom he may be called upon to lead.

## III

The following conversation with a youth who had just been elected hipparch (or commandant of cavalry), I can also vouch for.

Soc. Can you tell us what set you wishing to be a general of cavalry, young sir? What was your object? I suppose it was not simply to ride at the head of the “knights,” an honor not denied to the mounted archers, who ride even in front of the generals themselves?

Hipp. You are right.

Soc. No more was it for the sake merely of public notoriety, since a madman might boast of that fatal distinction.

Hipp. You are right again.

Soc. Is this possibly the explanation? you think to improve the cavalry—your aim would be to hand it over to the state in better condition than you find it; and, if the cavalry chanced to be called out, you at their head would be the cause of some good thing to Athens?

Hipp. Most certainly.

Soc. Well, and a noble ambition too, upon my word—if you can achieve your object. The command to which you are appointed concerns horses and riders, does it not?

Hipp. It does, no doubt.

Soc. Come then, will you explain to us first how you propose to improve the horses.

Hipp. Ah, that will scarcely form part of my business, I fancy. Each trooper is personally responsible for the condition of his horse.

Soc. But suppose, when they present themselves and their horses, you find that some have brought beasts with bad feet or legs or otherwise infirm, and others such ill-fed jades that they cannot keep up on the march; others, again, brutes so ill broken and unmanageable that they will not keep their place in the ranks, and others such desperate plungers that they cannot be got to any place in the ranks at all. What becomes of your cavalry force then? How will you charge at the head of such a troop, and win glory for the state?

Hipp. You are right. I will try to look after the horses to my utmost.

Soc. Well, and will you not lay your hand to improve the men themselves?

Hipp. I will.

Soc. The first thing will be to make them expert in mounting their chargers?

Hipp. That certainly, for if any of them were dismounted he would then have a better chance of saving himself.

Soc. Well, but when it comes to the hazard of engagement, what will you do then? Give orders to draw the enemy down to the sandy ground where you are accustomed to maneuver, or Endeavour beforehand to put your men through their practice on ground resembling a real battlefield?

Hipp. That would be better, no doubt.

Soc. Well, shall you regard it as a part of your duty to see that as many of your men as possible can take aim and shoot on horseback?

(7) Cf. “Hipparch,” i. 21.

Hipp. It will be better, certainly.

Soc. And have you thought how to whet the courage of your troopers? to kindle in them rage to meet the enemy?—which things are but stimulants to make stout hearts stouter?

Hipp. If I have not done so hitherto, I will try to make up for lost time now.

Soc. And have you troubled your head at all to consider how you are to secure the obedience of your men? for without that not one particle of good will you get, for all your horses and troopers so brave and so stout.

Hipp. That is a true saying; but how, Socrates, should a man best bring them to this virtue?

Soc. I presume you know that in any business whatever, people are more apt to follow the lead of those whom they look upon as adepts; thus in case of sickness they are readiest to obey him whom they regard as the cleverest physician; and so on a voyage the most skilful pilot; in matters agricultural the best farmer, and so forth.

Hipp. Yes, certainly.

Soc. Then in this matter of cavalry also we may reasonably suppose that he who is looked upon as knowing his business best will command the readiest obedience.

Hipp. If, then, I can prove to my troopers that I am better than all of them, will that suffice to win their obedience?

Soc. Yes, if along with that you can teach them that obedience to you brings greater glory and surer safety to themselves.

Hipp. How am I to teach them that?

Soc. Upon my word! How are you to teach them that? Far more easily, I take it, than if you had to teach them that bad things are better than good, and more advantageous to boot.

Hipp. I suppose you mean that, besides his other qualifications a commandant of cavalry must have command of speech and argument?

Soc. Were you under the impression that the commandant was not to open his mouth? Did it never occur to you that all the noblest things which custom compels us to learn, and to which indeed we owe our knowledge of life, have all been learned by means of speech and reason; and if there be any other noble learning which a man may learn, it is this same reason whereby he learns it; and the best teachers are those who have the freest command of thought and language, and those that have the best knowledge of the most serious things are the most brilliant masters of disputation. Again, have you not observed that whenever this city of ours fits out one of her choruses—such as that, for instance, which is sent to Delos—there is nothing elsewhere from any quarter of the world which can compete with it; nor will you find in any other state collected so fair a flower of manhood as in Athens?

Hipp. You say truly.

Soc. But for all that, it is not in sweetness of voice that the Athenians differ from the rest of the world so much, nor in stature of body or strength of limb, but in ambition and that love of honor which most of all gives a keen edge to the spirit in the pursuit of things lovely and of high esteem.

Hipp. That, too, is a true saying.

Soc. Do you not think, then, that if a man devoted himself to our cavalry also, here in Athens, we should far outstrip the rest of the world, whether in the furnishing of arms and horses, or in orderliness of battle-array, or in eager hazardous encounter with the foe, if only we could persuade ourselves that by so doing we should obtain honor and distinction?

Hipp. It is reasonable to think so.

Soc. Have no hesitation, therefore, but try to guide your men into this path, whence you yourself, and through you your fellow-citizens, will reap advantage.

Yes, in good sooth, I will try (he answered).

## IV

At another time, seeing Nicomachides on his way back from the elections (of magistrates), he asked him: Who are elected generals, Nicomachides?

And he: Is it not just like them, these citizens of Athens—just like them, I say—to go and elect, not me, who ever since my name first appeared on the muster-roll have literally worn myself out with military service—now as a captain, now as a colonel—and have received all these wounds from the enemy, look you! (at the same time, and suiting the action to the word, he bared his arms and proceeded to show the scars of ancient wounds)—they elect not me (he went on), but, if you please, Antisthenes! who never served as a hoplite in his life nor in the cavalry ever made a brilliant stroke, that

I ever heard tell of; no! in fact, he has got no science at all, I take it, except to amass stores of wealth.

But still (returned Socrates), surely that is one point in his favour—he ought to be able to provide the troops with supplies.

Nic. Well, for the matter of that, merchants are good hands at collecting stores; but it does not follow that a merchant or trader will be able to command an army.

But (rejoined Socrates) Antisthenes is a man of great pertinacity, who insists on winning, and that is a very necessary quality in a general. Do not you see how each time he has been choragus he has been successful with one chorus after another?

Nic. Bless me! yes; but there is a wide difference between standing at the head of a band of singers and dancers and a troop of soldiers.

Soc. Still, without any practical skill in singing or in the training of a chorus, Antisthenes somehow had the art to select the greatest proficients in both.

Nic. Yes, and by the same reasoning we are to infer that on a campaign he will find proficients, some to marshal the troops for him and others to fight his battles?

Soc. Just so. If in matters military he only exhibits the same skill in selecting the best hands as he has shown in matters of the chorus, it is highly probable he will here also bear away the palm of victory; and we may presume that if he expended so much to win a choric victory with a single tribe, he will be ready to expend more to secure a victory in war with the whole state to back him.

Nic. Do you really mean, Socrates, that it is the function of the same man to provide efficient choruses and to act as commander-in-chief?

Soc. I mean this, that, given a man knows what he needs to provide, and has the skill to do so, no matter what the department of things may be—house or city or army—you will find him a good chief and director of the same.

Then Nicomachides: Upon my word, Socrates, I should never have expected to hear you say that a good housekeeper and steward of an estate would make a good general.

Soc. Come then, suppose we examine their respective duties, and so determine whether they are the same or different.

Nic. Let us do so.

Soc. Well then, is it not a common duty of both to procure the ready obedience of those under them to their orders?

Nic. Certainly.

Soc. And also to assign to those best qualified to perform them their distinctive tasks?

That, too, belongs to both alike (he answered).

Soc. Again, to chastise the bad and reward the good belongs to both alike, methinks?

Nic. Decidedly.

Soc. And to win the kindly feeling of their subordinates must surely be the noble ambition of both?

That too (he answered).

Soc. And do you consider it to the interest of both alike to win the adherence of supporters and allies?

Nic. Without a doubt.

Soc. And does it not closely concern them both to be good guardians of their respective charges?

Nic. Very much so.

Soc. Then it equally concerns them both to be painstaking and prodigal of toil in all their doings?

Nic. Yes, all these duties belong to both alike, but the parallel ends when you come to actual fighting.

Soc. Yet they are both sure to meet with enemies?

Nic. There is no doubt about that.

Soc. Then is it not to the interest of both to get the upper hand of these?

Nic. Certainly; but you omit to tell us what service organization and the art of management will render when it comes to actual fighting.

Soc. Why, it is just then, I presume, it will be of most service, for the good economist knows that nothing is so advantageous or so lucrative as victory in battle, or to put it negatively, nothing so disastrous and expensive as defeat. He will enthusiastically seek out and provide everything conducive to victory, he will painstakingly discover and guard against all that tends to defeat, and when satisfied that all is ready and ripe for victory he will deliver battle energetically, and what is equally important, until the hour of final preparation has arrived, he will be cautious to deliver battle. Do not despise men of economic genius, Nicomachides; the difference between the devotion requisite to private affairs and to affairs of state is merely one of quantity. For the rest the parallel holds strictly, and in this respect pre-eminently, that both are concerned with human instruments: which human beings, moreover, are of one type and temperament, whether we speak of devotion to public affairs or of the administration of private property. To fare well in either case is given to those who know the secret of dealing with humanity, whereas the absence of that knowledge will as certainly imply in either case a fatal note of discord.

## V

A conversation held with Pericles the son of the great statesman may here be introduced. Socrates began:

I am looking forward, I must tell you, Pericles, to a great improvement in our military affairs when you are minister of war. The prestige of Athens, I hope, will rise; we shall gain the mastery over our enemies.

Pericles replied: I devoutly wish your words might be fulfilled, but how this happy result is to be obtained, I am at a loss to discover.

Shall we (Socrates continued), shall we balance the arguments for and against, and consider to what extent the possibility does exist?

Pray let us do so (he answered).

Soc. Well then, you know that in point of numbers the Athenians are not inferior to the Boeotians?

Per. Yes, I am aware of that.

Soc. And do you think the Boeotians could furnish a better pick of fine healthy men than the Athenians?

Per. I think we should very well hold our own in that respect.

Soc. And which of the two would you take to be the more united people—the friendlier among themselves?

Per. The Athenians, I should say, for so many sections of the Boeotians, resenting the selfish policy of Thebes, are ill disposed to that power, but at Athens I see nothing of the sort.

Soc. But perhaps you will say that there is no people more jealous of honor or haughtier in spirit. And these feelings are no weak spurs to quicken even a dull spirit to hazard all for glory's sake and fatherland.

Per. Nor is there much fault to find with Athenians in these respects.

Soc. And if we turn to consider the fair deeds of ancestry, to no people besides ourselves belongs so rich a heritage of stimulating memories, whereby so many of us are stirred to pursue virtue with devotion and to show ourselves in our turn also men of velour like our sires.

Per. All that you say, Socrates, is most true, but do you observe that ever since the disaster of the thousand under Tolmides at Lebadeia, coupled with that under Hippocrates at Delium, the prestige of Athens by comparison with the Boeotians has been lowered, while the spirit of Thebes as against Athens had been correspondingly exalted, so that those Boeotians who in old days did not venture to give battle to the Athenians even in their own territory unless they had the Lacedaemonians and the rest of the Peloponnesians to help them, do nowadays threaten to make an incursion into Attica single-handed; and the Athenians, who formerly, if they had to deal with the Boeotians only, made havoc of their territory, are now afraid the Boeotians may some day harry Attica.

To which Socrates: Yes, I perceive that this is so, but it seems to me that the state was never more tractably disposed, never so ripe for a really good leader, as to-day. For if boldness be the parent of carelessness, laxity, and insubordination, it is the part of fear to make people more disposed to application, obedience, and good order. A proof of which you may discover in the behavior of people on shipboard. It is in seasons of calm weather when there is nothing to fear that disorder may be said to reign, but as soon as there is apprehension of a storm, or an enemy in sight, the scene changes; not only is each word of command obeyed, but there is a hush of silent expectation; the mariners wait to catch the next signal like an orchestra with eyes upon the leader.

Per. But indeed, given that now is the opportunity to take obedience at the flood, it is high time also to explain by what means we are to rekindle in the hearts of our countrymen the old fires—the passionate longing for antique velour, for the glory and the wellbeing of the days of old.

Well (proceeded Socrates), supposing we wished them to lay claim to certain material wealth now held by others, we could not better stimulate them to lay hands on the objects coveted than by showing them that these were ancestral possessions to which they had a natural right. But since our object is that they should set their hearts on virtuous pre-eminence, we must prove to them that such headship combined with virtue is an old time-honored heritage which pertains to them beyond all others, and that if they strive earnestly after it they will soon out-top the world.

Por. How are we to inculcate this lesson?

Soc. I think by reminding them of a fact already registered in their minds, that the oldest of our ancestors whose names are known to us were also the bravest of heroes.

Per. I suppose you refer to that judgment of the gods which, for their virtue's sake, Cecrops and his followers were called on to decide?

Soc. Yes, I refer to that and to the birth and rearing of Erectheus, and also to the war which in his days was waged to stay the tide of invasion from the whole adjoining continent; and that other war in the days of the Heraclidae against the men of Peloponnese; and that series of battles fought in the days of Theseus—in all which the virtuous pre-eminence of our ancestry above the men of their own times was made manifest. Or, if you please, we may come down to things of a later date, which their descendants and the heroes of days not so long anterior to our own wrought in the struggle with the lords of Asia, nay of Europe also, as far as Macedonia: a people possessing a power and means of attack far exceeding any who had gone before—who, moreover, had accomplished the doughtiest deeds. These things the men of Athens wrought partly single-handed, and partly as sharers with the Peloponnesians in laurels won by land and sea. Heroes were these men also, far outshining, as tradition tells us, the peoples of their time.

Per. Yes, so runs the story of their heroism.

Soc. Therefore it is that, amidst the many changes of inhabitants, and the migrations which have, wave after wave, swept over Hellas, these maintained themselves in their own land, unmoved; so that it was a common thing for others to turn to them as to a court of appeal on points of right, or to flee to Athens as a harbor of refuge from the hand of the oppressor.

Then Pericles: And the wonder to me, Socrates, is how our city ever came to decline.

Soc. I think we are victims of our own success. Like some athlete, whose facile preponderance in the arena has betrayed him into laxity until he eventually succumbs to punier antagonists, so we Athenians, in the plenitude of our superiority, have neglected ourselves and are become degenerate.

Per. What then ought we to do now to recover our former virtue?

Soc. There need be no mystery about that, I think. We can rediscover the institutions of our forefathers—applying them to the regulation of our lives with something of their precision, and not improbably with like success; or we can imitate those who stand at the front of affairs to-day, adapting to ourselves their rule of life, in which case, if we live up to the standard of our models, we may hope at least to rival their excellence, or, by a more conscientious adherence to what they aim at, rise superior.

You would seem to suggest (he answered) that the spirit of beautiful and brave manhood has taken wings and left our city; as, for instance, when will Athenians, like the Lacedaemonians, reverence old age—the Athenian, who takes his own father as a starting-point for the contempt he pours upon grey hairs? When will he pay as strict an attention to the body, who is not content with neglecting a good habit, but laughs to scorn those who are careful in this matter? When shall we Athenians so obey our magistrates—we who take a pride, as it were, in despising authority? When, once more, shall we be united as a people—we who, instead of combining to promote common interests, delight in blackening each other's characters, envying one another more than we envy all the world besides; and—which is our worst failing—who, in private and public intercourse alike, are torn by dissension and are caught in a maze of litigation, and prefer to make capital out of our neighbor’s difficulties rather than to render natural assistance? To make our conduct consistent, indeed, we treat our national interests no better than if they were the concerns of some foreign state; we make them bones of contention to wrangle over, and rejoice in nothing so much as in possessing means and ability to indulge these tastes. From this hotbed is engendered in the state a spirit of blind folly and cowardice, and in the hearts of the citizens spreads a tangle of hatred and mutual hostility which, as I often shudder to think, will some day cause some disaster to befall the state greater than it can bear.

Do not (replied Socrates), do not, I pray you, permit yourself to believe that Athenians are smitten with so incurable a depravity. Do you not observe their discipline in all naval matters? Look at their prompt and orderly obedience to the superintendents at the gymnastic contests, their quite unrivalled subservience to their teachers in the training of our choruses.

Yes (he answered), there's the wonder of it; to think that all those good people should so obey their leaders, but that our hoplites and our cavalry, who may be supposed to rank before the rest of the citizens in excellence of manhood, should be so entirely unamenable to discipline.

Then Socrates: Well, but the council which sits on Areopagos is composed of citizens of approved character, is it not?

Certainly (he answered).

Soc. Then can you name any similar body, judicial or executive, trying cases or transacting other business with greater honor, stricter legality, higher dignity, or more impartial justice?

No, I have no fault to find on that score (he answered).

Soc. Then we ought not to despair as though all sense of orderliness and good discipline had died out of our countrymen.

Still (he answered), if it is not to harp upon one string, I maintain that in military service, where, if anywhere, sobriety and temperance, orderliness and good discipline are needed, none of these essentials receives any attention.

May it not perhaps be (asked Socrates) that in this department they are officered by those who have the least knowledge? Do you not notice, to take the case of harp-players, choric performers, dancers, and the like, that no one would ever dream of leading if he lacked the requisite knowledge? and the same holds of wrestlers or pancratiasts.

Moreover, while in these cases any one in command can tell you where he got the elementary knowledge of what he presides over, most generals are amateurs and improvisers.

I do not at all suppose that you are one of that sort. I believe you could give as clear an account of your schooling in strategy as you could in the matter of wrestling. No doubt you have got at first hand many of your father's “rules for generalship,” which you carefully preserve, besides having collected many others from every quarter whence it was possible to pick up any knowledge which would be of use to a future general. Again, I feel sure you are deeply concerned to escape even unconscious ignorance of anything which will be serviceable to you in so high an office; and if you detect in yourself any ignorance, you turn to those who have knowledge in these matters (sparing neither gifts nor gratitude) to supplement your ignorance by their knowledge and to secure their help.

To which Pericles: I am not so blind, Socrates, as to imagine you say these words under the idea that I am truly so careful in these matters; but rather your object is to teach me that the would-be general must make such things his care. I admit in any case all you say.

Socrates proceeded: Has it ever caught your observation, Pericles, that a high mountain barrier stretches like a bulwark in front of our country down towards Boeotia—cleft, moreover, by narrow and precipitous passes, the only avenues into the heart of Attica, which lies engirdled by a ring of natural fortresses?

Per. Certainly I have.

Soc. Well, and have you ever heard tell of the Mysians and Pisidians living within the territory of the great king, who, inside their mountain fortresses, lightly armed, are able to rush down and inflict much injury on the king's territory by their raids, while preserving their own freedom?

Per. Yes, the circumstance is not new to me.

And do you not think (added Socrates) that a corps of young able-bodied Athenians, accoutered with lighter arms, and holding our natural mountain rampart in possession, would prove at once a thorn in the enemy's side offensively, while defensively they would form a splendid bulwark to protect the country?

To which Pericles: I think, Socrates, these would be all useful measures, decidedly.

If, then (replied Socrates), these suggestions meet your approbation, try, O best of men, to realize them—if you can carry out a portion of them, it will be an honor to yourself and a blessing to the state; while, if you fail in any point, there will be no damage done to the city nor discredit to yourself.

## VI

Glaucon, the son of Ariston, had conceived such an ardor to gain the headship of the state that nothing could hinder him but he must deliver a course of public speeches, though he had not yet reached the age of twenty. His friends and relatives tried in vain to stop him making himself ridiculous and being dragged down from the bema. Socrates, who took a kindly interest in the youth for the sake of Charmides the son of Glaucon, and of Plato, alone succeeded in restraining him. It happened thus. He fell in with him, and first of all, to get him to listen, detained him by some such remarks as the following:

Ah, Glaucon (he exclaimed), so you have determined to become prime minister?

Glauc. Yes, Socrates, I have.

Soc. And what a noble aim! if aught human ever deserved to be called noble; since if you succeed in your design, it follows, as the night the day, you will be able not only to gratify your every wish, but you will be in a position to benefit your friends, you will raise up your father's house, you will exalt your fatherland, you will become a name thrice famous in the city first, and next in Hellas, and lastly even among barbarians perhaps, like Themistocles; but be it here or be it there, wherever you be, you will be the observed of all beholders.

The heart of Glaucon swelled with pride as he drank in the words, and gladly he stayed to listen.

Presently Socrates proceeded: Then this is clear, Glaucon, is it not? that you must needs benefit the city, since you desire to reap her honors?

Glauc. Undoubtedly.

Then, by all that is sacred (Socrates continued), do not keep us in the dark, but tell us in what way do you propose first to benefit the state? what is your starting-point? When Glaucon remained with sealed lips, as if he were now for the first time debating what this starting-point should be, Socrates continued: I presume, if you wished to improve a friend's estate, you would Endeavour to do so by adding to its wealth, would you not? So here, maybe, you will try to add to the wealth of the state?

Most decidedly (he answered).

Soc. And we may take it the state will grow wealthier in proportion as her revenues increase?

Glauc. That seems probable, at any rate.

Soc. Then would you kindly tell us from what sources the revenues of the state are at present derived, and what is their present magnitude? No doubt you have gone carefully into the question, so that if any of these are failing you may make up the deficit, or if neglected for any reason, make some new provision.

Glauc. Nay, to speak the truth, these are matters I have not thoroughly gone into.

Never mind (he said) if you have omitted the point; but you might oblige us by running through the items or heads of expenditure. Obviously you propose to remove all those which are superfluous?

Glauc. Well, no. Upon my word I have not had time to look into that side of the matter either as yet.

Soc. Then we will postpone for the present the problem of making the state wealthier; obviously without knowing the outgoings and the incomings it would be impossible to deal with the matter seriously.

But, Socrates (Glaucon remarked), it is possible to enrich the state out of the pockets of her enemies!

Yes, to be sure, considerably (answered Socrates), in the event of getting the better of them; but in the event of being worsted, it is also possible to lose what we have got.

A true observation (he replied).

And therefore (proceeded Socrates), before he makes up his mind with what enemy to go to war, a statesman should know the relative powers of his own city and the adversary's, so that, in case the superiority be on his own side, he may throw the weight of his advice into the scale of undertaking war; but if the opposite he may plead in favour of exercising caution.

You are right (he answered).

Soc. Then would you for our benefit enumerate the land and naval forces first of Athens and then of our opponents?

Glauc. Pardon me. I could not tell you them off-hand at a moment's notice.

Or (added Socrates), if you have got the figures on paper, you might produce them. I cannot tell how anxious I am to hear your statement.

Glauc. No, I assure you, I have not got them even on paper yet.

Soc. Well then, we will defer tending advice on the topic of peace or war, in a maiden speech at any rate. I can understand that, owing to the magnitude of the questions, in these early days of your ministry you have not yet fully examined them. But come, I am sure that you have studied the defenses of the country, at all events, and you know exactly how many forts and outposts are serviceable and how many are not; you can tell us which garrisons are strong enough and which defective; and you are prepared to throw in the weight of your advice in favour of increasing the serviceable outposts and sweeping away those that are superfluous?

Glauc. Yes, sweep them all away, that's my advice; for any good that is likely to come of them! Defenses indeed! so maintained that the property of the rural districts is simply pilfered.

But suppose you sweep away the outposts (he asked), may not something worse, think you, be the consequence? will not sheer plundering be free to any ruffian who likes?... But may I ask is this judgment the result of personal inspection? have you gone yourself and examined the defenses? or how do you know that they are all maintained as you say?

Glauc. I conjecture that it is so.

Soc. Well then, until we have got beyond the region of conjecture shall we defer giving advice on the matter? (It will be time enough when we know the facts.)

Possibly it would be better to wait till then (replied Glaucon).

Soc. Then there are the mines, but, of course, I am aware that you have not visited them in person, so as to be able to say why they are less productive than formerly.

Well, no; I have never been there myself (he answered).

Soc. No, Heaven help us! an unhealthy district by all accounts; so that, when the moment for advice on that topic arrives, you will have an excuse ready to hand.

I see you are making fun of me (Glaucon answered).

Soc. Well, but here is a point, I am sure, which you have not neglected. No, you will have thoroughly gone into it, and you can tell us. For how long a time could the corn supplies from the country districts support the city? how much is requisite for a single year, so that the city may not run short of this prime necessary, before you are well aware; but on the contrary you with your full knowledge will be in a position to give advice on so vital a question, to the aid or may be the salvation of your country?

It is a colossal business this (Glaucon answered), if I am to be obliged to give attention to all these details.

Soc. On the other hand, a man could not even manage his own house or his estate well, without, in the first place, knowing what he requires, and, in the second place, taking pains, item by item, to supply his wants. But since this city consists of more than ten thousand houses, and it is not easy to pay minute attention to so many all at once, how is it you did not practice yourself by trying to augment the resources of one at any rate of these—I mean your own uncle's? The service would not be thrown away. Then if your strength suffices in the single case you might take in hand a larger number; but if you fail to relieve one, how could you possibly hope to succeed with many? How absurd for a man, if he cannot carry half a hundredweight, to attempt to carry a whole!

Glauc. Nay, for my part, I am willing enough to assist my uncle's house, if my uncle would only be persuaded to listen to my advice.

Soc. Then, when you cannot persuade your uncle, do you imagine you will be able to make the whole Athenian people, uncle and all, obey you? Be careful, Glaucon (he added), lest in your thirst for glory and high repute you come to the opposite. Do you not see how dangerous it is for a man to speak or act beyond the range of his knowledge? To take the cases known to you of people whose conversation or conduct clearly transcends these limits: should you say they gain more praise or more blame on that account? Are they admired the rather or despised? Or, again, consider those who do know what they say and what they do; and you will find, I venture to say, that in every sort of undertaking those who enjoy repute and admiration belong to the class of those endowed with the highest knowledge; while conversely the people of sinister reputation, the mean and the contemptible, emanate from some depth of ignorance and dullness. If therefore what you thirst for is repute and admiration as a statesman, try to make sure of one accomplishment: in other words, the knowledge as far as in you lies of what you wish to do. If, indeed, with this to distinguish you from the rest of the world you venture to concern yourself with state affairs, it would not surprise me but that you might reach the goal of your ambition easily.

## VII

Now Charmides, the son of Glaucon, was, as Socrates observed, a man of mark and influence: a much more powerful person in fact than the mass of those devoted to politics at that date, but at the same time he was a man who shrank from approaching the people or busying himself with the concerns of the state. Accordingly Socrates addressed him thus:

Tell me, Charmides, supposing some one competent to win a victory in the arena and to receive a crown, whereby he will gain honor himself and make the land of his fathers more glorious in Hellas, were to refuse to enter the lists—what kind of person should you set him down to be?

Clearly an effeminate and cowardly fellow (he answered).

Soc. And what if another man, who had it in him, by devotion to affairs of state, to exalt his city and win honor himself thereby, were to shrink and hesitate and hang back—would he too not reasonably be regarded as a coward?

Possibly (he answered); but why do you address these questions to me?

Because (replied Socrates) I think that you, who have this power, do hesitate to devote yourself to matters which, as being a citizen, if for no other reason, you are bound to take part in.

Charm. And wherein have you detected in me this power, that you pass so severe a sentence upon me?

Soc. I have detected it plainly enough in those gatherings in which you meet the politicians of the day, when, as I observe, each time they consult you on any point you have always good advice to offer, and when they make a blunder you lay your finger on the weak point immediately.

Charm. To discuss and reason in private is one thing, Socrates, to battle in the throng of the assembly is another.

Soc. And yet a man who can count, counts every bit as well in a crowd as when seated alone by himself; and it is the best performer on the harp in private who carries off the palm of victory in public.

Charm. But do you not see that modesty and timidity are feelings implanted in man's nature? and these are much more powerfully present to us in a crowd than within the circle of our intimates.

Soc. Yes, but what I am bent on teaching you is that while you feel no such bashfulness and timidity before the wisest and strongest of men, you are ashamed of opening your lips in the midst of weaklings and dullards. Is it the fullers among them of whom you stand in awe, or the cobblers, or the carpenters, or the coppersmiths, or the merchants, or the farmers, or the hucksters of the market-place exchanging their wares, and bethinking them how they are to buy this thing cheap, and to sell the other dear—is it before these you are ashamed, for these are the individual atoms out of which the Public Assembly is composed? And what is the difference, pray, between your behavior and that of a man who, being the superior of trained athletes, quails before a set of amateurs? Is it not the case that you who can argue so readily with the foremost statesmen in the city, some of whom affect to look down upon you—you, with your vast superiority over practiced popular debaters—are no sooner confronted with a set of folk who never in their lives gave politics a thought, and into whose heads certainly it never entered to look down upon you—than you are afraid to open your lips in mortal terror of being laughed at?

Well, but you would admit (he answered) that sound argument does frequently bring down the ridicule of the Popular Assembly.

Soc. Which is equally true of the others. And that is just what rouses my astonishment, that you who can cope so easily with these lordly people (when guilty of ridicule) should persuade yourself that you cannot stand up against a set of commoners. My good fellow, do not be ignorant of yourself! do not fall into that commonest of errors—theirs who rush off to investigate the concerns of the rest of the world, and have no time to turn and examine themselves. Yet that is a duty which you must not in cowardly sort draw back from: rather must you brace ourself to give good heed to your own self; and as to public affairs, if by any manner of means they may be improved through you, do not neglect them. Success in the sphere of politics means that not only the mass of your fellow-citizens, but your personal friends and you yourself last but not least, will profit by your action.

## VIII

Once when Aristippus set himself to subject Socrates to a cross-examination, such as he had himself undergone at the hands of Socrates on a former occasion, Socrates, being minded to benefit those who were with him, gave his answers less in the style of a debater guarding against perversions of his argument, than of a man persuaded of the supreme importance of right conduct.

Aristippus asked him "if he knew of anything good," intending in case he assented and named any particular good thing, like food or drink, or wealth, or health, or strength, or courage, to point out that the thing named was sometimes bad. But he, knowing that if a thing troubles us, we immediately want that which will put an end to our trouble, answered precisely as it was best to do.

Soc. Do I understand you to ask me whether I know anything good for fever?

No (he replied), that is not my question.

Soc. Then for inflammation of the eyes?

Aristip. No, nor yet that.

Soc. Well then, for hunger?

Aristip. No, nor yet for hunger.

Well, but (answered Socrates) if you ask me whether I know of any good thing which is good for nothing, I neither know of it nor want to know.

And when Aristippus, returning to the charge, asked him "if he knew of any thing beautiful."

He answered: Yes, many things.

Aristip. Are they all like each other?

Soc. On the contrary, they are often as unlike as possible.

How then (he asked) can that be beautiful which is unlike the beautiful?

Soc. Bless me! for the simple reason that it is possible for a man who is a beautiful runner to be quite unlike another man who is a beautiful boxer, or for a shield, which is a beautiful weapon for the purpose of defense, to be absolutely unlike a javelin, which is a beautiful weapon of swift and sure discharge.

Aristip. Your answers are no better now than when I asked you whether you knew any good thing. They are both of a pattern.

Soc. And so they should be. Do you imagine that one thing is good and another beautiful? Do not you know that relatively to the same standard all things are at once beautiful and good? In the first place, virtue is not a good thing relatively to one standard and a beautiful thing relatively to another standard; and in the next place, human beings, on the same principle and relatively to the same standard, are called "beautiful and good"; and so the bodily frames of men relatively to the same standards are seen to be "beautiful and good," and in general all things capable of being used by man are regarded as at once beautiful and good relatively to the same standard—the standing being in each case what the thing happens to be useful for.

Aristip. Then I presume even a basket for carrying dung is a beautiful thing?

Soc. To be sure, and a spear of gold an ugly thing, if for their respective uses—the former is well and the latter ill adapted.

Aristip. Do you mean to assert that the same things may be beautiful and ugly?

Soc. Yes, to be sure; and by the same showing things may be good and bad: as, for instance, what is good for hunger may be bad for fever, and what is good for fever bad for hunger; or again, what is beautiful for wrestling is often ugly for running; and in general everything is good and beautiful when well adapted for the end in view, bad and ugly when ill adapted for the same.

Similarly when he spoke about houses, and argued that "the same house must be at once beautiful and useful"—I could not help feeling that he was giving a good lesson on the problem: "how a house ought to be built." He investigated the matter thus:

Soc. "Do you admit that any one purposing to build a perfect house will plan to make it at once as pleasant and as useful to live in as possible?" and that point being admitted, the next question would be:

"It is pleasant to have one's house cool in summer and warm in winter, is it not?" and this proposition also having obtained assent, "Now, supposing a house to have a southern aspect, sunshine during winter will steal in under the verandah, but in summer, when the sun traverses a path right over our heads, the roof will afford an agreeable shade, will it not? If, then, such an arrangement is desirable, the southern side of a house should be built higher to catch the rays of the winter sun, and the northern side lower to prevent the cold winds finding ingress; in a word, it is reasonable to suppose that the pleasantest and most beautiful dwelling place will be one in which the owner can at all seasons of the year find the pleasantest retreat, and stow away his goods with the greatest security."

Paintings and ornamental moldings are apt (he said) to deprive one of more joy than they confer.

The fittest place for a temple or an altar (he maintained) was some site visible from afar, and untrodden by foot of man: since it was a glad thing for the worshipper to lift up his eyes afar off and offer up his orison; glad also to wend his way peaceful to prayer unsullied.

## IX

Being again asked by some one: could courage be taught, or did it come by nature? he answered: I imagine that just as one body is by nature stronger than another body to encounter toils, so one soul by nature grows more robust than another soul in face of dangers. Certainly I do note that people brought up under the same condition of laws and customs differ greatly in respect of daring. Still my belief is that by learning and practice the natural aptitude may always be strengthened towards courage. It is clear, for instance, that Scythians or Thracians would not venture to take shield and spear and contend with Lacedaemonians; and it is equally evident that Lacedaemonians would demur to entering the lists of battle against Thracians if limited to their light shields and javelins, or against Scythians without some weapon more familiar than their bows and arrows. And as far as I can see, this principle holds generally: the natural differences of one man from another may be compensated by artificial progress, the result of care and attention. All which proves clearly that whether nature has endowed us with keener or blunter sensibilities, the duty of all alike is to learn and practice those things in which we would fain achieve distinction.

Between wisdom and sobriety of soul (which is temperance) he drew no distinction. Was a man able on the one hand to recognize things beautiful and good sufficiently to live in them? Had he, on the other hand, knowledge of the "base and foul" so as to beware of them? If so, Socrates judged him to be wise at once and sound of soul (or temperate).

And being further questioned whether "he considered those who have the knowledge of right action, but do not apply it, to be wise and self-controlled?"—"Not a whit more," he answered, "than I consider them to be unwise and intemperate. Every one, I conceive, deliberately chooses what, within the limits open to him, he considers most conducive to his interest, and acts accordingly. I must hold therefore that those who act against rule and crookedly are neither wise nor self-controlled.

He said that justice, moreover, and all other virtue is wisdom. That is to say, things just, and all things else that are done with virtue, are "beautiful and good"; and neither will those who know these things deliberately choose aught else in their stead, nor will he who lacks the special knowledge of them be able to do them, but even if he makes the attempt he will miss the mark and fail. So the wise alone can perform the things which are "beautiful and good"; they that are unwise cannot, but even if they try they fail. Therefore, since all things just, and generally all things "beautiful and good," are wrought with virtue, it is clear that justice and all other virtue is wisdom.

On the other hand, madness (he maintained) was the opposite to wisdom; not that he regarded simple ignorance as madness, but he put it thus: for a man to be ignorant of himself, to imagine and suppose that he knows what he knows not, was (he argued), if not madness itself, yet something very like it. The mass of men no doubt hold a different language: if a man is all abroad on some matter of which the mass of mankind are ignorant, they do not pronounce him "mad"; but a like aberration of mind, if only it be about matters within the scope of ordinary knowledge, they call madness. For instance, any one who imagined himself too tall to pass under a gateway of the Long Wall without stooping, or so strong as to try to lift a house, or to attempt any other obvious impossibility, is a madman according to them; but in the popular sense he is not mad, if his obliquity is confined to small matters. In fact, just as strong desire goes by the name of passion in popular parlance, so mental obliquity on a grand scale is entitled madness.

In answer to the question: what is envy? he discovered it to be a certain kind of pain; not certainly the sorrow felt at the misfortunes of a friend or the good fortune of an enemy—that is not envy; but, as he said, "envy is felt by those alone who are annoyed at the successes of their friends." And when some one or other expressed astonishment that any one friendlily disposed to another should be pained at his well-doing, he reminded him of a common tendency in people: when any one is faring ill their sympathies are touched, they rush to the aid of the unfortunate; but when fortune smiles on others, they are somehow pained. "I do not say," he added, "this could happen to a thoughtful person; but it is no uncommon condition of a silly mind."

In answer to the question: what is leisure? I discover (he said) that most men do something: for instance, the dice player, the gambler, the buffoon, do something, but these have leisure; they can, if they like, turn and do something better; but nobody has leisure to turn from the better to the worse, and if he does so turn, when he has no leisure, he does but ill in that.

(To pass to another definition.) They are not kings or rulers (he said) who hold the scepter merely, or are chosen by fellows out of the street, or are appointed by lot, or have stepped into office by violence or by fraud; but those who have the special knowledge how to rule. Thus having won the admission that it is the function of a ruler to enjoin what ought to be done, and of those who are ruled to obey, he proceeded to point out by instances that in a ship the ruler or captain is the man of special knowledge, to whom, as an expert, the ship-owner himself and all the others on board obey. So likewise, in the matter of husbandry, the proprietor of an estate; in that of sickness, the patient; in that of physical training of the body, the youthful athlete going through a course; and, in general, every one directly concerned in any matter needing attention and care will either attend to this matter personally, if he thinks he has the special knowledge; or, if he mistrusts his own science, will be eager to obey any expert on the spot, or will even send and fetch one from a distance. The guidance of this expert he will follow, and do what he has to do at his dictation.

And thus, in the art of spinning wool, he liked to point out that women are the rulers of men—and why? because they have the knowledge of the art, and men have not.

And if any one raised the objection that a tyrant has it in his power not to obey good and correct advice, he would retort: “Pray, how has he the option not to obey, considering the penalty hanging over him who disobeys the words of wisdom? for whatever the matter be in which he disobeys the word of good advice, he will fall into error, I presume, and falling into error, be punished.” And to the suggestion that the tyrant could, if he liked, cut off the head of the man of wisdom, his answer was: “Do you think that he who destroys his best ally will go scot free, or suffer a mere slight and passing loss? Is he more likely to secure his salvation that way, think you, or to compass his own swift destruction?”

When some one asked him: “What he regarded as the best pursuit or business for a man?” he answered: “Successful conduct"; and to a second question: "Did he then regard good fortune as an end to be pursued?"—"On the contrary," he answered, "for myself, I consider fortune and conduct to be diametrically opposed. For instance, to succeed in some desirable course of action without seeking to do so, I hold to be good fortune; but to do a thing well by dint of learning and practice, that according to my creed is successful conduct, and those who make this the serious business of their life seem to me to do well."

They are at once the best and the dearest in the sight of God (he went on to say) who for instance in husbandry do well the things of farming, or in the art of healing all that belongs to healing, or in statecraft the affairs of state; whereas a man who does nothing well—nor well in anything—is (he added) neither good for anything nor dear to God.

## X

But indeed, if chance brought him into conversation with any one possessed of an art, and using it for daily purposes of business, he never failed to be useful to this kind of person. For instance, stepping one time into the studio of Parrhasius the painter, and getting into conversation with him—

I suppose, Parrhasius (said he), painting may be defined as "a representation of visible objects," may it not? That is to say, by means of colors and palette you painters represent and reproduce as closely as possible the ups and downs, lights and shadows, hard and soft, rough and smooth surfaces, the freshness of youth and the wrinkles of age, do you not?

You are right (he answered), that is so.

Soc. Further, in portraying ideal types of beauty, seeing it is not easy to light upon any one human being who is absolutely devoid of blemish, you cull from many models the most beautiful traits of each, and so make your figures appear completely beautiful?

Parrh. Yes, that is how we do.

Well, but stop (Socrates continued); do you also pretend to represent in similar perfection the characteristic moods of the soul, its captivating charm and sweetness, with its deep wells of love, its intensity of yearning, its burning point of passion? or is all this quite incapable of being depicted?

Nay (he answered), how should a mood be other than inimitable, Socrates, when it possesses neither linear proportion nor color, nor any of those qualities which you named just now; when, in a word, it is not even visible?

Soc. Well, but the kindly look of love, the angry glance of hate at any one, do find expression in the human subject, do they not?

Parrh. No doubt they do.

Soc. Then this look, this glance, at any rate may be imitated in the eyes, may it not?

Undoubtedly (he answered).

Soc. And do anxiety and relief of mind occasioned by the good or evil fortune of those we love both wear the same expression?

By no means (he answered); at the thought of good we are radiant, at that of evil a cloud hangs on the brow.

Soc. Then here again are looks with it is possible to represent?

Parrh. Decidedly.

Soc. Furthermore, as through some chink or crevice, there pierces through the countenance of a man, through the very posture of his body as he stands or moves, a glimpse of his nobility and freedom, or again of something in him low and groveling—the calm of self-restraint, and wisdom, or the swagger of insolence and vulgarity?

You are right (he answered).

Soc. Then these too may be imitated?

No doubt (he said).

Soc. And which is the pleasanter type of face to look at, do you think—one on which is imprinted the characteristics of a beautiful, good, and lovable disposition, or one which bears the impress of what is ugly, and bad, and hateful?

Parrh. Doubtless, Socrates, there is a vast distinction between the two.

At another time he entered the workshop of the sculptor Cleiton, and in course of conversation with him said:

You have a gallery of handsome people here, Cleiton, runners, and wrestlers, and boxers, and pancratiasts—that I see and know; but how do you give the magic touch of life to your creations, which most of all allures the soul of the beholder through his sense of vision?

As Cleiton stood perplexed, and did not answer at once, Socrates added: Is it by closely imitating the forms of living beings that you succeed in giving that touch of life to your statues?

No doubt (he answered).

Soc. It is, is it not, by faithfully copying the various muscular contractions of the body in obedience to the play of gesture and poise, the wrinkling of flesh and the sprawl of limbs, the tensions and the relaxations, that you succeed in making your statues like real beings—make them “breathe” as people say?

Cleit. Without a doubt.

Soc. And does not the faithful imitation of the various affections of the body when engaged in any action impart a particular pleasure to the beholder?

Cleit. I should say so.

Soc. Then the threatening in the eyes of warriors engaged in battle should be carefully copied, or again you should imitate the aspect of a conqueror radiant with success?

Cleit. Above all things.

Soc. It would seem then that the sculptor is called upon to incorporate in his ideal form the workings and energies also of the soul?

Paying a visit to Pistias, the corselet maker, when that artist showed him some exquisite samples of his work, Socrates exclaimed:

By Hera! a pretty invention this, Pistias, by which you contrive that the corselet should cover the parts of the person which need protection, and at the same time leave free play to the arms and hands.... but tell me, Pistias (he added), why do you ask a higher price for these corselets of yours if they are not stouter or made of costlier material than the others?

Because, Socrates (he answered), mine are of much finer proportion.

Soc. Proportion! Then how do you make this quality apparent to the customer so as to justify the higher price—by measure or weight? For I presume you cannot make them all exactly equal and of one pattern—if you make them fit, as of course you do?

Fit indeed! that I most distinctly do (he answered), take my word for it: no use in a corselet without that.

But then are not the wearer's bodies themselves (asked Socrates) some well proportioned and others ill?

Decidedly so (he answered).

Soc. Then how do you manage to make the corselet well proportioned if it is to fit an ill-proportioned body?

Pist. To the same degree exactly as I make it fit. What fits is well proportioned.

Soc. It seems you use the term “well-proportioned” not in an absolute sense, but in reference to the wearer, just as you might describe a shield as well proportioned to the individual it suits; and so of a military cloak, and so of the rest of things, in your terminology? But maybe there is another considerable advantage in this “fitting”?

Pist. Pray instruct me, Socrates, if you have got an idea.

Soc. A corselet which fits is less galling by its weight than one which does not fit, for the latter must either drag from the shoulders with a dead weight or press upon some other part of the body, and so it becomes troublesome and uncomfortable; but that which fits, having its weight distributed partly along the collar-bone and shoulder-blade, partly over the shoulders and chest, and partly the back and belly, feels like another natural integument rather than an extra load to carry.

Pist. You have named the very quality which gives my work its exceptional value, as I consider; still there are customers, I am bound to say, who look for something else in a corselet—they must have them ornamental or inlaid with gold.

For all that (replied Socrates), if they end by purchasing an ill-fitting article, they only become the proprietors of a curiously-wrought and gilded nuisance, as it seems to me. But (he added), as the body is never in one fixed position, but is at one time curved, at another raised erect how can an exactly-modeled corselet fit?

Pist. It cannot fit at all.

You mean (Socrates continued) that it is not the exactly-modeled corselet which fits, but that which does not gall the wearer in the using?

Pist. There, Socrates, you have hit the very point. I see you understand the matter most precisely.

## XI

There was once in the city a fair woman named Theodote. She was not only fair, but ready to consort with any suitor who might win her favour. Now it chanced that some one of the company mentioned her, saying that her beauty beggared description. "So fair is she," he added, "that painters flock to draw her portrait, to whom, within the limits of decorum, she displays the marvels of her beauty." "Then there is nothing for it but to go and see her," answered Socrates, "since to comprehend by hearsay what is beyond description is clearly impossible." Then he who had introduced the matter replied: "Be quick then to follow me"; and on this wise they set off to seek Theodote. They found her "posing" to a certain painter; and they took their stand as spectators. Presently the painter had ceased his work; whereupon Socrates:

"Do you think, sirs, that we ought to thank Theodote for displaying her beauty to us, or she us for coming to gaze at her?... It would seem, would it not, that if the exhibition of her charms is the more profitable to her, the debt is on her side; but if the spectacle of her beauty confers the greater benefit on us, then we are her debtors."

Some one answered that "was an equitable statement of the case."

Well then (he continued), as far as she is concerned, the praise we bestow on her is an immediate gain; and presently, when we have spread her fame abroad, she will be further benefited; but for ourselves the immediate effect on us is a strong desire to touch what we have seen; by and by, too, we shall go away with a sting inside us, and when we are fairly gone we shall be consumed with longing. Consequently it seems that we should do her service and she accept our court.

Whereupon Theodote: Oh dear! if that is how the matter stands, it is I who am your debtor for the spectacle.

At this point, seeing that the lady herself was expensively attired, and that she had with her mother also, whose dress and style of attendance were out of the common, not to speak of the waiting-women—many and fair to look upon, who presented anything but a forlorn appearance; while in every respect the whole house itself was sumptuously furnished—Socrates put a question:

Pray tell me, Theodote, have you an estate in the country?

Theod. Not I indeed.

Soc. Then perhaps you possess a house and large revenues along with it?

Theod. No, nor yet a house.

Soc. You are not an employer of labor on a large scale?

(4) Lit. "You have not (in your employ) a body of handicraftsmen of any sort?"

Theod. No, nor yet an employer of labor.

Soc. From what source, then, do you get your means of subsistence?

Theod. My friends are my life and fortune, when they care to be kind to me.

Soc. By heaven, Theodote, a very fine property indeed, and far better worth possessing than a multitude of sheep or goats or cattle. A flock of friends!... But (he added) do you leave it to fortune whether a friend lights like a fly on your hand at random, or do you use any artifice yourself to attract him?

Theod. And how might I hit upon any artifice to attract him?

Soc. Bless me! far more naturally than any spider. You know how they capture the creatures on which they live; by weaving webs of gossamer, is it not? and woe betide the fly that tumbles into their toils! They eat him up.

Theod. So then you would counsel me to weave myself some sort of net?

Soc. Why, surely you do not suppose you are going to ensnare that noblest of all game—a lover, to wit—in so artless a fashion? Do you not see (to speak of a much less noble sort of game) what a number of devices are needed to bag a hare? The creatures range for their food at night; therefore the hunter must provide himself with night dogs. At peep of dawn they are off as fast as they can run. He must therefore have another pack of dogs to scent out and discover which way they betake them from their grazing ground to their forms; and as they are so fleet of foot that they run and are out of sight in no time, he must once again be provided with other fleet-footed dogs to follow their tracks and overtake them; and as some of them will give even these the slip, he must, last of all, set up nets on the paths at the points of escape, so that they may fall into the meshes and be caught.

Theod. And by what like contrivance would you have me catch my lovers?

Soc. Well now! what if in place of a dog you can get a man who will hunt up your wealthy lover of beauty and discover his lair, and having found him, will plot and plan to throw him into your meshes?

Theod. Nay, what sort of meshes have I?

Soc. One you have, and a close-folding net it is, I believe; to wit, your own person; and inside it sits a soul that teaches you with what looks to please and with what words to cheer; how, too, with smiles you are to welcome true devotion, but to exclude all wantons from your presence. It tells you, you are to visit your beloved in sickness with solicitude, and when he has wrought some noble deed you are greatly to rejoice with him; and to one who passionately cares for you, you are to make surrender of yourself with heart and soul. The secret of true love I am sure you know: not to love softly merely, but devotedly. And of this too I am sure: you can convince your lovers of your fondness for them not by lip phrases, but by acts of love.

Theod. No, upon my word, I have none of these devices.

Soc. And yet it makes all the difference whether you approach a human being in the natural and true way, since it is not by force certainly that you can either catch or keep a friend. Kindness and pleasure are the only means to capture this fearful wild-fowl man and keep him constant.

Theod. You are right.

Soc. In the first place you must make such demands only of your well-wisher as he can grant without repentance; and in the next place you must make requital, dispensing your favors with a like economy. Thus you will best make friends whose love shall last the longest and their generosity know no stint. And for your favors you will best win your friends if you suit your largess to their penury; for, mark you, the sweetest viands presented to a man before he wants them are apt to prove insipid, or, to one already sated, even nauseous; but create hunger, and even coarser stuff seems honey-sweet.

Theod. How then shall I create this hunger in the heart of my friends?

Soc. In the first place you must not offer or make suggestion of your dainties to jaded appetites until satiety has ceased and starvation cries for alms. Even then shall you make but a faint suggestion to their want, with modest converse—like one who would fain bestow a kindness... and lo! the vision fades and she is gone—until the very pinch of hunger; for the same gifts have then a value unknown before the moment of supreme desire.

Then Theodote: Oh why, Socrates, why are you not by my side (like the huntsman's assistant) to help me catch my friends and lovers?

Soc. That will I be in good sooth if only you can woo and win me.

Theod. How shall I woo and win you?

Soc. Seek and you will find means, if you truly need me.

Theod. Come then in hither and visit me often.

And Socrates, poking sly fun at his own lack of business occupation, answered: Nay, Theodote, leisure is not a commodity in which I largely deal. I have a hundred affairs of my own too, private or public, to occupy me; and then there are my lady-loves, my dear friends, who will not suffer me day or night to leave them, for ever studying to learn love-charms and incantations at my lips.

Theod. Why, are you really versed in those things, Socrates?

Soc. Of course, or else how is it, do you suppose, that Apollodorus here and Antisthenes never leave me; or why have Cebes and Simmias come all the way from Thebes to stay with me? Be assured these things cannot happen without diverse love-charms and incantations and magic wheels.

Theod. I wish you would lend me your magic-wheel, then, and I will set it spinning first of all for you.

Soc. Ah! but I do not wish to be drawn to you. I wish you to come to me.

Theod. Then I will come. Only, will you be "at home" to me?

Soc. Yes, I will welcome you, unless some one still dearer holds me engaged, and I must needs be "not at home."

## XII

Seeing one of those who were with him, a young man, but feeble of body, named Epigenes, he addressed him.

Soc. You have not the athletic appearance of a youth in training, Epigenes.

And he: That may well be, seeing I am an amateur and not in training.

Soc. As little of an amateur, I take it, as any one who ever entered the lists of Olympia, unless you are prepared to make light of that contest for life and death against the public foe which the Athenians will institute when the day comes. And yet they are not a few who, owing to a bad habit of body, either perish outright in the perils of war, or are ignobly saved. Many are they who for the self-same cause are taken prisoners, and being taken must, if it so betide, endure the pains of slavery for the rest of their days; or, after falling into dolorous straits, when they have paid to the uttermost farthing of all, or may be more than the worth of all, that they possess, must drag on a miserable existence in want of the barest necessaries until death release them. Many also are they who gain an evil repute through infirmity of body, being thought to play the coward. Can it be that you despise these penalties affixed to an evil habit? Do you think you could lightly endure them? Far lighter, I imagine, nay, pleasant even by comparison, are the toils which he will undergo who duly cultivates a healthy bodily condition. Or do you maintain that the evil habit is healthier, and in general more useful than the good? Do you pour contempt upon those blessings which flow from the healthy state? And yet the very opposite of that which befalls the ill attends the sound condition. Does not the very soundness imply at once health and strength? Many a man with no other talisman than this has passed safely through the ordeal of war; stepping, not without dignity, through all its horrors unscathed. Many with no other support than this have come to the rescue of friends, or stood forth as benefactors of their fatherland; whereby they were thought worthy of gratitude, and obtained a great renown and received as a recompense the highest honors of the State; to whom is also reserved a happier and brighter passage through what is left to them of life, and at their death they leave to their children the legacy of a fairer starting-point in the race of life.

Because our city does not practice military training in public, that is no reason for neglecting it in private, but rather a reason for making it a foremost care. For be you assured that there is no contest of any sort, nor any transaction, in which you will be the worse off for being well prepared in body; and in fact there is nothing which men do for which the body is not a help. In every demand, therefore, which can be laid upon the body it is much better that it should be in the best condition; since, even where you might imagine the claims upon the body to be slightest—in the act of reasoning—who does not know the terrible stumbles which are made through being out of health? It suffices to say that forgetfulness, and despondency, and moroseness, and madness take occasion often of ill-health to visit the intellectual faculties so severely as to expel all knowledge from the brain. But he who is in good bodily plight has large security. He runs no risk of incurring any such catastrophe through ill-health at any rate; he has the expectation rather that a good habit must procure consequences the opposite to those of an evil habit; and surely to this end there is nothing a man in his senses would not undergo.... It is a base thing for a man to wax old in careless self-neglect before he has lifted up his eyes and seen what manner of man he was made to be, in the full perfection of bodily strength and beauty. But these glories are withheld from him who is guilty of self-neglect, for they are not wont to blaze forth unbidden.

## XII

Once when some one was in a fury of indignation because he had bidden a passer-by good-day and the salutation was not returned, Socrates said: “It is enough to make one laugh! If you met a man in a wretched condition of body, you would not fall into a rage; but because you stumble upon a poor soul somewhat boorishly disposed, you feel annoyed.”

To the remark of another who complained that he did not take his food with pleasure, he said: “Acumenus has a good prescription for that.” And when the other asked: “And what may that be?” “To stop eating,” he said. “On the score of pleasure, economy, and health, total abstinence has much in its favour.”

And when some one else lamented that “the drinking-water in his house was hot,” he replied: “Then when you want a warm bath you will not have to wait.”

The Other. But for bathing purposes it is cold.

Soc. Do you find that your domestics seem to mind drinking it or washing in it?

The Other. Quite the reverse; it is a constant marvel to me how contentedly they use it for either purpose.

Soc. Which is hotter to the taste—the water in your house or the hot spring in the temple of Asclepius?

The Other. The water in the temple of Asclepius.

Soc. And which is colder for bathing—yours or the cold spring in the cave of Amphiaraus?

The Other. The water in the cave of Amphiaraus.

Soc. Then please to observe: if you do not take care, they will set you down as harder to please than a domestic servant or an invalid.

A man had administered a severe whipping to the slave in attendance on him, and when Socrates asked: "Why he was so wroth with his own serving-man?" excused himself on the ground that "the fellow was a lazy, gourmandizing, good-for-nothing dolt—fonder of money than of work." To which Socrates: "Did it ever strike you to consider which of the two in that case the more deserves a whipping—the master or the man?"

When some one was apprehending the journey to Olympia, "Why are you afraid of the long distance?" he asked. "Here at home you spend nearly all your day in taking walks. Well, on your road to Olympia you will take a walk and breakfast, and then you will take another walk and dine, and go to bed. Do you not see, if you take and tack together five or six days' length of walks, and stretch them out in one long line, it will soon reach from Athens to Olympia? I would recommend you, however, to set off a day too soon rather than a day too late. To be forced to lengthen the day's journey beyond a reasonable amount may well be a nuisance; but to take one day's journey beyond what is necessary is pure relaxation. Make haste to start, I say, and not while on the road."

When some one else remarked "he was utterly prostrated after a long journey," Socrates asked him: "Had he had any baggage to carry?"

"Not I," replied the complainer; "only my cloak."

Soc. Were you travelling alone, or was your man-servant with you?

He. Yes, I had my man.

Soc. Empty-handed, or had he something to carry?

He. Of course; carrying my rugs and other baggage.

Soc. And how did he come off on the journey?

He. Better than I did myself, I take it.

Soc. Well, but now suppose you had had to carry his baggage, what would your condition have been like?

He. Sorry enough, I can tell you; or rather, I could not have carried it at all.

Soc. What a confession! Fancy being capable of so much less toil than a poor slave boy! Does that sound like the perfection of athletic training?

## XIV

On the occasion of a common dinner-party where some of the company would present themselves with a small, and others with a large supply of viands, Socrates would bid the servants throw the small supplies into the general stock, or else to help each of the party to a share all round. Thus the grand victualers were ashamed in the one case not to share in the common stock, and in the other not to throw in their supplies also. Accordingly in went the grand supplies into the common stock. And now, being no better off than the small contributors, they soon ceased to cater for expensive delicacies.

At a supper-party one member of the company, as Socrates chanced to note, had put aside the plain fare and was devoting himself to certain dainties. A discussion was going on about names and definitions, and the proper applications of terms to things. Whereupon Socrates, appealing to the company: “Can we explain why we call a man a 'dainty fellow'? What is the particular action to which the term applies?—since every one adds some dainty to his food when he can get it. But we have not quite hit the definition yet, I think. Are we to be called dainty eaters because we like our bread buttered?”

No! hardly! (some member of the company replied).

Soc. Well, but now suppose a man confine himself to eating venison or other dainty without any plain food at all, not as a matter of training, but for the pleasure of it: has such a man earned the title? “The rest of the world would have a poor chance against him,” some one answered. “Or,” interposed another, “what if the dainty dishes he devours are out of all proportion to the rest of his meal—what of him?”

Soc. He has established a very fair title at any rate to the appellation, and when the rest of the world pray to heaven for a fine harvest: “May our corn and oil increase!” he may reasonably ejaculate, “May my fleshpots multiply!”

At this last sally the young man, feeling that the conversation set somewhat in his direction, did not desist indeed from his savory viands, but helped himself generously to a piece of bread. Socrates was all-observant, and added: Keep an eye on our friend yonder, you others next him, and see fair play between the sop and the sauce.

Another time, seeing one of the company using but one sop of bread to test several savory dishes, he remarked: Could there be a more extravagant style of cookery, or more murderous to the dainty dishes themselves, than this wholesale method of taking so many dishes together?—why, bless me, twenty different sorts of seasoning at one swoop! First of all he mixes up actually more ingredients than the cook himself prescribes, which is extravagant; and secondly, he has the audacity to commingle what the chef holds incongruous, whereby if the cooks are right in their method he is wrong in his, and consequently the destroyer of their art. Now is it not ridiculous first to procure the greatest virtuosi to cook for us, and then without any claim to their skill to take and alter their procedure? But there is a worse thing in store for the bold man who habituates himself to eat a dozen dishes at once: when there are but few dishes served, out of pure habit he will feel himself half starved, while his neighbor, accustomed to send his sop down by help of a single relish, will feast merrily, be the dishes never so few.

He had a saying that {euokheisthai}, to "make good cheer," was in Attic parlance a synonym for "eating," and the affix {eu} (the attributive "good") connoted the eating of such things as would not trouble soul or body, and were not far to seek or hard to find. So that to "make good cheer" in his vocabulary applied to a modest and well-ordered style of living.

# BOOK IV

## I

Such was Socrates; so helpful under all circumstances and in every way that no observer, gifted with ordinary sensibility, could fail to appreciate the fact, that to be with Socrates, and to spend long time in his society (no matter where or what the circumstances), was indeed a priceless gain. Even the recollection of him, when he was no longer present, was felt as no small benefit by those who had grown accustomed to be with him, and who accepted him. Nor indeed was he less helpful to his acquaintance in his lighter than in his graver moods.

Let us take as an example that saying of his, so often on his lips: “I am in love with so and so”; and all the while it was obvious the going-forth of his soul was not towards excellence of body in the bloom of beauty, but rather towards faculties of the soul unfolding in virtue. And these “good natures” he detected by certain tokens: a readiness to learn that to which the attention was directed; a power of retaining in the memory the lessons learnt; and a passionate predilection for those studies in particular which serve to good administration of a house or of a state, and in general to the proper handling of man and human affairs. Such beings, he maintained, needed only to be educated to become not only happy themselves and happy administrators of their private households, but to be capable of rendering other human beings as states or individuals happy also.

He had indeed a different way of dealing with different kinds of people. Those who thought they had good natural ability and despised learning he instructed that the most highly-gifted nature stands most in need of training and education; and he would point out how in the case of horses it is just the spirited and fiery thoroughbred which, if properly broken in as a colt, will develop into a serviceable and superb animal, but if left unbroken will turn out utterly intractable and good for nothing. Or take the case of dogs: a puppy exhibiting that zest for toil and eagerness to attack wild creatures which are the marks of high breeding, will, if well brought up, prove excellent for the chase or for any other useful purpose; but neglect his education and he will turn out a stupid, crazy brute, incapable of obeying the simplest command. It is just the same with human beings; here also the youth of best natural endowments—that is to say, possessing the most robust qualities of spirit and a fixed determination to carry out whatever he has laid his hand to—will, if trained and taught what it is right to do, prove a superlatively good and useful man. He achieves, in fact, what is best upon the grandest scale. But leave him in boorish ignorance untrained, and he will prove not only very bad but very mischievous, and for this reason, that lacking the knowledge to discern what is right to do, he will frequently lay his hand to villainous practices; while the very magnificence and vehemence of his character render it impossible either to rein him in or to turn him aside from his evil courses. Hence in his case also his achievements are on the grandest scale but of the worst.

Or to take the type of person so eaten up with the pride of riches that he conceives himself dispensed from any further need of education—since it is “money makes the man,” and his wealth will amply suffice him to carry out his desires and to win honors from admiring humanity. Socrates would bring such people to their senses by pointing out the folly of supposing that without instruction it was possible to draw the line of demarcation between what is gainful and what is hurtful in conduct; and the further folly of supposing that, apart from such discrimination, a man could help himself by means of wealth alone to whatever he liked or find the path of expediency plain before him; and was it not the most simplicity to suppose that, without the power of laboring profitably, a man can either be doing well or be in any sort of way sufficiently equipped for the battle of life? and again, the most simplicity to suppose that by mere wealth without true knowledge it was possible either to purchase a reputation for some excellence, or without such reputation to gain distinction and celebrity?

## II

Or to come to a third kind—the class of people who are persuaded that they have received the best education, and are proud of their wisdom: his manner of dealing with these I will now describe.

Euthydemus “the beautiful” had (Socrates was given to understand) collected a large library, consisting of the most celebrated poets and philosophers, by help of which he already believed himself to be more than a match for his fellows in wisdom, and indeed might presently expect to out-top them all in capacity of speech and action. At first, as Socrates noted, the young man by reason of his youth had not as yet set foot in the agora, but if he had anything to transact, his habit was to seat himself in a saddler's shop hard by. Accordingly to this same saddler's shop Socrates betook himself with some of those who were with him. And first the question was started by some one: “Was it through consorting with the wise, or by his own unaided talent, that Themistocles came so to surpass his fellow-citizens that when the services of a capable man were needed the eyes of the whole community instinctively turned to him?” Socrates, with a view to stirring Euthydemus, answered: There was certainly an ingenuous simplicity in the belief that superiority in arts of comparatively little worth could only be attained by aid of qualified teachers, but that the leadership of the state, the most important concern of all, was destined to drop into the lap of anybody, no matter whom, like an accidental windfall.

On a subsequent occasion, Euthydemus being present, though, as was plain to see, somewhat disposed to withdraw from the friendly concourse, as if he would choose anything rather than appear to admire Socrates on the score of wisdom, the latter made the following remarks.

Soc. It is clear from his customary pursuits, is it not, sirs, that when our friend Euthydemus here is of full age, and the state propounds some question for solution, he will not abstain from offering the benefit of his advice? One can imagine the pretty exordium to his parliamentary speeches which, in his anxiety not to be thought to have learnt anything from anybody, he has ready for the occasion. Clearly at the outset he will deliver himself thus: “Men of Athens, I have never at any time learnt anything from anybody; nor, if I have ever heard of any one as being an able statesman, well versed in speech and capable of action, have I sought to come across him individually. I have not so much as been at pains to provide myself with a teacher from amongst those who have knowledge; on the contrary, I have persistently avoided, I will not say learning from others, but the very faintest suspicion of so doing. However, anything that occurs to me by the light of nature I shall be glad to place at your disposal.”... How appropriate would such a preface sound on the lips of any one seeking, say, the office of state physician, would it not? How advantageously he might begin an address on this wise: “Men of Athens, I have never learnt the art of healing by help of anybody, nor have I sought to provide myself with any teacher among medical men. Indeed, to put it briefly, I have been ever on my guard not only against learning anything from the profession, but against the very notion of having studied medicine at all. If, however, you will be so good as to confer on me this post, I promise I will do my best to acquire skill by experimenting on your persons.” Every one present laughed at the exordium (and there the matter dropped).

Presently, when it became apparent that Euthydemus had got so far that he was disposed to pay attention to what was said, though he was still at pains not to utter a sound himself, as if he hoped by silence to attach to himself some reputation for sagacity, Socrates, wishing to cure him of that defect, proceeded.

Soc. Is it not surprising that people anxious to learn to play the harp or the flute, or to ride, or to become proficient in any like accomplishment, are not content to work unremittingly in private by themselves at whatever it is in which they desire to excel, but they must sit at the feet of the best-esteemed teachers, doing all things and enduring all things for the sake of following the judgment of those teachers in everything, as though they themselves could not otherwise become famous; whereas, among those who aspire to become eminent politically as orators and statesmen, there are some who cannot see why they should not be able to do all that politics demand, at a moment's notice, by inspiration as it were, without any preliminary pains or preparations whatever? And yet it would appear that the latter concerns must be more difficult of achievement than the former, in proportion as there are more competitors in the field but fewer who reach the goal of their ambition, which is as much as to say that a more sustained effort of attention is needed on the part of those who embark upon the sea of politics than is elsewhere called for.

Such were the topics on which Socrates was wont in the early days of their association to dilate in the hearing of Euthydemus; but when the philosopher perceived that the youth not only could tolerate the turns of the discussion more readily but was now become a somewhat eager listener, he went to the saddler's shop alone, and when Euthydemus was seated by his side the following conversation took place.

Soc. Pray tell me, Euthydemus, is it really true what people tell me, that you have made a large collection of the writings of "the wise," as they are called?

Euthydemus answered: Quite true, Socrates, and I mean to go on collecting until I possess all the books I can possibly lay hold of.

Soc. By Hera! I admire you for wishing to possess treasures of wisdom rather than of gold and silver, which shows that you do not believe gold and silver to be the means of making men better, but that the thoughts of the wise alone enrich with virtue their possessions.

And Euthydemus was glad when he heard that saying, for, thought he to himself, "In the eyes of Socrates I am on the high road to the acquisition of wisdom." But the latter, perceiving him to be pleased with the praise, continued.

Soc. And what is it in which you desire to excel, Euthydemus, that you collect books?

And when Euthydemus was silent, considering what answer he should make, Socrates added: Possibly you want to be a great doctor? Why, the prescriptions of the Pharmacopoeia would form a pretty large library by themselves.

No, indeed, not I! (answered Euthydemus).

Soc. Then do you wish to be an architect? That too implies a man of well-stored wit and judgment.

I have no such ambition (he replied).

Soc. Well, do you wish to be a mathematician, like Theodorus?

Euth. No, nor yet a mathematician.

Soc. Then do you wish to be an astronomer? or (as the youth signified dissent) possibly a rhapsodist? (he asked), for I am told you have the entire works of Homer in your possession.

Nay, God forbid! not I! (ejaculated the youth). Rhapsodists have a very exact acquaintance with epic poetry, I know, of course; but they are empty-pated creatures enough themselves.

At last Socrates said: Can it be, Euthydemus, that you are an aspirant to that excellence through which men become statesmen and administrators fit to rule and apt to benefit the rest of the world and themselves?

Yes (replied he), that is the excellence I desire—beyond measure.

Upon my word (said Socrates), then you have indeed selected as the object of your ambition the noblest of virtues and the greatest of the arts, for this is the property of kings, and is entitled “royal”; but (he continued) have you considered whether it is possible to excel in these matters without being just and upright?

Euth. Certainly I have, and I say that without justice and uprightness it is impossible to be a good citizen.

No doubt (replied Socrates) you have accomplished that initial step?

Euth. Well, Socrates, I think I could hold my own against all comers as an upright man.

And have upright men (continued Socrates) their distinctive and appropriate works like those of carpenters or shoe-makers?

Euth. To be sure they have.

Soc. And just as the carpenter is able to exhibit his works and products, the righteous man should be able to expound and set forth his, should he not?

I see (replied Euthydemus) you are afraid I cannot expound the works of righteousness! Why, bless me! of course I can, and the works of unrighteousness into the bargain, since there are not a few of that sort within reach of eye and ear every day.

Shall we then (proceeded Socrates) write the letter R on this side, and on that side the letter W; and then anything that appears to us to be the product of righteousness we will place to the R account, and anything which appears to be the product of wrong-doing and iniquity to the account of W?

By all means do so (he answered), if you think that it assists matters.

Accordingly Socrates drew the letters, as he had suggested, and continued.

Soc. Lying exists among men, does it not?

Euth. Certainly.

To which side of the account then shall we place it? (he asked).

Euth. Clearly on the side of wrong and injustice.

Soc. Deceit too is not uncommon?

Euth. By no means.

Soc. To which side shall we place deceit?

Euth. Deceit clearly on the side of wrong.

Soc. Well, and chicanery or mischief of any sort?

Euth. That too.

Soc. And the enslavement of free-born men?

Euth. That too.

Soc. And we cannot allow any of these to lie on the R side of the account, to the side of right and justice, can we, Euthydemus?

It would be monstrous (he replied).

Soc. Very good. But supposing a man to be elected general, and he succeeds in enslaving an unjust, wicked, and hostile state, are we to say that he is doing wrong?

Euth. By no means.

Soc. Shall we not admit that he is doing what is right?

Euth. Certainly.

Soc. Again, suppose he deceives the foe while at war with them?

Euth. That would be all fair and right also.

Soc. Or steals and pillages their property? would he not be doing what is right?

Euth. Certainly; when you began I thought you were limiting the question to the case of friends.

Soc. So then everything which we set down on the side of Wrong will now have to be placed to the credit of Right?

Euth. Apparently.

Soc. Very well then, let us so place them; and please, let us make a new definition—that while it is right to do such things to a foe, it is wrong to do them to a friend, but in dealing with the latter it behooves us to be as straightforward as possible.

I quite assent (replied Euthydemus).

So far so good (remarked Socrates); but if a general, seeing his troops demoralized, were to invent a tale to the effect that reinforcements were coming, and by means of this false statement should revive the courage of his men, to which of the two accounts shall we place that act of fraud?

On the side of right, to my notion (he replied).

Soc. Or again, if a man chanced to have a son ill and in need of medicine, which the child refused to take, and supposing the father by an act of deceit to administer it under the guise of something nice to eat, and by service of that lie to restore the boy to health, to which account shall we set down this fraud?

Euth. In my judgment it too should be placed to the same account.

Soc. Well, supposing you have a friend in deplorably low spirits, and you are afraid he will make away with himself—accordingly you rob him of his knife or other such instrument: to which side ought we to set the theft?

Euth. That too must surely be placed to the score of right behavior.

Soc. I understand you to say that a straightforward course is not in every case to be pursued even in dealing with friends?

Heaven forbid! (the youth exclaimed). If you will allow me, I rescind my former statement.

Soc. Allow you! Of course you may—anything rather than make a false entry on our lists.... But there is just another point we ought not to leave uninvestigated. Let us take the case of deceiving a friend to his detriment: which is the more wrongful—to do so voluntarily or unintentionally?

Euth. Really, Socrates, I have ceased to believe in my own answers, for all my former admissions and conceptions seem to me other than I first supposed them. Still, if I may hazard one more opinion, the intentional deceiver, I should say, is worse than the involuntary.

Soc. And is it your opinion that there is a lore and science of Right and Justice just as there is of letters and grammar?

Euth. That is my opinion.

Soc. And which should you say was more a man of letters—he who intentionally misspells or misreads, or he who does so unconsciously?

Euth. He who does so intentionally, I should say, because he can spell or read correctly whenever he chooses.

Soc. Then the voluntary misspeller may be a lettered person, but the involuntary offender is an illiterate?

Euth. True, he must be. I do not see how to escape from that conclusion.

Soc. And which of the two knows what is right—he who intentionally lies and deceives, or he who lies and deceives unconsciously?

Euth. Clearly he does.

Euth. The intentional and conscious liar clearly.

Soc. Well then, your statement is this: on the one hand, the man who has the knowledge of letters is more lettered than he who has no such knowledge?

Euth. Yes.

Soc. And he who has the {episteme} of things rightful is more righteous than he who lacks the {episteme}?

Euth. Yes.

Soc. And, on the other, he who has the knowledge of what is right is more righteous than he who lacks that knowledge?

Euth. I suppose it is, but for the life of me I cannot make head or tail of my own admission.

Soc. Well (look at it like this). Suppose a man to be anxious to speak the truth, but he is never able to hold the same language about a thing for two minutes together. First he says: “The road is towards the east,” and then he says, “No, it's towards the west”; or, running up a column of figures, now he makes the product this, and again he makes it that, now more, now less—what do you think of such a man?

Euth. Heaven help us! clearly he does not know what he thought he knew.

Soc. And you know the appellation given to certain people—”slavish,” or, “little better than a slave?”

Euth. I do.

Soc. Is it a term suggestive of the wisdom or the ignorance of those to whom it is applied?

Euth. Clearly of their ignorance.

Soc. Ignorance, for instance, of smithing?

Euth. No, certainly not.

Soc. Then possibly ignorance of carpentering?

Euth. No, nor yet ignorance of carpentering.

Soc. Well, ignorance of shoemaking?

Euth. No, nor ignorance of any of these: rather the reverse, for the majority of those who do know just these matters are “little better than slaves.”

Soc. You mean it is a title particularly to those who are ignorant of the beautiful, the good, the just?

It is, in my opinion (he replied).

Soc. Then we must in every way strain every nerve to avoid the imputation of being slaves?

Euth. Nay, Socrates, by all that is holy, I did flatter myself that at any rate I was a student of philosophy, and on the right road to be taught everything essential to one who would fain make beauty and goodness his pursuit. So that now you may well imagine my despair when, for all my pains expended, I cannot even answer the questions put to me about what most of all a man should know; and there is no path of progress open to me, no avenue of improvement left.

Thereupon Socrates: Tell me, Euthydemus, have you ever been to Delphi?

Yes, certainly; twice (said he).

Soc. And did you notice an inscription somewhere on the temple: {GNOMI SEAUTON}—KNOW THYSELF?

Euth. I did.

Soc. Did you, possibly, pay no regard to the inscription? or did you give it heed and try to discover who and what you were?

I can safely say I did not (he answered). That much I made quite sure I knew, at any rate; since if I did not know even myself, what in the world did I know?

Soc. Can a man be said, do you think, to know himself who knows his own name and nothing more? or must he not rather set to work precisely like the would-be purchaser of a horse, who certainly does not think that he has got the knowledge he requires until he has discovered whether the beast is tractable or stubborn, strong or weak, quick or slow, and how it stands with the other points, serviceable or the reverse, in reference to the use and purpose of a horse? So, I say, must a man in like manner interrogate his own nature in reference to a man's requirements, and learn to know his own capacities, must he not?

Euth. Yes, so it strikes me: he who knows not his own ability knows not himself.

Soc. And this too is plain, is it not: that through self-knowledge men meet with countless blessings, and through ignorance of themselves with many evils? Because, the man who knows himself knows what is advantageous to himself; he discerns the limits of his powers, and by doing what he knows, he provides himself with what he needs and so does well; or, conversely, by holding aloof from what he knows not, he avoids mistakes and thereby mishaps. And having now a test to gauge other human beings he uses their need as a stepping-stone to provide himself with good and to avoid evil. Whereas he who does not know himself, but is mistaken as to his own capacity, is in like predicament to the rest of mankind and all human matters else; he neither knows what he wants, nor what he is doing, nor the people whom he deals with; and being all abroad in these respects, he misses what is good and becomes involved in what is ill.

Again, he that knows what he is doing through the success of his performance attains to fame and honor; his peers and co-mates are glad to make use of him, while his less successful neighbors, failing in their affairs, are anxious to secure his advice, his guidance, his protection; they place their hopes of happiness in him, and for all these causes single him out as the chief object of their affection. He, on the contrary, who knows not what he does, who chooses amiss and fails in what he puts his hands to, not only incurs loss and suffers chastisement through his blunders, but step by step loses reputation and becomes a laughing-stock, and in the end is doomed to a life of dishonor and contempt.

What is true of individuals is true also of communities. That state which in ignorance of its power goes to war with a stronger than itself ends by being uprooted or else reduced to slavery.

Thereupon Euthydemus: Be assured I fully concur in your opinion; the precept KNOW THYSELF cannot be too highly valued; but what is the application? What the starting-point of self-examination? I look to you for an explanation, if you would kindly give one.

Well (replied Socrates), I presume you know quite well the distinction between good and bad things: your knowledge may be relied upon so far?

Why, yes, to be sure (replied the youth); for without that much discernment I should indeed be worse than any slave.

Come then (said he), do you give me an explanation of the things so termed.

That is fortunately not hard (replied the youth). First of all, health in itself I hold to be a good, and disease in itself an evil; and in the next place the sources of either of those aforementioned, meats and drinks, and habits of life, I regard as good or evil according as they contribute either to health or to disease.

Soc. Then health and disease themselves when they prove to be sources of any good are good, but when of any evil, evil?

And when (asked he), can health be a source of evil, or disease a source of good?

Why, bless me! often enough (replied Socrates). In the event, for instance, of some ill-starred expedition or of some disastrous voyage or other incident of the sort, of which veritably there are enough to spare—when those who owing to their health and strength take a part in the affair are lost; while those who were left behind—as hors de combat, on account of ill-health of other feebleness—are saved.

Euth. Yes, you are right; but you will admit that there are advantages to be got from strength and lost through weakness.

Soc. Even so; but ought we to regard those things which at one moment benefit and at another moment injure us in any strict sense good rather than evil?

Euth. No, certainly not, according to that line of argument. But wisdom, Socrates, you must on your side admit, is irrefragably a good; since there is nothing which or in which a wise man would not do better than a fool.

Soc. What say you? Have you never heard of Daedalus, how he was seized by Minos on account of his wisdom, and forced to be his slave, and robbed of fatherland and freedom at one swoop? and how, while endeavoring to make his escape with his son, he caused the boy's death without effecting his own salvation, but was carried off among barbarians and again enslaved?

Yes, I know the old story (he answered).

Soc. Or have you not heard of the “woes of Palamedes,” that commonest theme of song, how for his wisdom's sake Odysseus envied him and slew him?

Euth. That tale also is current.

Soc. And how many others, pray, do you suppose have been seized on account of their wisdom, and dispatched to the great king and at his court enslaved?

Well, prosperity, well-being (he exclaimed), must surely be a blessing, and that the most indisputable, Socrates?

It might be so (replied the philosopher) if it chanced not to be in itself a compound of other questionable blessings.

Euth. And which among the components of happiness and well-being can possibly be questionable?

None (he retorted), unless of course we are to include among these components beauty, or strength, or wealth, or reputation, or anything else of that kind?

Euth. By heaven! of course we are to include these, for what would happiness be without these?

Soc. By heaven! yes; only then we shall be including the commonest sources of mischief which befall mankind. How many are ruined by their fair faces at the hand of admirers driven to distraction by the sight of beauty in its bloom! how many, tempted by their strength to essay deeds beyond their power, are involved in no small evils! how many, rendered effeminate by reason of their wealth, have been plotted against and destroyed! how many through fame and political power have suffered a world of woe!

Well (the youth replied) if I am not even right in praising happiness, I must confess I know not for what one ought to supplicate the gods in prayer.

Nay, these are matters (proceeded Socrates) which perhaps, through excessive confidence in your knowledge of them, you have failed to examine into; but since the state, which you are preparing yourself to direct, is democratically constituted, of course you know what a democracy is.

Euth. I presume I do, decidedly.

Soc. Well, now, is it possible to know what a popular state is without knowing who the people are?

Euth. Certainly not.

Soc. And whom do you consider to be the people?

Euth. The poor citizens, I should say.

Soc. Then you know who the poor are, of course?

Euth. Of course I do.

Soc. I presume you also know who the rich are?

Euth. As certainly as I know who are the poor.

Soc. Whom do you understand by poor and rich?

Euth. By poor I mean those who have not enough to pay for their necessaries, and by rich those who have more means than sufficient for all their needs.

Soc. Have you noticed that some who possess a mere pittance not only find this sufficient, but actually succeed in getting a surplus out of it; while others do not find a large fortune large enough?

I have, most certainly; and I thank you for the reminder (replied Euthydemus). One has heard of crowned heads and despotic rulers being driven by want to commit misdeeds like the most paupers.

Then, if that is how matters stand (continued Socrates), we must class these same crowned heads with the commonalty; and some possessors of scant fortunes, provided they are good economists, with the wealthy?

Then Euthydemus: It is the poverty of my own wit which forces me to this admission. I bethink me it is high time to keep silence altogether; a little more, and I shall be proved to know absolutely nothing. And so he went away crestfallen, in an agony of self-contempt, persuaded that he was verily and indeed no better than a slave.

Amongst those who were reduced to a like condition by Socrates, many refused to come near him again, whom he for his part looked upon as dolts and dullards. But Euthydemus had the wit to understand that, in order to become worthy of account, his best plan was to associate as much as possible with Socrates; and from that moment, save for some necessity, he never left him—in some points even imitating him in his habits and pursuits. Socrates, on his side, seeing that this was the young man's disposition, disturbed him as little as possible, but in the simplest and plainest manner initiated him into everything which he held to be needful to know or important to practice.

## III

It may be inferred that Socrates was in no hurry for those who were with him to discover capacities for speech and action or as inventive geniuses, without at any rate a well-laid foundation of self-control. For those who possessed such abilities without these same saving virtues would, he believed, only become worse men with greater power for mischief. His first object was to instill into those who were with him a wise spirit in their relation to the gods. That such was the tenor of his conversation in dealing with men may be seen from the narratives of others who were present on some particular occasion. I confine myself to a particular discussion with Euthydemus at which I was present.

Socrates said: Tell me, Euthydemus, has it ever struck you to observe what tender pains the gods have taken to furnish man with all his needs?

Euth. No indeed, I cannot say that it has ever struck me.

Well (Socrates continued), you do not need to be reminded that, in the first place, we need light, and with light the gods supply us.

Euth. Most true, and if we had not got it we should, as far as our own eyes could help us, be like men born blind.

Soc. And then, again, seeing that we stand in need of rest and relaxation, they bestow upon us "the blessed balm of silent night."

Yes (he answered), we are much beholden for that boon.

Soc. Then, forasmuch as the sun in his splendor makes manifest to us the hours of the day and bathes all things in brightness, but anon night in her darkness obliterates distinctions, have they not displayed aloft the starry orbs, which inform us of the watches of the night, whereby we can accomplish many of our needs?

It is so (he answered).

Soc. And let us not forget that the moon herself not only makes clear to us the quarters of the night, but of the month also?

Certainly (he answered).

Soc. And what of this: that whereas we need nutriment, this too the heavenly powers yield us? Out of earth's bosom they cause good to spring up for our benefit; and for our benefit provide appropriate seasons to furnish us in turn not only with the many and diverse objects of need, but with the sources also of our joy and gladness?

Yes (he answered eagerly), these things bear token truly to a love for man.

Soc. Well, and what of another priceless gift, that of water, which conspires with earth and the seasons to give both birth and increase to all things useful to us; nay, which helps to nurture our very selves, and commingling with all that feeds us, renders it more digestible, more wholesome, and more pleasant to the taste; and mark you in proportion to the abundance of our need the superabundance of its supply. What say you concerning such a boon?

Euth. In this again I see a sign of providential care.

Soc. And then the fact that the same heavenly power has provided us with fire—our assistant against cold, our auxiliary in darkness, our fellow-workman in every art and every instrument which for the sake of its utility mortal man may invent or furnish himself withal. What of this, since, to put it compendiously, there is nothing serviceable to the life of man worth speaking of but owes its fabrication to fire?

Euth. Yes, a transcendent instance of benevolent design.

Soc. Again, consider the motions of the Sun, how when he has turned him about in winter he again draws nigh to us, ripening some fruits, and causing others whose time is past to dry up; how when he has fulfilled his work he comes no closer, but turns away as if in fear to scorch us to our hurt unduly; and again, when he has reached a point where if he should prolong his retreat we should plainly be frozen to death with cold, note how he turns him about and resumes his approach, traversing that region of the heavens where he may shed his genial influence best upon us.

Yes, upon my word (he answered), these occurrences bear the impress of being so ordered for the sake of man.

Soc. And then, again, it being manifest that we could not endure either scorching heat or freezing cold if they came suddenly upon us, note how gradually the sun approaches, and how gradually recedes, so that we fail to notice how we come at last to either extreme.

For my part (he replied), the question forces itself upon my mind, whether the gods have any other occupation save only to minister to man; and I am only hindered from saying so, because the rest of animals would seem to share these benefits along with man.

Soc. Why, to be sure; and is it not plain that these animals themselves are born and bred for the sake of man? At any rate, no living creature save man derives so many of his enjoyments from sheep and goats, horses and cattle and asses, and other animals. He is more dependent, I should suppose, on these than even on plants and vegetables. At any rate, equally with these latter they serve him as means of subsistence or articles of commerce; indeed, a large portion of the human family do not use the products of the soil as food at all, but live on the milk and cheese and flesh of their flocks and herds, while all men everywhere tame and domesticate the more useful kinds of animals, and turn them to account as fellow-workers in war and for other purposes.

Yes, I cannot but agree with what you say (he answered), when I see that animals so much stronger than man become so subservient to his hand that he can use them as he lists.

Soc. And as we reflect on the infinite beauty and utility and the variety of nature, what are we to say of the fact that man has been endowed with sensibilities which correspond with this diversity, whereby we take our fill of every blessing; or, again, this implanted faculty of reasoning, which enables us to draw inferences concerning the things which we perceive, and by aid of memory to understand how each set of things may be turned to our good, and to devise countless contrivances with a view to enjoying the good and repelling the evil; or lastly, when we consider the faculty bestowed upon us of interpretative speech, by which we are enabled to instruct one another, and to participate in all the blessings fore-named: to form societies, to establish laws, and to enter upon a civilized existence—what are we to think?

Euth. Yes, Socrates, decidedly it would appear that the gods do manifest a great regard, nay, a tender care, towards mankind.

Soc. Well, and what do you make of the fact that where we are powerless to take advantageous forethought for our future, at this stage they themselves lend us their co-operation, imparting to the inquirer through divination knowledge of events about to happen, and instructing him by what means they may best be turned to good account?

Euth. Ay, and you, Socrates, they would seem to treat in a more friendly manner still than the rest of men, if, without waiting even to be inquired of by you, they show you by signs beforehand what you must, and what you must not do.

Soc. Yes, and you will discover for yourself the truth of what I say, if, without waiting to behold the outward and visible forms of the gods themselves, you will be content to behold their works; and with these before you, to worship and honor the Divine authors of them. I would have you reflect that the very gods themselves suggest this teaching. Not one of these but gives us freely of his blessings; yet they do not step from behind their veil in order to grant one single boon. And pre-eminently He who orders and holds together the universe, in which are all things beautiful and good; who fashions and refashions it to never-ending use unworn, keeping it free from sickness or decay, so that swifter than thought it ministers to his will unerringly—this God is seen to perform the mightiest operations, but in the actual administration of the same abides himself invisible to mortal ken. Reflect further, this Sun above our heads, so visible to all—as we suppose—will not suffer man to regard him too narrowly, but should any essay to watch him with a shameless stare he will snatch away their power of vision. And if the gods themselves are thus unseen, so too shall you find their ministers to be hidden also; from the height of heaven above the thunderbolt is plainly hurled, and triumphs over all that it encounters, yet it is all-invisible, no eye may detect its coming or its going at the moment of its swoop. The winds also are themselves unseen, though their works are manifest, and through their approach we are aware of them. And let us not forget, the soul of man himself, which if aught else human shares in the divine—however manifestly enthroned within our bosom, is as wholly as the rest hidden from our gaze. These things you should lay to mind, and not despise the invisible ones, but learn to recognize their power, as revealed in outward things, and to know the divine influence.

Nay, Socrates (replied Euthydemus), there is no danger I shall turn a deaf ear to the divine influence even a little; of that I am not afraid, but I am out of heart to think that no soul of man may ever requite the kindness of the gods with fitting gratitude.

Be not out of heart because of that (he said); you know what answer the god at Delphi makes to each one who comes asking “how shall I return thanks to heaven?”—”According to the law and custom of your city”; and this, I presume, is law and custom everywhere that a man should please the gods with offerings according to the ability which is in him. How then should a man honor the gods with more beautiful or holier honor than by doing what they bid him? but he must in no wise slacken or fall short of his ability, for when a man so does, it is manifest, I presume, that at the moment he is not honoring the gods. You must then honor the gods, not with shortcoming but according to your ability; and having so done, be of good cheer and hope to receive the greatest blessings. For where else should a man of sober sense look to receive great blessings if not from those who are able to help him most, and how else should he hope to obtain them save by seeking to please his helper, and how may he hope to please his helper better than by yielding him the amplest obedience?

By such words—and conduct corresponding to his words—did Socrates mould and fashion the hearts of his companions, making them at once more devout and more virtuous.

## IV

But indeed with respect to justice and uprightness he not only made no secret of the opinion he held, but gave practical demonstration of it, both in private by his law-abiding and helpful behavior to all, and in public by obeying the magistrates in all that the laws enjoined, whether in the life of the city or in military service, so that he was a pattern of loyalty to the rest of the world, and on three several occasions in particular: first, when as president (Epistates) of the assembly he would not suffer the sovereign people to take an unconstitutional vote, but ventured, on the side of the laws, to resist a current of popular feeling strong enough, I think, to have daunted any other man. Again, when the Thirty tried to lay some injunction on him contrary to the laws, he refused to obey, as for instance when they forbade his conversing with the young; or again, when they ordered him and certain other citizens to arrest a man to be put to death, he stood out single-handed on the ground that the injunctions laid upon him were contrary to the laws. And lastly, when he appeared as defendant in the suit instituted by Meletus, notwithstanding that it was customary for litigants in the law courts to humor the judges in the conduct of their arguments by flattery and supplications contrary to the laws, notwithstanding also that defendants owed their acquittal by the court to the employment of such methods, he refused to do a single thing however habitual in a court of law which was not strictly legal; and though by only a slight deflection from the strict path he might easily have been acquitted by his judges, he preferred to abide by the laws and die rather than transgress them and live.

These views he frequently maintained in conversation, now with one and now with another, and one particular discussion with Hippias of Elis on the topic of justice and uprightness has come to my knowledge.

Hippias had just arrived at Athens after a long absence, and chanced to be present when Socrates was telling some listeners how astonishing it was that if a man wanted to get another taught to be a shoemaker or carpenter or coppersmith or horseman, he would have no doubt where to send him for the purpose: “People say,” he added, “that if a man wants to get his horse or his ox taught in the right way, the world is full of instructors; but if he would learn himself, or have his son or his slave taught in the way of right, he cannot tell where to find such instruction.”

Yes (answered Socrates), and what is still more strange, Hippias, it is not only the same old talk but about the same old subjects. Now you, I daresay, through versatility of knowledge, never say the same thing twice over on the same subject?

To be sure (he answered), my Endeavour is to say something new on all occasions.

What (he asked) about things which you know, as for instance in a case of spelling, if any one asks you, “How many letters in Socrates, and what is their order?” I suppose you try to run off one string of letters to-day and to-morrow another? or to a question of arithmetic, “Does twice five make ten?” your answer to-day will differ from that of yesterday?

Hipp. No; on these topics, Socrates, I do as you do and repeat myself. However, to revert to justice (and uprightness), I flatter myself I can at present furnish you with some remarks which neither you nor any one else will be able to controvert.

By Hera! (he exclaimed), what a blessing to have discovered! Now we shall have no more divisions of opinion on points of right and wrong; judges will vote unanimously; citizens will cease wrangling; there will be no more litigation, no more party faction, states will reconcile their differences, and wars are ended. For my part I do not know how I can tear myself away from you, until I have heard from your own lips all about the grand discovery you have made.

You shall hear all in good time (Hippias answered), but not until you make a plain statement of your own belief. What is justice? We have had enough of your ridiculing all the rest of the world, questioning and cross-examining first one and then the other, but never a bit will you render an account to any one yourself or state a plain opinion upon a single topic.

What, Hippias (Socrates retorted), have you not observed that I am in a chronic condition of proclaiming what I regard as just and upright?

Hipp. And pray what is this theory of yours on the subject? Let us have it in words.

Soc. If I fail to proclaim it in words, at any rate I do so in deed and in fact. Or do you not think that a fact is worth more as evidence than a word?

Worth far more, I should say (Hippias answered), for many a man with justice and right on his lips commits injustice and wrong, but no doer of right ever was a wrong doer or could possibly be.

Soc. I ask then, have you ever heard or seen or otherwise perceived me bearing false witness or lodging malicious information, or stirring up strife among friends or political dissension in the city, or committing any other unjust and wrongful act?

No, I cannot say that I have (he answered).

Soc. And do you not regard it as right and just to abstain from wrong?

Hipp. Now you are caught, Socrates, plainly trying to escape from a plain statement. When asked what you believe justice to be, you keep telling us not what the just man does, but what he does not do.

Why, I thought for my part (answered Socrates) that the refusal to do wrong and injustice was a sufficient warrant in itself of righteousness and justice, but if you do not agree, see if this pleases you better: I assert that what is “lawful” is “just and righteous.”

Do you mean to assert (he asked) that lawful and just are synonymous terms?

Soc. I do.

I ask (Hippias added), for I do not perceive what you mean by lawful, nor what you mean by just.

Soc. You understand what is meant by laws of a city or state?

Yes (he answered).

Soc. What do you take them to be?

Hipp. The several enactments drawn up by the citizens or members of a state in agreement as to what things should be done or left undone.

Then I presume (Socrates continued) that a member of a state who regulates his life in accordance with these enactments will be law-abiding, while the transgressor of the same will be law-less?

Certainly (he answered).

Soc. And I presume the law-loving citizen will do what is just and right, while the lawless man will do what is unjust and wrong?

Hipp. Certainly.

Soc. And I presume that he who does what is just is just, and he who does what is unjust is unjust?

Hipp. Of course.

Soc. It would appear, then, that the law-loving man is just, and the lawless unjust?

Then Hippias: Well, but laws, Socrates, how should any one regard as a serious matter either the laws themselves, or obedience to them, which laws the very people who made them are perpetually rejecting and altering?

Which is also true of war (Socrates replied); cities are perpetually undertaking war and then making peace again.

Most true (he answered).

Soc. If so, what is the difference between depreciating obedience to law because laws will be repealed, and depreciating good discipline in war because peace will one day be made? But perhaps you object to enthusiasm displayed in defense of one's home and fatherland in war?

No, indeed I do not! I heartily approve of it (he answered).

Soc. Then have you laid to heart the lesson taught by Lycurgus to the Lacedaemonians, and do you understand that if he succeeded in giving Sparta a distinction above other states, it was only by instilling into her, beyond all else, a spirit of obedience to the laws? And among magistrates and rulers in the different states, you would scarcely refuse the palm of superiority to those who best contribute to make their fellow-citizens obedient to the laws? And you would admit that any particular state in which obedience to the laws is the paramount distinction of the citizens flourishes most in peace time, and in time of war is irresistible? But, indeed, of all the blessings which a state may enjoy, none stands higher than the blessing of unanimity. "Concord among citizens"—that is the constant theme of exhortation emphasized by the councils of elders and by the choice spirits of the community; at all times and everywhere through the length and breadth of all Hellas it is an established law that the citizens be bound together by an oath of concord; everywhere they do actually swear this oath; not of course as implying that citizens shall all vote for the same choruses, or give their plaudits to the same flute-players, or choose the same poets, or limit themselves to the same pleasures, but simply that they shall pay obedience to the laws, since in the end that state will prove most powerful and most prosperous in which the citizens abide by these; but without concord neither can a state be well administered nor a household well organized.

And if we turn to private life, what better protection can a man have than obedience to the laws? This shall be his safeguard against penalties, his guarantee of honors at the hands of the community; it shall be a clue to thread his way through the mazes of the law courts unbewildered, secure against defeat, assured of victory. It is to him, the law-loving citizen, that men will turn in confidence when seeking a guardian of the most sacred deposits, be it of money or be it their sons or daughters. He, in the eyes of the state collectively, is trustworthy—he and no other; who alone may be depended on to render to all alike their dues—to parents and kinsmen and servants, to friends and fellow-citizens and foreigners. This is he whom the enemy will soonest trust to arrange an armistice, or a truce, or a treaty of peace. They would like to become the allies of this man, and to fight on his side. This is he to whom the allies of his country will most confidently entrust the command of their forces, or of a garrison, or their states themselves. This, again, is he who may be counted on to recompense kindness with gratitude, and who, therefore, is more sure of kindly treatment than another whose sense of gratitude is fuller. The most desirable among friends, the enemy of all others to be avoided, clearly he is not the person whom a foreign state would choose to go to war with; encompassed by a host of friends and exempt from foes, his very character has a charm to compel friendship and alliance, and before him hatred and hostility melt away.

And now, Hippias, I have done my part; that is my proof and demonstration that the "lawful" and "law-observant" are synonymous with the "upright" and the "just"; do you, if you hold a contrary view, instruct us.

Then Hippias: Nay, upon my soul, Socrates, I am not aware of holding any contrary opinion to what you have uttered on the theme of justice.

Soc. But now, are you aware, Hippias, of certain unwritten laws?

Yes (he answered), those held in every part of the world, and in the same sense.

Can you then assert (asked Socrates) of these unwritten laws that men made them?

Nay, how (he answered) should that be, for how could they all have come together from the ends of the earth? and even if they had so done, men are not all of one speech?

Soc. Whom then do you believe to have been the makers of these laws.

Hipp. For my part, I think that the gods must have made these laws for men, and I take it as proof that first and foremost it is a law and custom everywhere to worship and reverence the gods.

Soc. And, I presume, to honor parents is also customary everywhere?

Yes, that too (he answered).

Soc. And, I presume, also the prohibition of intermarriage between parents and children?

Hipp. No; at that point I stop, Socrates. That does not seem to me to be a law of God.

Now, why? (he asked).

Because I perceive it is not infrequently transgressed (he answered).

Soc. Well, but there are a good many other things which people do contrary to law; only the penalty, I take it, affixed to the transgression of the divine code is certain; there is no escape for the offender after the manner in which a man may transgress the laws of man with impunity, slipping through the fingers of justice by stealth, or avoiding it by violence.

Hipp. And what is the inevitable penalty paid by those who, being related as parents and children, intermingle in marriage?

Soc. The greatest of all penalties; for what worse calamity can human beings suffer in the production of offspring than to misbeget?

Hipp. But how or why should they breed them ill where nothing hinders them, being of a good stock themselves and producing from stock as good?

Soc. Because, forsooth, in order to produce good children, it is not simply necessary that the parents should be good and of a good stock, but that both should be equally in the prime and vigor of their bodies. Do you suppose that the seed of those who are at their prime is like theirs who either have not yet reached their prime, or whose prime has passed?

Hipp. No, it is reasonable to expect that the seed will differ.

Soc. And for the better—which?

Hipp. Theirs clearly who are at their prime.

Soc. It would seem that the seed of those who are not yet in their prime or have passed their prime is not good?

Hipp. It seems most improbable it should be.

Soc. Then the right way to produce children is not that way?

Hipp. No, that is not the right way.

Soc. Then children who are so produced are produced not as they ought to be?

Hipp. So it appears to me.

What offspring then (he asked) will be ill produced, ill begotten, and ill born, if not these?

I subscribe to that opinion also (replied Hippias).

Soc. Well, it is a custom universally respected, is it not, to return good for good, and kindness with kindness?

Hipp. Yes, a custom, but one which again is apt to be transgressed.

Soc. Then he that so transgresses it pays penalty in finding himself isolated; bereft of friends who are good, and driven to seek after those who love him not. Or is it not so that he who does me kindness in my intercourse with him is my good friend, but if I requite not this kindness to my benefactor, I am hated by him for my ingratitude, and yet I must needs pursue after him and cling to him because of the great gain to me of his society?

Hipp. Yes, Socrates. In all these cases, I admit, there is an implication of divine authority; that a law should in itself be loaded with the penalty of its transgression does suggest to my mind a higher than human type of legislator.

Soc. And in your opinion, Hippias, is the legislation of the gods just and righteous, or the reverse of what is just and righteous?

Hipp. Not the reverse of what is just and righteous, Socrates, God forbid! for scarcely could any other legislate aright, of not God himself.

Soc. It would seem then, Hippias, the gods themselves are well pleased that "the lawful" and "the just" should be synonymous?

By such language and by such conduct, through example and precept alike, he helped to make those who approached him more upright and more just.

## V

And now I propose to show in what way he made those who were with him more vigorous in action. In the first place, as befitted one whose creed was that a basis of self-command is indispensable to any noble performance, he manifested himself to his companions as one who had pre-eminently disciplined himself; and in the next place by conversation and discussion he encouraged them to a like self-restraint beyond all others. Thus it was that he continued ever mindful himself, and was continually reminding all whom he encountered, of matters conducive to virtue; as the following discussion with Euthydemus, which has come to my knowledge, will serve to illustrate—the topic of the discussion being self-command.

Tell me, Euthydemus (he began), do you believe freedom to be a noble and magnificent acquisition, whether for a man or for a state?

I cannot conceive a nobler or more magnificent (he answered).

Soc. Then do you believe him to be a free man who is ruled by the pleasures of the body, and thereby cannot perform what is best?

Certainly not (he answered).

Soc. No! for possibly to perform what is best appears to you to savor of freedom? And, again, to have some one over you who will prevent you doing the like seems a loss of freedom?

Most decidedly (he answered).

Soc. It would seem you are decidedly of opinion that the incontinent are the reverse of free?

Euth. Upon my word, I much suspect so.

Soc. And does it appear to you that the incontinent man is merely hindered from doing what is noblest, or that further he is impelled to do what is most shameful?

Euth. I think he is as much driven to the one as he is hindered from the other.

Soc. And what sort of lords and masters are those, think you, who at once put a stop to what is best and enforce what is worst?

Euth. Goodness knows, they must be the very worst of masters.

Soc. And what sort of slavery do you take to be the worst?

I should say (he answered) slavery to the worst masters.

It would seem then (pursued Socrates) that the incontinent man is bound over to the worst sort of slavery, would it not?

So it appears to be (the other answered).

Soc. And does it not appear to you that this same beldame incontinence shuts out wisdom, which is the best of all things, from mankind, and plunges them into the opposite? Does it not appear to you that she hinders men from attending to things which will be of use and benefit, and from learning to understand them; that she does so by dragging them away to things which are pleasant; and often though they are well aware of the good and of the evil, she amazes and confounds their wits and makes them choose the worse in place of the better?

Yes, so it comes to pass (he answered).

Soc. And soundness of soul, the spirit of temperate modesty? Who has less claim to this than the incontinent man? The works of the temperate spirit and the works of incontinency are, I take it, diametrically opposed?

That too, I admit (he answered).

Soc. If this then be so concerning these virtues, what with regard to carefulness and devotion to all that ought to occupy us? Can anything more seriously militate against these than this same incontinence?

Nothing that I can think of (he replied).

Soc. And can worse befall a man, think you? Can he be subjected to a more baleful influence than that which induces him to choose what is hurtful in place of what is helpful; which cajoles him to devote himself to the evil and to neglect the good; which forces him, will he nil he, to do what every man in his sober senses would shrink from and avoid?

I can imagine nothing worse (he replied).

Soc. Self-control, it is reasonable to suppose, will be the cause of opposite effects upon mankind to those of its own opposite, the want of self-control?

Euth. It is to be supposed so.

Soc. And this, which is the source of opposite effects to the very worst, will be the very best of things?

Euth. That is the natural inference.

Soc. It looks, does it not, Euthydemus, as if self-control were the best thing a man could have?

It does indeed, Socrates (he answered).

Soc. But now, Euthydemus, has it ever occurred to you to note one fact?

What fact? (he asked).

Soc. That, after all, incontinency is powerless to bring us to that realm of sweetness which some look upon as her peculiar province; it is not incontinency but self-control alone which has the passport to highest pleasures.

In what way? (he asked). How so?

Why, this way (Socrates answered): since incontinency will not suffer us to resist hunger and thirst, or to hold out against sexual appetite, or want of sleep (which abstinences are the only channels to true pleasure in eating and drinking, to the joys of love, to sweet repose and blissful slumber won by those who will patiently abide and endure till each particular happiness is at the flood)—it comes to this: by incontinency we are cut off from the full fruition of the more obvious and constantly recurring pleasures. To self-control, which alone enables us to endure the pains aforesaid, alone belongs the power to give us any pleasure worth remembering in these common cases.

You speak the words of truth (he answered).

Soc. Furthermore, if there be any joy in learning aught "beautiful and good," or in patient application to such rules as may enable a man to manage his body aright, or to administer his household well, or to prove himself useful to his friends and to the state, or to dominate his enemies—which things are the sources not only of advantage but of deepest satisfaction—to the continent and self-controlled it is given to reap the fruits of them in their performance. It is the incontinent who have neither part nor lot in any one of them. Since we must be right in asserting that he is least concerned with such things who has least ability to do them, being tied down to take an interest in the pleasure which is nearest to hand.

Euthydemus replied: Socrates, you would say, it seems to me, that a man who is mastered by the pleasures of the body has no concern at all with virtue.

And what is the distinction, Euthydemus (he asked), between a man devoid of self-control and the dullest of brute beasts? A man who foregoes all height of aim, who gives up searching for the best and strives only to gratify his sense of pleasure, is he better than the silliest of cattle?... But to the self-controlled alone is it given to discover the hid treasures. These, by word and by deed, they will pick out and make selection of them according to their kinds, choosing deliberately the good and holding aloof from the evil. Thus (he added) it is that a man reaches the zenith, as it were, of goodness and happiness, thus it is that he becomes most capable of reasoning and discussion. The very name discussion ({dialegesthai}) is got from people coming together and deliberating in common by picking out and selecting things ({dialegein}) according to their kinds. A man then is bound to prepare himself as much as possible for this business, and to pursue it beyond all else with earnest resolution; for this is the right road to excellence, this will make a man fittest to lead his fellows and be a master in debate.

## VI

At this point I will Endeavour to explain in what way Socrates fostered this greater “dialectic” capacity among his intimates. He held firmly to the opinion that if a man knew what each reality was, he would be able to explain this knowledge to others; but, failing the possession of that knowledge, it did not surprise him that men should stumble themselves and cause others to stumble also. It was for this reason that he never ceased inquiring with those who were with him into the true nature of things that are. It would be a long business certainly to go through in detail all the definitions at which he arrived; I will therefore content myself with such examples as will serve to show his method of procedure. As a first instance I will take the question of piety. The mode of investigation may be fairly represented as follows.

Tell me (said he), Euthydemus, what sort of thing you take piety to be?

Something most fair and excellent, no doubt (the other answered).

Soc. And can you tell me what sort of person the pious man is?

I should say (he answered) he is a man who honors the gods.

Soc. And is it allowable to honor the gods in any mode or fashion one likes?

Euth. No; there are laws in accordance with which one must do that.

Soc. Then he who knows these laws will know how he must honor the gods?

I think so (he answered).

Soc. And he who knows how he must honor the gods conceives that he ought not to do so except in the manner which accords with his knowledge? Is it not so?

Euth. That is so.

Soc. And does any man honor the gods otherwise than he thinks he ought?

I think not (he answered).

Soc. It comes to this then: he who knows what the law requires in reference to the gods will honor the gods in the lawful way?

Euth. Certainly.

Soc. But now, he who honors lawfully honors as he ought?

Euth. I see no alternative.

Soc. And he who honors as he ought is a pious man?

Euth. Certainly.

Soc. It would appear that he who knows what the law requires with respect to the gods will correctly be defined as a pious man, and that is our definition?

So it appears to me, at any rate (he replied).

Soc. But now, with regard to human beings; is it allowable to deal with men in any way one pleases?

Euth. No; with regard to men also, he will be a law-observing man who knows what things are lawful as concerning men, in accordance with which our dealings with one another must be conducted.

Soc. Then those who deal with one another in this way, deal with each other as they ought?

Obviously (he answered).

Soc. And they who deal with one another as they ought, deal well and nobly—is it not so?

Certainly (he answered).

Soc. And they who deal well and nobly by mankind are well-doers in respect of human affairs?

That would seem to follow (he replied).

Soc. I presume that those who obey the laws do what is just and right?

Without a doubt, (he answered).

Soc. And by things right and just you know what sort of things are meant?

What the laws ordain (he answered).

Soc. It would seem to follow that they who do what the laws ordain both do what is right and just and what they ought?

Euth. I see no alternative.

Soc. But then, he who does what is just and right is upright and just?

I should say so myself (he answered).

Soc. And should you say that any one obeys the laws without knowing what the laws ordain?

I should not (he answered).

Soc. And do you suppose that any one who knows what things he ought to do supposes that he ought not to do them?

No, I suppose not (he answered).

Soc. And do you know of anybody doing other than what he feels bound to do?

No, I do not (he answered).

Soc. It would seem that he who knows what things are lawful as concerning men does the things that are just and right?

Without a doubt (he answered).

Soc. But then, he who does what is just and right is upright and just?

Who else, if not? (he replied).

Soc. It would seem, then, we shall have got to a right definition if we name as just and upright those who know the things which are lawful as concerning men?

That is my opinion (he answered).

Soc. And what shall we say that wisdom is? Tell me, does it seem to you that the wise are wise in what they know, or are there any who are wise in what they know not?

Euth. Clearly they are wise in what they know; for how could a man have wisdom in that which he does not know?

Soc. In fact, then, the wise are wise in knowledge?

Euth. Why, in what else should a man be wise save only in knowledge?

Soc. And is wisdom anything else than that by which a man is wise, think you?

Euth. No; that, and that only, I think.

Soc. It would seem to follow that knowledge and wisdom are the same?

Euth. So it appears to me.

Soc. May I ask, does it seem to you possible for a man to know all the things that are?

Euth. No, indeed! not the hundredth part of them, I should say.

Soc. Then it would seem that it is impossible for a man to be all-wise?

Quite impossible (he answered).

Soc. It would seem the wisdom of each is limited to his knowledge; each is wise only in what he knows?

Euth. That is my opinion.

Soc. Well! come now, Euthydemus, as concerning the good: ought we to search for the good in this way?

What way? (he asked).

Soc. Does it seem to you that the same thing is equally advantageous to all?

No, I should say not (he answered).

Soc. You would say that a thing which is beneficial to one is sometimes hurtful to another?

Decidedly (he replied).

Soc. And is there anything else good except that which is beneficial, should you say?

Nothing else (he answered).

Soc. It would seem to follow that the beneficial is good relatively to him to whom it is beneficial?

That is how it appears to me (he answered).

Soc. And the beautiful: can we speak of a thing as beautiful in any other way than relatively? or can you name any beautiful thing, body, vessel, or whatever it be, which you know of as universally beautiful?

Euth. I confess I do not know of any such myself.

Soc. I presume to turn a thing to its proper use is to apply it beautifully?

Euth. Undoubtedly it is a beautiful appliance.

Soc. And is this, that, and the other thing beautiful for aught else except that to which it may be beautifully applied?

Euth. No single thing else.

Soc. It would seem that the useful is beautiful relatively to that for which it is of use?

So it appears to me (he answered).

Soc. And what of courage, Euthydemus? I presume you rank courage among things beautiful? It is a noble quality?

Nay, one of the most noble (he answered).

Soc. It seems that you regard courage as useful to no mean end?

Euth. Nay, rather the greatest of all ends, God knows.

Soc. Possibly in face of terrors and dangers you would consider it an advantage to be ignorant of them?

Certainly not (he answered).

Soc. It seems that those who have no fear in face of dangers, simply because they do not know what they are, are not courageous?

Most true (he answered); or, by the same showing, a large proportion of madmen and cowards would be courageous.

Soc. Well, and what of those who are in dread of things which are not dreadful, are they—

Euth. Courageous, Socrates?—still less so than the former, goodness knows.

Soc. Possibly, then, you would deem those who are good in the face of terrors and dangers to be courageous, and those who are bad in the face of the same to be cowards?

Certainly I should (he answered).

Soc. And can you suppose any other people to be good in respect of such things except those who are able to cope with them and turn them to noble account?

No; these and these alone (he answered).

Soc. And those people who are of a kind to cope but badly with the same occurrences, it would seem, are bad?

Who else, if not they? (he asked).

Soc. May it be that both one and the other class do use these circumstances as they think they must and should?

Why, how else should they deal with them? (he asked).

Soc. Can it be said that those who are unable to cope well with them or to turn them to noble account know how they must and should deal with them?

I presume not (he answered).

Soc. It would seem to follow that those who have the knowledge how to behave are also those who have the power?

Yes; these, and these alone (he said).

Soc. Well, but now, what of those who have made no egregious blunder (in the matter); can it be they cope ill with the things and circumstances we are discussing?

I think not (he answered).

Soc. It would seem, conversely, that they who cope ill have made some egregious blunder?

Euth. Probably; indeed, it would appear to follow.

Soc. It would seem, then, that those who know how to cope with terrors and dangers well and nobly are courageous, and those who fail utterly of this are cowards?

So I judge them to be (he answered).

A kingdom and a tyranny were, he opined, both of them forms of government, but forms which differed from one another, in his belief; a kingdom was a government over willing men in accordance with civil law, whereas a tyranny implied the government over unwilling subjects not according to law, but so as to suit the whims and wishes of the ruler.

There were, moreover, three forms of citizenship or polity; in the case where the magistrates were appointed from those who discharged the obligations prescribed by law, he held the polity to be an aristocracy (or rule of the best); where the title to office depended on ratable property, it was a plutocracy (or rule of wealth); and lastly, where all the citizens without distinction held the reins of office, that was a democracy (or rule of the people).

Let me explain his method of reply where the disputant had no clear statement to make, but without attempt at proof chose to contend that such or such a person named by himself was wiser, or more of a statesman, or more courageous, and so forth, than some other person. Socrates had a way of bringing the whole discussion back to the underlying proposition, as thus:

Soc. You state that so and so, whom you admire, is a better citizen that this other whom I admire?

The Disputant. Yes; I repeat the assertion.

Soc. But would it not have been better to inquire first what is the work or function of a good citizen?

The Disputant. Let us do so.

Soc. To begin, then, with the matter of expenditure: his superiority will be shown by his increasing the resources and lightening the expenditure of the state?

Certainly (the disputant would answer).

Soc. And in the event of war, by rendering his state superior to her antagonists?

The Disputant. Clearly.

Soc. Or on an embassy as a diplomatist, I presume, by securing friends in place of enemies?

That I should imagine (replies the disputant).

Soc. Well, and in parliamentary debate, by putting a stop to party strife and fostering civic concord?

The Disputant. That is my opinion.

By this method of bringing back the argument to its true starting-point, even the disputant himself would be affected and the truth become manifest to his mind.

His own—that is, the Socratic—method of conducting a rational discussion was to proceed step by step from one point of general agreement to another: "Herein lay the real security of reasoning," he would say; and for this reason he was more successful in winning the common assent of his hearers than any one I ever knew. He had a saying that Homer had conferred on Odysseus the title of a safe, unerring orator, because he had the gift to lead the discussion from one commonly accepted opinion to another.

## VII

The frankness and simplicity with which Socrates endeavored to declare his own opinions, in dealing with those who conversed with him, is, I think, conclusively proved by the above instances; at the same time, as I hope now to show, he was no less eager to cultivate a spirit of independence in others, which would enable them to stand alone in all transactions suited to their powers.

Of all the men I have ever known, he was most anxious to ascertain in what any of those about him was really versed; and within the range of his own knowledge he showed the greatest zeal in teaching everything which it befits the true gentleman to know; or where he was deficient in knowledge himself, he would introduce his friends to those who knew. He did not fail to teach them also up to what point it was proper for an educated man to acquire empiric knowledge of any particular matter.

To take geometry as an instance: Every one (he would say) ought to be taught geometry so far, at any rate, as to be able, if necessary, to take over or part with a piece of land, or to divide it up or assign a portion of it for cultivation, and in every case by geometric rule. That amount of geometry was so simple indeed, and easy to learn, that it only needed ordinary application of the mind to the method of mensuration, and the student could at once ascertain the size of the piece of land, and, with the satisfaction of knowing its measurement, depart in peace. But he was unable to approve of the pursuit of geometry up to the point at which it became a study of unintelligible diagrams. What the use of these might be, he failed, he said, to see; and yet he was not unversed in these recondite matters himself. These things, he would say, were enough to wear out a man's life, and to hinder him from many other more useful studies.

Again, a certain practical knowledge of astronomy, a certain skill in the study of the stars, he strongly insisted on. Every one should know enough of the science to be able to discover the hour of the night or the season of the month or year, for the purposes of travel by land or sea—the march, the voyage, and the regulations of the watch; and in general, with regard to all matters connected with the night season, or with the month, or the year, it was well to have such reliable data to go upon as would serve to distinguish the various times and seasons. But these, again, were pieces of knowledge easily learnt from night sportsmen, pilots of vessels, and many others who make it their business to know such things. As to pushing the study of astronomy so far as to include a knowledge of the movements of bodies outside our own orbit, whether planets or stars of eccentric movement, or wearing oneself out endeavoring to discover their distances from the earth, their periods, and their causes, all this he strongly discountenanced; for he saw (he said) no advantage in these any more than in the former studies. And yet he was not unversed in the subtleties of astronomy any more than in those of geometry; only these, again, he insisted, were sufficient to wear out a man's lifetime, and to keep him away from many more useful pursuits.

And to speak generally, in regard of things celestial he set his face against attempts to excogitate the machinery by which the divine power formed its several operations. Not only were these matters beyond man's faculties to discover, as he believed, but the attempt to search out what the gods had not chosen to reveal could hardly (he supposed) be well pleasing in their sight. Indeed, the man who tortured his brains about such subjects stood a fair chance of losing his wits entirely, just as Anaxagoras, the headiest speculator of them all, in his attempt to explain the divine mechanism, had somewhat lost his head. Anaxagoras took on himself to assert that sun and fire are identical, ignoring the fact that human beings can easily look at fire, but to gaze steadily into the face of the sun is given to no man; or that under the influence of his rays the color of the skin changes, but under the rays of fire not. He forgot that no plant or vegetation springs from earth's bosom with healthy growth without the help of sunlight, while the influence of fire is to parch up everything, and to destroy life; and when he came to speak of the sun as being a “red-hot stone” he ignored another fact, that a stone in fire neither lights up nor lasts, whereas the sun-god abides for ever with the most intense brilliancy undimmed.

Socrates inculcated the study of reasoning processes, but in these, equally with the rest, he bade the student beware of vain and idle over-occupation. Up to the limit set by utility, he was ready to join in any investigation, and to follow out an argument with those who were with him; but there he stopped. He particularly urged those who were with him to pay the utmost attention to health. They would learn all it was possible to learn from adepts, and not only so, but each one individually should take pains to discover, by a lifelong observation of his own case, what particular regimen, what meat or drink, or what kind of work, best suited him; these he should turn to account with a view to leading the healthiest possible life. It would be no easy matter for any one who would follow this advice, and study his own idiosyncrasy, to find a doctor to improve either on the diagnosis or the treatment requisite.

Where any one came seeking for help which no human wisdom could supply, he would counsel him to give heed to "divination." He who has the secret of the means whereby the gods give signs to men touching their affairs can never surely find himself bereft of heavenly guidance.

## VIII

Now if any one should be disposed to set the statement of Socrates touching the divinity which warned him what he ought to do or not to do, against the fact that he was sentenced to death by the board of judges, and argue that thereby Socrates stood convicted of lying and delusion in respect of this "divinity" of his, I would have him to note in the first place that, at the date of his trial, Socrates was already so far advanced in years that had he not died then his life would have reached its natural term soon afterwards; and secondly, as matters went, he escaped life's bitterest load in escaping those years which bring a diminution of intellectual force to all—instead of which he was called upon to exhibit the full robustness of his soul and acquire glory in addition, partly by the style of his defense—felicitous alike in its truthfulness, its freedom, and its rectitude—and partly by the manner in which he bore the sentence of condemnation with infinite gentleness and manliness. Since no one within the memory of man, it is admitted, ever bowed his head to death more nobly. After the sentence he must needs live for thirty days, since it was the month of the "Delia," and the law does not suffer any man to die by the hand of the public executioner until the sacred embassy return from Delos. During the whole of that period (as his acquaintances without exception can testify) his life proceeded as usual. There was nothing to mark the difference between now and formerly in the even tenor of its courage; and it was a life which at all times had been a marvel of cheerfulness and calm content.

Let us pause and ask how could man die more nobly and more beautifully than in the way described? or put it thus: dying so, then was his death most noble and most beautiful; and being the most beautiful, then was it also the most fortunate and heaven-blest; and being most blessed of heaven, then was it also most precious in the sight of God.

And now I will mention further certain things which I have heard from Hermogenes, the son of Hipponicus, concerning him. He said that even after Meletus had drawn up the indictment, he himself used to hear Socrates conversing and discussing everything rather than the suit impending, and had ventured to suggest that he ought to be considering the line of his defense, to which, in the first instance, the master answered: “Do I not seem to you to have been practicing that my whole life long?” And upon his asking “How?” added in explanation that he had passed his days in nothing else save in distinguishing between what is just and what is unjust (right and wrong), and in doing what is right and abstaining from what is wrong; “which conduct” (he added) “I hold to be the finest possible practice for my defense”; and when he (Hermogenes), returning to the point again, pleaded with Socrates: “Do you not see, Socrates, how commonly it happens that an Athenian jury, under the influence of argument, condemns innocent people to death and acquits real criminals?”—Socrates replied, “I assure you, Hermogenes, that each time I have essayed to give my thoughts to the defense which I am to make before the court, the divinity has opposed me." And when he (Hermogenes) exclaimed, "How strange!"—"Do you find it strange" (he continued), "that to the Godhead it should appear better for me to close my life at once? Do you not know that up to the present moment there is no man whom I can admit to have spent a better or happier life than mine. Since theirs I regard as the best of lives who study best to become as good as may be, and theirs the happiest who have the liveliest sense of growth in goodness; and such, hitherto, is the happy fortune which I perceive to have fallen to my lot. To such conclusion I have come, not only in accidental intercourse with others, but by a strict comparison drawn between myself and others, and in this faith I continue to this day; and not I only, but my friends continue in a like persuasion with regard to me, not for the same reason that they are my friends and love me (or else would others have been in like case as regards their friends), but because they are persuaded that by being with me they will attain to their full height of goodness. But, if I am destined to prolong my days, maybe I shall be enforced to pay in full the penalties of old age—to see and hear less keenly, to fail in intellectual force, and to leave school, as it were, more of a dunce than when I came, less learned and more forgetful—in a word, I shall fall from my high estate, and daily grow worse in that wherein aforetime I excelled. But indeed, were it possible to remain unconscious of the change, the life left would scarcely be worth living; but given that there is a consciousness of the change, then must the existence left to live be found by comparison insipid, joyless, a death in life, devoid of life's charm. But indeed, if it is reserved for me to die unjustly, then on those who unjustly slay me lies the shame (since, given injustice is base, how can any unjust action whatsoever fail of baseness?) But for me what disgrace is it that others should fail of a just decision and right acts concerning me?… I see before me a long line of predecessors on this road, and I mark the reputation also among posterity which they have left. I note how it varies according as they did or suffered wrong, and for myself I know that I too, although I die to-day, shall obtain from mankind a consideration far different from that which will be accorded to those who put me to death. I know that undying witness will be borne me to this effect, that I never at any time did wrong to any man, or made him a worse man, but ever tried to make those better who were with me.”

Such are the words which he spoke in conversation with Hermogenes and the rest. But amongst those who knew Socrates and recognized what manner of man he was, all who make virtue and perfection their pursuit still to this day cease not to lament his loss with bitterest regret, as for one who helped them in the pursuit of virtue as none else could.

To me, personally, he was what I have myself endeavored to describe: so pious and devoutly religious that he would take no step apart from the will of heaven; so just and upright that he never did even a trifling injury to any living soul; so self-controlled, so temperate, that he never at any time chose the sweeter in place of the better; so sensible, and wise, and prudent that in distinguishing the better from the worse he never erred; nor had he need of any helper, but for the knowledge of these matters, his judgment was at once infallible and self-sufficing. Capable of reasonably setting forth and defining moral questions, he was also able to test others, and where they erred, to cross-examine and convict them, and so to impel and guide them in the path of virtue and noble manhood. With these characteristics, he seemed to be the very impersonation of human perfection and happiness.

Such is our estimate. If the verdict fail to satisfy I would ask those who disagree with it to place the character of any other side by side with this delineation, and then pass sentence.

## XENOPHON

(C.430 to C.354 BC) was a wealthy Athenian and friend of Socrates.

He left Athens in 401 and joined an expedition including ten thousand Greeks led by the Persian governor Cyrus against the Persian king. After the defeat of Cyrus, it fell to Xenophon to lead the Greeks from the gates of Babylon back to the coast through inhospitable lands. Later he wrote the famous vivid account of this ‘March Up-Country’ (*Anabasis*); but meanwhile he entered service under the Spartans against the Persian king, married happily, and joined the staff of the Spartan king, Agesilaus. But Athens was at war with Sparta in 394 and so exiled Xenophon. The Spartans gave him an estate near Elis where he lived for years writing and hunting and educating his sons. Reconciled to Sparta, Athens restored Xenophon to honor but he preferred to retire to Corinth.

Xenophon’s Anabasis is a true story of remarkable adventures. *Hellenica*, a history of Greek affairs from 411 to 362, begins as a continuation of Thucydides’ account.

There are four works on Socrates (collected in Volume IV of the Loeb Xenophon edition). In Memorabilia Xenophon adds to Plato’s picture of Socrates from a different viewpoint. The *Apology* is an interesting complement to Plato’s account of Socrates’ defense at his trial Xenophon’s *Symposium* portrays a dinner party at which Socrates speaks of love; and *Oeconomicus* has him giving advice on household management and married life. *Cyropaedia*, a historical romance on the education of Cyrus (the Elder), reflects Xenophon’s ideas about rulers and government.

We also have his *Hiero*, a dialogue on government; *Agesilaus*, in praise of that king; *Constitution of Lacedaemon* (on the Spartan system); *Ways and Means* (on the finances of Athens); *Manual for a Cavalry Commander*; a good manual of *Horsemanship*; and a lively *Hunting with Hounds*— mostly hare-hunting. The *Constitution of the Athenians*, though clearly not by Xenophon, is an interesting document on politics at Athens. These eight books are collected in the last of the seven volumes of the Loeb Classical Library edition of Xenophon.

## INTRODUCTION

Note on the Titles:

### (a) The Memorabilia.

The title, by which this work is familiarly known to us, dates only from 1569, when Johann Lenklau prefixed it to the Latin version that accompanied his great edition of Xenophon's works. Before that time scholars had commonly used the Greek title Apomnemoneumata, i.e. Memoirs, or the awkward description *De factis et dictis Socratis memoratu dignis*. The correct Latin equivalent of the Greek name is *Commentarii*, which, in fact, occurs in the description of the book given by Aulus Gellius (XIV. iii.), viz. libri quos dictornm et factorum Socratis composuit [*Xenophon*).

The Greek title itself is not altogether satisfactory; for in reality the *Memorabilia* consists of four separate parts, which were certainly not all composed at the same time, and to the first of these parts the title does not apply.

### (b)The *Oeconomicus*.

"In many respects," writes Cicero in a well-known passage of the de Senectule, Xenophon's works are very useful. How eloquently he praises agriculture in his book entitled *Oeconomicus*, which deals with the care of one's property." Philodemus and Galen refer to the book as the *Oeconomica*. The ancients certainly did not suppose that the title meant the Economist or Householder, but understood it to denote exactly what Cicero's words suggest—*a Discourse on Estate Management*. The same holds good *mutatis mutandis* of the titles Hipparchicus and Cynegeticus.

### I

The first part of the *Memorabilia*, which is confined to the first two chapters of the First Book (The absurd division into books and chapters is, of course, not due to Xenophon himself.), is a Defense of Socrates, who had been tried and condemned to death on a charge of “impiety,” in the spring of 399 B.C. At the time of the trial Xenophon was absent in Asia. No speech delivered by any one of the three prosecutors—Anytus, Meletus, and Lycon—had been published, and Xenophon in consequence is only able to give the gist, not the exact form, of the indictment (I. i. 1), which had been drawn by Meletus. His reply to this indictment extends to the eighth section of the second chapter.

At this point a surprise is in store for the reader. For in the next sentence (I. ii. 9) Xenophon suddenly refers to “the prosecutor” in the singular, and proceeds to combat a series of accusations that he had brought. This “prosecutor” had charged against Socrates: (1) that he encouraged his companions to despise the laws (ii. 9); (2) that Critias and Alcibiades, who had done great evil to the state, were his associates (ii. 12); (3) that he taught young men to despise their fathers and their other relations, and to be false to their friends (ii. 49); (4) that he encouraged unscrupulous conduct and an anti-democratic spirit by the use he made of the poets (ii. 56).

Xenophon at first sight appears to be replying here to a speech actually delivered for the prosecution. But, as we have just seen, this cannot be the case. To whom, then, and to what is he replying? The correct solution of this problem was first given by Cobet, and it has been supported by a series of indisputable proofs by several subsequent scholars. The man Socrates had died in 399 B.C., and had left nothing written. But his ardent and gifted disciples—especially Antisthenes, a fanatical admirer, and a little later Plato—very soon began to publish works about Socrates, especially dialogues in which Socrates appeared as the chief interlocutor. One of these earlier Socratic works is, of course, the Apology by Plato. And so it came about that a literary Socrates grew into being—a figure that retained much, doubtless, of the historical man, but was not identical with him, and might be variously represented by the different authors, and even by the same author in different works.

This cult of Socrates actually provoked opposition. For shortly after the year 393 B.C. a well-known “sophist” named Polycrates published an attack on his memory, throwing his attack into the form of an imaginary speech delivered by one of the three prosecutors, Anytus, at the trial. In after ages a belief not unnaturally grew up that Anytus had actually employed this man, Polycrates, to write his speech for the prosecution. In reality the “Accusation of Socrates” written by Polycrates was nothing more than a literary exercise, based no doubt on reminiscences of the trial, but strongly colored by the writer’s own views. Xenophon was now living in exile at Scillus near Olympia; and there he must have read the work of Polycrates. He resolved to compose a reply, traversing the accusation step by step. In after ages another rejoinder was written to Polycrates by Libanius (fourth century A.D.), from whose Defense a good deal more can be learned about the lost Accusation of Polycrates.

The “prosecutor” then, is Polycrates, or rather Polycrates masquerading as Anytus.

Xenophon’s Defense of Socrates, therefore (occupying Book 1. i. and ii.), has a double purpose. It is intended, first, to be an answer to the actual indictment, so far as Xenophon was aware of its terms; and, secondly, to refute the attack of Polycrates on the memory of the martyred Socrates. As for the substance of the Defense, we note that although Plato’s Apology was certainly written already, Xenophon has not drawn upon it. In fact, throughout these two chapters there are no trustworthy indications that he has laid any of Plato’s published work under contribution. At I. ii. 20, indeed, Xenophon quotes in support of his arguments two passages from the poets that are in the Meno and the Protagoras of Plato, but it would be absurd to suppose that he went to Plato for two commonplace passages that would be familiar to every educated Athenian. In one passage (I. ii.) Xenophon expresses an opinion that is known to have been maintained by Antisthenes; in another (I. ii. 19) he combats that Cynic's doctrine of the permanence of Virtue. In neither place is he professing to report the views of Socrates; and even if it is safe to conclude from these two instances that he had consulted the works of Antisthenes, there is, so far as can be ascertained, no trace in the Defense that he borrowed such knowledge as he shows of Socrates from Antisthenes. The most likely inference from these negative facts is that he incorporated only such knowledge of Socrates as he had gained himself by intercourse with the Master. This knowledge, to be sure, is superficial, and does not point to a close intimacy. On the other hand, since Xenophon is concerned only to rebut the specific charges brought by the prosecutors and by Polycrates, we are scarcely entitled to assume that he has told us all that he really knew about Socrates in these two chapters.

## II

The Socratic literature rapidly grew in bulk. Antisthenes, who developed the Cynic system out of the teaching of Socrates, was probably the first to write "Socratic" dialogues. Plato, a much younger man, soon entered the field in sharp opposition to the Cynic. And others tried their hand. It seems that somewhere about the year 385 B.C., Xenophon, who had perhaps now read what Plato had so far published, and had certainly pondered on the works of Antisthenes and assimilated much of his doctrine, decided to compose a series of memoirs and dialogues as illustrations of his "Defense of Socrates." These illustrations cover the remainder of the First (I. iii. onwards) and the whole of the

Second Book of the Memorabilia. “I propose to show,” he says (I. iii. 1), “how Socrates helped his companions both by his deeds and his words: and, in order to do so, I shall relate all that I remember about them.”

Though he makes no reference here to his earlier work, he follows its arrangement closely. He first gives details to prove that Socrates accepted the gods of the state (I. iii. 1-4). Then he insists on the moral tendency of the conduct and teachings of Socrates (5—15); and here he recalls an outspoken conversation between the Master and himself about love. It is the only conversation in the collection in which Xenophon himself takes part. Having proceeded thus far, he suddenly modifies his plan; and writes a new and controversial introduction to a complete series of dialogues, dealing again with the two topics already handled—the piety and the morality of Socrates—before proceeding to illustrate his third topic. He says no more about the actions of Socrates; and the reason presumably is, that he was conscious that he could not add anything new to what he had already said in the *Defense*, little as that was. At any rate, it is noteworthy that, having undertaken to tell all that he remembers about the helpful deeds of Socrates, he has after all told us so very little, but has in the main confined himself to the conversations.

It will be convenient to have a list of the ensuing topics side by side with the corresponding passages of the Defense:

1. I. iv., On *Piety*: I. i. 2—19.

2. I. v.—vi., On Self-discipline: I. ii. 1—5.

3. I. vi. 11—14, On Taking Fees: I. ii. 5—8.

4. I. vi. 15—11. 1., On Obedience to the Laws and Service to the State: I. ii. 9—48.

5. II. ii., On The Duty of Children to Parents: 1. ii. 49—50.

6. II. iii., On The Relations between Brothers: I. ii. 51.
7. II. iv.—vii., On The Treatment of Friends and Relations: I. ii. 52—55.
8. II. viii.-x., On Socrates as Philanthropist: I. ii. 56—61.

Xenophon’s statement that he himself “heard” these conversations is a mere literary device. Some of them may quite possibly be based on actual recollection. But others are almost certainly pure invention. Who could suppose, for instance, that Socrates lectured his son on his duty to his mother (II. ii.), or urged Chaerecrates to make up a quarrel with his brother (II. iii.), while a third person, Xenophon, stood by silent, storing up all that good advice in a capacious memory? The supposition of Mr. Dakyns that such conversations were repeated to Xenophon by Lamprocles, Chaerecrates and others is very unlikely, unless we could imagine that Xenophon went about Athens gathering reports of Socrates’ conversations before he left for Asia, and when as yet he had no notion that he would ever come to write Socratic memoirs. The opening conversation of the collection, that on Piety (I. iv.), probably owes much to the study of Antisthenes. The chapters on the education of the Ruler (II. i.) and on the proper relations between parents and children, brothers, relatives and friends, contain much that we associate with Xenophon himself rather than with Socrates; and it is difficult to imagine Socrates declaiming to Aristippus a long passage from a work of Prodicus which was often part of its author’s own programmes (II. i. 21).

Does Xenophon owe anything to Plato in this part of the Memorabilia? The question hardly admits of a confident answer. The passage about the “Kingly Art” and “Happiness” in II. i. bears a close resemblance to a sentence in the Euthydemus of Plato (p. 291 b). But we know that the

"Kingly Art" was a commonplace with Antisthenes, as may be seen from some words put into his mouth in Xenophon's Banquet (iv. 6). Again, the opening words of I. vi. strongly suggest a passage in Plato's Lysis (p. 211 d).

But a similar sentiment is attributed to Socrates by Epictetus (III. v. ) and reappears in Dio Chrysostom (III. 128), and as both these authors borrow largely from Cynic sources, the common source of all four passages may possibly be Antisthenes again, though it certainly looks as if Xenophon here had borrowed from Plato, so close is the correspondence.

However that may be, we have here a series of imaginary conversations to which Xenophon's study of the Socratic literature has contributed not a little. But no doubt many of his reflections are really based on his recollection of Socrates himself. There is no proof in them, however, that Xenophon had really been one of his intimate companions, and indeed he nowhere makes any such claim. These remarks apply equally to the Collections which make up the Third and the Fourth Books.

## III

The Third Book of the Memorabilia, which consists of miscellaneous dialogues loosely strung together, and an appendix of aphorisms, clearly forms yet another separate work. The first seven chapters are linked together by a common subject— the civil and military service of the state. But at the eighth chapter the writer passes abruptly to the relation of a dialectical encounter between Socrates and Aristippus the Cyrenaic, on the identity of the Beautiful and the Useful, and appends to it a discourse of Socrates on the same theme. Next we come on a series of definitions.

Then follow other conversations on detached topics. The aphorisms that fill the last two chapters are concerned with very small things: and they are quite in the Cynic manner. The talk between Socrates and the younger Pericles (c. v.) may really have occurred in the year 411 B.C.; but the ambitions of Thebes are alluded to in a manner that suggests the period of the Theban Supremacy, the years following the battle of Leuctra (fought in 371 B.C.), as the time of composition, and there is a suspiciously Xenophontine ring in the allusions of Pericles to the excellence of the Spartan institutions (v. 15-16).

The fact is, the whole of the subjects dealt with in the first seven chapters of this Third Book are just those in which Xenophon, the old campaigner and worshipper of efficiency, took a special interest. Ten passages in the conversations on the duties and qualifications of commanders are repeated from the Cyropaedia; and here and there the author of the Anabasis and the Hipparchicus reveals himself pretty clearly.

Nevertheless, the spirit of these dialogues, with their insistence on Knowledge as the only sure basis of efficiency, is genuinely Socratic. Nor does the rest of the Third Book, from c. viii. onwards, contain anything inconsistent with the Socrates of Plato's early dialogues. Thus the cross-examination of the artists in the tenth chapter is entirely in keeping with the Platonic Socrates, whose habit it is to appose all sorts and conditions of men respecting their special work. The amusing interview with Theodote, the courtesan, is surprising in its context. The intention of it, apparently, is to show Socrates in a lighter vein, in the mood that we associate with the persiflage of a Banquet. The definitions in the ninth chapter are not alien to Socrates; but it may be that Xenophon drew them from the works of Antisthenes, whose opinions are known to have coincided with those expressed in them.

We may fairly accept as historical the explicit declaration in the Defense (I. ii. 4) that Socrates attached importance to physical culture. In the Dialogues of Plato, so far as I recollect, he does not display much real interest in the physical exercises of the wrestling-ground and the gymnasium; at any rate his chief interest is clearly in other matters when he enters those places. But in the *Republic* Plato on his part fully recognizes the value of “gymnastic” in education, and indeed builds up in his own way a complete theory of the subject. The germs of this theory may very well have come from Socrates himself. If that is true, then just as Plato develops the opinions of Socrates in his way, so Xenophon in the twelfth chapter of this book colors the same opinions with notions of his own, drawn from his experience in Asia, his admiration of Spartan institutions, and very likely, from his study of Antisthenes.

Lastly, what are we to say of the dispute with Aristippus about the Good and the Beautiful (c. viii.)? The truth of the account that Xenophon gives of Socrates’ views on this matter must clearly be rejected if we suppose that Plato derived from Socrates himself the theory of eternal, unchanging Ideas or Forms of Goodness and Beauty; for, according to the Socrates of Xenophon nothing is good, beautiful or useful in itself, but only in relation to something. But it is, to say the least, exceedingly doubtful whether Socrates is responsible for the “Theory of Forms or Ideas,” which makes no appearance in the early *Dialogues* of Plato. The doctrine of the Xenophontine Socrates is that all things Good and Beautiful must contribute to the advantage or enjoyment of man: nothing is Good but what is Useful for the particular purpose for which it is intended. The very same doctrine is propounded by Socrates in the *Greater Hippias* (rightly or wrongly attributed to Plato), but on examination is rejected by him as untenable. But Plato in the *Gorgias* makes Socrates declare that a thing is Beautiful because it is pleasant or useful or both; and the doctrine is unchallenged. Lastly, there is a passage of similar import in the *First Alcibiades*. If the *Greater Hippias* was really written by Plato, it must be later in date than the *Gorgias*, but earlier than the Third Book of the *Memorabilia* and Xenophon, assuming that he had read it, has tacitly implied that the views of Socrates are not correctly represented there. Whence did he derive his knowledge? If not from the *Gorgias*, it is very significant that his exposition agrees with what Plato puts into the mouth of Socrates in that Dialogue.

## IV

We pass now to the Fourth Book. In the noble and impassioned peroration with which this book concludes, the virtues of Socrates are summed up. Socrates was pious, just, self-controlled and wise: he was masterly in exposition and definition, in refuting error and exhorting to goodness. This concluding sentence is clearly a summary of the contents of this Fourth Book in the form in which it has come down to us; and it is in itself a sufficient refutation of the widely held opinion that large portions of the Fourth Book are spurious. The peroration applies only to this last book; at any rate it contains no reference to many of the topics that have been dealt with in the preceding portions of the collection, whereas it entirely covers the topics of the last. The natural inference is that the Fourth Book is yet another independent work.

This inference gains strong support from the actual contents of the book. The subject throughout is Education. Many topics already treated recur without any indication given that they have already been discussed. The style too differs to some extent from that of the preceding parts, in that it is somewhat fuller and more elaborate. The matter is arranged in an orderly fashion, in striking contrast with the desultory miscellany that makes up the latter part of the preceding book. Most of the conversations (c. ii., iii., v., vi.) are carried on with Euthydemus, a handsome, bookish and self-confident young man, eager to distinguish himself "in speech and action." The first of these conversations with the youth shows how Socrates convinced young men like Euthydemus that their essential need was to get real education. Next we are introduced to something like a complete system of Socratic education. The first object of Socrates was to make his followers "prudent," i.e. to train the character. Training in power to "speak and act" came after training of character, and it turns out presently that Socrates put speech and action in the inverse order of importance; and, moreover, held that sound action could come only from one who was master of himself. Competence in "speech" depended on power to reason and to define correctly.

We have seen that Euthydemus hoped to excel in "speech and action." Socrates brings him to see that the right way to attain the goal of his ambition is first to learn Prudence, then to realize what is the only sure foundation of right action, and lastly to study the laws of sound reasoning.

We should certainly have expected that throughout the book Socrates would have been represented as addressing himself to Euthydemus, and to none other. But this is, in fact, not the case. The fourth chapter contains an argument on Justice. If we regard the subject with which it deals, it is quite in place where it stands; but it is strange to find the series of hortatory discourses interrupted by an argument addressed to Hippias, the "sophist," on the identity of Law and Justice. Moreover, in the opening sentence of the seventh chapter Xenophon apparently disregards this argument with Hippias; and yet it is clear from the wording of the peroration, which is in exact correspondence with the topics of the discourses, that he had, when he wrote it, dealt with the topic of Justice.

All the conditions will be satisfied if we suppose that when he had written the fourth chapter down to the point where he was to relate what Socrates said about Justice by means of a dialogue (iv. 5), he incorporated this argument between Socrates and Hippias, which he had composed at some previous time, instead of writing a new dialogue in conformity with the others.

The talk with Hippias is in itself remarkable. For it represents Socrates as identifying Law and Justice. We have read in the Defense of Socrates (I. ii. 9) that Polycrates charged him with “despising the established laws,” and we find that Xenophon there really makes no reply to that charge. Socrates, of course, insisted on obedience to the laws and held that “it was just to do what the laws ordain”; but that is a very different thing from saying that he thought the laws to be the embodiment of Justice. This latter opinion runs counter to the whole trend of the Gorgias of Plato, and is indeed not wholly consistent with what Socrates says in other parts of the *Memorabilia*. Plato’s work may well have seemed to Xenophon to lend countenance to the very charge that he had failed to rebut in his own earlier work; and because Plato had written so, he may have felt it incumbent on him to come forward with an answer. He found a convenient place for its insertion here. It is really unconvincing as an exposition of Socrates’ views on Justice, and the concluding sentence of the chapter does not square with it.

The fifth chapter brings us to that “efficiency in speech and action” coveted by such men as Euthydemus, and it turns out that Socrates put “action” before “speech.” The secret and essential condition of efficiency in action was Prudence or Self-control. The curious passage appended to this conversation, in which “sound reasoning,” by a fanciful derivation, is declared to mean “sorting things out, and choosing what is right and rejecting what is wrong in speech and action,” looks like a genuine, but rather crude, reminiscence of something actually said by Socrates, who was fond of such word-play.

As for “efficiency in speech,” that is arrived at by mastering the art of Reasoning; and the art of Reasoning depends on correct definition of terms. Accordingly, in the sixth chapter we have a series of definitions. Some of these overlap the definitions contained in the ninth chapter of the Third Book; but, as the Fourth Book is independent of the Third, the omission of all reference to the earlier passage need not cause surprise. There is much in this sixth chapter that certainly reflects the opinions of the historical Socrates; but, as usual, the manner in which they are reflected is unmistakably Xenophontine. It is strange that there is nothing about Pleasure and its relation to the Good and Beautiful, seeing that this problem is handled by Plato already in the *Protagoras* and *Gorgias*, which dialogues belong to his earlier or “Socratic” stage, and of which Xenophon certainly takes account in his Fourth Book. One cannot but suspect that, in thus ignoring the problem of Pleasure, Xenophon was influenced by the works of Antisthenes. The speculations on Pleasure attributed to Socrates by Plato were, no doubt, much too subtle for Xenophon, and they were, outwardly at least, inconsistent. It was wiser for a plain man to pass them by.

The superficial account of Socratic induction and assumption, or “hypothesis,” with which the sixth chapter concludes (§§ 13-15) has raised a sharp dispute as to the sources of Xenophon’s information. Is all this derived from Socrates himself, or is it gleaned from the *Phaedo* and, possibly, other dialogues of Plato? The question admits of no certain answer. But if we assume that the information really comes from certain dialogues of Plato, then it is surely strange that Xenophon selected just this one point, "hypothesis" from them, and ignored other theories—for instance, Knowledge as Recollection and the doctrine of Forms—that Plato in those same dialogues attributes, truly or falsely, to Socrates.

In the seventh chapter we come to mathematics and astronomy, and the views of Socrates thereon. We are told that he recommended the study of them for practical purposes only—just so far as they were "useful." What Xenophon says is not inconsistent with the earlier Socrates of Plato, and can be brought into harmony with the Clouds of Aristophanes and, even with Plato's *Phaedo*. It is, on the other hand, wholly inconsistent with the system of education that Socrates is made to recommend for the "Guardians" in the *Republic* of Plato. The very uncomplimentary reference to Anaxagoras (IV. vii. 6) is thought by some to be based on a famous passage of the Phaedo, in which Socrates expresses disappointment with the Anaxagorean theory of the classification of Matter by Mind. But it is difficult to think that Xenophon could have justified to himself the taunt he attributes to Socrates by the regretful complaint of the Platonic Socrates, or even that he was capable of building this insult on so slender a substructure.

In the sentence that immediately follows this passage about the sciences, Xenophon refers to the importance that Socrates attached to divination (§). Then he argues that the belief in "the divine voice"—the belief that gave rise to the charge of introducing strange gods—was no delusion, and finally launches out into a noble description of the attitude of Socrates towards his trial and condemnation. The total effect of this epilogue is not greatly marred by one serious blemish it exhibits—the series of futile questions, so characteristic of our author at his worst, in the third section of the last chapter. (Similar questions, in which the obvious is put in the form of a conundrum, are often attributed to Socrates by Xenophon. They are, of course, invariably the product of Xenophon's own mind.)

Although this Fourth Book was written a generation after the death of Socrates, the tone of the peroration is still controversial. The object of Xenophon throughout the book is to prove that the system of education inculcated by Socrates was the best possible; that Socrates was himself the embodiment of that system, and was therefore the pattern of a good and happy man. Clearly there were many still who maintained that the infamous Critias had been trained by Socrates, and that this fact was enough to condemn the system. Nor can it escape notice that the depreciation of the higher mathematics and other sciences in the seventh chapter, and the sharp limitation of scientific studies by Socrates in the training of himself that is implied in the peroration, are argumentative. (The passage in the peroration referring to chapter seven is, "So wise that he was unerring in his judgment of the better and the worse and needed no counselor, but relied on himself for his knowledge of them.") Evidently, even after so long a time, controversy about Socrates had not been silenced, and there was still something to be done for his memory by an ardent believer.

## V

The chronological relationship of the *Oeconomicus* to Xenophon's other Socratic writings cannot be established with confidence. Certain linguistic indications point to a date earlier than the *Memorabilia*; but the tone of the work, calm and detached from controversy, strongly suggests that it was at least put into its final shape after the so-called Fourth Book of that work was written. The thoughts and reflections, whether put into the mouth of Socrates or Ischomachus, are so entirely Xenophon’s own that we may wonder why he did not frankly produce a treatise on the management of an estate instead of a Socratic dialogue. And it is evident that he found the dialogue form which he selected inconvenient. Socrates by this time was clearly a ~~literary~~ metaphorical figure, and almost any amount of freedom might be taken with his name. But at least some measure of verisimilitude must be kept up; and to represent Socrates, the wandering philosopher, as a landowner, an authority on household craft, land development and agriculture, devoted to his home, would carry the author too far away from the truth. An ingenious compromise suggested itself. What was impossible in the mouth of Socrates might be put into the mouth of another, and reported by Socrates. But this other person must be a man of standing and of mature years, and therefore could not be Xenophon himself, who had no established position during the life of Socrates. Hence Ischomachus. According to Plutarch this worthy but self-complacent gentleman is a historic personage; but little credence attaches to the kind of story that he tells. Anyhow, Ischomachus, as he appears in this book, is quite clearly Xenophon—Xenophon home from the wars, living happily and prosperously on his own estate at Scillus.

The beginning and end of the *Oeconomicus* are as abrupt as the end of Borrow’s *Lavengro* and the beginning of *The Romany Rye*. Even the name of Socrates is not given in the first few sentences: he is referred to as if he had been already mentioned; and there is no epilogue. But of course this does not show, as Galen supposed, that we have here a continuation of the *Memorabilia*, intended to follow on the Fourth Book. The second portion of the *Memorabilia* ends (II. x.) and the third portion opens (III. i.) and ends (III. xiv.) with similar abruptness. We may group the *Oeconomicus* with these miscellaneous dialogues, doubtless not all composed at the same time, that make up the Third Book of the *Memorabilia*. The plan of the work is curious, for the first six chapters form a lengthy preamble to the reported conversation with Ischomachus. The work must of course not be judged as though it were a complete treatise on Estate Management, indoor and outdoor. That is precisely what Xenophon has not chosen to write. The practical value, therefore, of the teaching is not anything like so great as that of the treatise *On Horsemanship*. But so far as it goes, the teaching is sound—for it is not certain that Xenophon believed that straw added to the manurial value, as well as to the bulk, of our old friends from farmyard and stable.

The abiding interest of the book, however, lies less in the edification it offers and in its literary merit (which is not great), than in the light that it sheds on Xenophon's intimate life, his tastes and pursuits. Readers will differ in their opinion of that paragon "Ischomachus." None will object to his having his boots and his pots and pans neatly set out in rows; but some will mock with the wits at his notion that there was any particular beauty in the spectacle afforded by these homely articles so carefully bestowed. However that may be, one cannot but sympathize with that long-suffering little saint, his wife, the most arresting figure in Xenophon's gallery of women. We glance at Theodote in the *Memorabilia* and Syennesis in the *Anabasis*, and we linger for a time over Panthea in the *Cyropaedia*; but we return again and again to this unnamed heroine of the household.

This unnamed heroine! But Ischomachus is Xenophon, and the little lady is wife of Ischomachus—that is she is Xenophon's wife, Philesia. "My dear, where is it?" asked her methodical husband; and Philesia, not knowing the answer, could only hang her head and blush. So she had to listen to a long homily on the beauty of order in the house, with illustrations drawn from the army and the navy. It is pleasant to know, that henceforward, at least in one home at Scillus, regimental order reigned among the household paraphernalia, from the boots to the works of art.

And this regimental order in his house is the mirror of Xenophon's mind; for his mind is a series of labeled pigeon-holes, each hole filled with a commonplace thought remorselessly analyzed. These elementary thoughts he produces again and again, for his reader's edification.

The *Oeconomicus* was reviewed and criticized by the Epicurean philosopher Philodemus, an elder contemporary of Cicero, in his treatise *On Vices and their Opposite Virtues*, but only a small part of what he had to say has survived, recovered from the ashes of Herculaneum. Further it was translated into Latin by Cicero in the days of his youth: it was familiar to the Roman writers on agriculture, including Virgil, was admired and imitated by the Italians of the Renaissance, and in our own times has found a doughty champion in Ruskin. Xenophon writes with an infectious enthusiasm, and with that easy charm of manner and diction of which he is a great master. But as with his thoughts, so with his words: he too often irritates the reader by incessant repetition of the same pattern of sentence, of the same formula, and even of the same word. How prone Xenophon is to repetition may be judged from the many references added in the translation of both *Memorabilia* and to other works; and of course these references are not exhaustive. His mind moves in a narrow' circle of ideas. But he is master of an extensive and multifarious vocabulary; so that it is strange that he constantly uses the same word over and over again in the compass of a few lines. A translator is often compelled to have recourse to synonyms.

# XENOPHON’S MEMORABILIA

## BOOK I

I. I have often wondered by what arguments those who drew up the indictment against Socrates could persuade the Athenians that his life was forfeit to the state. The indictment against him was to this effect: *Socrates is guilty of rejecting the gods acknowledged by the state and of bringing strange deities: he is also guilty of corrupting the youth.*

First then, that he rejected the gods acknowledged by the state—what evidence did they produce of that? He offered sacrifices constantly, and made no secret of it, now in his home, now at the altars of the state temples, and he made use of divination with as little secrecy. Indeed it had become notorious that Socrates claimed to be guided by ‘the deity’: it was out of this claim, I think, that the charge of bringing in strange deities arose. He was no more bringing in anything strange than are other believers in divination, who rely on augury, oracles, coincidences and sacrifices. For these men’s belief is not that the birds or the folk met by accident know what profits the inquirer, but that they are the instruments by which the gods make this known; and that was Socrates’ belief too. Only, whereas most men say that the birds or the folk they meet dissuade or encourage them, Socrates said what he meant: for he said that the deity gave him a sign. Many of his companions were counseled by him to do this or not to do that in accordance with the warnings of the deity: and those who followed his advice prospered, and those who rejected it had cause for regret. And yet who would not admit that he wished to appear neither a knave nor a fool to his companions? but he would have been thought both, had he proved to be mistaken when he alleged that his counsel was in accordance with divine revelation. Obviously, then, he would not have given the counsel if he had not been confident that what he said would come true. And who could have inspired him with that confidence but a god? And since he had confidence in the gods, how can he have disbelieved in the existence of the gods? Another way he had of dealing with intimate friends was this: if there was no room for doubt, he advised them to act as they thought best; but if the consequences could not be foreseen, he sent them to the oracle to inquire whether the thing ought to be done. Those who intended to control a house or a city, he said, needed the help of divination. For the craft of carpenter, smith, farmer or ruler, and the theory of such crafts, and arithmetic and economics and generalship might be learned and mastered by the application of human powers; but the deepest secrets of these matters the gods reserved to themselves; they were dark to men. You may plant a field well; but you know not who shall gather the fruits: you may build a house well; but you know not who shall dwell in it: able to command, you cannot know whether it is profitable to command: versed in statecraft, you know not whether it is profitable to guide the state: though, for your delight, you marry a pretty woman, you cannot tell whether she will bring you sorrow: though you form a party among men mighty in the state, you know not whether they will cause you to be driven from the state. If any man thinks that these matters are wholly within the grasp of the human mind and nothing in them is beyond our reason, that man, he said, is irrational. But it is no less irrational to seek the guidance of heaven in matters which men are permitted by the gods to decide for themselves by study: to ask, for instance, Is it better to get an experienced coachman to drive my carriage or a man without experience? Is it better to get an experienced seaman to steer my ship or a man without experience?

So too with what we may know by reckoning, measurement or weighing. To put such questions to the gods seemed to his mind profane. In short, what the gods have granted us to do by help of learning, we must learn; what is hidden from mortals we should try to find out from the gods by divination: for to him that is in their grace the gods grant a sign.

Moreover, Socrates lived ever in the open; for early in the morning he went to the public promenades and training-grounds; in the forenoon he was seen in the market; and the rest of the day he passed just where most people were to be met: he was generally talking, and anyone might listen. Yet none ever knew him to offend against piety and religion in deed or word. He did not even discuss that topic so favored by other talkers, “the Nature of the Universe”: and avoided speculation on the so-called “Cosmos” of the Professors, how it works, and on the laws that govern the phenomena of the heavens: indeed he would argue that to trouble one’s mind with such problems is sheer folly. In the first place, he would inquire, did these thinkers suppose that their knowledge of human affairs was so complete that they must seek these new fields for the exercise of their brains; or that it was their duty to neglect human affairs and consider only things divine? Moreover, he marveled at their blindness in not seeing that man cannot solve these riddles; since even the most conceited talkers on these problems did not agree in their theories, but behaved to one another like madmen. As some madmen have no fear of danger and others are afraid where there is nothing to be afraid of, as some will do or say anything in a crowd with no sense of shame, while others shrink even from going abroad among men, some respect neither temple nor altar nor any other sacred thing, others worship stocks and stones and beasts, so is it, he held, with those who worry with “Universal Nature.” Some hold that

*What is*, is one, others that it is infinite in number: some that all things are in perpetual motion, others that nothing can ever be moved at any time: some that all life is birth and decay, others that nothing can ever be born or ever die. Nor were those the only questions he asked about such theorists. Students of human nature, he said, think that they will apply their knowledge in due course for the good of themselves and any others they choose. Do those who pry into heavenly phenomena imagine that, once they have discovered the laws by which these are produced, they will create at their will winds, waters, seasons and such things to their need? Or have they no such expectation, and are they satisfied with knowing the causes of these various phenomena?

Such, then, was his criticism of those who meddle with these matters. His own conversation was ever of human things. The problems he discussed were, What is godly, what is ungodly; what is beautiful, what is ugly; what is just, what is unjust; what is prudence, what is madness; what is courage, what is cowardice; what is a state, what is a statesman; what is government, and what is a governor;—these and others like them, of which the knowledge made a "gentleman," in his estimation, while ignorance should involve the reproach of "slavishness."

So, in pronouncing on opinions of his that were unknown to them it is not surprising that the jury erred: but is it not astonishing that they should have ignored matters of common knowledge? For instance, when he was on the Council and had taken the counselor's oath by which he bound himself to give counsel in accordance with the laws, it fell to his lot to preside in the Assembly when the people wanted to condemn Thrasyllus and Erasinides and their colleagues to death by a single vote. That was illegal, and he refused the motion in spite of popular rancor and the threats of many powerful persons. It was more to him that he should keep his oath than that he should humor the people in an unjust demand and shield himself from threats. For, like most men, indeed, he believed that the gods are heedful of mankind, but with an important difference; for whereas they do not believe in the omniscience of the gods, Socrates thought that they know all things, our words and deeds and secret purposes; that they are present everywhere, and grant signs to men of all that concerns man.

I wonder, then, how the Athenians can have been persuaded that Socrates was a freethinker, when he never said or did anything contrary to sound religion, and his utterances about the gods and his behavior towards them were the words and actions of a man who is truly religious and deserves to be thought so.

II. No less wonderful is it to me that some believed the charge brought against Socrates of corrupting the youth. In the first place, apart from what I have said, in control of his own passions and appetites he was the strictest of men; further, in endurance of cold and heat and every kind of toil he was most resolute; and besides, his needs were so schooled to moderation that having very little he was yet very content. Such was his own character: how then can he have led others into impiety, crime, gluttony, lust, or sloth? On the contrary, he cured these vices in many, by putting into them a desire for goodness, and by giving them confidence that self-discipline would make them gentlemen. To be sure he never professed to teach this; but, by letting his own light shine, he led his disciples to hope that they through imitation of him would attain to such excellence. Furthermore, he himself never neglected the body, and reproved such neglect in others. Thus over-eating followed by over-exertion he disapproved. But he approved of taking as much hard exercise as is agreeable to the soul; for the habit not only insured good health, but did not hamper the care of the soul. On the other hand, he disliked foppery and pretentiousness in the fashion of clothes or shoes or in behavior. Nor, again, did he encourage love of money in his companions. For while he checked their other desires, he would not make money himself out of their desire for his companionship. He held that this self-denying ordinance insured his liberty. Those who charged a fee for their society he denounced for selling themselves into bondage; since they were bound to converse with all from whom they took the fee. He marveled that anyone should make money by the profession of virtue, and should not reflect that his highest reward would be the gain of a good friend; as though he who became a true gentleman could fail to feel deep gratitude for a benefit so great, Socrates indeed never promised any such boon to anyone; but he was confident that those of his companions who adopted his principles of conduct would throughout life be good friends to him and to one another. How, then, should such a man "corrupt the youth"? Unless, perchance, it be corruption to foster virtue.

But, said his accuser, he taught his companions to despise the established laws by insisting on the folly of appointing public officials by lot, when none would choose a pilot or builder or flautist by lot, nor any other craftsman for work in which mistakes are far less disastrous than mistakes in statecraft. Such sayings, he argued, led the young to despise the established constitution and made them violent. But I hold that they who cultivate wisdom and think they will be able to guide the people in prudent policy never lapse into violence: they know that enmities and dangers are inseparable from violence, but persuasion produces the same results safely and amicably. For violence, by making its victims sensible of loss, rouses their hatred: but persuasion, by seeming to confer a favor, wins goodwill.

It is not, then, cultivation of wisdom that leads to violent methods, but the possession of power without prudence. Besides, many supporters are necessary to him who ventures to use force: but he who can persuade needs no confederate, having confidence in his own unaided power of persuasion. And such a man has no occasion to shed blood; for who would rather take a man’s life than have a live and willing follower?

But his accuser argued thus. Among the associates of Socrates were Critias and Alcibiades; and none wrought so many evils to the state. For Critias in the days of the oligarchy bore the palm for greed and violence: Alcibiades, for his part, exceeded all in licentiousness and insolence under the democracy. Now I have no intention of excusing the wrong these two men wrought the state; but I will explain how they came to be with Socrates. Ambition was the very life-blood of both: no Athenian was ever like them. They were eager to get control of everything and to outstrip every rival in notoriety. They knew that Socrates was living on very little, and yet was wholly independent; that he was strictly moderate in all his pleasures; and that in argument he could do what he liked with any disputant. Sharing this knowledge and the principles I have indicated, is it to be supposed that these two men wanted to adopt the simple life of Socrates, and with this object in view sought his society? Did they not rather think that by associating with him they would attain the utmost proficiency in speech and action? For my part I believe that, had heaven granted them the choice between the life they saw Socrates leading and death, they would have chosen rather to die. Their conduct betrayed their purpose; for as soon as they thought themselves superior to their fellow-disciples they sprang away from Socrates and took to politics; it was for political ends that they had wanted Socrates.

But it may be answered: Socrates should have taught his companions prudence before politics. I do not deny it; but I find that all teachers show their disciples how they themselves practice what they teach, and lead them on by argument. And I know that it was so with Socrates: he showed his companions that he was a gentleman himself, and talked most excellently of goodness and of all things that concern man. I know further that even those two were prudent so long as they were with Socrates, not from fear of fine or blow, but because at that time they really believed in prudent conduct.

But many self-styled lovers of wisdom may reply: A just man can never become unjust; a prudent man can never become wanton; in fact no one having learned any kind of knowledge can become ignorant of it. I do not hold with this view. I notice that as those who do not train the body cannot perform the functions proper to the body, so those who do not train the soul cannot perform the functions of the soul: for they cannot do what they ought to do nor avoid what they ought not to do.

For this cause fathers try to keep their sons, even if they are prudent lads, out of bad company: for the society of honest men is a training in virtue, but the society of the bad is virtue's undoing. As one of the poets says:

"From the good shalt thou learn good things; but if thou minglest with the bad thou shalt lose even what thou hast of wisdom."

And another says:

"Ah, but a good man is at one time noble, at another base."

My testimony agrees with theirs; for I see that, just as poetry is forgotten unless it is often repeated, so instruction, when no longer heeded, fades from the mind. To forget good counsel is to forget the experiences that prompted the soul to desire prudence: and when those are forgotten, it is not surprising that prudence itself is forgotten. I see also that men who take to drink or get involved in love intrigues lose the power of caring about right conduct and avoiding evil. For many who are careful with their money no sooner fall in love than they begin to waste it: and when they have spent it all, they no longer shrink from making more by methods which they formerly avoided because they thought them disgraceful. How then can it be impossible for one who was prudent to lose his prudence, for one who was capable of just action to become incapable? To me indeed it seems that whatever is honorable, whatever is good in conduct is the result of training, and that this is especially true of prudence. For in the same body along with the soul are planted the pleasures which call to her: "Abandon prudence, and make haste to gratify us and the body."

And indeed it was thus with Critias and Alcibiades. So long as they were with Socrates, they found in him an ally who gave them strength to conquer their evil passions. But when they parted from him, Critias fled to Thessaly, and got among men who put lawlessness before justice; while Alcibiades, on account of his beauty, was hunted by many great ladies, and because of his influence at Athens and among her allies he was spoilt by many powerful men: and as athletes who gain an easy victory in the games are apt to neglect their training, so the honor in which he was held, the cheap triumph he won with the people, led him to neglect himself. Such was their fortune: and when to pride of birth, confidence in wealth, vainglory and much yielding to temptation were added corruption and long separation from Socrates, what wonder if they grew overbearing? For their wrongdoing, then, is Socrates to be called to account by his accuser? And does he deserve no word of praise for having controlled them in the days of their youth, when they would naturally be most reckless and licentious? Other cases, at least, are not so judged. For what teacher of flute, lyre, or anything else, after making his pupils proficient, is held to blame if they leave him for another master, and then turn out incompetent? What father, whose son bears a good character so long as he is with one master, but goes wrong after he has attached himself to another, throws the blame on the earlier teacher? Is it not true that the worse the boy turns out with the second, the higher is his father's praise of the first? Nay, fathers themselves, living with their sons, are not held responsible for their boys' wrongdoing if they are themselves prudent men. This is the test which should have been applied to Socrates too. If there was anything base in his own life, he might fairly have been thought vicious. But, if his own conduct was always prudent, how can he be fairly held to blame for the evil that was not in him?

Nevertheless, although he was himself free from vice, if he saw and approved of base conduct in them, he would be open to censure. Well, when he found that Critias loved Euthydemus and wanted to lead him astray, he tried to restrain him by saying that it was mean and unbecoming in a gentleman to sue like a beggar to the object of his affection, whose good opinion he coveted, stooping to ask a favor that it was wrong to grant. As Critias paid no heed whatever to this protest, Socrates, it is said, exclaimed in the presence of Euthydemus and many others, "Critias seems to have the feelings of a pig: he can no more keep away from Euthydemus than pigs can help rubbing themselves against stones." Now Critias bore a grudge against Socrates for this; and when he was one of the Thirty and was drafting laws with Charicles, he bore it in mind. He inserted a clause which made it illegal to teach the art of words." It was a calculated insult to Socrates, whom he saw no means of attacking, except by imputing to him the practice constantly attributed to philosophers, and so making him unpopular. For myself never heard Socrates indulge in the practice, nor knew of anyone who professed to have heard him do so. The truth came out. When the Thirty were putting to death many citizens of the highest respectability and were encouraging many in crime, Socrates had remarked: “It seems strange enough to me that a herdsman who lets his cattle decrease and go to the bad should not admit that he is a poor cowherd; but stranger still that a statesman when he causes the citizens to decrease and go to the bad, should feel no shame nor think himself a poor statesman.” This remark was reported to Critias and Charicles, who sent for Socrates, showed him the law and forbade him to hold conversation with the young.

“May I question you” asked Socrates, “in case I do not understand any point in your orders?”

“You may” said they.

“Well now,” said he, “I am ready to obey the laws. But lest I unwittingly transgress through ignorance, I want clear directions from you. Do you think that the art of words from which you bid me abstain is associated with sound or unsound reasoning? For if with sound, then clearly I must abstain from sound reasoning: but if with unsound, clearly I must try to reason soundly.”

“Since you are ignorant, Socrates,” said Charicles in an angry tone, “we put our order into language easier to understand. You may not hold any converse whatever with the young.”

“Well then,” said Socrates, “that there may be no question raised about my obedience, please fix the age limit below which a man is to be accounted young.”

"So long," replied Charicles, "as he is not permitted to sit in the Council, because as yet he lacks wisdom. You shall not converse with anyone who is under thirty."

"Suppose I want to buy something, am I not even then to ask the price if the seller is under thirty?"

"Oh yes," answered Charicles, "you may in such cases. But the fact is, Socrates, you are in the habit of asking questions to which you know the answer: so that is what you are not to do."

"Am I to give no answer, then, if a young man asks me something that I know?—for instance, 'Where does Charicles live?' or 'Where is Critias? '"

"Oh yes," answered Charicles, "you may, in such cases."

"But you see, Socrates," explained Critias, "you will have to avoid your favorite topic,—the cobblers, builders and metal workers; for it is already worn to rags by you in my opinion."

"Then must I keep off the subjects of which these supply illustrations, Justice, Holiness, and so forth?"

"Indeed yes," said Charicles, "and cowherds too: else you may find the cattle decrease."

Thus the truth was out: the remark about the cattle had been repeated to them: and it was this that made them angry with him.

So much, then, for the connexion of Critias with Socrates and their relation to each other. I venture to lay it down that learners get nothing from a teacher with whom they are out of sympathy. Now, all the time that Critias and Alcibiades associated with Socrates they were out of sympathy with him, but from the very first their ambition was political advancement. For while they were still with him, they tried to converse, whenever possible, with prominent politicians. Indeed, there is a story told of Alcibiades, that, when he was less than twenty years old, he had a talk about laws with Pericles, his guardian, the first citizen in the State.

"Tell me, Pericles," he said, "can you teach me what a law is?"

"Certainly," he replied.

"Then pray teach me. For whenever I hear men praised for keeping the laws, it occurs to me that no one can really deserve that praise who does not know what a law is."

"Well, Alcibiades, there is no great difficulty about what you desire. You wish to know what a law is. Laws are all the rules approved and enacted by the majority in assembly, whereby they declare what ought and what ought not to be done."

"Do they suppose it is right to do good or evil?"

"Good, of course, young man,—not evil."

"But if, as happens under an oligarchy, not the majority, but a minority meet and enact rules of conduct, what are these?"

"Whatsoever the sovereign power in the State, after deliberation, enacts and directs to be done is known as a law."

"If, then, a despot, being the sovereign power, enacts what the citizens are to do, are his orders also a law?"

"'Yes, whatever a despot as ruler enacts is also known as a law."

"But force, the negation of law, what is that, Pericles? Is it not the action of the stronger when he constrains the weaker to do whatever he chooses, not by persuasion, but by force?"

"That is my opinion."

"Then whatever a despot by enactment constrains the citizens to do without persuasion, is the negation of law?"

"I think so: and I withdraw my answer that whatever a despot enacts without persuasion is a law."

"And when the minority passes enactments, not by persuading the majority, but through using its power, are we to call that force or not?"

"Everything, I think, that men constrain others to do 'without persuasion,' whether by enactment or not, is not law, but force."

"It follows then, that whatever the assembled majority, through using its power over the owners of property, enacts without persuasion is not law, but force?"

"Alcibiades," said Pericles, "at your age, I may tell you, we, too, were very clever at this sort of thing. For the puzzles we thought about and exercised our wits on were just such as you seem to think about now."

"Ah, Pericles," cried Alcibiades, "if only I had known you intimately when you were at your cleverest in these things!"

So soon, then, as they presumed themselves to be the superiors of the politicians, they no longer came near Socrates. For apart from their general want of sympathy with him, they resented being cross-examined about their errors when they came. Politics had brought them to Socrates, and for politics they left him. But Criton was a true associate of Socrates, as were Chaerophon, Chaerecrates, Hermogenes, Simmias, Cebes, Phaedondas, and others who consorted with him not that they might shine in the courts or the assembly, but that they might become gentlemen, and be able to do their duty by house and household, and relatives and friends, and city and citizens. Of these not one, in his youth or old age, did evil or incurred censure.

"But," said his accuser, "Socrates taught sons to treat their fathers with contempt: he persuaded them that he made his companions wiser than their fathers: he said that the law allowed a son to put his father in prison if he convinced a jury that he was insane; and this was a proof that it was lawful for the wiser to keep the more ignorant in jail."

In reality Socrates held that, if you clap fetters on a man for his ignorance, you deserve to he kept in jail yourself by those whose knowledge is greater than your own: and such reasoning led him frequently to consider the difference between Madness and Ignorance. That madmen should be kept in prison was expedient, he thought, both for themselves and for their friends: but those who are ignorant of what they ought to know deserve to learn from those who know it.

"But," said his accuser, "Socrates caused his companions to dishonor not only their fathers, but their other relations as well, by saying that invalids and litigants get benefit not from their relations, but from their doctor or their counsel. Of friends too he said that their goodwill was worthless, unless they could combine with it some power to help one: only those deserved honor who knew what was the right thing to do, and could explain it. Thus by leading the young to think that he excelled in wisdom and in ability to make others wise, he had such an effect on his companions that no one counted for anything in their estimation in comparison with him." Now I know that he did use this language about fathers, relations and friends. And, what is more, he would say that so soon as the soul, the only seat of intelligence, is gone out of a man, even though he be our nearest and dearest, we carry out his body and hide it in the tomb. Moreover, a man's dearest friend is himself: yet, even in his lifetime he removes or lets another remove from his body whatever is useless and unprofitable. He removes his own nails, hair, corns: he lets the surgeon cut and cauterize him, and, aches and pains notwithstanding, feels bound to thank and fee him for it. He spits out the saliva from his mouth as far away as he can, because to retain it doesn't help him, but harms him rather.

Now in saying all this, he was not giving a lesson on "the duty of burying one's father alive, or making mincemeat of one's body": he meant to show that unreason is unworth, and was urging the necessity of cultivating sound sense and usefulness, in order that he who would fain be valued by father or by brother or by anyone else may not rely on the bond of familiarity and neglect him, but may try to be useful to all those by whom he would be valued.

Again, his accuser alleged that he selected from the most famous poets the most immoral passages, and used them as evidence in teaching his companions to be tyrants and malefactors: for example, Hesiod's line:

"No work is a disgrace, but idleness is a disgrace."

He was charged with explaining this line as an injunction to refrain from no work, dishonest or disgraceful, but to do anything for gain. Now, though Socrates would fully agree that it is a benefit and a blessing to a man to be a worker, and a disadvantage and an evil to be an idler—that work, in fact, is a blessing, idleness an evil—"working," "being a worker," meant to him doing good work; but gambling and any occupation that is immoral and leads to loss he called idling. When thus interpreted there is nothing amiss with the line:

"No work is a disgrace, but idleness is a disgrace."

Again, his accuser said that he often quoted the passage from Homer, showing how Odysseus:

"Whenever he found one that was a captain and a man of mark, stood by his side, and restrained him with gentle words: "Good sir, it is not seemly to affright thee like a coward, but do thou sit thyself and make all thy folk sit down.…’ But whatever man of the people he saw and found him shouting, him he drove with his scepter and chid him with loud words: ‘Good sir, sit still and hearken to the words of others that are thy betters: but thou art no warrior and a weakling, never reckoned whether in battle or in council.’”

This passage, it was said, he explained to mean that the poet approved of chastising common and poor folk. But Socrates never said that: indeed, on that view he would have thought himself worthy of chastisement. But what he did say was that those who render no service either by word or deed, who cannot help army or city or the people itself in time of need, ought to be stopped, even if they have riches in abundance, above all if they are insolent as well as inefficient. But Socrates, at least, was just the opposite of all that: he showed himself to be one of the people and a friend of mankind. For although he had many eager disciples among citizens and strangers, yet he never exacted a fee for his society from one of them, but of his abundance he gave without stint to all. Some indeed, after getting from him a few trifles for nothing, became vendors of them at a great price to others, and showed none of his sympathy with the people, refusing to talk with those who had no money to give them. But Socrates did far more to win respect for the State in the world at large than Lichas, whose services to Sparta have made his name immortal. For Lichas used to entertain the strangers staying at Sparta during the Feast of the Dancing Boys; but Socrates spent his life in lavishing his gifts and rendering the greatest services to all who cared to receive them. For he always made his associates better men before he parted with them.

Such was the character of Socrates. To me he seemed to deserve honor rather than death at the hands of the State. And a consideration of his case in its legal aspect will confirm my opinion. Under the laws, death is the penalty inflicted on persons proved to be thieves, highwaymen, cutpurses, kidnappers, robbers of temples; and from such criminals no man was so widely separated as he. Moreover, to the State he was never the cause of disaster in war, or strife or treason or any evil whatever. Again, in private life no man by him was ever deprived of good or involved in ill. None of these crimes was ever so much as imputed to him. How then could he be guilty of the charges? For so far was he from "rejecting the gods," as charged in the indictment, that no man was more conspicuous for his devotion to the service of the gods: so far from "corrupting the youth," as his accuser actually charged against him, that if any among his companions had evil desires, he openly tried to reform them and exhorted them to desire the fairest and noblest virtue, by which men prosper in public life and in their homes. By this conduct did he not deserve high honor from the State?

III. In order to support my opinion that he benefited his companions, alike by actions that revealed his own character and by his conversation, I will set down what I recollect of these.

First, then, for his attitude towards religion; his deeds and words were clearly in harmony with the answer given by the Priestess at Delphi to such questions as "What is my duty about sacrifice?" or about "cult of ancestors." For the answer of the Priestess is, "Follow the custom of the State: that is the way to act piously." And so Socrates acted himself and counseled others to act. To take any other course he considered presumption and folly.

And again, when he prayed he asked simply for good gifts, "for the gods know best what things are good." To pray for gold or silver or sovereignty or any other such thing, was just like praying for a gamble or a fight or anything of which the result is obviously uncertain.

Though his sacrifices were humble, according to his means, he thought himself not a whit inferior to those who made frequent and magnificent sacrifices out of great possessions. The gods (he said) could not well delight more in great offerings than in small—for in that case must the gifts of the wicked often have found more favor in their sight than the gifts of the upright—and man would not find life worth having, if the gifts of the wicked were received with more favor by the gods than the gifts of the upright. No, the greater the piety of the giver, the greater (he thought) was the delight of the gods in the gift. He would quote with approval the line:

"According to thy power render sacrifice to the immortal gods,"

and he would add that in our treatment of friends and strangers, and in all our behavior, it is a noble principle to render according to our power. If ever any warning seemed to be given him from heaven, he would more easily have been persuaded to choose a blind guide who did not know the road in preference to one who could see and knew the way, than to disregard the admonition. All men, in fact, who flouted the warnings of the gods in their anxiety to avoid the censure of men, he denounced for their foolishness. He himself despised all human opinions in comparison with counsel given by the gods.

He schooled his body and soul by following, a system which, in all human calculation, would give him a life of confidence and security, and would make it easy to meet his expenses. For he was so frugal that it is hardly possible to imagine a man doing so little work as not to earn enough to satisfy the needs of Socrates. He ate just sufficient food to make eating a pleasure, and he was so ready for his food that he found appetite the best sauce: and any kind of drink he found pleasant, because he drank only when he was thirsty. Whenever he accepted an invitation to dinner, he resisted without difficulty the common temptation to exceed the limit of satiety; and he advised those who could not do likewise to avoid appetizers that encouraged them to eat and drink what they did not want: for such trash was the ruin of stomach and brain and soul. “I believe,” he said in jest, “it was by providing a feast of such things that Circe made swine; and it was partly by the prompting of Hermes, partly through his own self-restraint and avoidance of excessive indulgence in such things, that Odysseus was not turned into a pig.” This was how he would talk on the subject, half joking, half in earnest.

Of sensual passion he would say: “Avoid it resolutely: it is not easy to control yourself once you meddle with that sort of thing.” Thus, on hearing that Critobulus had kissed Alcibiades’ pretty boy, he put this question to Xenophon before Critobulus: “Tell me, Xenophon, did you not suppose Critobulus to be a sober person, and by no means rash; prudent, and not thoughtless or adventurous?”

“Certainly,” said Xenophon.

“Then you are to look on him henceforth as utterly hot-headed and reckless: the man would do a somersault into a ring of knives; he would jump into fire.”

“What on earth has he done to make you think so badly of him?” asked Xenophon.

“What has the man done? He dared to kiss Alcibiades’ son, and the boy is very good-looking and attractive.”

“Oh, if that is the sort of adventure you mean, I think I might make that venture myself.”

“Poor fellow! What do you think will happen to you through kissing a pretty face? Won’t you lose your liberty in a trice and become a slave, begin spending large sums on harmful pleasures, have no time to give to anything fit for a gentleman, be forced to concern yourself with things that no madman even would care about?”

“Heracles! what alarming power in a kiss!” cried Xenophon.

“What? Does that surprise you?” continued Socrates. “Don’t you know that the scorpion, though smaller than a farthing, if it but fasten on the tongue, inflicts excruciating and maddening pain?”

“Yes, to be sure; for the scorpion injects something by its bite.”

“And do you think, you foolish fellow, that the fair inject nothing when they kiss, just because you don’t see it? Don’t you know that this creature called ‘fair and young’ is more dangerous than the scorpion, seeing that it need not even come in contact, like the insect, but at any distance can inject a maddening poison into anyone who only looks at it?

“Maybe, too, the loves are called archers for this reason, that the fair can wound even at a distance.

“Nay, I advise you, Xenophon, as soon as you see a pretty face to take to your heels and fly: and you, Critobulus, I advise to spend a year abroad.

It will certainly take you at least as long as that to recover from the bite.”

Thus in the matter of carnal appetite, he held that those whose passions were not under complete control should limit themselves to such indulgence as the soul would reject unless the need of the body were pressing, and such as would do no harm when the need was there. As for his own conduct in this matter, it was evident that he had trained himself to avoid the fairest and most attractive more easily than others avoid the ugliest and most repulsive. Concerning eating and drinking then and carnal indulgence such were his views, and he thought that a due portion of pleasure would be no more lacking to him than to those who give themselves much to these, and that much less trouble would fall to his lot.

IV. If any hold the opinion expressed in some written and spoken criticisms of Socrates that are based on inference, and think, that though he was consummate in exhorting men to virtue, he was an incompetent guide to it, let them consider not only the searching cross-examination with which he chastised those who thought themselves omniscient, but his daily talks with his familiar friends, and then judge whether he was capable of improving his companions.

I will first state what I once heard him say about the godhead in conversation with Aristodemus the dwarf, as he was called. On learning that he was not known to sacrifice or pray or use divination, and actually made a mock of those who did so, he said: “Tell me, Aristodemus, do you admire any human beings for wisdom?”

“I do,” he answered.

“Tell us their names.”

“In epic poetry Homer comes first, in my opinion; in dithyramb, Melanippides; in tragedy, Sophocles; in sculpture, Polycleitus; in painting, Zeuxis.”

“Which, think you, deserve the greater admiration, the creators of phantoms without sense and motion, or the creators of living, intelligent, and active beings?”

“Oh, of living beings, by far, provided only they are created by design and not mere chance.”

“Suppose that it is impossible to guess the purpose of one creature’s existence, and obvious that another’s serves a useful end, which, in your judgment, is the work of chance, and which of design?”

"Presumably the creature that serves some useful end is the work of design."

"Do you not think then that he who created man from the beginning had some useful end in view when he endowed him with his several senses, giving eyes to see visible objects, ears to hear sounds? Would odors again be of any use to us had we not been endowed with nostrils? What perception should we have of sweet and bitter and all things pleasant to the palate had we no tongue in our mouth to discriminate between them? Besides these, are there not other contrivances that look like the results of forethought? Thus the eyeballs, being weak, are set behind eyelids, that open like doors when we want to see, and close when we sleep: on the lids grow lashes through which the very winds filter harmlessly: above the eyes is a coping of brows that lets no drop of sweat from the head hurt them. The ears catch all sounds, but are never choked with them. Again, the incisors of all creatures are adapted for cutting, the molars for receiving food from them and grinding it. And again, the mouth, through which the food they want goes in, is set near the eyes and nostrils; but since what goes out is unpleasant, the ducts through which it passes are turned away and removed as far as possible from the organs of sense. With such signs of forethought in these arrangements, can you doubt whether they are the works of chance or design?"

"No, of course not. When I regard them in this light they do look very like the handiwork of a wise and loving creator."

"What of the natural desire to beget children, the mother's desire to rear her babe, the child's strong will to live and strong fear of death?"

"Undoubtedly these, too, look like the contrivances of one who deliberately willed the existence of living creatures."

"Do you think you have any wisdom yourself?"

“Oh! Ask me a question and judge from my answer.”

“And do you suppose that wisdom is nowhere else to be found, although you know that you have a mere speck of all the earth in your body and a mere drop of all the water, and that of all the other mighty elements you received, I suppose, just a scrap towards the fashioning of your body? But as for mind, which alone, it seems, is without mass, do you think that you snapped it up by a lucky accident, and that the orderly ranks of all these huge masses, infinite in number, are due, forsooth, to a sort of absurdity?”

“Yes; for I don’t see the master hand, whereas I see the makers of things in this world.”

“Neither do you see your own soul, which has the mastery of the body; so that, as far as that goes, you may say that you do nothing by design, but everything by chance.”

Here Aristodemus exclaimed: “Really, Socrates, I don’t despise the godhead. But I think it is too great to need my service.”

“Then the greater the power that deigns to serve you, the more honor it demands of you.”

“I assure you, that if I believed that the gods pay any heed to man, I would not neglect them.”

“Then do you think them unheeding? In the first place, man is the only living creature that they have caused to stand upright; and the upright position gives him a wider range of vision in front and a better view of things above, and exposes him less to injury. Secondly, to groveling creatures they have given feet that afford only the power of moving, whereas they have endowed man with hands, which are the instruments to which we chiefly owe our greater happiness. Again, though all creatures have a tongue, the tongue of man alone has been formed by them to be capable of contact with different parts of the mouth, so as to enable us to articulate the voice and express all our wants to one another. Once more, for all other creatures they have prescribed a fixed season of sexual indulgence; in our case the only time limit they have set is old age.

“Nor was the deity content to care for man’s body. What is of yet higher moment, he has implanted in him the noblest type of soul. For in the first place what other creature’s soul has apprehended the existence of gods who set in order the universe, greatest and fairest of things? And what race of living things other than man worships gods? And what soul is more apt than man’s to make provision against hunger and thirst, cold and heat, to relieve sickness and promote health, to acquire knowledge by toil, and to remember accurately all that is heard, seen, or learned? For is it not obvious to you that, in comparison with the other animals, men live like gods, by nature peerless both in body and in soul? For with a man’s reason and the body of an ox we could not carry out our wishes, and the possession of hands without reason is of little worth. Do you, then, having received the two most precious gifts, yet think that the gods take no care of you? What are they to do, to make you believe that they are heedful of you?”

“1 will believe when they send counselors, as you declare they do, saying, f Do this, avoid that.’”

“But when the Athenians inquire of them by divination and they reply, do you not suppose that to you, too, the answer is given? Or when they send portents for warning to the Greeks, or to all the world? Are you their one exception, the only one consigned to neglect? Or do you suppose that the gods would have put into man a belief in their ability to help and harm, if they had not that power; and that man throughout the ages would never have detected the fraud? Do you not see that the wisest and most enduring of human institutions, cities and nations, are most god-fearing, and that the most thoughtful period of life is the most religious? Be well assured, my good friend, that the mind within you directs your body according to its will; and equally you must think that ***Thought indwelling in the Universal*** disposes all things according to its pleasure. For think not that your eye can travel over many furlongs and yet god's eye cannot see the whole world at once; that your soul can ponder on things in Egypt and in Sicily, and god's thought is not sufficient to pay heed to the whole world at once. Nay, but just as by serving men you find out who is willing to serve you in return, by being kind who will be kind to you in return, and by taking counsel, discover the masters of thought, so *try the gods by serving them, and see whether they will vouchsafe to counsel you in matters hidden from man*. Then you will know that such is the greatness and such the nature of the deity that he sees all things and hears all things alike, and is present in all places and heedful of all things."

To me at least it seemed that by these sayings he kept his companions from impiety, injustice, and baseness, and that not only when they were seen by men, but even in solitude; since they ever felt that no deed of theirs could at any time escape the gods.

V. But if Self-control too is a fair and noble possession, let us now consider whether he led men up to that virtue by discourse like the following:

"My friends, if we were at war and wanted to choose a leader most capable of helping us to save ourselves and conquer the enemy, should we choose one whom we knew to be the slave of the belly, or of wine, or lust, or sleep? How could we expect that such an one would either save us or defeat the enemy? Or if at the end of our life we should wish to appoint a guardian to educate our boys or protect our girls or to take care of our goods, should we think a loose liver a trustworthy man to choose?

Should we entrust live stock or storehouses or the management of works to a vicious slave? Should we be willing to take as a gift a page or an errand-boy with such a character? Surely then, if we should refuse a vicious slave, the master must look to it that he does not grow vicious himself? For whereas the covetous, by robbing other men of their goods, seem to enrich themselves, a vicious man reaps no advantage from the harm he does to others. If he is a worker of mischief to others, he brings much greater mischief on himself, if indeed the greatest mischief of all is to ruin not one's home merely, but the body and the soul. In social intercourse what pleasure could you find in such a man, knowing that he prefers your sauces and your wines to your friends, and likes the women better than the company? Should not every man hold self-control to be the foundation of all virtue, and first lay this foundation firmly in his soul? For who without this can learn any good or practice it worthily? Or what man that is the slave of his pleasures is not in an evil plight body and soul alike? From my heart I declare that every free man should pray not to have such a man among his slaves; and every man who is a slave to such pleasures should entreat the gods to give him good masters: thus, and only thus, may he find salvation."

Such were his words; but his own self-control was shown yet more clearly by his deeds than by his words. For he kept in subjection not only the pleasures of the body, but those too that money brings, in the belief that he who takes money from any casual giver puts himself under a master and endures the basest form of slavery,

VI. It is due to him that a conversation he had with Antiphon the Sophist should not go unrecorded. Antiphon came to Socrates with the intention of drawing his companions away from him, employed to entertain the guests at the banquet and spoke thus in their presence.

“Socrates, I supposed that philosophy must add to one’s store of happiness. But the fruits you have reaped from philosophy are apparently very different. For example, you are living a life that would drive even a slave to desert his master. Your meat and drink are of the poorest: the cloak you wear is not only a poor thing, but is never changed summer or winter; and you never wear shoes or tunic. Besides you refuse to take money, the mere getting of which is a joy, while its possession makes one more independent and happier. Now the professors of other subjects try to make their pupils copy their teachers: if you too intend to make your companions do that, you must consider yourself a professor of unhappiness.”

To this Socrates replied:

“Antiphon, you seem to have a notion that my life is so miserable, that I feel sure you would choose death in preference to a life like mine. Come then, let us consider together what hardship you have noticed in my life. Is it that those who take money are bound to carry out the work for which they get a fee, while I, because I refuse to take it, am not obliged to talk with anyone against my will? Or do you think my food poor because it is less wholesome than yours or less nourishing? or because my viands are harder to get than yours, being scarcer and more expensive? or because your diet is more enjoyable than mine? Do you not know that the greater the enjoyment of eating the less the need of sauce; the greater the enjoyment of drinking, the less the desire for drinks that are not available? As for cloaks, they are changed, as you know, on account of cold or heat. And shoes are worn as a protection to the feet against pain and inconvenience in walking. Now did you ever know me to stay indoors more than others on account of the cold, or to fight with any man for the shade because of the heat, or to be prevented from walking anywhere by sore feet? Do you not know that by training, a puny weakling comes to be better at any form of exercise he practices, and gets more staying power, than the muscular prodigy who neglects to train? Seeing then that I am always training my body to answer any and every call on its powers, do you not think that I can stand every strain better than you can without training? For avoiding slavery to the belly or to sleep and incontinence, is there, think you, any more effective specific than the possession of other and greater pleasures, which are delightful not only to enjoy, but also because they arouse hopes of lasting benefit? And again, you surely know that while he who supposes that nothing goes well with him is unhappy, he who believes that he is successful in farming or a shipping concern or any other business he is engaged in is happy in the thought of his prosperity. Do you think then that out of all this thinking there comes anything so pleasant as the thought: 'I am growing in goodness and I am making better friends?' And that, I may say, is my constant thought.

"Further, if help is wanted by friends or city, which of the two has more leisure to supply their needs, he who lives as I am living or he whose life you call happy? Which will find soldiering the easier task, he who cannot exist without expensive food or he who is content with what he can get? Which when besieged will surrender first, he who wants what is very hard to come by or he who can make shift with whatever is at hand?

"You seem, Antiphon, to imagine that happiness consists in luxury and extravagance. But my belief is that to have no wants is divine; to have as few as possible comes next to the divine; and as that which is divine is supreme, so that which approaches nearest to its nature is nearest to the supreme."

In another conversation with Socrates Antiphon said:

"Socrates, I for my part believe you to be a just, but by no means a wise man. And I think you realize it yourself. Anyhow, you decline to take money for your society. Yet if you believed your cloak or house or anything you possess to be worth money, you would not part with it for nothing or even for less than its value. Clearly, then, if you set any value on your society, you would insist on getting the proper price for that too. It may well be that you are a just man because you do not cheat people through avarice; but wise you cannot be, since your knowledge is not worth anything."

To this Socrates replied: "Antiphon, it is common opinion among us in regard to beauty and wisdom that there is an honorable and a shameful way of bestowing them. For to offer one's beauty for money to all comers is called prostitution; but we think it virtuous to become friendly with a lover who is known to be a man of honor. So is it with wisdom. Those who offer it to all comers for money are known as sophists, prostitutors of wisdom, but we think that he who makes a friend of one whom he knows to be gifted by nature, and teaches him all the good he can, fulfils the duty of a citizen and a gentleman. That is my own view, Antiphon. Others have a fancy for a good horse or dog or bird: my fancy, stronger even than theirs, is for good friends. And I teach them all the good I can, and recommend them to others from whom I think they will get some moral benefit. And the treasures that the wise men of old have left us in their writings I open and explore with my friends. If we come on any good thing, we extract it, and we set much store on being useful to one another."

For my part, when I heard these words fall from his lips, I judged him to be a happy man himself and to be putting his hearers in the way of being gentlemen.

On yet another occasion Antiphon asked him: “How can you suppose that you make politicians of others, when you yourself avoid politics even if you understand them?”

“How now, Antiphon?” he retorted, should I play a more important part in politics by engaging in them alone or by taking pains to turn out as many competent politicians as possible?”

VII. Let us next consider whether by discouraging imposture he encouraged his companions to cultivate virtue. For he always said that the best road to glory is the way that makes a man as good as he wishes to be thought. And this was how he demonstrated the truth of this saying:

“Suppose a bad flute-player wants to be thought a good one, let us note what he must do. Must he not imitate good players in the accessories of the art? First, as they wear fine clothes and travel with many attendants, he must do the same. Further, seeing that they win the applause of crowds, he must provide himself with a large *claque*. But, of course, he must never accept an engagement, or he will promptly expose himself to ridicule as an incompetent player and an impostor to boot. And so, what with incurring heavy expense and gaining nothing, and bringing disgrace on himself as well, he will make his life burdensome, unprofitable and ridiculous. So too if a man who is not a general or a pilot wanted to be thought a good one, let us imagine what would happen to him. If his efforts to seem proficient in these duties failed to carry conviction, would not his failure be galling to him? if they succeeded, would not his success be still more disastrous? for it is certain that if a man who knew nothing about piloting a ship or commanding an army were appointed to such work, he would lose those whom he least wanted to lose and would bring ruin and disgrace on himself.”

By similar reasoning he would show how unprofitable is a reputation for wealth or courage or strength when it is undeserved. “Tasks beyond their powers,” he would say, “are laid on the incompetent, and no mercy is shown to them when they disappoint the expectation formed of their capability. The man who persuades you to lend him money or goods and then keeps them is without doubt a rogue; but much the greatest rogue of all is the man who has gulled his city into the belief that he is fit to direct it.”

For my part I thought that such talks did discourage imposture among his companions.

## BOOK II

I. In other conversations I thought that he exhorted his companions to practice self-control in the matter of eating and drinking, and sexual indulgence, and sleeping, and endurance of cold and heat and toil. Aware that one of his companions was rather intemperate in such matters, he said: "Tell me, Aristippus, if you were required to take charge of two youths and educate them so that the one would be fit to rule and the other would never think of putting himself forward, how would you educate them? Shall we consider it, beginning with the elementary question of food?"

"Oh yes," replied Aristippus, "food does seem to come first; for one can't live without food."

"Well, now, will not a desire for food naturally arise in both at certain times?"

"Yes, naturally."

"Now which of the two should we train in the habit of transacting urgent business before he satisfies his hunger:"

"The one who is being trained to rule, undoubtedly; else State business might be neglected during his tenure."

"And must not the same one be given power to resist thirst when both want to drink?"

"Certainly."

"And to which shall we give the power of limiting his sleep so that he can go late to bed and get up early, and do without sleep if need be?"

"To the same again."

"And the power to control his passions, so that he may not be hindered in doing necessary work?"

"To the same again."

"And to which shall we give the habit of not shirking a task, but undertaking it willingly?"

"That too will go to the one who is being trained to rule."

"And to which would the knowledge needful for overcoming enemies be more appropriately given?"

"Without doubt to the one who is being trained to rule; for the other lessons would be useless without such knowledge."

"Don't you think that with this education he will be less likely to be caught by his enemy than other creatures? Some of them, you know, are so greedy, that in spite of extreme timidity in some cases, they are drawn irresistibly to the bait to get food, and are caught; and others are snared by drink."

"Yes, certainly."

"Others again—quails and partridges, for instance—are so amorous, that when they hear the cry of the female, they are carried away by desire and anticipation, throw caution to the winds and blunder into the nets. Is it not so?"

He agreed again.

"Now, don't yon think it disgraceful that a man should be in the same plight as the silliest of wild creatures? Thus an adulterer enters the women's quarters, knowing that by committing adultery he is in danger of incurring the penalties threatened by the law, and that he may be trapped, caught and ill-treated. When such misery and disgrace hang over the adulterer's head, and there are many remedies to relieve him of his carnal desire without risk, is it not sheer lunacy to plunge headlong into danger?"

"Yes, I think it is."

"And considering that the great majority of essential occupations, warfare, agriculture and very many others, are carried on in the open air, don't you think it gross negligence that so many men are untrained to withstand cold and heat?"

He agreed again.

“Don’t you think then, that one who is going to rule must adapt himself to bear them lightly?”

“Certainly.”

“If then we classify those who control themselves in all these matters as ‘fit to rule,’ shall we not classify those who cannot behave so as men with no claim to be rulers?”

He agreed again.

“Well now, as you know the category to which each of these species belongs, have you ever considered in which category you ought to put yourself?”

“l have; and I do not for a moment put myself in the category of those who want to be rulers. For considering how hard a matter it is to provide for one’s own needs, I think it absurd not to be content to do that, but to shoulder the burden of supplying the wants of the community as well. That anyone should sacrifice a large part of his own wishes and make himself accountable as head of the state for the least failure to carry out all the wishes of the community is surely the height of folly. For states claim to treat their rulers just as I claim to treat my servants. I expect my men to provide me with necessaries in abundance, but not to touch any of them; and states hold it to be the business of the ruler to supply them with all manner of good things, and to abstain from all of them himself. And so, should anyone want to bring plenty of trouble on himself and others, I would educate him as you propose and number him with ‘those fitted to be rulers ‘: but myself I classify with those who wish for a life of the greatest ease and pleasure that can be had.”

Here Socrates asked: “Shall we then consider whether the rulers or the ruled live the pleasanter life?”

“Certainly,” replied Aristippus.

“To take first the nations known to us. In Asia the rulers are the Persians; the Syrians, Lydians and Phrygians are the ruled. In Europe the Scythians rule, and the Maeotians are ruled. In Africa the Carthaginians rule, and the Libyans are ruled. Which of the two classes, think you, enjoys the pleasanter life? Or take the Greeks, of whom you yourself are one; do you think that the controlling or the controlled communities enjoy the pleasanter life?”

“Nay,” replied Aristippus, “for my part I am no candidate for slavery; but there is, as I hold, a middle path in which I am fain to walk. That way leads neither through rule nor slavery, but through liberty, which is the royal road to happiness.”

“Ah,” said Socrates, “if only that path can avoid the world as well as rule and slavery, there may be something in what you say. But, since you are in the world, if you intend neither to rule nor to be ruled, and do not choose to truckle to the rulers—I think you must see that the stronger have a way of making the weaker rue their lot both in public and in private life, and treating them like slaves. You cannot be unaware that where some have sown and planted, others cut their corn and fell their trees, and in all manner of ways harass the weaker if they refuse to bow down, until they are persuaded to accept slavery as an escape from war with the stronger. So, too, in private life do not brave and mighty men enslave and plunder the cowardly and feeble folk?”

“Yes, but my plan for avoiding such treatment is this. I do not shut myself up in the four corners of a community, but am a stranger in every land.”

“A very cunning trick, that!” cried Socrates, “for ever since the death of Sinis and Sceiron and Procrustes, highwaymen slain by Theseus, no one injures strangers! And yet nowadays those who take a hand in the affairs of their homeland pass laws to protect themselves from injury, get friends to help them over and above those whom nature has given them, encompass their cities with fortresses, get themselves weapons to ward off the workers of mischief; and besides all this seek to make allies in other lands; and in spite of all these precautions, they are still wronged.

But you, with none of these advantages, spend much time on the open road, where so many come to harm; and into whatever city you enter, you rank below all its citizens, and are one of those specially marked down for attack by intending wrongdoers; and yet, because you are a stranger, do you expect to escape injury? What gives you confidence? Is it that the cities by proclamation guarantee your safety in your coming and going? Or is it the thought that no master would find you worth having among his slaves? For who would care to have a man in his house who wants to do no work and has a weakness for high living?

"But now let us see how masters treat such servants. Do they not starve them to keep them from immorality, lock up the stores to stop their stealing, clap fetters on them so that they can't run away, and beat the laziness out of them with whips? What do you do yourself to cure such faults among your servants?"

"I make their lives a burden to them until I reduce them to submission. But how about those who are trained in the art of kingship, Socrates, which you appear to identify with happiness? How are they better off than those whose sufferings are compulsory, if they must bear hunger, thirst, cold, sleeplessness, and endure all these tortures willingly? For if the same back gets the flogging whether its owner kicks or consents, or, in short, if the same body, consenting or objecting, is besieged by all these torments, I see no difference, apart from the folly of voluntary suffering."

“What, Aristippus,” exclaimed Socrates, “don’t you think that there is just this difference between these voluntary and involuntary sufferings, that if you bear hunger or thirst willingly, you can eat, drink, or what not, when you choose, whereas compulsory suffering is not to be ended at will? Besides, he who endures willingly enjoys his work because he is comforted by hope; hunters, for instance, toil gladly in hope of game. Rewards like these are indeed of little worth after all the toil; but what of those who toil to win good friends, or to subdue enemies, or to make themselves capable in body and soul of managing their own homes well, of helping their friends and serving their country? Surely these toil gladly for such prizes and live a joyous life, well content with themselves, praised and envied by everyone else? Moreover, indolence and present enjoyment can never bring the body into good condition, as trainers say, neither do they put into the soul knowledge of any value, but strenuous effort leads up to good and noble deeds, as good men say. And so says Hesiod somewhere in Works and Days:

‘Wickedness can be had in abundance easily: smooth is the road and very nigh she dwells. But in front of virtue the gods immortal have put sweat: long and steep is the path to her and rough at first; but when you reach the top, then at length the road is easy, hard though it was.’

“And we have the testimony of Epicharmus too in the line:

‘The gods demand of us toil as the price of all good things.’

“And elsewhere he says:

‘Knave, yearn not for the soft things, lest thou earn the hard.’

“Aye, and Prodicus the wise expresses himself to the like effect concerning Virtue in the essay ‘On Heracles ‘ that he recites to throngs of listeners. This, so far as I remember, is how he puts it:

“When Heracles was passing from boyhood to youth’s estate, wherein the young, now becoming their own masters, show whether they will approach life by the path of virtue or the path of vice, he went out into a quiet place, and sat pondering which road to take. And there appeared two women of great stature making towards him. The one was fair to see and of high bearing; and her limbs were adorned with purity, her eyes with modesty; sober was her figure, and her robe was white. The other was plump and soft, with high feeding. Her face was made up to heighten its natural white and pink, her figure to exaggerate her height. Open-eyed was she; and dressed so as to disclose all her charms. Now she eyed herself; anon looked whether any noticed her; and often stole a glance at her own shadow.

“When they drew nigh to Heracles, the first pursued the even tenor of her way: but the other, all eager to outdo her, ran to meet him, crying: ‘Heracles, I see that you are in doubt which path to take towards life. Make me your friend; follow me, and I will lead you along the pleasantest and easiest road. You shall taste all the sweets of life; and hardship you shall never know. First, of wars and worries you shall not think, but shall ever be considering what choice food or drink you can find, what sight or sound will delight you, what touch or perfume; what tender love can give you most joy, what bed the softest slumbers; and how to come by all these pleasures with least trouble. And should there arise misgiving that lack of means may stint your enjoyments, never fear that I may lead you into winning them by toil and anguish of body and soul. Nay; you shall have the fruits of others’ toil, and refrain from nothing that can bring you gain. For to my companions give authority to pluck advantage where they will.’

“Now when Heracles heard this, he asked, ‘Lady, pray what is your name?’

"'My friends call me Happiness,' she said, 'but among those that hate me I am nicknamed Vice.'

"Meantime the other had drawn near, and she said: 'I, too, am come to you, Heracles: I know your parents and I have taken note of your character during the time of your education. Therefore I hope that, if you take the road that leads to me, you will turn out a right good doer of high and noble deeds, and I shall be yet more highly honored and more illustrious for the blessings I bestow. But I will not deceive you by a pleasant prelude: I will rather tell you truly the things that are, as the gods have ordained them. For of all things good and fair, the gods give nothing to man without toil and effort.

If you want the favor of the gods, you must worship the gods: if you desire the love of friends, you must do good to your friends: if you covet honor from a city, you must aid that city: if you are fain to win the admiration of all Hellas for virtue, you must strive to do good to Hellas: if you want land to yield you fruits in abundance, you must cultivate that land: if you are resolved to get wealth from flocks, you must care for those flocks: if you essay to grow great through war and want power to liberate your friends and subdue your foes, you must learn the arts of war from those who know them and must practice their right use: and if you want your body to be strong, you must accustom your body to be the servant of your mind, and train it with toil and sweat.'

"And Vice, as Prodicus tells, answered and said: 'Heracles, mark you how hard and long is that road to joy, of which this woman tells? but I will lead you by a short and easy road to happiness.'

"And Virtue said: 'What good thing is thine, poor wretch, or what pleasant thing dost thou know, if thou wilt do naught to win them? Thou dost not even tarry for the desire of pleasant things, but fillest thyself with all things before thou desirest them, eating before thou art hungry, drinking before thou art thirsty, getting thee cooks, to give zest to eating, buying thee costly wines and running to and fro in search of snow in summer, to give zest to drinking; to soothe thy slumbers it is not enough for thee to buy soft coverlets, but thou must have frames for thy beds. For not toil, but the tedium of having nothing to do, makes thee long for sleep. Thou dost rouse lust by many a trick, when there is no need, using men as women: thus thou trainest thy friends, waxing wanton by night, consuming in sleep the best hours of day. Immortal art thou, yet the outcast of the gods, the scorn of good men. Praise, sweetest of all things to hear, thou hearest not: the sweetest of all sights thou beholdest not, for never yet hast thou beheld a good work wrought by thyself. Who will believe what thou dost say? who will grant what thou dost ask? Or what sane man will dare join thy throng? While thy votaries are young their bodies are weak, when they wax old, their souls are without sense; idle and sleek they thrive in youth, withered and weary they journey through old age, and their past deeds bring them shame, their present deeds distress. Pleasure they ran through in their youth: hardship they laid up for their old age. But I company with gods and good men, and no fair deed of god or man is done without my aid. I am first in honor among the gods and among men that are akin to me: to craftsmen a beloved fellow-worker, to masters a faithful guardian of the house, to servants a kindly protector: good helpmate in the toils of peace, staunch ally in the deeds of war, best partner in friendship. To my friends meat and drink bring sweet and simple enjoyment: for they wait till they crave them. And a sweeter sleep falls on them than on idle folk: they are not vexed at awaking from it, nor for its sake do they neglect to do their duties. The young rejoice to win the praise of the old; the elders are glad to be honored by the young; with joy they recall their deeds past, and their present well-doing is joy to them, for through me they are dear to the gods, lovely to friends, precious to their native land. And when comes the appointed end, they be not forgotten and dishonored, but live on, sung and remembered for all time. O Heracles, thou son of goodly parents, if thou wilt labor earnestly on this wise, thou mayest have for thine own the most blessed happiness.'

"Such, in outline, is Prodicus' story of the training of Heracles by Virtue; only he has clothed the thoughts in even finer phrases than I have done now. But anyhow, Aristippus, it were well that you should think on these things and try to show some regard for the life that lies before you."

II. On noticing that his eldest son, Lamprocles, was out of humor with his mother, he said: "Tell me, my boy, do you know that some men are called ungrateful?"

"Indeed I do," replied the young man.

"Do you realize how they come to have this bad name?"

"I do; the word is used of those who do not show the gratitude that it is in their power to show for benefits received."

"You take it, then, that the ungrateful are reckoned among the unjust?"

"Yes."

"Now, seeing that enslavement is considered a just or an unjust act according as the victims are friends or enemies, have you ever considered whether the case of ingratitude is analogous, ingratitude being unjust towards friends, but just towards enemies?"

"Indeed I have; and I think that it is always unjust not to show gratitude for a favor from whomsoever it is received, be he friend or enemy."

"If that is so, must not ingratitude be injustice pure and simple?"

He assented.

"Therefore the greater the benefits received the greater the injustice of not showing gratitude?"

He agreed again.

"Now what deeper obligation can we find than that of children to their parents? To their parents children owe their being and their portion of all fair sights and all blessings that the gods bestow on men—gifts so highly prized by us that all will sacrifice anything rather than lose them; and the reason why governments have made death the penalty for the greatest crimes is that the fear of it is the strongest deterrent against crime. Of course you don't suppose that lust provokes men to beget children, when the streets and the stews are full of means to satisfy that? We obviously select for wives the women who will bear us the best children, and then marry them to raise a family. The man supports the woman who is to share with him the duty of parentage and provides for the expected children whatever he thinks will contribute to their benefit in life, and accumulates as much of it as he can. The woman conceives and bears her burden in travail, risking her life, and giving of her own food; and, with much labor, having endured to the end and brought forth her child, she rears and cares for it, although she has not received any good thing, and the babe neither recognizes its benefactress nor can make its wants known to her: still she guesses what is good for it and what it likes, and seeks to supply these things, and rears it for a long season, enduring toil day and night, nothing knowing what return she will get.

"Nor are the parents content just to supply food, but so soon as their children seem capable of learning they teach them what they can for their good, and if they think that another is more competent to teach them anything, they send them to him at a cost, and strive their utmost that the children may turn out as well as possible."

To this the young man replied: Nay, but even if she has done all this and far more than this, no one could put up with her vile temper."

"Which, think you," asked Socrates, "is the harder to bear, a wild beast's brutality or a mother's?"

"I should say a mother's, when she is like mine."

"Well now, many people get bitten or kicked by wild beasts; has she ever done you an injury of that sort?"

"Oh no, but she says things one wouldn't listen to for anything in the world."

"Well, how much trouble do you think you have given her by your peevish words and froward acts day and night since you were a little child; and how much pain when you were ill?"

"But I have never yet said or done anything to cause her shame."

"Now do you really think it harder for you to listen to what she says than for actors when they abuse one another in a tragedy?"

"But an actor, I suppose, doesn't think that a question put to him will lead to punishment, or that a threat means any harm: and so he makes light of it."

"And why should you be annoyed? You know well that there is no malice in what your mother says to you; on the contrary, she wishes you to be blessed above all other beings—unless, indeed, you suppose that your mother is maliciously set against you?"

"Oh no, I don't think that."

Then Socrates exclaimed: “So this mother of yours is kindly disposed towards you; she nurses you devotedly in sickness and sees that you want for nothing; more than that, she prays the gods to bless you abundantly and pays vows on your behalf; and yet you say she is a trial! It seems to me that, if you can’t endure a mother like her, you can’t endure a good thing. Now tell me, is there any other being whom you feel bound to regard? Or are you set on trying to please nobody, and obeying neither general nor other ruler?”

“Of course not!”

“Do you want to please your neighbor, for instance, so that he may kindle a fire for you at your need, may support you in prosperity, and in case of accident or failure may be ready to hold out a helping hand?”

“Yes, I do.”

“When you find yourself with a travelling companion on land or at sea, or happen to meet anyone, is it a matter of indifference to you whether he prove a friend or an enemy? Or do you think his goodwill worth cultivating?”

“Yes, I do.”

“And yet, when you are resolved to cultivate these, you don’t think courtesy is due to your mother, who loves you more than all? Don’t you know that even the state ignores all other forms of ingratitude and pronounces no judgment on them, caring nothing if the recipient of a favor neglects to thank his benefactor, but inflicts penalties on the man who is discourteous to his parents and rejects him as unworthy of office, holding that it would be a sin for him to offer sacrifices on behalf of the state and that he is unlikely to do anything else honorably and rightly? Aye, and if one fail to honor his parents’ graves, the state inquires into that too, when it examines the candidates for office. Therefore, my boy, if you are prudent, you will pray the gods to pardon your neglect of your mother, lest they in turn refuse to be kind to you, thinking you an ingrate; and you will beware of men, lest all cast you out, perceiving that you care nothing for your parents, and in the end you are found to be without a friend. For, should men suppose you to be ungrateful to your parents, none would think you would be grateful for any kindness he might show you."

III. On another occasion he found that two brothers, Chaerophon and Chaerecrates, whom he knew well, were quarrelling. On seeing the latter, he cried, "Surely, Chaerecrates, you are not one of those who hold that there is more value in goods and chattels than in a brother, when they are senseless but he is sensible; they are helpless but he is helpful; when, moreover, you have many goods, but only one brother. It is strange too that a man should think he loses by his brothers because he cannot have their possessions as well as his own, and yet should not think that he loses by his fellow-citizens because their possessions are not his; and whereas in this case men can reflect that it is better to belong to a community, secure in the possession of a sufficiency, than to dwell in solitude with a precarious hold on all the property of their fellow-citizens, they fail to see that the same principle applies to brothers. Again, those who have the means buy servants to relieve them of work, and make friends because they feel the need of help; but they care nothing for their brothers, as though friendship can exist between fellow-citizens, but not between brothers! Yet common parentage and common upbringing are strong ties of affection,[1] for even brute beasts reared together feel a natural yearning for one another. Besides, our fellow-men respect those of us who have brothers more than those who have none, and are less ready to quarrel with them."

"If only the difference between us were a slight one, Socrates," replied Chaerecrates, "it might perhaps be my duty to put up with my brother and not allow trifles to separate us. For a brother who behaves like a brother is, as you say, a blessing; but if his conduct is nothing like that, and is, in fact, just the opposite of what it should be, what is the use of attempting impossibilities?"

"Does everyone find Chaerophon as disagreeable as you do, Chaerecrates, or do some people think him very pleasant?"

"Ah, Socrates," replied he, "this is precisely my reason for hating him: he is pleasant enough to other people, but whenever he is near me, he invariably says and does more to hurt than to help me."

"Well now," said Socrates, "if you try to manage a horse without knowing the right way, he hurts you. Is it so with a brother? Does he hurt if you try to deal with him when you don't know the way?

"What," exclaimed Chaerecrates, "don't I know how to deal with a brother, when I know how to requite a kind word and a generous deed? But I can't speak or act kindly to one who tries to annoy me by his words and actions'—and what's more, I won't try."

"Chaerecrates, you astonish me! Had you a sheep dog that was friendly to the shepherds, but growled when you came near him, it would never occur to you to get angry, but you would try to tame him by kindness. You say that, if your brother treated you like a brother, he would be a great blessing, and you confess that you know how to speak and act kindly: yet you don't set yourself to contriving that he shall be the greatest possible blessing to you."

"I fear, Socrates, that I lack the wisdom to make Chaerophon treat me as he should."

"And yet," said Socrates, "there is no need, so far as I see, of any subtle or strange contriving on your part: I think you know the way to win him and to get his good opinion."

"If you have observed that I know some spell without being conscious of my knowledge, pray tell me at once."

"Then tell me, now; if you wanted to get an invitation to dine with an acquaintance when he offers sacrifice, what would you do?"

"Of course I should begin by inviting him myself when I offered sacrifice."

"And suppose you wanted to encourage one of your friends to look after your affairs during your absence from home, what would you do?"

"Of course I should first undertake to look after his affairs in his absence."

"And suppose you wanted a stranger to entertain you when you visited his city, what would you do?"

"Obviously I should first entertain him when he came to Athens. Yes, and if I wanted him to show himself eager in forwarding the business on which I had come, it is obvious that I should first have to do the same by him."

"It seems that you have long concealed a knowledge of all spells that were ever discovered. Or is it that you hesitate to make a beginning, for fear of disgracing yourself by first showing kindness to your brother? Yet it is generally thought worthy of the highest praise to anticipate the malevolence of an enemy and the benevolence of a friend. So if I thought Chaerophon more capable than you of showing the way to this friendship, I would try to persuade him to take the first step towards an understanding with you. But as things are, I think the enterprise more likely to succeed under your direction."

“Strange sentiments, these, Socrates! It’s quite unlike you to urge me, the junior, to lead the way! And surely all hold the contrary opinion, that the senior, I mean, should always act and speak first?”

“How so?” said Socrates. “Is it not the general opinion that a young man should make way for an older when they meet, offer his seat to him, give him a comfortable bed, let him have the first word?

My good friend, don’t hesitate, but take up the task of pacifying your man, and in no time he will respond to your overtures. Don’t you see how keen and frank he is? Low fellows, it is true, yield most readily to gifts, but kindness is the weapon most likely to prevail with a gentleman.”

“And what,” asked Chaerecrates, “if all my efforts lead to no improvement?”

“Well, in that case, I presume you will have shown that you are honest and brotherly, he that he is base and unworthy of kindness. But I am confident that no such result will follow; for I think that, as soon as he is aware of your challenge to this contest, he will be all eagerness to outdo your kind words and actions. What if a pair of hands refused the office of mutual help for which God made them, and tried to thwart each other; or if a pair of feet neglected the duty of working together, for which they were fashioned, and took to hampering each other? That is how you two are behaving at present. Would it not be utterly senseless and disastrous to use for hindrance instruments that were made for help? And, moreover, a pair of brothers, in my judgment, were made by God to render better service one to the other than a pair of hands and feet and eyes and all the instruments that he meant to be used as fellows. For the hands cannot deal simultaneously with things that are more than six feet or so apart: the feet cannot reach in a single stride things that are even six feet apart: and the eyes, though they seem to have a longer range, cannot at the same moment see things still nearer than that, if some are in front and some behind. But two brothers, when they are friends, act simultaneously for mutual benefit, however far parted one from the other."

IV. Again, I once heard him give a discourse on friendship that was likely, as I thought, to help greatly in the acquisition and use of friends.

For be said that be often heard it stated that of all possessions the most precious is a good and sincere friend. "And yet," be said, "there is no transaction most men are so careless about as the acquisition of friends. For I find that they are careful about getting houses and lands and slaves and cattle and furniture, and anxious to keep what they have; but though they tell one that a friend is the greatest blessing, I find that most men take no thought how to get new friends or how to keep their old ones. Indeed, if one of their friends and one of their servants fall ill at the same time, I find that some call in the doctor to attend the servant and are careful to provide everything that may contribute to his recovery, whereas they take no heed of the friend. In the event of both dying, they are vexed at losing the servant, but don't feel that the death of the friend matters in the least. And though none of their other possessions is uncared for and unconsidered, they are deaf to their friends' need of attention. And besides all this, I find that most men know the number of their other possessions, however great it may be, yet cannot tell the number of their friends, few as they are; and, if they are asked and try to make a list, they will insert names and presently remove them. So much for the thought they give to their friends! Yet surely there is no other possession that can compare with a good friend. For what horse, what yoke of oxen is so good a servant as the good friend? What slave so loyal and constant? or what possession so serviceable? The good friend is on the watch to supply whatever his friend wants for building up his private fortune and forwarding his public career.

If generosity is called for, he does his part: if fear harasses, he comes to the rescue, shares expenses, helps to persuade, bears down opposition: he is foremost in delighting him when he is prosperous and raising him up when he falls. Of all that a man can do with his hands, see for himself with his eyes, hear for himself with his ears or accomplish with his feet, in nothing is a friend backward in helping. Nevertheless, while some strive to cultivate a tree for its fruit, most bestow but an idle and listless care on their most fruitful possession, the name of which is friend.'"

V. Again, I once heard him exhort a listener—for so I interpreted his words—to examine himself and to ask how much he was worth to his friends. For he had noticed that one of his companions was neglecting a poverty-stricken friend; so he put a question to Antisthenes in the presence of several others, including the careless friend. "Antisthenes," he said, "have friends like servants their own values? For one servant, I suppose, may be worth two minas, another less than half a mina, another five minas, another no less than ten. Nicias, son of Niceratus, is said to have given a whole talent for a manager of his silver-mine. So I am led to inquire whether friends too may not differ in value."

"Oh yes," replied Antisthenes, "there are men whose friendship I, at any rate, would rather have than two minas: others I should value at less than half a mina: others I would prefer to ten minas: others I would sacrifice any sum and take any trouble to have among my friends."

"Then if that is so," said Socrates, "were it not well that one should ask himself how much he is really worth to his friends, and try to make himself as precious as possible, in order that his friends may not be tempted to betray him? For my part, I often hear complaints of this sort: 'A friend betrayed me,' 'one whom I regarded as my friend gave me up for the sake of a mina.' I think over such matters and reflect that, when a man sells a bad slave he takes anything he can get for him; and perhaps it is tempting to sell a bad friend when there is a chance of getting more than he is worth. Good servants, I find, are not offered for sale, nor are good friends betrayed."

VI. In the following conversation I thought he gave instruction for testing the qualities that make a man's friendship worth winning.

"Tell me, Critobulus," he said, "if we wanted a good friend, how should we start on the quest? Should we seek first for one who is no slave to eating and drinking, lust, sleep, idleness? For the thrall of these masters cannot do his duty by himself or his friend."

"No, of course not."

"Then you think we should avoid one who is subject to them?"

"I do, certainly."

"Now what about the spendthrift who is never satisfied, who is always appealing to his neighbors for help, if he receives something, makes no return, if he receives nothing, resents it? Don't you think he too is a troublesome friend?"

"Certainly."

"Then we must avoid him too?"

"We must indeed."

"Again, what about the skilful man of business who is eager to make money, and consequently drives a hard bargain, who likes to receive but is disinclined to repay?"

"So far as I see, he is even worse than the last."

"And what of the man who is such a keen man of business that he has no leisure for anything but the selfish pursuit of gain?"

"We must avoid him too, I think. There is no profit in knowing him."

"And what of the quarrelsome person who is willing to provide his friends with plenty of enemies?"

"We must shun him too, of course."

"Suppose that a man is free from all these faults, but stoops to receive kindness with no thought of returning it?"

"There is no profit in him either. But what are the qualities for which we shall try to win a man's friendship, Socrates?"

"The opposite of these, I suppose. We shall look for one who controls his indulgence in the pleasures of the body, who is truly hospitable and fair in his dealings and eager to do as much for his benefactors as he receives from them, so that he is worth knowing."

"Then how can we test these qualities, Socrates, before intimacy begins?"

"What test do we apply to a sculptor? We don't judge by what he says, but we look at his statues, and if we see that the works he has already produced are beautiful, we feel confident that his future works will be as good."

"You mean that anyone whose good works wrought upon his old friends are manifest will clearly prove a benefactor to new friends also?"

“Yes; for when find that an owner of horses has been in the habit of treating his beasts well I think that he will treat others equally well.”

“Granted! but when we have found a man who seems worthy of our friendship, how are we to set about making him our friend?”

“First we should seek guidance from the gods, whether they counsel us to make a friend of him.”

“And next? Supposing that we have chosen and the gods approve him, can you say how is he to be hunted?”

“Surely not like a hare by swift pursuit, nor like birds by cunning, nor like enemies by force. It is no light task to capture a friend against his will, and hard to keep him a prisoner like a slave. Hatred, rather than friendship, comes of that treatment.”

“But how does friendship come?”

“There are spells, they say, wherewith those who know charm whom they will and make friends of them, and drugs which those who know give to whom they choose and win their love.”

“How then can we learn them?”

“You have heard from Homer in the Odyssey the spell that the Sirens put on Odysseus. It begins like this:

‘Hither, come hither, renowned Odysseus, great glory of the Achaeans.’

“Then did the Sirens chant in this strain for other folk too, Socrates, so as to keep those who were under the spell from leaving them?”

“No, only for those that yearned for the fame that virtue gives.”

“You mean, I take it, that the spell must be fitted to the listener, so that he may not take the praise for mockery”

"Yes; for to praise one for his beauty, his stature and his strength who is conscious that he is short, ugly and puny, is the way to repel him and make him dislike you more."

"Do you know any other spells?"

"No, but I have heard that Pericles knew many and put them on the city, and so made her love him."

"And how did Themistocles make the city love him?"

"Not by spells: no, no; but by hanging some good amulet about her."

"I think you mean, Socrates, that if we are to win a good man's friendship, we ourselves must be good in word and deed alike?"

"But you imagined that a bad man could win the friendship of honest men?"

"I did," answered Critobulus, "for I saw that poor orators have good speakers among their friends, and some who are incapable of commanding an army are intimate with great generals."

"Coming then to the point under discussion, do you know cases of useless persons making useful friends?"

"Assuredly not; but if it is impossible that the bad should gain the friendship of gentlemen, then I am anxious to know whether it is quite easy for a gentleman as a matter of course to be the friend of gentlemen?"

"Your trouble is, Critobulus, that you often find men who do good and shun evil not on friendly terms, but apt to quarrel and treat one another more harshly than worthless fellows."

"Yes," said Critobulus, "and such conduct is not confined to individuals, but even the cities that care most for the right and have least liking for the wrong are often at enmity. These thoughts make me despair about the acquisition of friends.

For I see on the one hand that rogues cannot be friends with one another—for how could the ungrateful, the careless, the selfish, the faithless, the incontinent, form friendships? I feel sure, then, that rogues are by their nature enemies rather than friends. But then, as you point out, neither can rogues ever join in friendship with honest men, for how can wrongdoers become friendly with those who hate their conduct? And if we must add that the votaries of virtue strive with one another for headship in cities, and envy and hate one another, who then will be friends and where shall loyalty and faithfulness be found?"

"Ah, Critobulus, but there is a strange complication in these matters. Some elements in man's nature make for friendship: men need one another, feel pity, work together for their common good, and, conscious of the facts, are grateful to one another. But there are hostile elements in men. For, holding the same things to be honorable and pleasant, they fight for them, fall out and take sides. Strife and anger lead to hostility, covetousness to enmity, jealousy to hatred. Nevertheless through all these barriers friendship slips, and unites the gentle natures. For thanks to their virtue these prize the untroubled security of moderate possessions above sovereignty won by war; despite hunger and thirst, they can share their food and drink without a pang; and although they delight in the charms of beauty they can resist the lure and avoid offending those whom they should respect; they can not only share wealth lawfully and keep from covetousness, but also supply one another's wants; they can compose strife not only without pain, but with advantage to one another, and prevent anger from pursuing its way towards remorse: but jealousy they take away utterly, regarding their own good things as belonging to their friends, and thinking their friend's good things to be their own. Surely, then, it is likely that true gentlemen will share public honors too not only without harm to one another, but to their common benefit? For those who desire to win honor and to bear rule in their cities that they may have power to embezzle, to treat others with violence, to live in luxury, are bound to be unjust, unscrupulous, incapable of unity. But if a man seeks to be honored in a state that he may not be the victim of injustice himself and may help his friends in a just cause, and when he takes office may try to do some good to his country, why should he be incapable of union with one like himself? Will his connexion with other gentlemen render him less capable of serving his friends? Will he be less able to benefit his city with the help of other gentlemen? Even in the public games it is clear that, if the strongest competitors were allowed to join forces against the weaker, they would win all the events, they would carry off all the prizes. True, that is not permitted in the games; but in politics, where the gentlemen are the strongest, nobody prevents anyone from forming any combination he may choose for the benefit of the state; surely, then, in public life it is a gain to make friends with the best, and to see in them partners and fellow-workers in a common cause, and not rivals. But, again, it is equally clear that anyone who goes to war will need allies, and more of them if he is to fight an army of gentlemen. Moreover, those who are willing to fight at your side must be well treated that they may be willing to exert themselves; and it is a far sounder plan to show kindness to the best, who are fewer in number, than to the worst, who are the greater company; for the bad want many more kindnesses than the good. Courage, Critobulus; try to be good, and when you have achieved that, set about catching your gentleman. Maybe, I myself, as an adept in love, can lend you a hand in the pursuit of gentlemen. For when I want to catch anyone it’s surprising how I strain every nerve to have my love returned, my longing reciprocated by him, in my eagerness that he shall want me as much as I want him. I see that you too will feel this need when you want to form a friendship. So do not hide from me the names of those whom you wish to make your friends; for I am careful to please him who pleases me, and so, I think, I am not without experience in the pursuit of men."

"Well, Socrates," said Critobulus in reply, "these are the lessons I have long wished to learn, especially if the same skill will serve to win a good soul and a fair face."

"Ah no, Critobulus," said Socrates, "it belongs not to my skill to lay hands on the fair and force them to submit. I am convinced that the reason why men fled from Scylla was that she laid hands on them; but the Sirens laid hands on no man; from far away they sang to all, and therefore, we are told, all submitted, and hearing were enchanted." 1

"I am not going to put a hand on anyone," said Critobulus, "so teach me any good plan you know for making friends."

"Then won't you put lip to lip either?"

"Courage!" answered Critobulus, "I won't touch a lip with mine either—unless the owner is fair!"

"That's an unfortunate beginning for you, Critobulus! The fair won't submit to such conduct; but the ugly like it, supposing that they are called fair for the beauty of their souls."

"A kiss for the fair," exclaimed Critobulus, "'and a thousand kisses for the good! That shall be my motto, so take courage, and teach me the art of catching friends."

"Well then, Critobulus," said Socrates, "when you want to make a new friend, will you let me warn him that you admire him and want his friendship?"

"Warn him by all means: no one hates those who praise him, so far as I know."

“Suppose I go on to warn him that your admiration makes you well disposed towards him, you won’t think I am slandering you, will you:”

“Nay; when I guess that anyone feels well disposed towards me, a like goodwill towards him is begotten in me.”

“Then you will permit me to say this about you to those whose friendship you desire. Now if you will give me permission to tell them besides that you are devoted to your friends and nothing gives you so much pleasure as good friends; that you take as much pride in your friends’ fair achievements as in your own, and as much pleasure in your friends’ good as in your own, and never weary of contriving it for your friend’s; and you have made up your mind that a man’s virtue consists in outdoing his friends in kindness and his enemies in mischief; then I think you will find me a useful companion in the quest of good friends.”

“Now why do you say this to me? as if you were not free to say what you choose about me.”

“Not so indeed: I can quote Aspasia against you. She once told me that good matchmakers are successful in making marriages only when the good reports they carry to and fro are true; false reports she would not recommend, for the victims of deception hate one another and the matchmaker too. I am convinced that this is sound, and so I think it is not open to me to say anything in your praise that I can’t say truthfully.”

“It appears, Socrates, that you are the sort of friend to help me if I am in any way qualified to make friends: but if not, you won’t make up a story to help me.”

“How do you think I shall help you best, Critobulus, by false praise, or by urging you to try to be a good man? If you don’t yet see clearly, take the following cases as illustrations. Suppose that I wanted to get a shipmaster to make you his friend, and as a recommendation told him that you are a good skipper, which is untrue; and suppose that he believed me and put you in charge of his ship in spite of your not knowing how to steer it: have you any reason to hope that you would not lose the ship and your life as well? Or suppose that I falsely represented to the Assembly that you are a born general, jurist and statesman in one, and so persuaded the state to commit her fortunes to you, what do you suppose would happen to the state and to yourself under your guidance? Or again, suppose that I falsely described you to certain citizens in private as a thrifty, careful person, and persuaded them to place their affairs in your hands, wouldn't you do them harm and look ridiculous when you came to the test? Nay, Critobulus, if you want to be thought good at anything, you must try to be so; that is the quickest, the surest, the best way. You will find on reflection that every kind of virtue named among men is increased by study and practice. Such is the view I take of our duty, Critobulus. If you have anything to say against it, tell me."

"Why, Socrates," said Critobulus, "I should be ashamed to contradict you, for I should be saying what is neither honorable nor true."

VII. To pass to another subject. The distresses of his friends that arose from ignorance he tried to cure by advice, those that were due to want by telling them how to help one another according to their power. On this subject too I will state what I know about him.

One day, noticing that Aristarchus looked glum, he said: "Aristarchus, you seem to have a burden on your mind. You should let your friends share it; possibly we may do something to ease you."

"Ah yes, Socrates," replied Aristarchus, "I am in great distress. Since the revolution there has been an exodus to the Piraeus, and a crowd of my women-folk, being left behind, are come to me,—sisters, nieces and cousins,—so that we are fourteen in the house without counting the slaves. We get nothing from our land, because our enemies have seized it, and nothing from our house property, now there are so few residents in the city. Portable property finds no buyers, and it's quite impossible to borrow money anywhere: I really think a search in the street would have better result than an application for a loan. It's hard, Socrates, to let one's people die, but impossible to keep so many in times like these."

When Socrates heard this, he asked: "How is it that with so many mouths to feed Ceramon not only contrives to provide for the needs of himself and his family, but actually saves enough to make him a rich man, whereas you, with so many mouths to feed, fear you will all be starved to death?"

"The explanation, of course, is this: my dependants are gentlefolk, his are slaves."

"And which do you think are the better, his slaves or your gentlefolk?"

"My gentlefolk, I think."

"Then is it not disgraceful that you with your gentlefolk should be in distress, while he is kept in affluence by his meaner household?"

"Of course his dependants are artisans, while mine have had a liberal education."

"What is an artisan? one who knows how to produce something useful?"

"Certainly."

"Are groats useful?"

"Yes, very."

"And bread?"

“No less so.”

“What about men’s and women’s cloaks, shirts, capes, smocks?”

“Yes, all these things too are very useful.”

“Then don’t the members of your household know how to make any of these?”

“I believe they can make all of them.”

“Don’t you know, then, that by manufacturing one of these commodities, namely groats, Nausicydes keeps not only himself and his family, but large herds of swine and cattle as well, and has so much to spare that he often undertakes costly public duties; that Cyrebus feeds his whole family well and lives in luxury by baking bread, Demeas of Collytus by making capes, Menon by making cloaks; and most of the Megarians make a good living out of smocks?”

“Yes, of course; for they buy foreign slaves and can force them to make what is convenient, but my household is made up of gentlefolk and relations.”

“And so, just because they are gentlefolk and related to you, you think they should do nothing but eat and sleep? Do you find that other gentlefolk who live this sort of life are better off and happier than those who are usefully employed in work that they understand? Or is it your experience that idleness and carelessness help men to learn what they ought to know and remember what they learn, to make themselves healthy and strong, and to get and keep things that are of practical use, but industry and carefulness are useless things? When these women learned the work that you say they understand, did they regard it as of no practical use, and had they no intention of taking it up, or did they mean to occupy themselves in it and obtain some benefit from it? Which makes men more prudent, idleness or useful employment? Which makes men more just, work or idle discussions about supplies? Besides, at present, I fancy, you don't love these ladies and they don't love you: you think they are a tax on you, and they see that you feel them to be a burden. And the danger in this state of things is that dislike may grow and their former gratitude fade away; but if you exert your authority and make them work, you will love them, when you find that they are profitable to you, and they will be fond of you, when they feel that you are pleased with them. Both you and they will like to recall past kindnesses and will strengthen the feeling of gratitude that these engender; thus you will be better friends and feel more at home. To be sure, if they were going to do something disgraceful, death would be a better fate. But in point of fact the work they understand is, as it appears, the work considered the most honorable and the most suitable for a woman; and the work that is understood is always done with the greatest ease, speed, pride and pleasure. So do not hesitate to offer them work that will yield a return both to you and to them, and probably they will welcome your proposal."

"Well, well," said Aristarchus, "your advice seems so good, Socrates, that I think I shall now bring myself to borrow capital to make a start. Hitherto I have had no inclination to do so, knowing that when I had spent the loan I should not have the wherewithal to repay it."

The consequence was that capital was provided and wool purchased. The women worked during dinner and only stopped at the supper hour. There were happy instead of gloomy faces: suspicious glances were exchanged for pleasant smiles. They loved him as a guardian and he liked them because they were useful. Finally Aristarchus came to Socrates and told him this with delight. "One objection they have to me," he added: "I am the only member of the household who eats the bread of idleness."

"Then why not tell them the story of the dog?" asked Socrates. "It is said that when beasts could talk, a sheep said to her master: 'It is strange that you give us sheep nothing but what we get from the land, though we supply you with wool and lambs and cheese, and yet you share your own food with your dog, who supplies you with none of these things.' The dog heard this, and said: 'Of course he does. Do not I keep you from being stolen by thieves, and carried off by wolves? Why, but for my protection you couldn't even feed for fear of being killed.' And so, they say, the sheep admitted the dog's claim to preference. Do you then tell these women that you are their watch-dog and keeper, and it is due to you that they live and work in safety and comfort, with none to harm them."

VIII. Again, on meeting an old comrade after long absence he said: "Where do you come from, Eutherus?"

"I came home when the war ended, Socrates, and am now living here," he replied. "Since we have lost our foreign property, and my father left me nothing in Attica, am forced to settle down here now and work for my living with my hands. I think it's better than begging, especially as I have no security to offer for a loan."

"And how long will you have the strength, do you think, to earn your living by your work?"

"Oh, not long, of course."

"But remember, when you get old you will have to spend money, and nobody will be willing to pay you for your labor."

"True."

"Then it would be better to take up some kind of work at once that will assure you a competence when you get old, and to go to somebody who is better off and wants an assistant, and get a return for your services by acting as his bailiff, helping to get in his crops and looking after his property.”

“I shouldn’t like to make myself a slave, Socrates.”

“But surely those who control their cities and take charge of public affairs are thought more respectable, not more slavish on that account.”

“Briefly, Socrates, I have no inclination to expose myself to any man’s censure.”

“But, you see, Eutherus, it is by no means easy to find a post in which one is not liable to censure. Whatever one does, it is difficult to avoid mistakes, and it is difficult to escape unfair criticism even if one makes no mistakes. I wonder if you find it easy to avoid complaints entirely even from your present employers. You should try, therefore, to have no truck with grumblers and to attach yourself to considerate masters; to undertake such duties as you can perform and beware of any that are too much for you, and, whatever you do, to give of your best and put your heart into the business. In this way, I think, you are most likely to escape censure, find relief from your difficulties, live in ease and security, and obtain an ample competence for old age.”

IX. I remember that he once heard Criton say that life at Athens was difficult for a man who wanted to mind his own business. “At this moment,” Criton added, “actions are pending against me not because I have done the plaintiffs an injury, but because they think that I would sooner pay than have trouble.”

“Tell me, Criton,” said Socrates, “do you keep dogs to fend the wolves from your sheep?”

“Certainly,” replied Criton, “because it pays me better to keep them.”

“Then why not keep a man who may be able and willing to fend off the attempts to injure you?

“I would gladly do so were I not afraid that he might turn on me.”

“What? don’t you see that it is much pleasanter to profit by humoring a man like you than by quarrelling with him? I assure you there are men in this city who would take pride in your friendship.”

Thereupon they sought out Archedemus, an excellent speaker and man of affairs, but poor. For he was not one of those who make money unscrupulously, but an honest man, and he would say that it was easy to take forfeit from false accusers. So whenever Criton was storing corn, oil, wine, wool or other farm produce, he would make a present of a portion to Archedemus, and when he sacrificed, he invited him, and in fact lost no similar opportunity of showing courtesy. Archedemus came to regard Criton’s house as a haven of refuge and constantly paid his respects to him. He soon found out that Criton’s false accusers had much to answer for and many enemies. He brought one of them to trial on a charge involving damages or imprisonment. The defendant, conscious that he was guilty on many counts, did all he could to get quit of Archedemus. But Archedemus refused to let him off until he withdrew the action against Criton and compensated him. Archedemus carried through several other enterprises of a similar kind; and now many of Criton’s friends begged him to make Archedemus their protector, just as when a shepherd has a good dog the other shepherds want to pen their flocks near his, in order to get the use of his dog. Archedemus was glad to humor Criton, and so there was peace not only for Criton but for his friends as well. If anyone whom he had offended reproached Archedemus with flattering Criton because he found him useful, he would answer:

"Which, then, is disgraceful: to have honest men for your friends, by accepting and returning their favors, and to fall out with rogues; or to treat gentlemen as enemies by trying to injure them, and to make friends of rogues by siding with them, and to prefer their intimacy?"

Henceforward Archedemus was respected by Criton's friends and was himself numbered among them.

X. Again I recall the following conversation between him and his companion Diodorus.

"Tell me, Diodorus," he said, "if one of your servants runs away, do you take steps to bring him back safe?"

"Yes, of course," he replied, "and I invite others to help, by offering a reward for the recovery of the man."

"And further, if one of your servants is ill, do you take care of him and call in doctors to prevent him dying?"

"Indeed I do."

"Well, suppose that one of your acquaintance, who is much more useful than your servants, is near being ruined by want, don't you think it worth your while to take steps to save him? Now you know that Hermogenes is a conscientious man and would be ashamed to take a favor from you without making a return. Yet surely it is worth many servants to have a willing, loyal, staunch subordinate, capable of doing what he is told, and not only so, but able to make himself useful unbidden, to think clearly and give advice. Good householders, you know, say that the right time to buy is when a valuable article can be bought at a low price; and in these times the circumstances afford an opportunity of acquiring good friends very cheap."

"Thank you, Socrates," said Diodorus, "pray bid Hermogenes call on me."

"No, indeed I won't," said he; "for in my opinion it is at least as good for you to go to him yourself as to invite him to come to you, and you have quite as much to gain as he by doing so.”

The consequence was that Diodorus setoff to visit Hermogenes; and in return for a small sum he acquired a friend who made a point of thinking how he could help and please him either by word or deed.

## BOOK III

I. I will now explain how he helped those who were eager to win distinction by making them qualify themselves for the honors they coveted.

He once heard that Dionysodorus had arrived at Athens, and gave out that he was going to teach generalship. Being aware that one of his companions wished to obtain the office of general from the state, he addressed him thus: “Young man, surely it would be disgraceful for one who wishes to be a general in the state to neglect the opportunity of learning the duties, and he would deserve to be punished by the state much more than one who carved statues without having learned to be a sculptor. For in the dangerous times of war the whole state is in the general’s hands, and great good may come from his success and great evil from his failure. Therefore anyone who exerts himself to gain the votes, but neglects to learn the business, deserves punishment.”

This speech persuaded the man to go and learn. When he had learnt his lesson and returned, Socrates chaffed him. “Don’t you think, sirs,” he said, “that our friend looks more majestic,’ as Homer called Agamemnon, now that he has learnt generalship? For just as he who has learnt to play the harp is a harper even when he doesn’t play, and he who has studied medicine is a doctor even though he doesn’t practice, so our friend will be a general for ever, even if no one votes for him. But your ignoramus is neither general nor doctor, even if he gets every vote. But,” he continued, “in order that any one of us who may happen to command a regiment or platoon under you may have a better knowledge of warfare, tell us the first lesson he gave you in generalship.”

“The first was like the last,” he replied; “he taught me tactics—nothing else.”

"But then that is only a small part of generalship. For a general must also be capable of furnishing military equipment and providing supplies for the men; he must be resourceful, active, careful, hardy and quick-witted; he must be both gentle and brutal, at once straightforward and designing, capable of both caution and surprise, lavish and rapacious, generous and mean, skilful in defense and attack; and there are many other qualifications, some natural, some acquired, that are necessary to one who would succeed as a general. It is well to understand tactics too; for there is a wide difference between right and wrong disposition of the troops, just as stones, bricks, timber and tiles flung together anyhow are useless, whereas when the materials that neither rot nor decay, that is, the stones and tiles, are placed at the bottom and the top, and the bricks and timber are put together in the middle, as in building, the result is something of great value, a house, in fact."

"Your analogy is perfect, Socrates," said the youth; "for in war one must put the best men in the van and the rear, and the worst in the centre, that they may be led by the van and driven forward by the rearguard."

"Well and good, provided that he taught you also to distinguish the good and the bad men. If not, what have you gained by your lessons? No more than you would have gained if he had ordered you to put the best money at the head and tail, and the worst in the middle, without telling you how to distinguish good from base coin."

"I assure you he didn't; so we should have to judge for ourselves which are the good men and which are the bad."

"Then we had better consider how we may avoid mistaking them."

"I want to do so," said the youth.

“Well now,” said Socrates, “if we had to lay hands on a sum of money, would not the right arrangement be to put the most covetous men in the front?”

“1 think so.”

“And what should we do with those who are going to face danger? Should our first line consist of the most ambitious? ‘

“Oh yes: they are the men who will face danger for the sake of glory. About these, now, there is no mystery: they are conspicuous everywhere, and so it is easy to find them.”

“But,” said Socrates, “did he teach you only the disposition of an army, or did he include where and how to use each formation?”

“Not at all.”

“And yet there are many situations that call for a modification of tactics and strategy.”

“I assure you he didn’t explain that.”

“Then pray go back and ask him. If he knows and has a conscience, he will be ashamed to send you home ill-taught, after taking your money.”

II. One day when he met a man who had been chosen general, he asked him, “For what reason, think you, is Agamemnon dubbed ‘Shepherd of the people’ by Homer? Is it because a shepherd must see that his sheep are safe and are fed, and that the object for which they are kept is attained, and a general must see that his men are safe and are fed, and that the object for which they fight is attained, or, in other words, that victory over the enemy may add to their happiness? Or what reason can Homer have for praising Agamemnon as ‘both a good king and a doughty warrior too’? Is it that he would be ‘a doughty warrior too’ not if he alone were a good fighter, but if he made all his men like himself; and ‘a good king’ not if he merely ordered his own life aright, but if he made his subjects happy as well? Because a king is chosen, not to take good care of himself, but for the good of those who have chosen him; and all men fight in order that they may get the best life possible, and choose generals to guide them to it. Therefore it is the duty of a commander to contrive this for those who have chosen him for general. For anything more honorable than that is not easy to find, or anything more disgraceful than its opposite."

By these reflections on what constitutes a good leader he stripped away all other virtues, and left just the power to make his followers happy.

III. Again, when someone had been chosen a leader of cavalry, I remember that Socrates conversed with him in the following manner:

"Young man," he said, "can you tell us why you hankered after a cavalry command? I presume it was not to be first of the cavalry in the charge; for that privilege belongs to the mounted archers; at any rate they ride ahead of their commanders even."

"True."

"Nor was it to get yourself known either. Even madmen are known to everyone."

"True again."

"But perhaps you think you can hand over the cavalry in better condition to the state when you retire, and can do something for the good of the state as a cavalry leader, in case there is any occasion to employ that arm?"

"Yes, certainly," said he.

"Yes," said Socrates, "and no doubt it is a fine thing if you can do that. The command, I presume, for which you have been chosen, is the command of horses and riders."

"Indeed it is."

"Come then, tell us first how you propose to improve the horses."

"Oh, but I don't think that is my business. Every man must look after his own horse."

"Then if some of your men appear on parade with their horses ailing or suffering from bad feet or sore legs, others with underfed animals that can't go the pace, others with restive brutes that won't keep in line, others with such bad kickers that it is impossible to line them up at all, what will you be able to make of your cavalry? how will you be able to do the state any good with a command like that?"

"I am much obliged to you," he replied, "and I will try to look after the horses carefully."

"Won't you also try to improve the men?" said Socrates.

"I will."

"Then will you first train them to mount better?"

"Oh yes, I must, so that if anyone is thrown he may have a better chance of saving himself."

"Further, when there is some danger before you, will you order them to draw the enemy into the sandy ground where your maneuvers are held, or will you try to carry out your training in the kind of country that the enemy occupy?"

"Oh yes, that is the better way."

"And again, will you pay much attention to bringing down as many of the enemy as possible without dismounting?"

"Oh yes, that too is the better way."

"Have you thought of fostering a keen spirit among the men and hatred of the enemy, so as to make them more gallant in action?"

"Well, at any rate, will try to do so now."

"And have you considered how to make the men obey you? Because without that horses and men, however good and gallant, are of no use."

"True, but what is the best way of encouraging them to obey, Socrates?"

"Well, I suppose you know that under all conditions human beings are most willing to obey those whom they believe to be the best. Thus in sickness they most readily obey the doctor, on board ship the pilot, on a farm the farmer, whom they think to be most skilled in his business."

"Yes, certainly."

"Then it is likely that in horsemanship too, one who clearly knows best what ought to be done will most easily gain the obedience of the others."

"If then, Socrates, I am plainly the best horseman among them, will that suffice to gain their obedience?"

"Yes, if you also show them that it will be safer and more honorable for them to obey you."

"How, then, shall I show that?"

"Well, it's far easier than if you had to show them that bad is better than good and more profitable."

"Do you mean that in addition to his other duties a cavalry leader must take care to be a good speaker?"

"Did you suppose that a commander of cavalry should be mum? Did you never reflect that all the best we learned according to custom—the learning,

I mean, that teaches us how to live—we learned by means of *words*, and that every other good lesson to be learned is learned by means of words; that the best teachers rely most on the spoken word and those with the deepest knowledge of the greatest subjects are the best talkers? Did you never reflect that, whenever one chorus is selected from the citizens of this state—for instance, the chorus that is sent to Delos—no choir from any other place can compare with it, and no state can collect so goodly a company?”

“True.”

“And yet the reason is that Athenians excel all others not so much in singing or in stature or in strength, as in love of honor, which is the strongest incentive to deeds of honor and renown.”

“True again.”

“Then don’t you think that if one took the same pains with our cavalry, they too would greatly excel others in arms and horses and discipline and readiness to face the enemy, if they thought that they would win glory and honor by it?”

“I expect so.”

“Don’t hesitate then, but try to encourage this keenness among the men: both you and your fellow-citizens will benefit by the results of your efforts.”

“Most certainly I will try.”

IV. Once on seeing Nicomachides returning from the elections, he asked, “Who have been chosen generals, Nicomachides?”

“Isn’t it like the Athenians?” replied he; “they haven’t chosen me after all the hard work I have done, since I was called up, in the command of company or regiment, though I have been so often wounded in action” (and here he uncovered and showed his scars); “yet they have chosen Antisthenes, who has never served in a marching regiment nor distinguished himself in the cavalry and understands nothing but money-making.”

“Isn’t that a recommendation,” said Socrates, “supposing he proves capable of supplying the men’s needs?”

“Why,” retorted Nicomachides, “merchants too are capable of making money, but that doesn’t make them fit to command an army.”

“But,” cried Socrates, “Antisthenes also is eager for victory, and that is a good point in a general. Whenever he has been choragus, you know, his choir has always won.”

“No doubt,” said Nicomachides, “but there is no analogy between the handling of a choir and of an army.”

“But, you see,” said Socrates, “though Antisthenes knows nothing about music or choir training, he showed himself capable of finding the best experts in these.”

“In the army too, then,” said Nicomachides, “he will find others to command for him, and others to do the fighting.”

“And therefore,” said Socrates, “if he finds out and prefers the best men in warfare as in choir training it is likely that he will be victorious in that too; and probably he will be more ready to spend on winning; a battle with the whole state than on winning a choral competition with his tribe.”

“Do you mean to say, Socrates, that the man who succeeds with a chorus will also succeed with an army?”

“I mean that, whatever a man controls, if he knows what he wants and can get it he will be a good controller, whether he control a chorus, an estate, a city or an army.”

“Really, Socrates,” cried Nicomachides, “I should never have thought to hear you say that a good business man would make a good general.”

“Come then, let us review the duties of each that we may know whether they are the same or different.”

“By all means.”

“Is it not the duty of both to make their subordinates willing and obedient?”

“Decidedly.”

"And to put the right man in the right place?"

"That is so."

"I suppose, moreover, that both should punish the bad and reward the good."

"Yes, certainly."

"Of course both will do well to win the goodwill of those under them?"

"That is so."

"Do you think that it is to the interest of both to attract allies and helpers?"

"Yes, certainly."

"And should not both be able to keep what they have got?"

"They should indeed."

"And should not both be strenuous and industrious in their own work?"

"All these are common to both; but fighting is not."

"But surely both are bound to find enemies?"

"Oh yes, they are."

"Then is it not important for both to get the better of them?"

"Undoubtedly; but you don't say how business capacity will help when it comes to fighting."

"That is just where it will be most helpful. For the good business man, through his knowledge that nothing profits or pays like a victory in the field, and nothing is so utterly unprofitable and entails such heavy loss as a defeat, will be eager to seek and furnish all aids to victory, careful to consider and avoid what leads to defeat, prompt to engage the enemy if he sees he is strong enough to win, and, above all, will avoid an engagement when he is not ready. Don't look down on business men, Nicomachides. For the management of private concerns differs only in point of number from that of public affairs. In other respects they are much alike, and particularly in this, that neither can be carried on without men, and the men employed in private and public transactions are the same. For those who take charge of public affairs employ just the same men when they attend to their own; and those who understand how to employ them are successful directors of public and private concerns, and those who do not, fail in both.”

V. Once when talking with the son of the great Pericles, he said: “For my part, Pericles, I feel hopeful that, now you have become general, our city will be more efficient and more famous in the art of war, and will defeat our enemies.”

“I could wish,” answered Pericles, “that it might be as you say, Socrates; but how these changes are to come about cannot see.”

“Should you like to discuss them with me, then,” said Socrates, “and consider how they can be brought about?”

“1 should.”

“Do you know then, that in point of numbers the Athenians are not inferior to the Boeotians?”

“Yes, I know.”

“Do you think that the larger number of fine, well-developed men could be selected from among the Boeotians or the Athenians?”

“In that matter too they seem to be at no disadvantage.”

“Which do you think are the more united?”

“The Athenians, I should say, for many of the Boeotians resent the selfish behavior of the Thebans. At Athens I see nothing of that sort.”

“And again, the Athenians are more ambitious and more high-minded than other peoples; and these qualities are among the strongest incentives to heroism and patriotic self-sacrifice.”

“Yes, in these respects too the Athenians need not fear criticism.”

“And besides, none have inherited a past more crowded with great deeds; and many are heartened by such a heritage and encouraged to care for virtue and prove their gallantry.”

“All you have said is true, Socrates. But, you see, since the disasters sustained by Tolmides and the Thousand at Lebadea and by Hippocrates at Delium, the relations of the Athenians and Boeotians are changed: the glory of the Athenians is brought low, the pride of the Thebans is exalted; and now the Boeotians, who formerly would not venture, even in their own country, to face the Athenians without help from Sparta and the rest of the Peloponnese, threaten to invade Attica by themselves, and the Athenians, who formerly overran Boeotia, fear that the Boeotians may plunder Attica.”

“Ah, I am aware of that,” answered Socrates; “but the disposition of our city is now more to a good ruler’s liking. For confidence breeds carelessness, slackness, disobedience: fear makes men more attentive, more obedient, more amenable to discipline. The behavior of sailors is a case in point. So long as they have nothing to fear, they are, I believe, an unruly lot, but when they expect a storm or an attack, they not only carry out all orders, but watch in silence for the word of command like choristers.”

“Well,” exclaimed Pericles, “if they are now in the mood for obedience, it seems time to say how we can revive in them a longing for the old virtue and fame and happiness.”

“If then,” said Socrates, “we wanted them to claim money that others held, the best way of egging them on to seize it would be to show them that it was their fathers’ money and belongs to them. As we want them to strive for preeminence in virtue, we must show that this belonged to them in old days, and that by striving for it they will surpass all other men."

"How then can we teach this?"

"I think by reminding them that their earliest ancestors of whom we have any account were, as they themselves have been told, the most valiant."

"Do you refer to the judgment of the gods, which Cecrops delivered in his court because of his virtue?"

"Yes, and the care and birth of Erectheus, and the war waged in his day with all the adjacent country, and the war between the sons of Heracles and the Peloponnesians, and all the wars waged in the days of Theseus, in all of which it is manifest that they were champions among the men of their time. You may add the victories of their descendants, who lived not long before our own day: some they gained unaided in their struggle with the lords of all Asia and of Europe as far as Macedonia, the owners of more power and wealth than the world had ever seen, who had wrought deeds that none had equaled; in others they were fellow-champions with the Peloponnesians both on land and sea. These men, like their fathers, are reported to have been far superior to all other men of their time."

"Yes, that is the report of them,"

"Therefore, though there have been many migrations in Greece, these continued to dwell in their own land: many referred to them their rival claims, many found a refuge with them from the brutality of the oppressor."

"Yes, Socrates," cried Pericles, "and I wonder how our city can have become so degenerate."

"My own view," replied Socrates, "is that the Athenians, as a consequence of their great superiority, grew careless of themselves, and have thus become degenerate, much as athletes who are in a class by themselves and win the championship easily are apt to grow slack and drop below their rivals.

“How, then, can they now recover their old virtue?”

“There is no mystery about it, as I think. If they find out the customs of their ancestors and practice them as well as they did, they will come to be as good as they were; or failing that, they need but to imitate those who now have the pre-eminence and to practice their customs, and if they are equally careful in observing them, they will be as good as they, and, if more careful, even better.”

“That means that it is a long march for our city to perfection. For when will Athenians show the Lacedaemonian reverence for age, seeing that they despise all their elders, beginning with their own fathers? When will they adopt the Lacedaemonian system of training, seeing that they not only neglect to make themselves fit, but mock at those who take the trouble to do so? When will they reach that standard of obedience to their rulers, seeing that they make contempt of rulers a point of honor? Or when will they attain that harmony, seeing that, instead of working together for the general good, they are more envious and bitter against one another than against the rest of the world, are the most quarrelsome of men in public and private assemblies, most often go to law with one another, and would rather make profit of one another so than by mutual service, and while regarding public affairs as alien to themselves, yet fight over them too, and find their chief enjoyment in having the means to carry on such strife? So it comes about that mischief and evil grow apace in the city, enmity and mutual hatred spring up among the people, so that I am always dreading that some evil past bearing may befall the city.”

“No, no, Pericles, don’t think the wickedness of the Athenians so utterly past remedy. Don’t you see what good discipline they maintain in their fleets, how well they obey the umpires in athletic contests, how they take orders from the choir-trainers as readily as any?”

“Ah yes, and strange indeed it is that such men submit themselves to their masters, and yet the infantry and cavalry, who are supposed to be the pick of the citizens for good character, are the most insubordinate.”

Then Socrates asked, “But what of the Court of the Areopagus, Pericles? Are not its members persons who have won approval?”

“Certainly.”

“Then do you know of any who decide the cases that come before them and perform all their other functions more honorably, more in accordance with law, with more dignity and justice?”

“I am not finding fault with the Areopagus.”

“Then you must not despair of Athenian discipline,

“But, you see, in the army, where good conduct, discipline, submission are most necessary, our people pay no attention to these things.”

“This may be due to the incompetence of the officers. You must have noticed that no one attempts to exercise authority over our harpists, choristers and dancers, if he is incompetent, nor over wrestlers or wrestlers who also box? All who have authority over them can tell where they learned their business; but most of our generals are improvisers. However, I don’t suppose you are one of this sort. I suppose you can say when you began to learn strategy as well as when you began wrestling. Many of the principles, I think, you have inherited from your father, and many others you have gathered from every source from which you could learn anything useful to a general. I think, too, that you take much trouble that you may not unconsciously lack any knowledge useful to a general; and if you find that you don't know anything, you seek out those who have the knowledge, grudging neither gifts nor thanks, that you may learn what you don't know from them and may have the help of good coaching."

"I can see, Socrates, that in saying this you don't really think I study these things, but you are trying to show me that one who is going to command an army must study all of them; and of course I admit that you are right."

"Have you observed, Pericles, that our frontier is protected by great mountains extending to Boeotia, through which there are steep and narrow passes leading into our land, and that the interior is cut across by rugged mountains?"

"Certainly."

"Further, have you heard that the Mysians and Pisidians, occupying very rugged country in the Great King's territory and lightly armed, contrive to overrun and damage the King's territory and to preserve their own freedom?"

"Yes, I have heard so."

"And don't you think that active young Athenians, more lightly armed and occupying the mountains that protect our country, would prove a thorn in the side of the enemy and a strong bulwark of defense to our people?"

"Socrates," replied Pericles, "I think all these suggestions too have a practical value."

"Then, since you like them, adopt them, my good fellow. Any part of them that you carry out will bring honor to you and good to the state; and should you fail in part, you will neither harm the state nor disgrace yourself."

VI. Ariston's son, Glaucon, was attempting to become an orator and striving for headship in the state, though he was less than twenty years old; and none of his friends or relations could check him, though he would get himself dragged from the platform and make himself a laughing-stock. Only Socrates, who took an interest in him for the sake of Plato and Glaucon's son Charmides, managed to check him.

For once on meeting him, he stopped him and contrived to engage his attention by saying:

"Glaucon, have you made up your mind to be our chief man in the state?"

"I have, Socrates."

"Well, upon my word there's no more honorable ambition in the world; for obviously, if you gain your object, you will be able to get whatever you want, and you will have the means of helping your friends: you will lift up your father's house and exalt your fatherland; and you will make a name for yourself first at home, later on in Greece, and possibly, like Themistocles, in foreign lands as well; wherever you go, you will be a man of mark."

When Glaucon heard this, he felt proud and gladly lingered.

Next Socrates asked, "Well, Glaucon, as you want to win honor, is it not obvious that you must benefit your city?"

"Most certainly."

"Pray don't be reticent, then; but tell us how you propose to begin your services to the state."

As Glaucon remained dumb, apparently considering for the first time how to begin, Socrates said:

"If you wanted to add to a friend's fortune, you would set about making him richer. Will you try, then, to make your city richer?"

"Certainly."

"Would she not be richer if she had a larger revenue?"

"Oh yes, presumably."

"Now tell me, from what sources are the city's revenues at present derived and what is their total? No doubt you have gone into this matter, in order to raise the amount of any that are deficient and supply any that are lacking."

"Certainly not," exclaimed Glaucon, "I haven't gone into that."

"Well, if you have left that out, tell us the expenditure of the city. No doubt you intend to cut down any items that are excessive."

"The fact is, I haven't had time yet for that either."

"Oh, then we will postpone the business of making the city richer; for how is it possible to look after income and expenditure without knowing what they are?"

"Well, Socrates, one can make our enemies contribute to the city's wealth."

"Yes, of course, provided he is stronger than they; but if he be weaker, he may lose what she has got instead."

"True."

"Therefore, in order to advise her whom to fight, it is necessary to know the strength of the city and of the enemy, so that, if the city be stronger, one may recommend her to go to war, but if weaker than the enemy, may persuade her to beware."

"You are right."

"First, then, tell us the naval and military strength of our city, and then that of her enemies."

"No, of course I can't tell you out of my head."

"Well, if you have made notes, fetch them, for I should greatly like to hear this."

"But, I tell you, I haven't yet made any notes either."

"Then we will postpone offering advice about war too for the present. You are new to power, and perhaps have not had time to investigate such big problems. But the defense of the country, now, I feel sure you have thought about that, and know how many of the garrisons are well placed and how many are not, and how many of the guards are efficient and how many are not; and you will propose to strengthen the well-placed garrisons and to do away with those that are superfluous."

"No, no; I shall propose to do away with them all, for the only effect of maintaining them is that our crops are stolen."

"But if you do away with the garrisons, don't you think that anyone will be at liberty to rob us openly? However, have you been on a tour of inspection, or how do you know that they are badly maintained?"

"By guess-work."

"Then shall we wait to offer advice on this question too until we really know, instead of merely guessing?"

"Perhaps it would be better."

"Now for the silver mines. I am sure you have not visited them, and so cannot tell why the amount derived from them has fallen."

"No, indeed, have not been there."

"To be sure: the district is considered unhealthy, and so when you have to offer advice on the problem, this excuse will serve."

"You're chaffing me."

"Ah, but there's one problem I feel sure you haven't overlooked: ,no doubt you have reckoned how long the corn grown in the country will maintain the population, and how much is needed annually, so that you may not be caught napping, should the city at any time be short, and may come to the rescue and relieve the city by giving expert advice about food."

"What an overwhelming task, if one has got to include such things as that in one's duties!"

"But, you know, no one will ever manage even his own household successfully unless he knows all its needs and sees that they are all supplied. Seeing that our city contains more than ten thousand houses, and it is difficult to look after so many families at once, you must have tried to make a start by doing something for one, I mean your uncle's? It needs it; and if you succeed with that one, you can set to work on a larger number. But if you can't do anything for one, how are you going to succeed with many? If a man can't carry one talent, it's absurd for him to try to carry more than one, isn't it?"

"Well, I could do something for uncle's household if only he would listen to me."

"What? You can't persuade your uncle, and yet you suppose you will be able to persuade all the Athenians, including your uncle, to listen to you? Pray take care, Glaucon, that your daring ambition doesn't lead to a fall! Don't you see how risky it is to say or do what you don't understand? Think of others whom you know to be the sort of men who say and do what they obviously don't understand.

Do you think they get praise or blame by it? And think of those who understand what they say and what they do. You will find, I take it, that the men who are famous and admired always come from those who have the widest knowledge, and the infamous and despised from the most ignorant. Therefore, if you want to win fame and admiration in public life, try to get a thorough knowledge of what you propose to do. If you enter on a public career with this advantage over others, I should not be surprised if you gained the object of your ambition quite easily."

VII. Seeing that Glaucon's son, Charmides, was a respectable man and far more capable than the politicians of the day, and nevertheless shrank from speaking in the assembly and taking a part in politics, he said: "Tell me, Charmides, what would you think of a man who was capable of gaining a victory in the great games and consequently of winning honor for himself and adding to his country's fame in the Greek world, and yet refused to compete?"

"I should think him a poltroon and a coward, of course."

"Then if a man were to shrink from state business though capable of discharging it with advantage to the state and honor to himself, wouldn't it be reasonable to think him a coward?"

"Perhaps; but why ask me that?"

"Because I fancy that you shrink from work that is within your powers, work in which it is your duty as a citizen to take a hand."

"What makes you think so? In what sort of work have you discovered my powers?"

"In your intercourse with public men. Whenever they take counsel with you, I find that you give excellent advice, and whenever they make a mistake, your criticism is sound."

"A private conversation is a very different thing from a crowded debate, Socrates."

"But, you know, a man who is good at figures counts as well in a crowd as in solitude; and those who play the harp best in private excel no less in a crowd."

"But surely you see that bashfulness and timidity come natural to a man, and affect him far more powerfully in the presence of a multitude than in private society?"

"Yes, and I mean to give you a lesson. The wisest do not make you bashful, and the strongest do not make you timid; yet you are ashamed to address an audience of mere dunces and weaklings. Who are they that make you ashamed? The fullers or the cobblers or the builders or the smiths or the farmers or the merchants, or the traffickers in the market-place who think of nothing but buying cheap and selling dear? For these are the people who make up the Assembly. You behave like a man who can beat trained athletes and is afraid of amateurs! You are at your ease when you talk with the first men in the state, some of whom despise you, and you are a far better talker than the ordinary run of politicians; and yet you are shy of addressing men who never gave a thought to public affairs and haven't learnt to despise you—all because you fear ridicule!"

"Well, don't you think the Assembly often laughs at sound argument?"

"Yes, and so do the others; and that's why I am surprised that you, who find it easy to manage them when they do it, think you will be quite unable to deal with the Assembly. My good man, don't be ignorant of yourself: don't fall into the common error. For so many are in such a hurry to pry into other people's business that they never turn aside to examine themselves. Don't refuse to face this duty then: strive more earnestly to pay heed to yourself; and don't neglect public affairs, if you have the power to improve them. If they go well, not only the people, but your friends and you yourself at least as much as they will profit."

VIII. When Aristippus attempted to cross-examine Socrates in the same fashion as he had been cross-examined by him in their previous encounter, Socrates, wishing to benefit his companions, answered like a man who is resolved to do what is right, and not like a debater guarding against any distortion of the argument.

Aristippus asked if he knew of anything good, in order that if Socrates mentioned some good thing, such as food, drink, money, health, strength, or daring, he might show that it is sometimes bad. But he, knowing that when anything troubles us we need what will put an end to the trouble, gave the best answer: “Are you asking me,” he said, “whether I know of anything good for a fever?”

“No, not that.”

“For ophthalmia?”

“No, nor that.”

“For hunger?”

“No, not for hunger either.”

“Well, but if you are asking me whether I know of anything good in relation to nothing, I neither know nor want to know.”

Again Aristippus asked him whether he knew of anything beautiful: “Yes, many things,” he replied.

“All like one another?”

“On the contrary, some are as unlike as they can be.”

“How then can that which is unlike the beautiful be beautiful?”

“The reason, of course, is that a beautiful wrestler is unlike a beautiful runner, a shield beautiful for defense is utterly unlike a javelin beautiful for swift and powerful hurling.”

“That is the same answer as you gave to my question whether you knew of anything good.”

“You think, do you, that good is one thing and beautiful another? Don’t you know that all things are both beautiful and good in relation to the same things? In the first place, Virtue is not a good thing in relation to some things and a beautiful thing in relation to others. Men, again, are called ‘beautiful and good’ in the same respect and in relation to the same things: it is in relation to the same things that men’s bodies look beautiful and good and that all other things men use are thought beautiful and good, namely, in relation to those things for which they are useful.”

“Is a dung basket beautiful then?”

“Of course, and a golden shield is ugly, if the one is well made for its special work and the other badly.”

“Do you mean that the same things are both beautiful and ugly?”

“Of course—and both good and bad. For what is good for hunger is often bad for fever, and what is good for fever bad for hunger; what is beautiful for running is often ugly for wrestling, and what is beautiful for wrestling ugly for running. For all things are good and beautiful in relation to those purposes for which they are well adapted, bad and ugly in relation to those for which they are ill adapted.”

Again his dictum about houses, that the same house is both beautiful and useful, was a lesson in the art of building houses as they ought to be.

He approached the problem thus:

“When one means to have the right sort of house, must he contrive to make it as pleasant to live in and as useful as can be?”

And this being admitted, “Is it pleasant,” he asked, “to have it cool in summer and warm in winter?”

And when they agreed with this also, “Now in houses with a south aspect, the sun’s rays penetrate into the porticoes in winter, but in summer the path of the sun is right over our heads and above the roof, so that there is shade. If, then, this is the best arrangement, we should build the south side loftier to get the winter sun and the north side lower to keep out the cold winds. To put it shortly, the house in which the owner can find a pleasant retreat at all seasons and can store his belongings safely is presumably at once the pleasantest and the most beautiful. As for paintings and decorations, they rob one of more delights than they give."

For temples and altars the most suitable position, he said, was a conspicuous site remote from traffic; for it is pleasant to breathe a prayer at the sight of them, and pleasant to approach them filled with holy thoughts.

IX. When asked again whether Courage could be taught or came by nature, he replied: I think that just as one man's body is naturally stronger than another's for labor, so one man's soul is naturally braver than another's in danger. For I notice that men brought up under the same laws and customs differ widely in daring. Nevertheless, I think that every man's nature acquires more courage by learning and practice. Of course Scythians and Thracians would not dare to take bronze shield and spear and fight Lacedaemonians; and of course Lacedaemonians would not be willing to face Thracians with leather shields and javelins, nor Scythians with bows for weapons. And similarly in all other points, I find that human beings naturally differ one from another and greatly improve by application. Hence it is clear that all men, whatever their natural gifts, the talented and the dullards alike, must learn and practice what they want to excel in."

Between Wisdom and Prudence he drew no distinction; but if a man knows and practices what is beautiful and good, knows and avoids what is base,1 that man he judged to be both wise and prudent. When asked further whether he thought that those who know what they ought to do and yet do the opposite are at once wise and vicious, he answered:

"No; not so much that, as both unwise and vicious. For I think that all men have a choice between various courses, and choose and follow the one which they think conduces most to their advantage. Therefore I hold that those who follow the wrong course are neither wise nor prudent."

He said that Justice and every other form of Virtue is Wisdom. "For just actions and all forms of virtuous activity are beautiful and good. He who knows the beautiful and good will never choose anything else, he who is ignorant of them cannot do them, and even if he tries, will fail. Hence the wise do what is beautiful and good, the unwise cannot and fail if they try. Therefore since just actions and all other forms of beautiful and good activity are virtuous actions, it is clear that Justice and every other form of Virtue is Wisdom."

Madness, again, according to him, was the opposite of Wisdom. Nevertheless he did not identify Ignorance with Madness; but not to know yourself, and to assume and think that you know what you do not, he put next to Madness. "Most men, however," he declared, "do not call those mad who err in matters that lie outside the knowledge of ordinary people: madness is the name they give to errors in matters of common knowledge. For instance, if a man imagines himself to be so tall as to stoop when he goes through the gateways in the Wall, or so strong as to try to lift houses or to perform any other feat that everybody knows to be impossible, they say he's mad. They don't think a slight error implies madness, but just as they call strong desire love, so they name a great delusion madness."

Considering the nature of Envy, he found it to be a kind of pain, not, however, at a friend's misfortune, nor at an enemy's good fortune, but the envious are those only who are annoyed at their friends' successes. Some expressed surprise that anyone who loves another should be pained at his success, but he reminded them that many stand in this relation towards others, that they cannot disregard them in time of trouble, but aid them in their misfortune, and yet they are pained to see them prospering. This, however, could not happen to a man of sense, but it is always the case with fools.

Considering the nature of Leisure, he said his conclusion was that almost all men do something. Even draught-players and jesters do something, but all these are at leisure, for they might go and do something better. But nobody has leisure to go from a better to a worse occupation. If anyone does so, he acts wrongly, having no leisure.

Kings and rulers, he said, are not those who hold the scepter, nor those who are chosen by the multitude, nor those on whom the lot falls, nor those who owe their power to force or deception; but those who know how to rule. For once it was granted that it is the business of the ruler to give orders and of the ruled to obey, he went on to show that on a ship the one who knows, rules, and the owner and all the others on board obey the one who knows: in farming the landowners, in illness the patients, in training those who are in training, in fact everybody concerned with anything that needs care, look after it themselves if they think they know how, but, if not, they obey those who know, and not only when such are present, but they even send for them when absent, that they may obey them and do the right thing. In spinning wool, again, he would point out, the women govern the men because they know how to do it and men do not.

If anyone objected that a despot may refuse to obey a good counselor, “How can he refuse,” he would ask, “when a penalty waits on disregard of good counsel? All disregard of good counsel is bound surely to result in error, and his error will not go unpunished.”

If anyone said that a despot can kill a loyal subject, “Do you think,” he retorted, “that he who kills the best of his allies suffers no loss, or that his loss is trifling? Do you think that this conduct brings him safety, or rather swift destruction?”

When someone asked him what seemed to him the best pursuit for a man, he answered: “Doing well.” Questioned further, whether he thought good luck a pursuit, he said: “On the contrary, I think luck and doing are opposite poles. To hit on something right by luck without search I call good luck, to do something well after study and practice I call doing well; and those who pursue this seem to me to do well. And the best men and dearest to the gods,” he added, “are those who do their work well: if it is farming, as good farmers; if medicine, as good doctors; if politics, as good politicians. He who does nothing well is neither useful in any way nor dear to the gods.”

X. Then again, whenever he talked with artists who followed their art as a business, he was as useful to them as to others.

Thus, on entering the house of Parrhasius the painter one day, he asked in the course of a conversation with him: “Is painting a representation of things seen, Parrhasius? Anyhow, you painters with your colors represent and reproduce figures high and low, in light and in shadow, hard and soft, rough and smooth, young and old.”

“True.”

“And further, when you copy types of beauty, it is so difficult to find a perfect model that you combine the most beautiful details of several, and thus contrive to make the whole figure look beautiful.”

“Yes, we do!” “Well now, do you also reproduce the character of the soul, the character that is in the highest degree captivating, delightful, friendly, fascinating, lovable? Or is it impossible to imitate that?”

“Oh no, Socrates; for how could one imitate that which has neither shape nor color nor any of the qualities you mentioned just now, and is not even visible?”

“Do human beings commonly express the feelings of sympathy and aversion by their looks?”

“I think so.”

“Then cannot thus much be imitated in the eyes?”

“Undoubtedly.”

“Do you think that the joys and sorrows of their friends produce the same expression on men’s faces, whether they really care or not?”

“Oh no, of course not: they look radiant at their joys, downcast at their sorrows.”

“Then is it possible to represent these looks too?”

“Undoubtedly.”

“Moreover, nobility and dignity, self-abasement and servility, prudence and understanding, insolence and vulgarity, are reflected in the face and in the attitudes of the body whether still or in motion.”

“True.”

“Then these, too, can be imitated, can they not?”

“Undoubtedly.”

“Now which do you think the more pleasing sight, one whose features and bearing reflect a beautiful and good and lovable character, or one who is the embodiment of what is ugly and depraved and hateful?”

“No doubt there is a great difference, Socrates.”

On another occasion he visited Cleiton the sculptor, and while conversing with him said:

“Cleiton, that your statues of runners, wrestlers, boxers and fighters are beautiful I see and know. But how do you produce in them that illusion of life which is their most alluring charm to the beholder?”

As Cleiton was puzzled and did not reply at once, “Is it,” he added, “by faithfully representing the form of living beings that you make your statues look as if they lived?”

“Undoubtedly.”

“Then is it not by accurately representing the different parts of the body as they are affected by the pose—the flesh wrinkled or tense, the limbs compressed or outstretched, the muscles taut or loose—that you make them look more like real members and more convincing?”

“Yes, certainly.”

“Does not the exact imitation of the feelings that affect bodies in action also produce a sense of satisfaction in the spectator?”

“Oh yes, presumably.”

“Then must not the threatening look in the eyes of fighters be accurately represented, and the triumphant expression on the face of conquerors be imitated?”

“Most certainly.”

“It follows, then, that the sculptor must represent in his figures the activities of the soul.”

On visiting Pistias the armorer, who showed him some well-made breastplates, Socrates exclaimed:

“Upon my word, Pistias, it’s a beautiful invention, for the breastplate covers the parts that need protection without impeding the use of the hands. But tell me, Pistias,” he added, “why do you charge more for your breastplates than any other maker, though they are no stronger and cost no more to make?”

“Because the proportions of mine are better, Socrates.”

“And how do you show their proportions when you ask a higher price—by weight or measure? For I presume you don’t make them all of the same weight or the same size, that is, if you make them to fit.”

“Fit? Why, of course! a breastplate is of no use without that!”

“Then are not some human bodies well, others ill proportioned?”

“Certainly.”

“Then if a breastplate is to fit an ill-proportioned body, how do you make it well-proportioned?”

“By making it fit; for if it is a good fit it is well-proportioned.”

“Apparently you mean well-proportioned not absolutely, but in relation to the wearer, as you might call a shield well-proportioned for the man whom it fits, or a military cape—and this seems to apply to everything according to you. And perhaps there is another important advantage in a good fit.”

“Tell it me, if you know, Socrates.”

“The good fit is less heavy to wear than the misfit, though both are of the same weight. For the misfit, hanging entirely from the shoulders, or pressing on some other part of the body, proves uncomfortable and irksome; but the good fit, with its weight distributed over the collar-bone and shoulder-blades, the shoulders, chest, back and belly, may almost be called an accessory rather than an encumbrance.”

“The advantage you speak of is the very one which I think makes my work worth a big price. Some, however, prefer to buy the ornamented and the gold-plated breastplates.”

“Still, if the consequence is that they buy misfits, it seems to me they buy ornamented and gold-plated trash. However, as the body is not rigid, but now bent, now straight, how can tight breastplates fit?"

"They can't."

"You mean that the good fits are not the tight ones, but those that don't chafe the wearer?"

"That is your own meaning, Socrates, and you have hit the right nail on the head."

XI. At one time there was in Athens a beautiful woman named Theodote, who was ready to keep company with anyone who pleased her. One of the bystanders mentioned her name, declaring that words failed him to describe the lady's beauty, and adding that artists visited her to paint her portrait, and she showed them as much as decency allowed.

"We had better go and see her," cried Socrates; "of course what beggars description can't very well be learned by hearsay."

"Come with me at once," returned his informant. So off they went to Theodote's house, where they found her posing before a painter, and looked on.

When the painter had finished, Socrates said:

"My friends, ought we to be more grateful to Theodote for showing us her beauty, or she to us for looking at it? Does the obligation rest with her, if she profits more by showing it, but with us, if we profit more by looking?"

When someone answered that this was a fair way of putting it, "Well now," he went on, "she already has our praise to her credit, and when we spread the news, she will profit yet more; whereas we already long to touch what we have seen, and we shall go away excited and shall miss her when we are gone. The natural consequence is that we become her adorers, she the adored."

"Then, if that is so," exclaimed Theodote, "of course I ought to be grateful to you for looking."

At this point Socrates noticed that she was sumptuously dressed, and that her mother at her side was wearing fine clothes and jewelry; and she had many pretty maids, who also were well cared for, and her house was lavishly furnished.

"Tell me, Theodote," he said, "have you a farm?"

"Not I," she answered.

"Or a house, perhaps, that brings in money?"

"No, nor a house."

"Some craftsmen, possibly?"

"No, none."

"Then where do you get your supplies from?"

"I live on the generosity of any friend I pick up."

"A fine property, upon my word, Theodote, and much better than abundance of sheep and goats and oxen. But," he went on, "do you trust to luck, waiting for friends to settle on you like flies, or have you some contrivance of your own?"

"How could I invent a contrivance for that?"

"Much more conveniently, I assure you, than the spiders. For you know how they hunt for a living: they weave a thin web, I believe, and feed on anything that gets into it."

"And do you advise me, then, to weave a trap of some sort?"

"Of course not. Don't suppose you are going to hunt friends, the noblest game in the world, by such crude methods. Don't you notice that many tricks are employed even for hunting such a poor thing as the hare? Since hares feed by night, hounds specially adapted for night work are provided to hunt them; and since they run away at daybreak, another pack of hounds is obtained for tracking them by the scent along the run from the feeding ground to the form; and since they are so nimble that once they are oft' they actually escape in the open, yet a third pack of speedy hounds is formed to catch them by hot pursuit; and as some escape even so, nets are set up in the tracks where they escape, that they may be driven into them and stopped dead."

"Then can I adapt this plan to the pursuit of friends?"

"Of course you can, if for the hound you substitute an agent who will track and find rich men with an eye for beauty, and will then contrive to chase them into your nets."

"Nets! What nets have I got?"

"One, surely, that clips close enough—your body! And inside it you have a soul that teaches you what glance will please, what words delight, and tells you that your business is to give a warm welcome to an eager suitor, but to slam the door upon a coxcomb; yes, and when a friend has fallen sick, to show your anxiety by visiting him; and when he has had a stroke of good fortune, to congratulate him eagerly; and if he is eager in his suit, to put yourself at his service heart and soul. As for loving, you know how to do that, I am sure, both tenderly and truly; and that your friends give you satisfaction, you convince them, I know, not by words but by deeds."

"Upon my word," said Theodote, "I don't contrive one of these things."

"Nevertheless," he continued, "it is very important that your behavior to a man should be both natural and correct. For assuredly you can neither catch a friend nor keep him by violence; it is kindness and sweetness that catch the creature and hold him fast."

"True," she said.

"First, then, you must ask such favors of your suitors as they will grant without a moment's hesitation; and next you must repay their favors in the same coin; for in this way they will prove most sincerely your friends, most constant in their affection and most generous. And they will appreciate your favors most highly if you wait till they ask for them. The sweetest meats, you see, if served before they are wanted, seem sour, and to those who have had enough they are positively nauseating; but even poor fare is very welcome when offered to a hungry man."

"And how can I make them hunger for my fare?"

"Why, in the first place, you must not offer it to them when they have had enough, nor prompt them until they have thrown off the surfeit and are beginning to want more; then, when they feel the want, you must prompt them by behaving as a model of propriety, by a show of reluctance to yield, and by holding back until they are as keen as can be; for then the same gifts are much more to the recipient than when they are offered before they are desired."

"Then, Socrates," exclaimed Theodote, "why don't you become my partner in the pursuit of friends?"

"By all means—if you persuade me."

"And how am I to persuade you?"

"That you will find out and contrive for yourself, if you want my help."

"Come and see me often, then."

"Ah!" said Socrates, making fun of his own leisurely habits, "it's not so easy for me to find time.

For I have much business to occupy me, private and public; and I have the dear girls, who won't leave me day or night; they are studying potions with me and spells."

"Indeed! do you understand these things too, Socrates?"

“Why, what is the reason that master Apollodorus and Antisthenes never leave me, do you suppose? And why do Cebes and Simmias come to me from Thebes? I assure you these things don’t happen without the help of many potions and spells and magic wheels.”

“Do lend me your wheel, that I may turn it first to draw you.”

“But of course I don’t want to be drawn to you: I want you to come to me.”

“Oh, I’ll come: only mind you welcome me.”

“Oh, you shall be welcome—unless there’s a dearer girl with me!”

XII. On noticing that Epigenes, one of his companions, was in poor condition, for a young man, he said: “You look as if you need exercise, Epigenes.”

“Well,” he replied, “I’m not an athlete, Socrates.”

“Just as much as the competitors entered for Olympia,” he retorted. “Or do you count the life and death struggle with their enemies, upon which, it may be, the Athenians will enter, but a small thing? Why, many, thanks to their bad condition, lose their life in the perils of war or save it disgracefully: many, just for this same cause, are taken prisoners, and then either pass the rest of their days, perhaps, in slavery of the hardest kind, or, after meeting with cruel sufferings and paying, sometimes, more than they have, live on, destitute and in misery. Many, again, by their bodily weakness earn infamy, being thought cowards. Or do you despise these, the rewards of bad condition, and think that you can easily endure such things? And yet I suppose that what has to be borne by anyone who takes care to keep his body in good condition is far lighter and far pleasanter than these things. Or is it that you think bad condition healthier and generally more serviceable than good, or do you despise the effects of good condition? And yet the results of physical fitness are the direct opposite of those that follow from unfitness. The fit are healthy and strong; and many, as a consequence, save themselves decorously on the battlefield and escape all the dangers of war; many help friends and do good to their country and for this cause earn gratitude; get great glory and gain very high honors, and for this cause live henceforth a pleasanter and better life, and leave to their children better means of winning a livelihood.

"I tell you, because military training is not publicly recognized by the state, you must not make that an excuse for being a whit less careful in attending to it yourself. For you may rest assured that there is no kind of struggle, apart from war, and no undertaking in which you will be worse off by keeping your body in better fettle. For in everything that men do the body is useful; and in all uses of the body it is of great importance to be in as high a state of physical efficiency as possible. Why, even in the process of thinking, in which the use of the body seems to be reduced to a minimum, it is matter of common knowledge that grave mistakes may often be traced to bad health. And because the body is in a bad condition, loss of memory, depression, discontent, insanity often assail the mind so violently as to drive whatever knowledge it contains clean out of it. But a sound and healthy body is a strong protection to a man, and at least there is no danger then of such a calamity happening to him through physical weakness: on the contrary, it is likely that his sound condition will serve to produce effects the opposite of those that arise from bad condition. And surely a man of sense would submit to anything to obtain the effects that are the opposite of those mentioned in my list.

"Besides, it is a disgrace to grow old through sheer carelessness before seeing what manner of man you may become by developing your bodily strength and beauty to their highest limit. But you cannot see that, if you are careless; for it will not come of its own accord."

XIII. On a man who was angry because his greeting was not returned: "Ridiculous!" he exclaimed; "you would not have been angry if you had met a man in worse health; and yet you are annoyed because you have come across someone with ruder manners!"

On another who declared that he found no pleasure in eating: "Acumenus," he said, "has a good prescription for that ailment." And when asked "What?" he answered, "Stop eating; and you will then find life pleasanter, cheaper, and healthier."

On yet another who complained that the drinking water at home was warm: "Consequently," he said, "when you want warm water to wash in, you will have it at hand."

"But it's too cold for washing," objected the other.

"Then do your servants complain when they use it both for drinking and washing?"

"Oh no: indeed I have often felt surprised that they are content with it for both these purposes."

"Which is the warmer to drink, the water in your house or Epidaurus water?"

"Epidaurus water."

"And which is the colder to wash in, yours or Oropus water?"

"Oropus water."

"Then reflect that you are apparently harder to please than servants and invalids."

When someone punished his footman severely, he asked why he was angry with his man.

“Because he’s a glutton and he’s a fool,” said the other: “he’s rapacious and he’s lazy.”

“Have you ever considered, then, which deserves the more stripes, the master or the man?”

When someone was afraid of the journey to Olympia, he said:

“Why do you fear the distance? When you are at home, don’t you spend most of the day in walking about? on your way there you will take a walk before lunch, and another before dinner, and then take a rest. Don’t you know that if you put together the walks you take in five or six days, you can easily cover the distance from Athens to Olympia? It is more comfortable, too, to start a day early rather than a day late, since to be forced to make the stages of the journey unduly long is unpleasant; but to take a day extra on the way makes easy going. So it is better to hurry over the start than on the road.”

When another said that he was worn out after a long journey, he asked him whether he had carried a load.

“Oh no,” said the man; “only my cloak.”

“Were you alone, or had you a footman with you?”

“I had.”

“Empty-handed or carrying anything?”

“He carried the rugs and the rest of the baggage, of course.”

“And how has he come out of the journey?”

“Better than I, so far as I can tell.”

“Well then, if you had been forced to carry his load, how would you have felt, do you suppose?”

“Bad, of course; or rather, I couldn’t have done it.”

“Indeed! do you think a trained man ought to be so much less capable of work than his slave?”

XIV. Whenever some of the members of a dining-club brought more meat than others, Socrates would tell the waiter either to put the small contribution into the common stock or to portion it out equally among the diners. So the high batteners felt obliged not only to take their share of the pool, but to pool their own supplies in return; and so they put their own supplies also into the common stock. And since they thus got no more than those who brought little with them, they gave up spending much on meat.

He observed on one occasion that one of the company at dinner had ceased to take bread, and ate the meat by itself. *Now the talk was of names and the actions to which they are properly applied.*

“Can we say, my friends,” said Socrates, “what is the nature of the action for which a man is called greedy? For all, I presume, eat meat with their bread when they get the chance: but I don’t think there is so far any reason for calling them greedy?”

“No, certainly not,” said one of the company.

“Well, suppose he eats the meat alone, without the bread, not because he’s in training, but to tickle his palate, does he seem a greedy fellow or not?”

“If not, it’s hard to say who does,” was the reply.

Here another of the company queried, “And he who eats a scrap of bread with a large helping of meat?”

“He too seems to me to deserve the epithet,” said Socrates. “Aye, and when others pray for a good wheat harvest, he, presumably, would pray for a good meat supply.”

The young man, guessing that these remarks of Socrates applied to him, did not stop eating his meat, but took some bread with it. When Socrates observed this, he cried: “Watch the fellow, you who are near him, and see whether he treats the bread as his meat or the meat as his bread."

On another occasion he noticed one of the company at dinner tasting several dishes with each bite of bread. "Can you imagine," he asked, "a meal more extravagant and more ruinous to the victuals than his who eats many things together, and crams all sorts of sauces into his mouth at once? At any rate by mixing more ingredients than the cooks, he adds to the cost, and since he mixes ingredients that they regard as unsuitable in a mixture, if they are right, then he is wrong and is ruining their art. Yet it is surely ridiculous for a master to obtain highly skilled cooks, and then, though he claims no knowledge of the art, to alter their confections? There's another drawback, too, attaching to the habit of eating many things together. For if many dishes are not provided, one seems to go short because one misses the usual variety: whereas he who is accustomed to take one kind of meat along with one bit of bread can make the best of one dish when more are not forthcoming."

He used to say too that the term "good feeding" in Attic was a synonym for "eating." The "good" in the compound implied the eating of food that could harm neither body nor soul and was not hard to come by. Thus he attributed even good feeding to sober livers.

## BOOK IV

I. Socrates was so useful in all circumstances and in all ways, that any observer gifted with ordinary perception can see that nothing was more useful than the companionship of Socrates, and time spent with him in any place and in any circumstances. The very recollection of him in absence brought no small good to his constant companions and followers; for even in his light moods they gained no less from his society than when he was serious.

Thus he would often say he was “in love”; but clearly his heart was set not on those who were fair to outward view, but on those whose souls excelled in goodness. These excellent beings he recognized by their quickness to learn whatever subject they studied, ability to remember what they learned, and desire for every kind of knowledge on which depend good management of a household and estate and tactful dealing with men and the affairs of men. For education would make such beings not only happy in themselves, and successful in the management of their households, but capable of conferring happiness on their fellow-men and on states alike. His method of approach varied. To those who thought themselves possessed of natural endowments and despised learning, he explained that the greater the natural gifts, the greater is the need of education; pointing out that thoroughbreds by their spirit and mettle develop into serviceable and splendid creatures, if they are broken in as colts, but if unbroken, prove intractable and sorry jades; and high-bred puppies, keen workers and good tacklers of game, make first-rate hounds and useful dogs, if well trained, but, if untrained, turn out stupid, crazy, disobedient brutes. It is the same with human beings. The most highly gifted, the youths of ardent soul, capable of doing whatever they attempt, if educated and taught their duty grow into excellent and useful men; for manifold and great are their good deeds. But untrained and untaught, these same become utterly evil and mischievous; for without knowledge to discern their duty, they often put their hand to vile deeds, and through the very grandeur and vehemence of their nature, they are uncontrollable and intractable: therefore manifold and great are their evil deeds.

Those who prided themselves on riches and thought they had no need of education, supposing that their wealth would suffice them for gaining the objects of their wishes and winning honor among men, he admonished thus. “Only a fool,” he said, “can think it possible to distinguish between things useful and things harmful without learning: only a fool can think that without distinguishing these he will get all he wants by means of his wealth and be able to do what is expedient: only a simpleton can think that without the power to do what is expedient he is doing well and has made good or sufficient provision for his life: only a simpleton can think that by his wealth alone without knowledge he will be reputed good at something, or will enjoy a good reputation without being reputed good at anything in particular.

II. I will now show his method of dealing with those who thought they had received the best education, and prided themselves on wisdom. He was informed that Euthydemus, the handsome, had formed a large collection of the works of celebrated poets and professors, and therefore supposed himself to be a prodigy of wisdom for his age, and was confident of surpassing all competitors in power of speech and action. At present, Socrates observed, he did not enter the Market-place owing to his youth, but when he wanted to get anything done, he would be found sitting in a saddler’s shop near the Market. So, to make an opening, Socrates went to this shop with some of his companions.

At the first visit, one of them asked: “Was it by constant intercourse with some wise man or by natural ability that

Themistocles stood out among his fellow-citizens as the man to whom the people naturally looked when they felt the want of a great leader?”

In order to set Euthydemus thinking, Socrates said:

“If in the minor arts great achievement is impossible without competent masters, surely it is absurd to imagine that the art of statesmanship, the greatest of all accomplishments, comes to a man of its own accord.”

Some time afterwards, meeting Euthydemus again, he saw that he was reluctant to join the circle and anxious not to betray any admiration for the wisdom of Socrates: “Well, gentlemen,” said he, “when our friend Euthydemus has attained his full powers, and some question of policy is before the Assembly, he won’t be backward in offering advice: that is obvious from his behavior. I fancy he has prepared a noble exordium to his addresses, with due care not to give the impression that he is indebted to anyone for his knowledge. No doubt he will begin his speech with this introduction:

“‘Men of Athens, I have never yet learnt anything from anyone, nor when I have been told of any man’s ability in speech and in action, have I sought to meet him, nor have I been at pains to find a teacher among the men who know. On the contrary, I have constantly avoided learning anything of anyone, and even the appearance of it. Nevertheless shall recommend to your consideration anything that comes into my head.’

“This exordium might be adapted so as to suit candidates for the office of public physician. They might begin their speeches in this strain:

“‘Men of Athens, I have never yet studied medicine, nor sought to find a teacher among our physicians; for I have constantly avoided learning anything from the physicians, and even the appearance of having studied their art. Nevertheless I ask you to appoint me to the office of a physician, and I will endeavor to learn by experimenting on you.'"

The exordium set all the company laughing.

Now when it became evident that Socrates had gained the attention of Euthydemus, but that Euthydemus still avoided breaking silence himself, and thought that he assumed an air of prudence by remaining dumb, Socrates wanted to put an end to that affectation. "How strange it is," he said, "that those who want to play the harp or the flute, or to ride or to get skill in any similar accomplishment, work hard at the art they mean to master, and not by themselves but under the tuition of the most eminent professors, doing and bearing anything in their anxiety to do nothing without their teachers' guidance, just because that is the only way to become proficient: and yet, among those who want to shine as speakers in the Assembly and as statesmen, there are some who think that they will be able to do so on a sudden, by instinct, without training or study. Yet surely these arts are much the harder to learn; for many more are interested in them and far fewer succeed. Clearly then these arts demand a longer and more intense application than the others."

For a time, then, Socrates continued to talk in this strain, while Euthydemus listened. But on finding him more tolerant of his conversation and more attentive, Socrates went alone to the saddler's; and when Euthydemus had taken a seat beside him, he said: "Tell me, Euthydemus, am I rightly informed that you have a large collection of books written by the wise men of the past, as they are called?"

"By Zeus, yes, Socrates," answered he, "and I am still adding to it, to make it as complete as possible."

“By Hera,” retorted Socrates, “I do admire you for valuing the treasures of wisdom above gold and silver. For you are evidently of opinion that, while gold and silver cannot make men better, the thoughts of the wise enrich their possessors with virtue.”

Now Euthydemus was glad to hear this, for he guessed that in the opinion of Socrates he was on the road to wisdom. But Socrates, aware that he was pleased with his approbation, went on to say: “Tell me, Euthydemus, what kind of goodness do you want to get by collecting these books?”

And as Euthydemus was silent, considering what answer to give, “Possibly you want to be a doctor?” he guessed: “Medical treatises alone make a large collection.”

“Oh no, not at all.”

“But perhaps you wish to be an architect? One needs a well-stored mind for that too.”

“No, indeed I don’t.”

“Well, perhaps you want to be a good mathematician, like Theodorus?”

“No, not that either.”

“Well, perhaps you want to be an astronomer?” And as he again said no, “Perhaps a rhapsodist, then? They tell me you have a complete copy of Homer.”

“Oh no, not at all; for your rhapsodists, I know, are consummate as reciters, but they are very silly fellows themselves.”

Then Socrates exclaimed: “Surely, Euthydemus, you don’t covet the kind of excellence that makes good statesmen and managers, competent rulers and benefactors of themselves and mankind in general?”

"Yes, I do, Socrates," answered Euthydemus, "that kind of excellence I greatly desire."

"Why," cried Socrates, "it is the noblest kind of excellence, the greatest of arts that you covet, for it belongs to kings and is dubbed 'kingly.' However," he added, "have you reflected whether it be possible to excel in these matters without being a just man?"

"Yes, certainly; and it is, in fact, impossible to be a good citizen without justice."

"Then tell me, have you got that?"

"Yes, Socrates, I think I can show myself to be as just as any man."

"And have just men, like carpenters, their works?"

"Yes, they have."

"And as carpenters can point out their works, should just men be able to rehearse theirs?"

"Do you suppose," retorted Euthydemus, "that I am unable to rehearse the works of justice? Of course I can,—and the works of injustice too, since there are many opportunities of seeing and hearing of them every day."

"I propose, then, that we write J in this column and I in that, and then proceed to place under these letters, J and I, what we take to be the works of justice and injustice respectively."

"Do so, if you think it helps at all"

Having written down the letters as he proposed, Socrates went on: "Lying occurs among men, does it not?"

"Yes, it does."

"Under which heading, then, are we to put that?"

"Under the heading of injustice, clearly."

"Deceit, too, is found, is it not?"

"Certainly."

"Under which heading will that go?"

"Under injustice again, of course."

"What about doing mischief?"

"That too."

"Selling into slavery?"

"That too."

"Then we shall assign none of these things to justice, Euthydemus?"

"No, it would be monstrous to do so."

"Now suppose a man who has been elected general enslaves an unjust and hostile city, shall we say that he acts unjustly?"

"Oh no!"

"We shall say that his actions are just, shall we not?"

"Certainly."

"And what if he deceives the enemy when at war?"

"That too is just."

"And if he steals and plunders their goods, will not his actions be just?"

"Certainly; but at first I assumed that your questions had reference only to friends."

"Then everything that we assigned to injustice should be assigned to justice also?"

"Apparently."

"Then I propose to revise our classification, and to say: It is just to do such things to enemies, but it is unjust to do them to friends, towards whom one's conduct should be scrupulously honest."

"By all means."

“Now suppose that a general, seeing that his army is downhearted, tells a lie and says that reinforcements are approaching, and by means of this lie checks discouragement among the men, under which heading shall we put this deception?”

“Under justice, I think.”

“Suppose, again, that a man’s son refuses to take a dose of medicine when he needs it, and the father induces him to take it by pretending that it is food, and cures him by means of this lie, where shall we put this deception?”

“That too goes on the same side, I think.”

“And again, suppose one has a friend suffering from depression, and, for fear that he may make away with himself, one takes away his sword or something of the sort, under which heading shall we put that now?”

“That too goes under justice, of course.”

“You mean, do you, that even with friends straightforward dealing is not invariably right?”

“It isn’t, indeed! I retract what I said before, if you will let me.”

“Why, I’m bound to let you; it’s far better than getting our lists wrong. But now, consider deception practiced on friends to their detriment: we mustn’t overlook that either. Which is the more unjust deception in that case, the intentional or unintentional?”

“Nay, Socrates, I have lost all confidence in my answers; for all the opinions that I expressed before seem now to have taken an entirely different form. Still I venture to say that the intentional deception is more unjust than the unintentional.”

“*Do you think there is a doctrine and science of the just, as there is of letters*?”

“Yes.”

“Which, in your judgment, is the more literate, the man who intentionally blunders in writing and reading, or the man who blunders unintentionally?”

“The one who blunders intentionally, I presume; for he can always be accurate when he chooses.”

“May we not say, then, that the intentional blunderer is literate and the unintentional is illiterate?”

“Indeed we must.”

“And which knows what is just, the intentional liar and deceiver, or the unintentional?”

“The intentional, clearly.”

“You say, then, as I understand, that he who knows letters is more literate than he who is ignorant of them?”

“Yes”

“And he who knows what is just is more just than he who does not know?”

“Apparently; but here again I don’t feel sure of my own meaning.”

“Now come, what do you think of the man who wants to tell the truth, but never sticks to what he says; when he shows you the way, tells you first that the road runs east, then that it runs west; and when he casts up figures, makes the total now larger, now smaller?”

“Why, I think he shows that he doesn’t know what he thought he knew.”

“Are you aware that some people are called slavish?”

“Yes.”

“To what do they owe the name, to knowledge or to ignorance?”

“To ignorance, obviously.”

"To ignorance of the smiths' trade, shall we say?"

"Certainly not."

"Ignorance of carpentry perhaps?"

"No, not to that either."

"Of cobbling?"

"No, to none of these: on the contrary, those who are skilled in such trades are for the most part slavish."

"Then is this name given to those who are ignorant of the beautiful and good and just?"

"That is my opinion."

"Then we must strain every nerve to escape being slaves."

"Upon my word, Socrates, I did feel confident that I was a student of a philosophy that would provide me with the best education in all things needful to one who would be a gentleman. But you can imagine my dismay when I realize that in spite of all my pains I am even incapable of answering a question about things that one is bound to know, and yet find no other way that will lead to my improvement."

Hereupon Socrates exclaimed: "Tell me, Euthydemus, have you ever been to Delphi?"

"Yes, certainly; twice."

"Then did you notice somewhere on the temple the inscription 'Know thyself'?"

"I did."

"And did you pay no heed to the inscription, or did you attend to it and try to consider who you were?"

"Indeed I did not; because I felt sure that I knew that already; for I could hardly know anything else if I did not even know myself."

"And what do you suppose a man must know to know himself, his own name merely? Or must he consider what sort of a creature he is for human use and get to know his own powers; just as those who buy horses don’t think that they know the beast they want to know until they have considered whether he is docile or stubborn, strong or weak, fast or slow, and generally how he stands in all that makes a useful or a useless horse?”

“That leads me to think that he who does not know his own powers is ignorant of himself.”

“Is it not clear too that through self-knowledge men come to much good, and through self-deception to much harm? For those who know themselves, know what things are expedient for themselves and discern their own powers and limitations. And by doing what they understand, they get what they want and prosper: by refraining from attempting what they do not understand, they make no mistakes and avoid failure. And consequently through their power of testing other men too, and through their intercourse with others, they get what is good and shun what is bad. Those who do not know and are deceived in their estimate of their own powers, are in the like condition with regard to other men and other human affairs. They know neither what they want, nor what they do, nor those with whom they have intercourse; but mistaken in all these respects, they miss the good and stumble into the bad. Furthermore, those who know what they do win fame and honor by attaining their ends. Their equals are glad to have dealings with them; and those who miss their objects look to them for counsel, look to them for protection, rest on them their hopes of better things, and for all these reasons love them above all other men. But those who know not what they do, choose amiss, fail in what they attempt and, besides incurring direct loss and punishment thereby, they earn contempt through their failures, make themselves ridiculous and live in dishonor and humiliation.

“And the same is true of communities. You find that whenever a state, in ignorance of its own power, goes to war with a stronger people, it is exterminated or loses its liberty.”

“Socrates” answered Euthydemus, “you may rest assured that I fully appreciate the importance of knowing oneself. But where should the process of self-examination begin? I look to you for a statement, please.”

“Well,” said Socrates, “I may assume, I take it, that you know what things are good and what are evil?”

“Of course, for if I don’t know so much as that, I must be worse than a slave.”

“Come then, state them for my benefit.”

“Well, that’s a simple matter. First health in itself is, I suppose, a good, sickness an evil. Next the various causes of these two conditions—meat, drink, habits—are good or evil according as they promote health or sickness.”

“Then health and sickness too must be good when their effect is good, and evil when it is evil.”

“But when can health possibly be the cause of evil, or sickness of good?”

“Why, in many cases; for instance, a disastrous campaign or a fatal voyage: the able-bodied who go are lost, the weaklings who stay behind are saved.”

“True; but you see, in the successful adventures too the able-bodied take part, the weaklings are left behind.”

“Then since these bodily conditions sometimes lead to profit, and sometimes to loss, are they any more good than evil?”

“No, certainly not; at least so it appears from the argument. But wisdom now, Socrates,—that at any rate is indisputably a good thing; for what is there that a wise man would not do better than a fool?”

“Indeed! have you not heard how Daedalus was seized by Minos because of his wisdom, and was forced to be his slave, and was robbed of his country and his liberty, and essaying to escape with his son, lost the boy and could not save himself, but was carried off to the barbarians and again lived as a slave there?”

“That is the story, of course.”

“And have you not heard the story of Palamedes? Surely, for all the poets sing of him, how that he was envied for his wisdom and done to death by Odysseus.”

“Another well-known tale!”

“And how many others, do you suppose, have been kidnapped on account of their wisdom, and haled off to the great King’s court, and live in slavery there?”

“Happiness seems to be unquestionably a good, Socrates.”

“It would be so, Euthydemus, were it not made up of goods that are questionable.”

“But what element in happiness can be called in question?”

“None, provided we don’t include in it beauty or strength or wealth or glory or anything of the sort.”

“But of course we shall do that. For how can anyone be happy without them?”

“Then of course we shall include the sources of much trouble to mankind. For many are ruined by admirers whose heads are turned at the sight of a pretty face; many are led by their strength to attempt tasks too heavy for them, and meet with serious evils: many by their wealth are corrupted, and fall victims to conspiracies; many through glory and political power have suffered great evils.”

“Well now, if I am at fault in praising even happiness, I confess I know not what one should ask for in one’s prayers.”

“But perhaps you never even thought about these things, because you felt so confident that you knew them. However, as the state you are preparing yourself to direct is governed by the people, no doubt you know what popular government is?”

“I think so, certainly.”

“Then do you suppose it possible to know popular government without knowing the people?”

“Indeed I don’t.”

“And do you know, then, what the people consists of?”

“I think so.”

“Of what do you suppose it to consist?”

“The poorer classes, I presume.”

“You know the poor, then?”

“Of course I do.”

“And you know the rich too?”

“Yes, just as well as the poor.”

“What kind of men do you call poor and rich respectively?”

“The poor, I imagine, are those who have not enough to pay for what they want; the rich those who have more than enough.”

“Have you observed, then, that some who have very little not only find it enough, but even manage to save out of it, whereas others cannot live within their means, however large?”

“Yes, certainly—thanks for reminding me—I know, in fact, of some despots even who are driven to crime by poverty, just like paupers.”

“Therefore, if that is so, we will include despots in the people, and men of small means, if they are thrifty, in the rich.”

“1 am forced to agree once more,” cried Euthydemus, “evidently by my stupidity. I am inclined to think I had better hold my tongue, or I shall know nothing at all presently.” And so he went away very dejected, disgusted with himself and convinced that he was indeed a slave.

Now many of those who were brought to this pass by Socrates, never went near him again and were regarded by him as mere blockheads. But Euthydemus guessed that he would never be of much account unless he spent as much time as possible with Socrates. Henceforward, unless obliged to absent himself, he never left him, and even began to adopt some of his practices. Socrates, for his part, seeing how it was with him, avoided worrying him, and began to expound very plainly and clearly the knowledge that he thought most needful and the practices that he held to be most excellent.

III. Skill in speaking and efficiency in affairs, therefore, and ingenuity, were not the qualities that he was eager to foster in his companions. He held that they needed first to acquire prudence. For he believed that those faculties, unless accompanied by prudence, increased in their possessors injustice and power for mischief.

In the first place, then, he tried to make his companions prudent towards the gods. Accordingly he discoursed on this topic at various times, as those who were present used to relate. The following conversation between him and Euthydemus I heard myself.

“Tell me, Euthydemus” he began, “has it ever occurred to you to reflect on the care the gods have taken to furnish man with what he needs?”

“No, indeed it has not,” replied Euthydemus.

"Well, no doubt you know that our first and foremost need is light, which is supplied to us by the gods?"

"Of course; since without light our eyes would be as useless as if we were blind."

"And again, we need rest; and therefore the gods grant us the welcome respite of night."

"Yes, for that too we owe them thanks."

"And since the night by reason of her darkness is dim, whereas the sun by his brightness illuminates the hours of the day and all things else, have they not made stars to shine in the night, that mark the watches of night for us, and do we not thereby satisfy many of our needs?"

"That is so."

"Moreover, the moon reveals to us not only the divisions of the night, but of the month too."

"Certainly."

"Now, seeing that we need food, think how they make the earth to yield it, and provide to that end appropriate seasons which furnish in abundance the diverse things that minister not only to our wants but to our enjoyment."

"Truly these things too show loving-kindness."

"Think again of their precious gift of water, that aids the earth and the seasons to give birth and increase to all things useful to us and itself helps to nourish our bodies, and mingling with all that sustains us, makes it more digestible, more wholesome, and more palatable: and how, because we need so much of it, they supply it without stint."

"That too shows design at work."

"Think again of the blessing of fire, our defense against cold and against darkness, our helpmate in every art and all that man contrives for his service.

In fact, to put it shortly, nothing of any account that is useful to the life of man is contrived without the aid of fire."

"This too is a signal token of loving-kindness."

"Think again how the sun, when past the winter solstice, approaches, ripening some things and withering others, whose time is over; and having accomplished this, approaches no nearer, but turns away, careful not to harm us by excess of heat; and when once again in his retreat he reaches the point where it is clear to ourselves, that if he goes further away, we shall be frozen with the cold, back he turns once more and draws near and revolves in that region of the heavens where he can best serve us."

"Yes, verily, these things do seem to be done for the sake of mankind."

"And again, since it is evident that we could not endure the heat or the cold if it came suddenly, the sun's approach and retreat are so gradual that we arrive at the one or the other extreme imperceptibly.

"For myself," exclaimed Euthydemus, "I begin to doubt whether after all the gods are occupied in any other work than the service of man. The one difficulty I feel is that the lower animals also enjoy these blessings."

"Yes," replied Socrates, "and is it not evident that they too receive life and food for the sake of man? For what creature reaps so many benefits as man from goats and sheep and horses and oxen and asses and the other animals? He owes more to them, in my opinion, than to the fruits of the earth. At the least they are not less valuable to him for food and commerce; in fact a large portion of mankind does not use the products of the earth for food, but lives on the milk and cheese and flesh they get from live stock. Moreover, all men tame and domesticate the useful kinds of animals, and make them their fellow-workers in war and many other undertakings.”

“There too I agree with you, seeing that animals far stronger than man become so entirely subject to him that he puts them to any use he chooses.”

“Think again of the multitude of things beautiful and useful and their infinite variety, and how the gods have endowed man with senses adapted for the perception of every kind, so that there is nothing good that we cannot enjoy; and again, how they have implanted in us the faculty of reasoning, whereby we are able to reason about the objects of our perceptions and to commit them to memory, and so come to know what advantage every kind can yield, and devise many means of enjoying the good and driving away the bad; and think of the power of expression, which enables us to impart to one another all good things by teaching and to take our share of them, to enact laws and to administer states.”

“Truly, Socrates, it does appear that the gods devote much care to man.”

“Yet again, in so far as we are powerless of ourselves to foresee what is expedient for the future, the gods lend us their aid, revealing the issues by divination to inquirers, and teaching them how to obtain the best results.”

“With you, Socrates, they seem to deal even more friendly than with other men, if it is true that, even unasked, they warn you by signs what to do and what not to do.”

“Yes, and you will realize the truth of what I say if, instead of waiting for the gods to appear to you in bodily presence, you are content to praise and worship them because you see their works. Mark that the gods themselves give the reason for doing so; for when they bestow on us their good gifts, not one of them ever appears before us gift in hand; and especially he who co-ordinates and holds together the universe, wherein all things are fair and good, and presents them ever unimpaired and sound and ageless for our use, and quicker than thought to serve us unerringly, is manifest in his supreme works, and yet is unseen by us in the ordering of them. Mark that even the sun, who seems to reveal himself to all, permits not man to behold him closely, but if any attempts to gaze recklessly upon him, blinds their eyes. And the gods' ministers too you will find to be invisible. That the thunderbolt is hurled from heaven, and that he overwhelms all on whom he falls, is evident, but he is seen neither coming nor striking nor going. And the winds are themselves invisible, yet their deeds are manifest to us, and we perceive their approach. Moreover, the soul of man, which more than all else that is human partakes of the divine, reigns manifestly within us, and yet is itself unseen.

"For these reasons it behooves us not to despise the things that are unseen, but, realizing their power in their manifestations, to honor the godhead."

"Socrates," replied Euthydemus, "that I will in no wise be heedless of the godhead I know of a surety. But my heart fails me when I think that no man can ever render due thanks to the gods for their benefits."

"Nay, be not down-hearted, Euthydemus; for you know that to the inquiry, 'How am I to please the gods?' the Delphic god replies, 'Follow the custom of the state'; and everywhere, I suppose, it is the custom that men propitiate the gods with sacrifices according to their power. How then can a man honor the gods more excellently and more devoutly than by doing as they themselves ordain? Only he must fall no whit short of his power. For when he does that, it is surely plain that he is not then honoring the gods. Therefore it is by coming no whit short of his power in honoring the gods that he is to look with confidence for the greatest blessings. For there are none from whom a man of prudence would hope for greater things than those who can confer the greatest benefits, nor can he show his prudence more clearly than by pleasing them. And how can he please them better than by obeying them strictly?”

Thus by precept and by example alike he strove to increase in his companions Piety and Prudence.

IV. Again, concerning Justice he did not hide his opinion, but proclaimed it by his actions. All his private conduct was lawful and helpful: to public authority he rendered such scrupulous obedience in all that the laws required, both in civil life and in military service, that he was a pattern of good discipline to all. When chairman in the Assemblies he would not permit the people to record an illegal vote, but, upholding the laws, resisted a popular impulse that might even have overborne any but himself. And when the Thirty laid a command on him that was illegal, he refused to obey. Thus he disregarded their repeated injunction not to talk with young men; and when they commanded him and certain other citizens to arrest a man on a capital charge, he alone refused, because the command laid on him was illegal. Again, when he was tried on the charge brought by Meletus, whereas it is the custom of defendants to curry favor with the jury and to indulge in flattery and illegal appeals, and many by such means have been known to gain a verdict of acquittal, he rejected utterly the familiar chicanery of the courts; and though he might easily have gained a favorable verdict by even a moderate indulgence in such stratagems, he chose to die through his loyalty to the laws rather than to live through violating them.

Such views frequently found expression in his conversations with different persons; I recollect the substance of one that he had with Hippias of Elis concerning Justice. Hippias, who had not been in Athens for a considerable time, found Socrates talking: he was saying that if you want to have a man taught cobbling or building or smithing or riding, you know where to send him to learn the craft: some indeed declare that if you want to train up a horse or an ox in the way he should go, teachers abound. And yet, strangely enough, if you want to learn Justice yourself, or to have your son or servant taught it, you know not where to go for a teacher.

When Hippias heard this, “How now?” he cried in a tone of raillery, “still the same old sentiments, Socrates, that I heard from you so long ago?”

“Yes, Hippias,” he replied, “always the same, and—what is more astonishing—on the same topics too! You are so learned that I daresay you never say the same thing on the same subjects.”

“I certainly try to say something fresh every time.”

“Do you mean, about what you know? For example, in answer to the question, ‘How many letters are there in “Socrates” and how do you spell it?’ do you try to say something different now from what you said before? Or take figures: suppose you are asked if twice five are ten, don’t you give the same answer now as you gave before?”

“About letters and figures, Socrates, I always say the same thing, just like you. As for Justice, I feel confident that I can now say that which neither you nor anyone else can contradict.”

“Upon my word, you mean to say that you have made a great discovery, if jurymen are to cease from voting different ways, citizens from disputing and litigation, and wrangling about the justice of their claims, cities from quarrelling about their rights and making war; and for my part, I don’t see how to tear myself away from you till I have heard about your great discovery.”

“But I vow you shall not hear unless you first declare your own opinion about the nature of Justice; for it’s enough that you mock at others, questioning and examining everybody, and never willing to render an account yourself or to state an opinion about anything.”

“Indeed, Hippias! Haven’t you noticed that I never cease to declare my notions of what is just?”

“And how can you call that an account?”

“I declare them by my deeds, anyhow, if not by my words. Don’t you think that deeds are better evidence than words?”

“Yes, much better, of course; for many say what is just and do what is unjust; but no one who does what is just can be unjust.”

“Then have you ever found me dealing in perjury or calumny, or stirring up strife between friends or fellow-citizens, or doing any other unjust act?”

“I have not.”

“To abstain from what is unjust is just, don’t you think?”

“Even now, Socrates, you are clearly endeavoring to avoid stating what you think Justice to be. You are saying not what the just do, but what they don’t do.”

“Well, I thought that unwillingness to do injustice was sufficient proof of Justice. But, if you don’t think so, see whether you like this better: I say that what is lawful is just.”

“Do you mean, Socrates, that lawful and just are the same thing?”

“I do.”

“Because I don’t see what you mean by lawful or what you mean by just.”

"Does the expression 'laws of a state' convey a meaning to you?"

"It does."

"And what do you think they are?"

"Covenants made by the citizens whereby they have enacted what ought to be done and what ought to be avoided."

"Then would not that citizen who acts in accordance with these act lawfully, and he who transgresses them act unlawfully?"

"Yes, certainly."

"And would not he who obeys them do what is just, and he who disobeys them do what is unjust?"

"Certainly."

"Then would not he who does what is just be just, and he who does what is unjust be unjust?"

"Of course."

"Consequently he who acts lawfully is just, and he who acts unlawfully is unjust."

"Laws," said Hippias, "can hardly be thought of much account, Socrates, or observance of them, seeing that the very men who passed them often reject and amend them."

"Yes," said Socrates, "and after going to war, cities often make peace again."

"To be sure."

"Then is there any difference, do you think, between belittling those who obey the laws on the ground that the laws may be annulled, and blaming those who behave well in the wars on the ground that peace may be made? Or do you really censure those who are eager to help their fatherland in the wars?"

"No, of course not."

“Lycurgus the Lacedaemonian now—have you realized that he would not have made Sparta to differ from other cities in any respect, had he not established obedience to the laws most securely in her? Among rulers in cities, are you not aware that those who do most to make the citizens obey the laws are the best, and that the city in which the citizens are most obedient to the laws has the best time in peace and is irresistible in war? And again, agreement is deemed the greatest blessing for cities: their senates and their best men constantly exhort the citizens to agree, and everywhere in Greece there is a law that the citizens shall promise under oath to agree, and everywhere they take this oath. The object of this, in my opinion, is not that the citizens may vote for the same choirs, not that they may praise the same flute-players, not that they may select the same poets, not that they may like the same things, but that they may obey the laws. For those cities whose citizens abide by them prove strongest and enjoy most happiness; but without agreement no city can be made a good city, no house can be made a prosperous house. And how is the individual citizen less likely to incur penalties from the state, and more certain to gain honor than by obeying the laws? How less likely to be defeated in the courts or more certain to win? Whom would anyone rather trust as guardian of his money or sons or daughters? Whom would the whole city think more trustworthy than the man of lawful conduct? From whom would parents or kinsfolk or servants or friends or fellow-citizens or strangers more surely get their just rights? Whom would enemies rather trust in the matter of a truce or treaty or terms of peace? Whom would men rather choose for an ally? And to whom would allies rather entrust leadership or command of a garrison, or cities? Whom would anyone more confidently expect to show gratitude for benefits received? Or whom would one rather benefit than him from whom he thinks he will receive due gratitude? Whose friendship would anyone desire, or whose enmity would he avoid more earnestly? Whom would anyone less willingly make war on than him whose friendship he covets and whose enmity he is fain to avoid, who attracts the most friends and allies, and the fewest opponents and enemies?

"So, Hippias, I declare lawful and just to be the same thing. If you are of the contrary opinion, tell me.

Upon my word, Socrates," answered Hippias, "I don't think my opinion is contrary to what you have said about Justice."

"Do you know what is meant by 'unwritten laws,' Hippias?"

"Yes, those that are uniformly observed in every country."

"Could you say that men made them?"

"Nay, how could that be, seeing that they cannot all meet together and do not speak the same language?"

"Then by whom have these laws been made, do you suppose?"

"I think that the gods made these laws for men. For among all men the first law is to fear the gods."

"Is not the duty of honoring parents another universal law?"

"Yes, that is another."

"And that parents shall not have sexual intercourse with their children nor children with their parents?"

"No, I don't think that is a law of God."

"Why so?"

"Because I notice that some transgress it."

"Yes, and they do many other things contrary to the laws. But surely the transgressors of the laws ordained by the gods pay a penalty that a man can in no wise escape, as some, when they transgress the laws ordained by man, escape punishment, either by concealment or by violence."

"And pray what sort of penalty is it, Socrates, that may not be avoided by parents and children who have intercourse with one another?"

"The greatest, of course. For what greater penalty can men incur when they beget children than begetting them badly?"

"How do they beget children badly then, if, as may well happen, the fathers are good men and the mothers good women?"

"Surely because it is not enough that the two parents should be good. They must also be in full bodily vigor: unless you suppose that those who are in full vigor are no more efficient as parents than those who have not yet reached that condition or have passed it."

"Of course that is unlikely."

"Which are the better then?"

"Those who are in full vigor, clearly."

"Consequently those who are not in full vigor are not competent to become parents?"

"It is improbable, of course."

"In that case then, they ought not to have children?"

"Certainly not."

"Therefore those who produce children in such circumstances produce them wrongly?"

"I think so."

"Who then will be bad fathers and mothers, if not they?"

"I agree with you there too."

"Again, is not the duty of requiting benefits universally recognized by law?"

“Yes, but this law too is broken.”

“Then does not a man pay forfeit for the breach of that law too, in the gradual loss of good friends and the necessity of hunting those who hate him?

Or is it not true that, whereas those who benefit an acquaintance are good friends to him, he is hated by them for his ingratitude, if he makes no return, and then, because it is most profitable to enjoy the acquaintance of such men, he hunts them most assiduously?”

“Assuredly, Socrates, all this does suggest the work of the gods. For laws that involve in themselves punishment meet for those who break them, must, I think, be framed by a better legislator than man.”

“Then, Hippias, do you think that the gods ordain what is just or what is otherwise?”

“Not what is otherwise—of course not; for if a god ordains not that which is just, surely no other legislator can do so.”

“Consequently, Hippias, the gods too accept the identification of just and lawful.”

By such words and actions he encouraged Justice in those who resorted to his company.

V. He did also try to make his companions efficient in affairs, as I will now show. For holding that it is good for anyone who means to do honorable work to have self-control, he made it clear to his companions, in the first place, that he had been assiduous in self-discipline; moreover, in his conversation he exhorted his companions to cultivate self-control above all things. Thus he bore in mind continually the aids to virtue, and put all his companions in mind of them. I recall in particular the substance of a conversation that he once had with Euthydemus on self-control.

“Tell me, Euthydemus,” he said, “do you think that freedom is a noble and splendid possession both for individuals and for communities?”

“Yes, I think it is, in the highest degree.”

“Then do you think that the man is free who is ruled by bodily pleasures and is unable to do what is best because of them?”

“By no means.”

“Possibly, in fact, to do what is best appears to you to be freedom, and so you think that to have masters who will prevent such activity is bondage?”

“I am sure of it.”

“You feel sure then that the incontinent are bond slaves?”

“Of course, naturally.”

“And do you think that the incontinent are merely prevented from doing what is most honorable, or are also forced to do what is most dishonorable?”

“I think that they are forced to do that just as much as they are prevented from doing the other.”

“What sort of masters are they, in your opinion, who prevent the best and enforce the worst?”

“The worst possible, of course.”

“And what sort of slavery do you believe to be the worst?”

“Slavery to the worst masters, I think.”

“The worst slavery, therefore, is the slavery endured by the incontinent?”

“I think so.”

“As for Wisdom, the greatest blessing, does not incontinence exclude it and drive men to the opposite? Or don’t you think that incontinence prevents them from attending to useful things and understanding them, by drawing them away to things pleasant, and often so stuns their perception of good and evil that they choose the worse instead of the better?"

"That does happen."

"With Prudence, Euthydemus, who, shall we say, has less to do than the incontinent? For I presume that the actions prompted by prudence and incontinence are exact opposites?"

"I agree with that too."

"To caring for what is right is there any stronger hindrance, do you think, than incontinence?"

"Indeed do not."

"And do you think there can be aught worse for a man than that which causes him to choose the harmful rather than the useful, and persuades him to care for the one and to be careless of the other, and forces him to do the opposite of what prudence dictates?"

"Nothing."

"And is it not likely that self-control causes actions the opposite of those that are due to incontinence?"

"Certainly."

"Then is not the cause of the opposite actions presumably a very great blessing?"

"Yes, presumably."

"Consequently we may presume, Euthydemus, that self-control is a very great blessing to a man?"

"We may presume so, Socrates."

"Has it ever occurred to you, Euthydemus—?"

"What?"

"That though pleasure is the one and only goal to which incontinence is thought to lead men, she herself cannot bring them to it, whereas nothing produces pleasure so surely as self-control?”

“How so?”

“Incontinence will not let them endure hunger or thirst or desire or lack of sleep, which are the sole causes of pleasure in eating and drinking and sexual indulgence, and in resting and sleeping, after a time of waiting and resistance until the moment comes when these will give the greatest possible satisfaction; and thus she prevents them from experiencing any pleasure worthy to be mentioned in the most elementary and recurrent forms of enjoyment. But self-control alone causes them to endure the sufferings I have named, and therefore she alone causes them to experience any pleasure worth mentioning in such enjoyments.”

“What you say is entirely true.”

“Moreover, the delights of learning something good and excellent, and of studying some of the means whereby a man knows how to regulate his body well and manage his household successfully, to be useful to his friends and city and to defeat his enemies—knowledge that yields not only very great benefits but very great pleasures—these are the delights of the self-controlled; but the incontinent have no part in them. For who, should we say, has less concern with these than he who has no power of cultivating them because all his serious purposes are centered in the pleasures that lie nearest?”

“Socrates,” said Euthydemus, “I think you mean that he who is at the mercy of the bodily pleasures has no concern whatever with virtue in any form.”

“Yes, Euthydemus; for how can an incontinent man be any better than the dullest beast? How can he who fails to consider the things that matter most, and strives by every means to do the things that are most pleasant, be better than the stupidest of creatures? No, only the self-controlled have power to consider the things that matter most, and, sorting them out after their kind, by word and deed alike to prefer the good and reject the evil."

And thus, he said, men become supremely good and happy and skilled in discussion. The very word "discussion," according to him, owes its name to the practice of meeting together for common deliberation, sorting, discussing things after their kind: and therefore one should be ready and prepared for this and be zealous for it; for it makes for excellence, leadership and skill in discussion.

VI. I will try also to show how he encouraged his companions to become skilled in discussion. Socrates held that those who know what any given thing is can also expound it to others; on the other hand, those who do not know are misled themselves and mislead others. For this reason he never gave up considering with his companions what any given thing is.

To go through all his definitions would be an arduous task. I will say only enough to indicate his method of analysis.

His analysis of Piety—to take that first—was more or less as follows:

"Tell me, Euthydemus, what sort of thing is Piety, in your opinion?"

"A very excellent thing, to be sure," he replied.

"Can you say what sort of man is pious?"

"He who worships the gods, I think."

"May a man worship the gods according to his own will and pleasure?"

“No, there are laws to be observed in worshipping the gods!”

“Then will not he who knows these laws know how he must worship the gods?”

“I think so.”

“Then does he who knows how he must worship the gods think that he must do so according to his knowledge, and not otherwise?”

“He does indeed.”

“And does everyone worship the gods as he thinks he ought, and not otherwise?”

“I think so.”

“Then will he who knows what is lawful about the gods worship the gods lawfully?”

“Certainly.”

“Then does not he who worships lawfully worship as he ought?”

“Of course.”

“Yes, but he who worships as he ought is pious?”

“Certainly.”

“Shall we therefore rightly define the pious man as one who knows what is lawful concerning the gods?”

“I at any rate think so.”

“In dealing with men, again, may one do as one chooses?”

“No, in the case of men too there are laws of conduct.”

“Then do not those who observe them in their dealings with one another behave as they ought?”

“Of course.”

“And do not they who behave as they ought behave well?”

“Certainly.”

“And do not they who behave well towards men act well in human affairs?”

“Presumably.”

“And do not those who obey the law’s do what is just?”

“Certainly.”

“Do you know what sort of things are called just?”

“The things that the laws command.”

“Consequently those who do what the laws command do both what is just and what they must do?”

“Of course.”

“And are not they who do what is just, just men?”

“I think so.”

“Do you think then, that any obey the laws without knowing what the law’s command?”

“I do not.”

“And knowing what they must do, do you suppose that any think they must not do it?”

“I don’t think so.”

“Do you know of any who do, not what they think they must do, but something else?”

“I do not.”

“Consequently those who know what is lawful concerning men do what is just?”

“Certainly.”

“But are not they who do what is just, just men?”

“Exactly.”

“At last, then, we may rightly define just men as those who know best what is just concerning men?”

“I think so.”

“And what of Wisdom? How shall we describe it? Tell me, does it seem to you that the wise are wise about what they know, or are some wise about what they do not know?”

“About what they know, obviously; for how can a man be wise about the things he doesn’t know?”

“The wise, then, are wise by knowledge?”

“How else can a man be wise if not by knowledge?”

“Do you think that wisdom is anything but that by which men are wise?”

“No.”

“It follows that Wisdom is Knowledge?”

“I think so.”

“Then do you think it possible for a man to know all things?”

“Of course not—nor even a fraction of them.”

“So an all-wise man is an impossibility?”

“Of course, of course.”

“Consequently everyone is wise just in so far as he knows?”

“I think so.”

“Now to seek the Good, Euthydemus: is this the way?”

“What do you mean?”

“Does it seem to you that the same thing is useful to everyone?”

“No.”

“In fact, what is useful to one may sometimes be hurtful to another, don’t you think?”

“Assuredly.”

“Should you call anything good except what is useful?”

“No.”

"Consequently what is useful is good for him to whom it is useful?"

"I think so."

"Consider the Beautiful: can we define it in any other way? Or is it possible to name a beautiful body, for instance, or vessel, or anything else that you know to be beautiful for all purposes?"

"Of course not."

"Then does the beauty in using anything consist in using it for just that purpose for which that particular thing is useful?"

"Certainly."

"And is a tiling beautiful for any other purpose than that for which it is beautiful to use that particular thing?"

"For no other purpose whatever."

"The useful, then, is beautiful for any purpose for which it is useful?"

"I think so."

"Next comes Courage, Euthydemus. Do you think it a beautiful thing?"

"I prefer to say very beautiful."

"So you think Courage useful for no mean purposes?"

"Of course—or rather, for the greatest."

"Then do you think that in the pressure of terrors and dangers it is useful to be ignorant of them?"

"By no means."

"So those who feel no fear of such things because they are ignorant of them are not courageous?"

"Of course not, for in that case many madmen and cowards would be courageous."

"What of those who are afraid when there is no ground for fear?"

"Still less, of course."

"Then do you think that those who are good in the presence of terrors and dangers are courageous, and those who are bad are cowards?"

"Certainly."

"And do you think that any are good in the presence of such things, except those who can deal with them well?"

"None but these."

"And bad, except such as deal badly with them?"

"These and none others."

"Then do both classes behave as they think they must?"

"How can they behave otherwise?"

"Then do those who cannot behave well know how they must behave?"

"Surely not."

"So those who know how they must behave are just those who can?"

"Yes, only they."

"Well now, do those who are not utterly mistaken deal badly with such things?"

"I think not."

"So those who behave badly are utterly mistaken?"

"Presumably."

"It follows that those who know how to deal well with terrors and dangers are courageous, and those who utterly mistake the way are cowards?"

"That is my opinion."

Kingship and despotism, in his judgment, were both forms of government, but he held that they differed. For government of men with their consent and in accordance with the laws of the state was kingship; while government of unwilling subjects and not controlled by laws, but imposed by the will of the ruler, was despotism. And where the officials are chosen among those who fulfill the requirements of the laws, the constitution is an aristocracy: where ratable property is the qualification for office, you have a plutocracy: where all are eligible, a democracy.

Whenever anyone argued with him on any point without being able to make himself clear, asserting but not proving, that so and so was wiser or an abler politician or braver or what not, he would lead the whole discussion back to the definition required, much in this way:

"Do you say that your man is a better citizen than mine?"

"I do indeed."

"Then why didn't we first consider what is the function of a good citizen?"

"Let us do so."

"In financial administration, then, is not the better man he who makes the city wealthier?"

"Certainly."

"And in war he who makes her stronger than her rivals?"

"Of course."

"And on an embassy he who turns enemies into friends?"

"Presumably."

"And in debate he who puts down strife and produces harmony?"

"I think so."

By this process of leading back the argument even his adversary came to see the truth clearly. Whenever he himself argued out a question, he advanced by steps that gained general assent, holding this to be the only sure method.

Accordingly, whenever he argued, he gained a greater measure of assent from his hearers than any man I have known. He said that Homer gave Odysseus the credit of being “a safe speaker” because he had a way of leading the discussion from one acknowledged truth to another.

VII. I think that I have said enough to show that Socrates stated his own opinion plainly to those who consorted with him: I will now show that he also took pains to make them independent in doing the work that they were fitted for. For I never knew a man who was so careful to discover what each of his companions knew. Whatever it befits a gentleman to know he taught most zealously, so far as his own knowledge extended; if he was not entirely familiar with a subject, he took them to those who knew. He also taught them how far a well-educated man should make himself familiar with any given subject.

For instance, he said that the study of geometry should be pursued until the student was competent to measure a parcel of land accurately in case he wanted to take over, convey or divide it, or to compute the yield; and this knowledge was so easy to acquire, that anyone who gave his mind to mensuration knew the size of the piece and carried away a knowledge of the principles of land measurement. He was against carrying the study of geometry so far as to include the more complicated figures, on the ground that he could not see the use of them. Not that he was himself unfamiliar with them, but he said that they were enough to occupy a lifetime, to the complete exclusion of many other useful studies.

Similarly he recommended them to make themselves familiar with astronomy, but only so far as to be able to find the time of night, month and year, in order to use reliable evidence when planning a journey by land or sea, or setting the watch, and in all other affairs that are done in the night or month or year, by distinguishing the times and seasons aforesaid. This knowledge, again, was easily to be had from night hunters and pilots and others who made it their business to know such things. But he strongly deprecated studying astronomy so far as to include the knowledge of bodies revolving in different courses, and of planets and comets, and wearing oneself out with the calculation of their distance from the earth, their periods of revolution and the causes of these. Of such researches, again he said that he could not see what useful purpose they served. He had indeed attended lectures on these subjects too; but these again, he said, were enough to occupy a lifetime to the complete exclusion of many useful studies.

In general, with regard to the phenomena of the heavens, he deprecated curiosity to learn how the deity contrives them: he held that their secrets could not be discovered by man, and believed that any attempt to search out what the gods had not chosen to reveal must be displeasing to them. He said that he who meddles with these matters runs the risk of losing his sanity as completely as Anaxagoras, who took an insane pride in his explanation of the divine machinery.

For that sage, in declaring the sun to be fire, ignored the facts than men can look at fire without inconvenience, but cannot gaze steadily at the sun; that their skin is blackened by the sun’s rays, but not by fire. Further, he ignored the fact that sunlight is essential to the health of all vegetation, whereas if anything is heated by fire it withers. Again, when he pronounced the sun to be a red-hot stone, he ignored the fact that a stone in fire neither glows nor can resist it long, whereas the sun shines with unequaled brilliance for ever.

He also recommended the study of arithmetic. But in this case as in the others he recommended avoidance of vain application; and invariably, whether theories or ascertained facts formed the subject of his conversation, he limited it to what was useful.

He also strongly urged his companions to take care of their health. “You should find out all you can,” he said, “from those who know. Everyone should watch himself throughout his life, and notice what sort of meat and drink and what form of exercise suit his constitution, and how he should regulate them in order to enjoy good health. For by such attention to yourselves you can discover better than any doctor what suits your constitution.” When anyone was in need of help that human wisdom was unable to give he advised him to resort to divination; for he who knew the means whereby the gods give guidance to men concerning their affairs never lacked divine counsel.

VIII. As for his claim that he was forewarned by “the deity” what he ought to do and what not to do, some may think that it must have been a delusion because he was condemned to death. But they should remember two facts. First, he had already reached such an age, that had he not died then, death must have come to him soon after. Secondly, he escaped the most irksome stage of life and the inevitable diminution of mental powers, and instead won glory by the moral strength revealed in the wonderful honesty and frankness and probity of his defense, and in the equanimity and manliness with which he bore the sentence of death.

In fact it is admitted that there is no record of death more nobly borne. For he was forced to live for thirty days after the verdict was given, because it was the month of the Delia, and the law did not allow any public execution to take place until the sacred embassy had returned from Delos. During this interval, as all his intimate acquaintances could see, he continued to live exactly as before; and, in truth, before that time he had been admired above all men for his cheerfulness and serenity. How, then, could man die more nobly? Or what death could be nobler than the death most nobly faced?

What death more blessed than the noblest? Or what dearer to the gods than the most blessed?

I will repeat what Hermogenes, son of Hipponicus, told me about him. “When Meletus had actually formulated his indictment,” he said, Socrates talked freely in my presence, but made no reference to the case. I told him that he ought to be thinking about his defense. His first remark was, ‘Don’t you think that I have been preparing for it all my life?’ And when I asked him how, he said that he had been constantly occupied in the consideration of right and wrong, and in doing what was right and avoiding what was wrong, which he regarded as the best preparation for a defense. Then I said, ‘Don’t you see, Socrates, that the juries in our courts are apt to be misled by argument, so that they often put the innocent to death, and acquit the guilty?’ ‘Ah, yes, Hermogenes,’ he answered, ‘but when I did try to think out my defense to the jury, the deity at once resisted.’ ‘Strange words,’ said I; and he, ‘Do you think it strange, if it seems better to God that I should die now? Don’t you see that to this day I never would acknowledge that any man had lived a better or a pleasanter life than I? For they live best, I think, who strive best to become as good as possible: and the pleasantest life is theirs who are conscious that they are growing in goodness. And to this day that has been my experience; and mixing with others and closely comparing myself with them, I have held without ceasing to this opinion of myself. And not I only, but my friends cease not to feel thus towards me, not because of their love for me (for why does not love make others feel thus towards their friends?), but because they think that they too would rise highest in goodness by being with me. But if I am to live on, haply I may be forced to pay the old man’s forfeit—to become sand-blind and deaf and dull of wit, slower to learn, quicker to forget, outstripped now by those who were behind me. Nay, but even were I unconscious of the change, life would be a burden to me; and if I knew, misery and bitterness would surely be my lot.

"'But now, if I am to die unjustly, they who unjustly kill me will bear the shame of it. For if to do injustice is shameful, whatever is unjustly done must surely bring shame. But to me what shame is it that others fail to decide and act justly concerning me? I see that posterity judges differently of the dead according as they did or suffered injustice. I know that men will remember me too, and, if I die now, not as they will remember those who took my life. For I know that they will ever testify of me that I wronged no man at any time, nor corrupted any man, but strove ever to make my companions better.'"

This was the tenor of his conversation with Hermogenes and with the others. All who knew what manner of man Socrates was and who seek after virtue continue to this day to miss him beyond all others, as the chief of helpers in the quest of virtue. For myself, I have described him as he was: so religious that he did nothing without counsel from the gods; so just that he did no injury, however small, to any man, but conferred the greatest benefits on all who dealt with him; so self-controlled that he never chose the pleasanter rather than the better course; so wise that he was unerring in his judgment of the better and the worse, and needed no counselor, but relied on himself for his knowledge of them; masterly in expounding and defining such things; no less masterly in putting others to the test, and convincing them of error and exhorting them to follow virtue and gentleness. To me then he seemed to be all that a truly good and happy man must be. But if there is any doubter, let him set the character of other men beside these things; then let him judge.

# THE OECONOMICUS

## A DISCUSSION ON ESTATE MANAGEMENT

I. I once heard him discuss the subject of estate management in the following manner.

“Tell me, Critobulus, is estate management the name of a branch of knowledge, like medicine, smithing and carpentry?”

“I think so,” replied Critobulus.

“And can we say what the function of estate management is, just as we can say what is the function of each of these arts?”

“Well, I suppose that the business of a good estate manager is to manage his own estate well.”

“Yes, and in case he were put in charge of another man’s estate, could he not, if he chose, manage it as well as he manages his own? Anyone who understands carpentry can do for another exactly the same work as he does for himself; and so, I presume, can a good estate manager.”

“I think so, Socrates.”

“Is it possible, then, for one who understands this art, even if he has no property of his own, to earn money by managing another man’s estate, just as he might do by building him a house?”

“Yes, of course; and he would get a good salary if, after taking over an estate, he continued to pay all outgoings, and to increase the estate by showing a balance.”

“But what do we mean now by an estate? Is it the same thing as a house, or is all property that one possesses outside the house also part of the estate?”

“Well, I think that even if the property is situated in different cities, everything a man possesses is part of his estate.”

“Do not some men possess enemies?”

“Of course; some in fact possess many.”

“Shall we include their enemies in their possessions?”

“It would be ridiculous, surely, if one actually received a salary for increasing the number of a man’s enemies!”

“Because, you know, we supposed a man’s estate to be the same as his property.”

“To be sure—meaning thereby the good things that he possesses. No, of course I don’t call any bad thing that he may possess property.”

“You seem to use the word property of whatever is profitable to its owner.”

“Certainly; but what is harmful I regard as loss rather than wealth.”

“Yes, and consequently if a man buys a horse and doesn’t know how to manage it, and so keeps on getting thrown and injuring himself by trying to ride it, the horse is not wealth to him, I presume?”

“No, if we assume that wealth is a good thing.”

“It follows that land is not wealth either to a man who works it in such a way that his work results in loss.”

“To be sure: even land is not wealth if it makes us starve instead of supporting us.”

“And the same will hold good of sheep, will it not? if a man loses through ignorance of sheep farming, his sheep too will not be wealth to him?”

“I think not.”

“It seems, then, that your view is this: what is profitable is wealth, what is harmful is not wealth.”

“Quite so.”

"That is to say, the same things are wealth and not wealth, according as one understands or does not understand how to use them. A flute, for example, is wealth to one who is competent to play it, but to an incompetent person it is no better than useless stones."

"True—unless he sells it."

"We now see that to persons who don't understand its use, a flute is wealth if they sell it, but not wealth if they keep it instead of selling."

"Yes, Socrates, and our argument runs consistently, since we have said that what is profitable is wealth.

For a flute, if not put up for sale, is not wealth, because it is useless: if put up for sale it becomes wealth."

"Yes," commented Socrates, "provided he knows how to sell; but again, in case he sells it for something he doesn't know how to use, even then the sale doesn't convert it into wealth, according to you."

"You imply, Socrates, that even money isn't wealth to one who doesn't know how to use it."

"And you, I think, agree with me to this extent, that wealth is that from which a man can derive profit. At any rate, if a man uses his money to buy a mistress who makes him worse off in body and soul and estate, how can his money be profitable to him then?"

"By no means, unless we are ready to maintain that the weed called nightshade, which drives you mad if you eat it, is wealth."

"Then money is to be kept at a distance, Critobulus, if one doesn't know how to use it, and not to be included in wealth. But how about friends? If one knows how to make use of them so as to profit by them, what are they to be called?"

“Wealth, of course, and much more so than cattle, if it be true that they are more profitable than cattle.”

“Yes, and it follows from what you say that enemies too are wealth to anyone who can derive profit from them.”

“Well, that is my opinion.”

“Consequently it is the business of a good estate manager to know how to deal with enemies so as to derive profit from them too.”

“Most decidedly.”

“In fact, Critobulus, you cannot fail to notice that many private persons have been indebted to war for the increase of their estates, and many princes too.”

“Yes, so far so good, Socrates. But sometimes we come across persons possessed of knowledge and means whereby they can increase their estates if they work, and we find that they are unwilling to do so; and consequently we see that their knowledge profits them nothing. What are we to make of that? In these cases, surely, neither their knowledge nor their property is wealth?”

“Are you trying to raise a discussion about slaves, Critobulus?”

“Oh no, not at all: I am referring to persons of whom some, at any rate, are considered men of the highest lineage. I observe that there are persons skilled in the arts of war or peace, as the case may be, who are unwilling to practice them, and the reason, I think, is just this, that they have no master over them.”

“What, no master over them, when, in spite of their prayers for prosperity and their desire to do what will bring them good, they are thwarted in their intentions by the powers that rule them?”

“And who, pray, may these unseen rulers be?”

“No, not unseen, but open and undisguised, surely! And very vicious rulers they are too, as you yourself must see, if at least you regard idleness and moral cowardice and negligence as vice. Aye, and then there is a set of deceitful mistresses that pretend to be pleasures—such as gambling and consorting with bad companions: even the victims of their deception find as time goes on that these, after all, are really pains concealed beneath a thin veneer of pleasures, and that they are hindering them from all profitable work by their influence over them.”

“But there are other men, Socrates, whose energy is not hindered by these influences, in fact they have an eager desire to work and to make an income: nevertheless they exhaust their estates and are beset with difficulties,”

“Yes, they too are slaves, and hard indeed are their masters: some are in bondage to gluttony, some to lechery, some to drink, and some to foolish and costly ambitions. And so hard is the rule of these passions over every man who falls into their clutches, that so long as they see that he is strong and capable of work, they force him to pay over all the profits of his toil, and to spend it on their own desires; but no sooner do they find that he is too old to work, than they leave him to an old age of misery, and try to fasten the yoke on other shoulders. Ah, Critobulus, we must fight for our freedom against these tyrants as persistently as if they were armed men trying to enslave us. Indeed, open enemies may be gentlemen, and when they enslave us, may, by chastening, purge us of our faults and cause us to live better lives in future. But such mistresses as these never cease to plague men in body and soul and estate all the time that they have dominion over them.”

II. The word was now with Critobulus, who continued thus:

“Well, I think you have told me quite enough about such passions as these, and when I examine myself I find, I think, that I have them fairly well under control; and therefore, if you will advise me what I should do to increase my estate, I don’t think those mistresses, as you call them, are likely to hinder me. So do not hesitate to give me any good advice you can: unless, indeed, you have made up your mind that we are rich enough already, Socrates, and think we have no need of more money?”

“Oh, if you mean to include me, I certainly think I have no need of more money and am rich enough. But you seem to me to be quite poor, Critobulus, and at times, I assure you, I feel quite sorry for you.”

“And how much, pray,” asked Critobulus, laughing, “would your property fetch at a sale, do you suppose, Socrates, and how much would mine?”

“Well, if I found a good buyer, I think the whole of my goods and chattels, including the house, might readily sell for five minae. Yours, I feel sure, would fetch more than a hundred times that sum.”

“And in spite of that estimate, you really think you have no need of money and pity me for my poverty?”

“Yes, because my property is sufficient to satisfy my wants, but I don’t think you would have enough to keep up the style you are living in and to support your reputation, even if your fortune were three times what it is.”

“How can that be?” exclaimed Critobulus.

“Because, in the first place,” explained Socrates,

“I notice that you are bound to offer many large sacrifices; else, I fancy, you would get into trouble with gods and men alike. Secondly, it is your duty to entertain many strangers, on a generous scale too. Thirdly, you have to give dinners and play the benefactor to the citizens, or you lose your following. Moreover, I observe that already the state is exacting heavy contributions from you: you must needs keep horses, pay for choruses and gymnastic competitions, and accept presidencies; and if war breaks out, I know they will require you to maintain a ship and pay taxes that will nearly crush you. Whenever you seem to fall short of what is expected of you, the Athenians will certainly punish you as though they had caught you robbing them. Besides all this, I notice that you imagine yourself to be a rich man; you are indifferent to money, and yet go courting minions, as though the cost were nothing to you. And that is why I pity you, and fear that you may come to grief and find yourself reduced to penury. Now, if I ran short of money, no doubt you know as well as I do that I should not lack helpers who would need to contribute very little to fill my cup to overflowing. But your friends, though far better supplied with means to support their establishment than you, yet look to receive help from you”

“I cannot dispute this, Socrates,” said Critobulus, “but it is time for you to take me in hand, and see that I don’t become a real object of pity.”

At this Socrates exclaimed, “What, don’t you think it strange, Critobulus, that a little while ago, when said I was rich, you laughed at me, as though I did not even know the meaning of riches, and would not cease until you had proved me wrong and made me own that my possessions were less than one-hundredth part of yours, and yet now you bid me take you in hand and see that you don’t become in literal truth a poor man?”

“Well, Socrates, I see that you understand one process by which wealth is created—how to create a balance. So a man who saves on a small income can, I suppose, very easily show a large surplus with a large one.”

"Then don't you remember saying just now in our conversation, when you wouldn't give me leave to utter a syllable, that if a man doesn't know how to manage horses, his horses are not wealth to him, nor his land, sheep, money or anything else, if he doesn't know how to manage them? Now these are the sources from which income is derived: and how do you suppose that I can possibly know how to manage any of these things, seeing that I never yet possessed any one of them?"

"Still we held that, even if a man happens to have no wealth, there is such a thing as a science of household management. Then what reason is there why you should not know it?"

"Exactly the same reason, of course, that a man would have for not knowing how to play on the flute if he had never possessed one himself and had never borrowed one to learn on. That is just my case with regard to estate management; for never having possessed wealth myself, I have not had an opportunity of learning on an instrument of my own, and nobody has ever let me handle his, until you made your offer. Beginners, I fancy, are apt to spoil the lyres they learn on; and if I attempted to learn to manage estates by practicing on yours, possibly I might spoil it entirely for you."

"Ah, Socrates!" rejoined Critobulus, "I see you are eager to avoid giving me any help towards lightening the weight of my troublesome duties."

"Not at all, not at all," said Socrates, "I am all eagerness to tell you all I know. Suppose that you had come to me for fire, and I, having none by me, had taken you to some place where you could get it; you would not, I think, have found fault with me: or, if you had asked for water, and I, having none myself, had brought you to some other place for it, I feel sure that you would not have found fault with me for that either: or, suppose you wanted to learn music with me and I directed you to persons far more skilled in music than I am, who would be grateful to you for taking lessons with them, what fault could you find with me for doing so?"

"None, if I were fair, Socrates."

"Well then, Critobulus, I will direct you to others far more skilled than I in the things you now seek to learn from me. I confess that I have made a point of finding out who are the greatest masters of various sciences to be found in Athens. For observing once that the same pursuits lead in one case to great poverty and in another to great riches, I was filled with amazement, and thought it worth while to consider what this could mean. And on consideration I found that these things happen quite naturally. For I saw that those who follow these pursuits carelessly suffer loss, and I discovered that those who devote themselves earnestly to them accomplish them more quickly, more easily and with more profit. I think that if you would elect to learn from these, you too with God's favor would turn out a clever man of business."

III. "Socrates," exclaimed Critobulus on hearing this, "I don't intend to let you go now, until you have proved to my satisfaction what you have promised in the presence of our friends here to prove."

"Well then" said Socrates, "what if I prove to your satisfaction, Critobulus, to begin with, that some men spend large sums in building houses that are useless, while others build houses perfect in all respects for much less? Will you think that I am putting before you one of the operations that constitute estate management?"

"Yes, certainly."

"And what if I show you next the companion to this—that some possess many costly belongings and cannot use them at need, and do not even know whether they are safe and sound, and so are continually worried themselves and worrying their servants, whereas others, though they possess not more, but even less, have whatever they want ready for use?"

"What is the reason of this, then, Socrates? Is it not simply this, that the former stow their things away anywhere and the latter have everything neatly arranged in some place?"

"Yes, of course, arranged carefully in the proper place, not just anywhere."

"Your point, I take it, is that this too is an element in estate management."

"Then what if I show you besides that in some households nearly all the servants are in fetters and yet continually try to run away, whereas in others they are under no restraint and are willing to work and to stay at their posts? Won't you think that here too I am pointing out to you a notable effect of estate management?"

"Yes, of course; very much so."

"And that when men farm the same kind of land, some are poverty-stricken and declare that they are ruined by farming, and others do well with the farm and have all they want in abundance?"

"Yes, of course; for maybe some spend money not on necessary purposes only but on what brings harm to the owner and the estate."

"Perhaps there are such people. But I am referring rather to those who haven't the money to meet even the necessary expenses, though professing to be farmers."

"Now what can be the reason of that, Socrates?"

"I will take you to these too; and when you watch them, you will find out, I fancy."

"Of course; that is, if I can."

"Then you must watch, and try by experiment whether you are capable of understanding. At present I observe that when a comedy is to be seen, you get up very early and walk a very long way and press me eagerly to go to the play with you. But you have never yet invited me to see a drama of real life like this."

"You think me ridiculous, don't you, Socrates?"

"You think yourself far more so, I am sure. And suppose I show you that some have been brought to penury by keeping horses, while others prosper by doing so, and moreover glory in their gain? "

"Well, I too see and know instances of both; I am not one of the gainers for all that."

"The fact is you watch them just as you watch the actors in tragedy or comedy, not, I suppose, to become a playwright, but for the pleasure of seeing and hearing something. And perhaps there is no harm in that, because you don't want to write plays; but seeing that you are forced to meddle with horses, don't you think that common-sense requires you to see that you are not ignorant of the business, the more so as the self-same horses are both good to use and profitable to sell?"

"Would you have me break in colts, Socrates?"

"Of course not, no more than I would have you buy children to train as agricultural laborers; but horses and human beings alike, I think, on reaching a certain age forthwith become useful and go on improving. I can also show you that husbands differ widely in their treatment of their wives, and some succeed in winning their co-operation and thereby increase their estates, while others bring utter ruin on their houses by their behavior to them."

"And ought one to blame the husband or the wife for that, Socrates?"

"When a sheep is ailing," said Socrates, "we generally blame the shepherd, and when a horse is vicious, we generally find fault with his rider. In the case of a wife, if she receives instruction in the right way from her husband and yet does badly, perhaps she should bear the blame; but if the husband does not instruct his wife in the right way of doing things, and so finds her ignorant, should he not bear the blame himself? Anyhow, Critobulus, you should tell us the truth, for we are all friends here. Is there anyone to whom you commit more affairs of importance than you commit to your wife?"

"There is not."

"Is there anyone with whom you talk less?"

"There are few or none; I confess."

"And you married her when she was a mere child and had seen and heard almost nothing?"

"Certainly."

"Then it would be far more surprising if she understood what she should say or do than if she made mistakes."

"But what of the husbands who, as you say, have good wives, Socrates? Did they train them themselves?"

"There's nothing like investigation. I will introduce Aspasia to you, and she will explain the whole matter to you with more knowledge than I possess. I think that the wife who is a good partner in the household contributes just as much as her husband to its good; because the incomings for the most part are the result of the husband's exertions, but the outgoings are controlled mostly by the wife's dispensation. If both do their part well, the estate is increased; if they act incompetently, it is diminished. If you think you want to know about other branches of knowledge, I fancy I can show you people who acquit themselves creditably in any one of them."

IV. "Surely, Socrates, there is no need to go through the whole list. For it is not easy to get workmen who are skilled in all the arts, nor is it possible to become an expert in them. Pray select the branches of knowledge that seem the noblest and would be most suitable for me to cultivate: show me these, and those who practice them; and give me from your own knowledge any help you can towards learning them."

"Very good, Critobulus; for, to be sure, the illiberal arts, as they are called, are spoken against, and are, naturally enough, held in utter disdain in our states. For they spoil the bodies of the workmen and the foremen, forcing them to sit still and live indoors, and in some cases to spend the day at the fire. The softening of the body involves a serious weakening of the mind. Moreover, these so-called illiberal arts leave no spare time for attention to one's friends and city, so that those who follow them are reputed bad at dealing with friends and bad defenders of their country. In fact, in some of the states, and especially in those reputed warlike, it is not even lawful for any of the citizens to work at illiberal arts."

"But what arts, pray, do you advise us to follow, Socrates?"

"Need we be ashamed of imitating the king of the Persians? For they say that he pays close attention to husbandry and the art of war, holding that these are two of the noblest and most necessary pursuits."

“And do you really believe, Socrates,” exclaimed Critobulus on hearing this, “that the king of the Persians includes husbandry among his occupations?”

“Perhaps, Critobulus, the following considerations will enable us to discover whether he does so. We allow that he pays close attention to warfare, because he has given a standing order to every governor of the nations from which he receives tribute, to supply maintenance for a specified number of horsemen and archers and slingers and light infantry, that they may be strong enough to control his subjects and to protect the country in the event of an invasion; and, apart from these, he maintains garrisons in the citadels. Maintenance for these is supplied by the governor charged with this duty, and the king annually reviews the mercenaries and all the other troops ordered to be under arms, assembling all but the men in the citadels at the place of muster, as it is called: he personally inspects the men who are near his residence, and sends trusted agents to review those who live far away. The officers, whether commanders of garrisons or of regiments or viceroys, who turn out with a full complement of men and parade them equipped with horses and arms in good condition, he promotes in the scale of honor and enriches with large grants of money; but those officers whom he finds to be neglecting the garrisons or making profit out of them he punishes severely, and appoints others to take their office. These actions, then, seem to us to leave no room for question that he pays attention to warfare.

“As for the country, he personally examines so much of it as he sees in the course of his progress through it; and he receives reports from his trusted agents on the territories that he does not see for himself. To those governors who are able to show him that their country is densely populated and that the land is in cultivation and well stocked with the trees of the district and with the crops, he assigns more territory and gives presents, and rewards them with seats of honor. Those whose territory he finds uncultivated and thinly populated either through harsh administration or through contempt or through carelessness, he punishes, and appoints others to take their office. By such action, does he seem to provide less for the cultivation of the land by the inhabitants than for its protection by the garrisons? Moreover, each of these duties is entrusted to a separate class of officers; one class governs the residents and the laborers, and collects tribute from them, the other commands the men under arms and the garrisons. If the commander of a garrison affords insufficient protection to the country, the civil governor and controller of agriculture denounces the commander, setting out that the inhabitants are unable to work the farms for want of protection. If, on the other hand, the commander brings peace to the farms, and the governor nevertheless causes the land to be sparsely populated and idle, the commander in turn denounces the governor. For, roughly speaking, where cultivation is inefficient, the garrisons are not maintained and the tribute cannot be paid. Wherever a viceroy is appointed, he attends to both these matters."

At this point Critobulus said: "Well, Socrates, if the Great King docs this, it seems to me that he pays as much attention to husbandry as to warfare."

"Yet further," continued Socrates, "in all the districts he resides in and visits he takes care that there are 'paradises,' as they call them, full of all the good and beautiful things that the soil will produce, and in this he himself spends most of his time, except when the season precludes it."

"Then it is of course necessary, Socrates, to take care that these paradises in which the king spends his time shall contain a fine stock of trees and all other beautiful things that the soil produces."

"And some say, Critobulus, that when the king makes gifts, he first invites those who have distinguished themselves in war, because it is useless to have broad acres under tillage unless there are men to defend them; and next to them, those who stock and cultivate the land best, saying that even stout-hearted warriors cannot live without the aid of workers. There is a story that Cyrus, lately the most illustrious of princes, once said to the company invited to receive his gifts, 'I myself deserve to receive the gifts awarded in both classes; for I am the best at stocking land and the best at protecting the stock.'"

"Well, if Cyrus said that, Socrates, he took as much pride in cultivating and stocking land as in being a warrior."

"Yes, and, upon my word, if Cyrus had only lived, it seems that he would have proved an excellent ruler. One of the many proofs that he has given of this is the fact that, when he was on his way to fight his brother for the throne, it is said that not a man deserted from Cyrus to the king, whereas tens of thousands deserted from the king to Cyrus. I think you have one clear proof of a ruler's excellence, when men obey him willingly and choose to stand by him in moments of danger. Now his friends all fought at his side and fell at his side to a man, fighting round his body, with the one exception of Ariaeus, whose place in the battle was, in point of fact, on the left wing.

"Further, the story goes that when Lysander came to him bringing the gifts from the allies, this Cyrus showed him various marks of friendliness, as Lysander himself related once to a stranger at Megara, adding besides that Cyrus personally showed him round his paradise at Sardis. Now Lysander admired the beauty of the trees in it, the accuracy of the spacing, the straightness of the rows, the regularity of the angles and the multitude of the sweet scents that clung round them as they walked; and for wonder of these things he cried, 'Cyrus, I really do admire all these lovely things, but I am far more impressed with your agent's skill in measuring and arranging everything so exactly.' Cyrus was delighted to hear this and said: 'Well, Lysander, the whole of the measurement and arrangement is my own work, and I did some of the planting myself.' 'What, Cyrus?' exclaimed Lysander, looking at him, and marking the beauty and perfume of his robes, and the splendor of the necklaces and bangles and other jewels that he was wearing; 'did you really plant part of this with your own hands?' ' Does that surprise you, Lysander?' asked Cyrus in reply. I swear by the Sun-god that never yet sat down to dinner when in sound health, without first working hard at some task of war or agriculture, or exerting myself somehow.'

"Lysander himself declared, I should add, that on hearing this, he congratulated him in these words: 'I think you deserve your happiness, Cyrus, for you earn it by your virtues.'"

V. "Now I tell you this," continued Socrates, "because even the wealthiest cannot hold aloof from husbandry. For the pursuit of it is in some sense a luxury as well as a means of increasing one's estate and of training the body in all that a free man should be able to do. For, in the first place, the earth yields to cultivators the food by which men live; she yields besides the luxuries they enjoy. Secondly, she supplies all the things with which they decorate altars and statues and themselves, along with most pleasant sights and scents. Thirdly, she produces or feeds the ingredients of many delicate dishes; for the art of breeding stock is closely linked with husbandry; so that men have victims for propitiating the gods with sacrifice and cattle for their own use. And though she supplies good things in abundance, she suffers them not to be won without toil, but accustoms men to endure winter’s cold and summer’s heat. She gives increased strength through exercise to the men that labor with their own hands, and hardens the overseers of the work by rousing them early and forcing them to move about briskly. For on a farm no less than in a town the most important operations have their fixed times. Again, if a man wants to serve in the cavalry, farming is his most efficient partner in furnishing keep for his horse; if on foot, it makes his body brisk. And the land helps in some measure to arouse a liking for the toil of hunting, since it affords facilities for keeping hounds and at the same time supplies food for the wild game that preys on the land. And if husbandry benefits horses and hounds, they benefit the farm no less, the horses by carrying the overseer early to the scene of his duties and enabling him to leave it late, the hounds by keeping the wild animals from injuring crops and sheep, and by helping to give safety to solitude. The land also stimulates armed protection of the country on the part of the husbandmen, by nourishing her crops in the open for the strongest to take. And what art produces better runners, throwers and jumpers than husbandry? What art rewards the laborer more generously? What art welcomes her follower more gladly, inviting him to come and take whatever he wants? What art entertains strangers more generously? Where is there greater facility for passing the winter comforted by generous fire and warm baths, than on a farm? Where is it pleasanter to spend the summer enjoying the cool waters and breezes and shade, than in the country? What other art yields more seemly first-fruits for the gods, or gives occasion for more crowded festivals? What art is dearer to servants, or pleasanter to a wife, or more delightful to children, or more agreeable to friends? To me indeed it seems strange, if any free man has come by a possession pleasanter than this, or has found out an occupation pleasanter than this or more useful for winning a livelihood.

"Yet again, the earth willingly teaches righteousness to those who can learn; for the better she is served, the more good things she gives in return. And if haply those who are occupied in farming, and are receiving a rigorous and manly teaching, are forced at any time to quit their lands by great armies, they, as men well-found in mind and in body, can enter the country of those who hinder them, and take sufficient for their support. Often in time of war it is safer to go armed in search of food than to gather it with farming implements.

"Moreover, husbandry helps to train men for corporate effort. For men are essential to an expedition against an enemy, and the cultivation of the soil demands the aid of men. Therefore nobody can be a good farmer unless he makes his laborers both eager and obedient; and the captain who leads men against an enemy must contrive to secure the same results by rewarding those who act as brave men should act and punishing the disobedient. And it is no less necessary for a farmer to encourage his laborers often, than for a general to encourage his men. And slaves need the stimulus of good hopes no less, nay, even more than free men, to make them steadfast. It has been nobly said that husbandry is the mother and nurse of the other arts.

For when husbandry flourishes, all the other arts are in good fettle; but whenever the land is compelled to lay waste, the other arts of landsmen and mariners alike well-nigh perish."

"Well, Socrates," replied Critobulus to this, "I think you are right so far. But in husbandry a man can rely very little on forecast. For hailstorms and frosts sometimes, and droughts and rains and blight ruin schemes well planned and well carried out; and sometimes well-bred stock is miserably destroyed by an outbreak of disease.”

“Well,” said Socrates in reply, “I thought you knew, Critobulus, that the operations of husbandry no less than those of war are in the hands of the gods. And you observe, I suppose, that men engaged in war try to propitiate the gods before taking action; and with sacrifices and omens seek to know what they ought to do and what they ought not to do; and for the business of husbandry do you think it less necessary to ask the blessing of the gods? Know of a surety that right-minded men offer prayer for fruits and crops and cattle and horses and sheep, aye and for all that they possess.”

VI. “Well, Socrates, I think you are right when you bid me try to begin every undertaking with the gods’ help, since the gods control the works of peace no less than of war. We will try, then, to do so. But now go back to the point where you broke off in your talk about estate management, and try to expound the subject completely step by step, since after hearing what you have said so far, I seem even now to discern rather more clearly than before what I must do to earn my living.”

“I suggest then,” resumed Socrates, “that we should first recapitulate those points of our discussion on which we have already reached agreement, in order that we may try to agree as thoroughly, if possible, when we go through the remaining steps.”

“O yes; when several are jointly interested in money, it is pleasant to have no disagreement in going over the accounts; and it is equally pleasant for us, as the interested parties in a discussion, to agree as we go over the several steps.”

"Well now, we thought that estate management is the name of a branch of knowledge, and this knowledge appeared to be that by which men can increase estates, and an estate appeared to be identical with the total of one's property, and we said that property is that which is useful for supplying a livelihood, and useful things turned out to be all those things that one knows how to use. Now we thought that it is impossible to learn all the sciences, and we agreed with our states in rejecting the so-called illiberal arts, because they seem to spoil the body and unnerve the mind. We said that the clearest proof of this would be forthcoming, if in the course of a hostile invasion the husbandmen and craftsmen were made to sit apart, and each group were asked whether they voted for defending the country or withdrawing from the open and guarding the fortresses. We thought that in these circumstances the men who have to do with the land would give their vote for defending it, the craftsmen for not fighting, but sitting still, as they have been brought up to do, aloof from toil and danger. We came to the conclusion that for a gentleman the best occupation and the best science is husbandry, from which men obtain what is necessary to them. For this occupation seemed to be the easiest to learn and the pleasantest to work at, to give to the body the greatest measure of strength and beauty, and to leave to the mind the greatest amount of spare time for attending to the interests of one's friends and city. Moreover, since the crops grow and the cattle on a farm graze outside the walls, husbandry seemed to us to help in some measure to make the workers valiant. And so this way of making a living appeared to be held in the highest estimation by our states, because it seems to turn out the best citizens and most loyal to the community."

"I have already heard enough, I think, Socrates, to convince me that it is in the highest degree honorable, good and pleasant to get a living by husbandry. But you told me that you have discovered the reasons why some farmers are so successful that husbandry yields them all they need in abundance, and others are so inefficient that they find farming unprofitable. I should like to hear the reasons in each case, in order that we may do what is good and avoid what is harmful."

"Well then, Critobulus, l propose to give you a complete account of an interview I once had with a man whom took to be really one of those who are justly styled 'gentlemen.'"

"I should greatly like to hear it, Socrates, for I long to deserve that title myself."

"Then I will tell you how came to take note of him. For it took me a very little time to visit our good builders, good smiths, good painters, good sculptors, and other people of the kind, and to inspect those of their works that are declared to be beautiful; but I felt a desire to meet one of those who are called by that grand name 'gentleman,' which implies 'beautiful' as well as 'good,' in order to consider what they did to deserve it. And, first, because the epithet 'beautiful' is added to 'good,' I went up to every person I noticed, and tried to discover whether I could anywhere see goodness in combination with beauty. But after all, it was not so: I thought I discovered that some who were beautiful to look at were thoroughly depraved in their minds. So I decided to let good looks alone, and to seek out someone known as 'a gentleman.' Accordingly, since I heard the name applied to Ischomachus by men, women, citizens and strangers alike, I decided to meet him, if I could.

VII. "So, happening one day to see him sitting in the cloister of the temple of Zeus Eleutherius apparently at leisure, I approached, and sitting down at his side, said:

"'Why sitting still, Ischomachus? You are not much in the habit of doing nothing; for generally when I see you in the market-place you are either busy or at least not wholly idle.'

"'True, and you would not have seen me so now, Socrates, had I not made an appointment with some strangers here.'

"'Pray where do you spend your time,' said I, 'and what do you do when you are not engaged in some such occupation? For I want very much to learn how you came to be called a gentleman, since you do not pass your time indoors, and your condition does not suggest that you do so.'

"Smiling at my question, 'How came you to be called a gentleman?', and apparently well pleased, Ischomachus answered: 'Well, Socrates, whether certain persons call me so when they talk to you about me, I know not. Assuredly when they challenge me to an exchange of property in order to escape some public burden, fitting a warship or providing a chorus, nobody looks for the "gentleman," but the challenge refers to me as plain "Ischomachus," my father's son. Well now, Socrates, as you ask the question, I certainly do not pass my time indoors; for, you know, my wife is quite capable of looking after the house by herself.'

Ah, Ischomachus,' said I, that is just what I want to hear from you. Did you yourself train your wife to be of the right sort, or did she know her household duties when you received her from her parents?'

"'Why, what knowledge could she have had, Socrates, when I took her for my wife? She was not yet fifteen years old when she came to me, and up to that time she had lived in leading-strings, seeing, hearing and saying as little as possible. If when she came she knew no more than how, when given wool, to turn out a cloak, and had seen only how the spinning is given out to the maids, is not that as much as could be expected? For in control of her appetite, Socrates, she had been excellently trained; and this sort of training is, in my opinion, the most important to man and woman alike.’

“‘But in other respects did you train your wife yourself, Ischomachus, so that she should be competent to perform her duties?’

“‘Oh no, Socrates; not until I had first offered sacrifice and prayed that I might really teach, and she learn what was best for us both.’

“‘Did not your wife join with you in these same sacrifices and prayers? ‘

“‘Oh yes, earnestly promising before heaven to behave as she ought to do; and it was easy to see that she would not neglect the lessons I taught her.’

“‘Pray tell me, Ischomachus, what was the first lesson you taught her, since I would sooner hear this from your lips than an account of the noblest athletic event or horse-race?’

“‘Well, Socrates, as soon as I found her docile and sufficiently domesticated to carry on conversation, I questioned her to this effect:

“‘“Tell me, dear, have you realized for what reason I took you and your parents gave you to me? For it is obvious to you, I am sure, that we should have had no difficulty in finding someone else to share our beds. But I for myself and your parents for you considered who was the best partner of home and children that we could get. My choice fell on you, and your parents, it appears, chose me as the best they could find. Now if God grants us children, we will then think out how we shall best train them. For one of the blessings in which we shall share is the acquisition of the very best of allies and the very best of support in old age; but at present we share in this our home. For I am paying into the common stock all that I have, and you have put in all that you brought with you. And we are not to reckon up which of us has actually contributed the greater amount, but we should know of a surety that the one who proves the better partner makes the more valuable contribution.”

“‘My wife’s answer was as follows, Socrates: “How can I possibly help you? What power have I? Nay, all depends on you. My duty, as my mother told me, is to be discreet.”

“‘“Yes, of course, dear,” I said, “my father said the same to me. But discretion both in a man and a woman, means acting in such a manner that their possessions shall be in the best condition possible, and that as much as possible shall be added to them by fair and honorable means.”

“‘“And what do you see that I can possibly do to help in the improvement of our property?” asked my wife.

“ ‘“Why,” said I, “of course you must try to do as well as possible what the gods made you capable of doing and the law sanctions.”

“‘“And pray, what is that?” said she.

“‘“Things of no small moment, I fancy,” replied I, “unless, indeed, the tasks over which the queen bee in the hive presides are of small moment.

For it seems to me, dear, that the gods with great discernment have coupled together male and female, as they are called, chiefly in order that they may form a perfect partnership in mutual service. For, in the first place, that the various species of living creatures may not fail, they are joined in wedlock for the production of children. Secondly, offspring to support them in old age is provided by this union, to human beings, at any rate. Thirdly, human beings live not in the open air, like beasts, but obviously need shelter. Nevertheless, those who mean to win store to fill the covered place, have need of someone to work at the open-air occupations; since ploughing, sowing, planting and grazing are all such open-air employments; and these supply the needful food. Then again, as soon as this is stored in the covered place, then there is need of someone to keep it and to work at the things that must be done under cover. Cover is needed for the nursing of the infants; cover is needed for the making of the corn into bread, and likewise for the manufacture of clothes from the wool. And since both the indoor and the out door tasks demand labor and attention, God from the first adapted the woman's nature, I think, to the indoor and man's to the outdoor tasks and cares.

" '"For he made the man's body and mind more capable of enduring cold and heat, and journeys and campaigns; and therefore imposed on him the outdoor tasks. To the woman, since he has made her body less capable of such endurance, I take it that God has assigned the indoor tasks. And knowing that he had created in the woman and had imposed on her the nourishment of the infants, he meted out to her a larger portion of affection for new-born babes than to the man. And since he imposed on the woman the protection of the stores also, knowing that for protection a fearful disposition is no disadvantage, God meted out a larger share of fear to the woman than to the man; and knowing that he who deals with the outdoor tasks will have to be their defender against any wrong-doer, he meted out to him again a larger share of courage. But because both must give and take, he granted to both impartially memory and attention; and so you could not distinguish whether the male or the female sex has the larger share of these. And God also gave to both impartially the power to practice due self-control, and gave authority to whichever is the better—whether it be the man or the woman—to win a larger portion of the good that comes from it. And just because both have not the same aptitudes, they have the more need of each other, and each member of the pair is the more useful to the other, the one being competent where the other is deficient.

“ “‘Now since we know, dear, what duties have been assigned to each of us by God, we must endeavor, each of us, to do the duties allotted to us as well as possible. The law, moreover, approves of them, for it joins together man and woman. And as God has made them partners in their children, so the law appoints them partners in the home. And besides, the law declares those tasks to be honorable for each of them wherein God has made the one to excel the other. Thus, to the woman it is more honorable to stay indoors than to abide in the fields, but to the man it is unseemly rather to stay indoors than to attend to the work outside. If a man acts contrary to the nature God has given him, possibly his defiance is detected by the gods and he is punished for neglecting his own work, or meddling with his wife’s. I think that the queen bee is busy about just such other tasks appointed by God.”

““And pray.” said she, “how do the queen bee’s tasks resemble those that I have to do?”

““How? she stays in the hive,” I answered, “and does not suffer the bees to be idle; but those whose duty it is to work outside she sends forth to their work; and whatever each of them brings in, she knows and receives it, and keeps it till it is wanted. And when the time is come to use it, she portions out the just share to each. She likewise presides over the weaving of the combs in the hive, that they may be well and quickly woven, and cares for the brood of little ones, that it be duly reared up. And when the young bees have been duly reared and are fit for work, she sends them forth to found a colony, with a leader to guide the young adventurers.”

““Then shall I too have to do these things?” said my wife.

“Indeed you will,” said I: “your duty will be to remain indoors and send out those servants whose work is outside, and superintend those who are to work indoors, and to receive the incomings, and distribute so much of them as must be spent, and watch over so much as is to be kept in store, and take care that the sum laid by for a year be not spent in a month. And when wool is brought to you, you must see that cloaks are made for those that want them. You must see too that the dry corn is in good condition for making food. One of the duties that fall to you, however, will perhaps seem rather thankless: you will have to see that any servant who is ill is cared for.”

“Oh no,” cried my wife, “it will be delightful, assuming that those who are well cared for are going to feel grateful and be more loyal than before.”

““‘Why, my dear,” cried I, delighted with her answer, “what makes the bees so devoted to their leader in the hive, that when she forsakes it, they all follow her, and not one thinks of staying behind? Is it not the result of some such thoughtful acts on her part?”

“It would surprise me,” answered my wife, “if the leader’s activities did not concern you more than me. For my care of the goods indoors and my management would look rather ridiculous, I fancy, if you did not see that something is gathered in from outside.”

““‘And my ingathering would look ridiculous,” I countered, “if there were not someone to keep what is gathered in. Don’t you see how they who ‘draw water in a leaky jar,’ as the saying goes, are pitied, because they seem to labor in vain?”

“““Of course,” she said, “for they are indeed in a miserable plight if they do that.”

“““But I assure you, dear, there are other duties peculiar to you that are pleasant to perform. It is delightful to teach spinning to a maid who had no knowledge of it when you received her, and to double her worth to you: to take in hand a girl who is ignorant of housekeeping and service, and after teaching her and making her trustworthy and serviceable to find her worth any amount: to have the power of rewarding the discreet and useful members of your household, and of punishing anyone who turns out to be a rogue. But the pleasantest experience of all is to prove yourself better than I am, to make me your servant; and, so far from having cause to fear that as you grow older you may be less honored in the household, to feel confident that with advancing years, the better partner you prove to me and the better housewife to our children, the greater will be the honor paid to you in our home. For it is not through outward comeliness that the sum of things good and beautiful is increased in the world, but by the daily practice of the virtues."

"'Such was the tenor of my earliest talks with her, Socrates, so far as I can recall them.'"

VIII. "'And did you find, Ischomachus, that they acted as a stimulus to her diligence?' I asked.

"'Yes, indeed,' answered Ischomachus, 'and I recollect that she was vexed and blushed crimson, because she could not give me something from the stores when I asked for it. And seeing that she was annoyed, I said: "Don't worry, dear, because you cannot give me what I am asking for. For not to be able to use a thing when you want it is poverty unquestionably; but failure to get the thing that you seek is less grievous than not to seek it at all because you know that it does not exist. The fact is, you are not to blame for this, but I, because I handed over the things to you without giving directions where they were to be put, so that you might know where to put them and where to find them. My dear, there is nothing so convenient or so good for human beings as order. Thus, a chorus is a combination of human beings; but when the members of it do as they choose, it becomes mere confusion, and there is no pleasure in watching it; but when they act and chant in an orderly fashion, then those same men at once seem worth seeing and worth hearing. Again, my dear, an army in disorder is a confused mass, an easy prey to enemies, a disgusting sight to friends and utterly useless,—donkey, trooper, carrier, light-armed, horseman, chariot, huddled together. For how are they to march in such a plight, when they hamper one another, some walking while others run, some running while others halt, chariot colliding with horseman, donkey with chariot, carrier with trooper? If there is fighting to be done, how can they fight in such a state? For the units that must needs run away when attacked are enough to trample underfoot the heavy infantry. But an army in orderly array is a noble sight to friends, and an unwelcome spectacle to the enemy. What friend would not rejoice as he watches a strong body of troopers marching in order, would not admire cavalry riding in squadrons? And what enemy would not fear troopers, horsemen, light-armed, archers, slingers disposed in serried ranks and following their officers in orderly fashion? Nay, even on the march where order is kept, though they number tens of thousands, all move steadily forward as one man; for the line behind is continually filling up the gap. Or, again, why is a man-of-war laden with men terrible to an enemy and a goodly sight to friends, if not for its speed? Why do the men on board not hamper one another?

Is it not just because they are seated in order, swing forward and backward in order, embark and disembark in order? If I want a type of disorder, I think of a farmer who has stored barley, wheat and pulse in one bin; and then when he wants a bannock or a loaf or a pudding, must pick out the grain instead of finding it separate and ready for use.

““And so, my dear, if you do not want this confusion, and wish to know exactly how to manage our goods, and to find with ease whatever is wanted, and to satisfy me by giving me anything I ask for, let us choose the place that each portion should occupy; and, having put the things in their place, let us instruct the maid to take them from it and put them back again. Thus we shall know what is safe and sound and what is not; for the place itself will miss whatever is not in it, and a glance will reveal anything that wants attention, and the knowledge where each thing is will quickly bring it to hand, so that we can use it without trouble.”

‘“Once I had an opportunity of looking over the great Phoenician merchantman, Socrates, and I thought I had never seen tackle so excellently and accurately arranged. For I never saw so many bits of stuff’ packed away separately in so small a receptacle. As you know, a ship needs a great quantity of wooden and corded implements when she comes into port or puts to sea, much rigging, as it is called, when she sails, many contrivances to protect her against enemy vessels; she carries a large supply of arms for the men, and contains a set of household utensils for each mess. In addition to all this, she is laden with cargo which the skipper carries for profit. And all the things mention were contained in a chamber of little more than a hundred square cubits. And I noticed that each kind of thing was so neatly stowed away that there was no confusion, no work for a searcher, nothing out of place, no troublesome untying to cause delay when anything was wanted for immediate use. I found that the steersman’s servant, who is called the mate, knows each particular section so exactly, that he can tell even when away where everything is kept and how much there is of it, just as well as a man who knows how to spell can tell how many letters there are in Socrates and in what order they come. Now I saw this man in his spare time inspecting all the stores that are wanted, as a matter of course, in the ship. I was surprised to see him looking over them, and asked what he was doing.

“Sir,” he answered, “I am looking to see how the ship’s tackle is stored, in case of accident, or whether anything is missing or mixed up with other stuff.

For when God sends a storm at sea, there’s no time to search about for what you want or to serve it out if it’s in a muddle. For God threatens and punishes careless fellows, and you’re lucky if he merely refrains from destroying the innocent; and if he saves you when you do your work well, you have much cause to thank heaven.”

“‘Now after seeing the ship’s tackle in such perfect order, I told my wife: “Considering that folk aboard a merchant vessel, even though it be a little one, find room for things and keep order, though tossed violently to and fro, and find what they want to get, though terror-stricken, it would be downright carelessness on our part if we, who have large storerooms in our house to keep everything separate and whose house rests on solid ground, fail to find a good and handy place for everything. Would it not be sheer stupidity on our part?

“ ‘“How good it is to keep one’s stock of utensils in order, and how easy to find a suitable place in a house to put each set in, I have already said. And what a beautiful sight is afforded by boots of all sorts and conditions ranged in rows! How beautiful it is to see cloaks of all sorts and conditions kept separate, or blankets, or brazen vessels, or table furniture! Yes, no serious man will smile when I claim that there is beauty in the order even of pots and pans set out in neat array, however much it may move the laughter of a wit. There is nothing, in short, that does not gain in beauty when set out in order. For each set looks like a troop of utensils, and the space between the sets is beautiful to see, when each set is kept clear of it, just as a troop of dancers about the altar is a beautiful spectacle in itself, and even the free space looks beautiful and unencumbered.

"'"We can test the truth of what I say, dear, without any inconvenience and with very little trouble. Moreover, my dear, there is no ground for any misgiving that it is hard to find someone who will get to know the various places and remember to put each set in its proper place. For we know, I take it, that the city as a whole has ten thousand times as much of everything as we have; and yet you may order any sort of servant to buy something in the market and to bring it home, and he will be at no loss: every one of them is bound to know where he should go to get each article. Now the only reason for this is that everything is kept in a fixed place. But when you are searching for a person, you often fail to find him, though he may be searching for you himself. And for this again the one reason is that no place of meeting has been fixed."

"'Such is the gist of the conversation I think I remember having with her about the arrangement of utensils and their use.'"

IX. "'And what was the result?' I asked; 'did you think, Ischomachus, that your wife paid any heed to the lessons you tried so earnestly to teach her?'

"'Why, she promised to attend to them, and was evidently pleased beyond measure to feel that she had found a solution of her difficulties, and she begged me to lose no time in arranging things as I had suggested.'

"'And how did you arrange things for her, Ischornachus?' I asked.

"'Why, I decided first to show her the possibilities of our house. For it contains few elaborate decorations, Socrates;

but the rooms are designed simply with the object of providing as convenient receptacles as possible for the things that are to fill them, and thus each room invited just what was suited to it. Thus the store-room by the security of its position called for the most valuable blankets and utensils, the dry covered rooms for the corn, the cool for the wine, the well-lit for those works of art and vessels that need light. I showed her decorated living-rooms for the family that are cool in summer and warm in winter.[1] I showed her that the whole house fronts south, so that it was obvious that it is sunny in winter and shady in summer. I showed her the women's quarters too, separated by a bolted door from the men's, so that nothing which ought not to be moved may be taken out, and that the servants may not breed without our leave. For honest servants generally prove more loyal if they have a family; but rogues, if they live in wedlock, become all the more prone to mischief.

"'And now that we had completed the list, we forthwith set about separating the furniture tribe by tribe. We began by collecting together the vessels we use in sacrificing. After that we put together the women's holiday finery, and the men's holiday and war garb, blankets in the women's, blankets in the men's quarters, women's shoes, men's shoes. Another tribe consisted of arms, and three others of implements for spinning, for bread-making and for cooking; others, again, of the things required for washing, at the kneading-trough, and for table use. All these we divided into two sets, things in constant use and things reserved for festivities. We also put by themselves the things consumed month by month, and set apart the supplies calculated to last for a year. For this plan makes it easier to tell how they will last to the end of the time. When we had divided all the portable property tribe by tribe, we arranged everything in its proper place. After that we showed the servants who have to use them where to keep the utensils they require daily, for baking, cooking, spinning and so forth; handed them over to their care and charged them to see that they were safe and sound. The things that we use only for festivals or entertainments, or on rare occasions, we handed over to the housekeeper, and after showing her their places and counting and making a written list of all the items, we told her to give them out to the right servants, to remember what she gave to each of them, and when receiving them back to put everything in the place from which she took it.

In appointing the housekeeper, we chose the woman whom on consideration we judged to be the most temperate in eating and wine drinking and sleeping and the most modest with men, the one, too, who seemed to have the best memory, to be most careful not to offend us by neglecting her duties, and to think most how she could earn some reward by obliging us. We also taught her to be loyal to us by making her a partner in all our joys and calling on her to share our troubles. Moreover, we trained her to be eager for the improvement of our estate, by making her familiar with it and by allowing her to share in our success. And further, we put justice into her, by giving more honor to the just than to the unjust, and by showing her that the just live in greater wealth and freedom than the unjust; and we placed her in that position of superiority.

"'When all this was done, Socrates, I told my wife that all these measures were futile, unless she saw to it herself that our arrangement was strictly adhered to in every detail. I explained that in well-ordered cities the citizens are not satisfied with passing good laws: they go further, and choose guardians of the laws, who act as overseers, commending the law-abiding and punishing law-breakers.

So I charged my wife to consider herself guardian of the laws to our household. And just as the commander of a garrison inspects his guards, so must she inspect the chattels whenever she thought it well to do so; as the Council scrutinizes the cavalry and the horses, so she was to make sure that everything was in good condition: like a queen, she must reward the worthy with praise and honor, so far as in her lay, and not spare rebuke and punishment when they were called for.

"'Moreover, I taught her that she should not be vexed that I assigned heavier duties to her than to the servants in respect of our possessions. Servants, I pointed out, carry, tend and guard their master's property, and only in this sense have a share in it; they have no right to use anything except by the owner's leave; but everything belongs to the master, to use it as he will. Therefore, I explained, he who gains most by the preservation of the goods and loses most by their destruction, is the one who is bound to take most care of them.'

"'Well, now, Ischomachus,' said I, 'was your wife inclined to pay heed to your words?'

"'Why, Socrates,' he cried, 'she just told me that I was mistaken if I supposed that I was laying a hard task on her in telling her that she must take care of our things. It would have been harder, she said, had I required her to neglect her own possessions, than to have the duty of attending to her own peculiar blessings. The fact is,' he added, 'just as it naturally comes easier to a good woman to care for her own children than to neglect them, so, I imagine, a good woman finds it pleasanter to look after her own possessions than to neglect them.'"

X. "Now when I heard that his wife had given him this answer, I exclaimed; 'Upon my word, Ischomachus, your wife has a truly masculine mind by your showing!'

“‘Yes,’ said Ischomachus, ‘and I am prepared to give you other examples of high-mindedness on her part, when a word from me was enough to secure her instant obedience.’

“‘Tell me what they are,’ I cried; ‘for if Zeuxis showed me a fair woman’s portrait painted by his own hand, it would not give me half the pleasure I derive from the contemplation of a living woman’s virtues.’

“Thereupon Ischomachus took up his parable. ‘Well, one day, Socrates, I noticed that her face was made up: she had rubbed in white lead in order to look even whiter than she is, and alkanet juice to heighten the rosy color of her cheeks; and she was wearing boots with thick soles to increase her height. So I said to her, “Tell me, my dear, how should I appear more worthy of your love as a partner in our goods, by disclosing to you our belongings just as they are, without boasting of imaginary possessions or concealing any part of what we have, or by trying to trick you with an exaggerated account, showing you bad money and gilt necklaces and describing clothes that will fade as real purple?”

“‘“Hush!” she broke in immediately, “pray don’t be like that—I could not love you with all my heart if you were like that!”

“‘“Then, are we not joined together by another bond of union, dear, to be partners in our bodies?”

“‘“The world says so, at any rate.”

“‘“How then should I seem more worthy of your love in this partnership of the body—by striving to have my body hale and strong when I present it to you, and so literally to be of a good countenance in your sight, or by smearing my cheeks with red lead and painting myself under the eyes with rouge before I show myself to you and clasp you in my arms, cheating you and offering to your eyes and hands red lead instead of my real flesh?”

"'"Oh," she cried, "I would sooner touch you than red lead, would sooner see your own color than rouge, would sooner see your eyes bright than smeared with grease."

"'"Then please assume, my dear, that I do not prefer white paint and dye of alkanet to your real color; but just as the gods have made horses to delight in horses, cattle in cattle, sheep in sheep, so human beings find the human body undisguised most delightful. Tricks like these may serve to gull outsiders, but people who live together are bound to be found out, if they try to deceive one another. For they are found out while they are dressing in the morning; they perspire and are lost; a tear convicts them; the bath reveals them as they are!

"'And; pray, what did she say to that?' I asked.

Nothing,' he said, 'only she gave up such practices from that day forward, and tried to let me see her undisguised and as she should be. Still, she did ask whether I could advise her on one point: how she might make herself really beautiful, instead of merely seeming to be so. And this was my advice, Socrates: "Don't sit about for ever like a slave, but try, God helping you, to behave as a mistress: stand before the loom and be ready to instruct those who know less than you, and to learn from those who know more: look after the baking-maid: stand by the housekeeper when she is serving out stores: go round and see whether everything is in its place." For I thought that would give her a walk as well as occupation. I also said it was excellent exercise to mix flour and knead dough; and to shake and fold cloaks and bedclothes; such exercise would give her a better appetite, improve her health, and add natural color to her cheeks. Besides, when a wife's looks outshine a maid's, and she is fresher and more becomingly dressed, they're a ravishing sight, especially when the wife is also willing to oblige, whereas the girl's services are compulsory. But wives who sit about like fine ladies, expose themselves to comparison with painted and fraudulent hussies. And now, Socrates, you may be sure, my wife's dress and appearance are in accord with my instructions and with my present description.'"

XI. "At this point I said, 'Ischomachus, I think your account of your wife's occupations is sufficient for the present—and very creditable it is to both of you. But now tell me of your own: thus you will have the satisfaction of stating the reasons why you are so highly respected, and I shall be much beholden to you for a complete account of a gentleman's occupations, and if my understanding serves, for a thorough knowledge of them.'

"'Well then, Socrates,' answered Ischomachus, 'it will be a very great pleasure to me to give you an account of my daily occupations, that you may correct me if you think there is anything amiss in my conduct.'

"'As to that,' said I, 'how could I presume to correct a perfect gentleman, I who am supposed to be a mere chatterer with my head in the air, I who am called—the most senseless of all taunts—a poor beggar? I do assure you, Ischomachus, this last imputation would have driven me to despair, were it not that a day or two ago I came upon the horse of Nicias the foreigner. I saw a crowd walking behind the creature and staring, and heard some of them talking volubly about him. Well, I went up to the groom and asked him if the horse had many possessions. The man looked at me as if I must be mad to ask such a question, and asked me how a horse could own property. At that I recovered, for his answer showed that it is possible even for a poor horse to be a good one, if nature has given him a good spirit. Assume, therefore, that it is possible for me to be a good man, and give me a complete account of your occupations, that, so far as my understanding allows me, I may endeavor to follow your example from to-morrow morning; for that's a good day for entering on a course of virtue.'

You're joking, Socrates,' said Ischomachus; 'nevertheless I will tell you what principles I try my best to follow consistently in life. For I seem to realize that, while the gods have made it impossible for men to prosper without knowing and attending to the things they ought to do, to some of the wise and careful they grant prosperity, and to some deny it; and therefore I begin by worshipping the gods, and try to conduct myself in such a way that I may have health and strength in answer to my prayers, the respect of my fellow-citizens, the affection of my friends, safety with honor in war, and wealth increased by honest means.'

"'What, Ischomachus,' I asked on hearing that, 'do you really want to be rich and to have much, along with much trouble to take care of it?'

"'The answer to your questions,' said he, 'is, Yes, I do indeed. For I would fain honor the gods without counting the cost, Socrates, help friends in need, and look to it that the city lacks no adornment that my means can supply.'

"'Truly noble aspirations, Ischomachus,' I cried, 'and worthy of a man of means, no doubt! Seeing that there are many who cannot live without help from others, and many are content if they can get enough for their own needs, surely those who can maintain their own estate and yet have enough left to adorn the city and relieve their friends may well be thought high and mighty men. However,' I added, 'praise of such men is a commonplace among us. Please return to your first statement, Ischomachus, and tell me how you take care of your health and your strength, how you make it possible to come through war with safety and honor. I shall be content to hear about your money-making afterwards.'

"'Well, Socrates,' replied Ischomachus, 'all these things hang together, so far as I can see. For if a man has plenty to eat, and works off the effects properly, take it that he both insures his health and adds to his strength. By training himself in the arts of war he is more qualified to save himself honorably, and by due diligence and avoidance of loose habits, he is more likely to increase his estate.'

"'So far, Ischomachus, I follow you,' I answered. 'You mean that by working after meals, by diligence and by training, a man is more apt to obtain the good things of life. But now I should like you to give me details. By what kind of work do you endeavor to keep your health and strength? How do you train yourself in the arts of war? What diligence do you use to have a surplus from which to help friends and strengthen the city?'

"'Well now, Socrates,' replied Ischomachus, 'I rise from my bed at an hour when, if I want to call on anyone, I am sure to find him still at home. If I have any business to do in town, I make it an opportunity for getting a walk. If there is nothing pressing to be done in town, my servant leads my horse to the farm, and I make my walk by going to it on foot, with more benefit, perhaps, Socrates, than if I took a turn in the arcade. When I reach the farm, I may find planting, clearing, sowing or harvesting in progress. I superintend all the details of the work, and make any improvements in method that I can suggest. After this, I usually mount my horse and go through exercises, imitating as closely as I can the exercises needed in warfare. I avoid neither slope nor steep incline, ditch nor watercourse, but I use all possible care not to lame my horse when he takes them. After I have finished, the servant gives the horse a roll and leads him home, bringing with him from the farm anything we happen to want in the city. I divide the return home between walking and running. Arrived, I clean myself with a strigil, and then I have luncheon, Socrates, eating just enough to get through the day neither empty-bellied nor too full.’

“‘Upon my word, Ischomachus,’ cried I, ‘I am delighted with your activities. For you have a pack of appliances for securing health and strength, of exercises for war and specifics for getting rich, and you use them all at the same time! That does seem to me admirable! And in fact you afford convincing proofs that your method in pursuing each of these objects is sound. For we see you generally in the enjoyment of health and strength, thanks to the gods, and we know that you are considered one of our best horsemen and wealthiest citizens.’

“‘And what comes of these activities, Socrates? Not, as you perhaps expected to hear, that I am generally dubbed a gentleman, but that I am persistently slandered.’

“‘Ah,’ said I, ‘but I was meaning to ask you, Ischomachus, whether you include in your system ability to conduct a prosecution and defense, in case you have to appear in the courts?’

“‘Why, Socrates,’ he answered, ‘do you not see that this is just what I am constantly practicing—showing my traducers that I wrong no man and do all the good I can to many? And do you not think that I practice myself in accusing, by taking careful note of certain persons who are doing wrong to many individuals and to the state, and are doing no good to anyone?’

“‘But tell me one thing more, Ischomachus,’ I said; ‘do you also practice the art of expounding these matters?’

“‘Why, Socrates,’ he replied, ‘I assiduously practice the art of speaking. For I get one of the servants to act as prosecutor or defendant, and try to confute him; or I praise or blame someone before his friends; or I act as peace-maker between some of my acquaintances by trying to show them that it is to their interest to be friends rather than enemies. I assist at a court-martial and censure a soldier, or take turns in defending a man who is unjustly blamed, or in accusing one who is unjustly honored. We often sit in counsel and speak in support of the course we want to adopt and against the course we want to avoid. I have often been singled out before now, Socrates, and condemned to suffer punishment or pay damages.'

"'By whom, Ischomachus?' I asked; I am in the dark about that! '

"'By my wife,' was his answer.

"'And, pray, how do you plead?' said I.

"'Pretty well, when it is to my interest to speak the truth. But when lying is called for, Socrates, I can't make the worse cause appear the better—oh no, not at all.'

"'Perhaps, Ischomachus,' I commented, you can't make the falsehood into the truth!'

XII. "'But perhaps I am keeping you, Ischomachus,' I continued, and you want to get away now?'

"'Oh no, Socrates,' he answered; 'I should not think of going before the market empties.'

"'To be sure,' I continued; you take the utmost care not to forfeit your right to be called a gentleman! For I daresay there are many things claiming your attention now; but, as you have made an appointment with those strangers, you are determined not to break it.'

"'But I assure you, Socrates, I am not neglecting the matters you refer to, either; for I keep bailiffs on my farms.'

"'And when you want a bailiff, Ischomachus, do you look out for a man qualified for such a post, and then try to buy him—when you want a builder, I feel sure you inquire for a qualified man and try to get him—or do you train your bailiffs yourself? ‘

“‘Of course I try to train them myself, Socrates. For the man has to be capable of taking charge in my absence; so why need he know anything but what I know myself? For if I am fit to manage the farm, I presume I can teach another man what I know myself.’

“‘Then the first requirement will be that he should be loyal to you and yours, if he is to represent you in your absence. For if a steward is not loyal, what is the good of any knowledge he may possess? ‘

“‘None, of course; but I may tell you, loyalty to me and to mine is the first lesson I try to teach.’

“‘And how, in heaven’s name, do you teach your man to be loyal to you and yours?’

“‘By rewarding him, of course, whenever the gods bestow some good thing on us in abundance.’

“‘You mean, then, that those who enjoy a share of your good things are loyal to you and want you to prosper?’

“‘Yes, Socrates, find that is the best instrument for producing loyalty.’

“‘But, now, if he is loyal to you, Ischomachus, will that be enough to make him a competent bailiff? Don’t you see that though all men, practically, wish themselves well, yet there are many who won’t take the trouble to get for themselves the good things they want to have?’

“‘Well, when I want to make bailiffs of such men, of course I teach them also to be careful.’

“‘Pray how do you do that? I was under the impression that carefulness is a virtue that can’t possibly be taught,’

“‘True, Socrates, it isn’t possible to teach everyone you come across to be careful.’

"'Very well; what sort of men can be taught? Point these out to me, at all events.'

"'In the first place, Socrates, you can't make careful men of hard drinkers; for drink makes them forget everything they ought to do.'

"'Then are drunkards the only men who will never become careful, or are there others?'

"'Of course there are—sluggards must be included; for you can't do your own business when you are asleep, nor make others do theirs.'

"'Well then, will these make up the total of persons incapable of learning this lesson, or are there yet others besides? '

"'I should add that in my opinion a man who falls desperately in love is incapable of giving more attention to anything than he gives to the object of his passion. For it isn't easy to find hope or occupation more delightful than devotion to the darling! aye, and when the thing to be done presses, no harder punishment can easily be thought of than the prevention of intercourse with the beloved! Therefore I shrink from attempting to make a manager of that sort of man too.'

"'And what about the men who have a passion for lucre? Are they also incapable of being trained to take charge of the work of a farm? '

"'Not at all; of course not. In fact, they very easily qualify for the work. It is merely necessary to point out to them that diligence is profitable.'

"'And assuming that the others are free from the faults that you condemn and are covetous of gain in a moderate degree, how do you teach them to be careful in the affairs you want them to superintend?'

"'By a very simple plan, Socrates. Whenever I notice that they are careful, I commend them and try to show them honor; but when they appear careless, I try to say and do the sort of things that will sting them.'

"'Turn now, Ischomachus, from the subject of the men in training for the occupation, and tell me about the system: is it possible for anyone to make others careful if he is careless himself?'

"'Of course not: an unmusical person could as soon teach music. For it is hard to learn to do a thing well when the teacher prompts you badly; and when a master prompts a servant to be careless, it is difficult for the man to become a good servant. To put it shortly, I don't think I have discovered a bad master with good servants: I have, however, come across a good master with bad servants—but they suffered for it! If you want to make men fit to take charge, you must supervise their work and examine it, and be ready to reward work well carried through, and not shrink from punishing carelessness as it deserves. I like the answer that is attributed to the Persian. The king, you know, had happened on a good horse, and wanted to fatten him as speedily as possible. So he asked one who was reputed clever with horses what is the quickest way of fattening a horse. "The master's eye" replied the man. I think we may apply the answer generally, Socrates, and say that the master's eye in the main does the good and worthy work.'"

XIII. "'When you have impressed on a man,' I resumed, 'the necessity of careful attention to the duties you assign to him, will he then be competent to act as bailiff, or must he learn something besides, if he is to be efficient?'

"'Of course,' answered Ischomachus, 'he has still to understand what he has to do, and when and how to do it. Otherwise how could a bailiff be of more use than a doctor who takes care to visit a patient early and late, but has no notion of the right way to treat his illness?’

“‘Well, but suppose he has learned how farm-work is to be done, will he want something more yet, or will your man now be a perfect bailiff?’

“‘I think he must learn to rule the laborers.’

“‘And do you train your bailiffs to be competent to rule too?’

“‘Yes, I try, anyhow.’

“‘And pray tell me how you train them to be rulers of men.’

“‘By a childishly easy method, Socrates. I daresay you’ll laugh if I tell you.’

“‘Oh, but it is certainly not a laughing matter, Ischomachus. For anyone who can make men fit to rule others can also teach them to be masters of others; and if he can make them fit to be masters, he can make them fit to be kings. So anyone who can do that seems to me to deserve high praise rather than laughter.’

“‘Well now, Socrates, other creatures learn obedience in two ways—by being punished when they try to disobey, and by being rewarded when they are eager to serve you. Colts, for example, learn to obey the horse-breaker by getting something they like when they are obedient, and suffering inconvenience when they are disobedient, until they carry out the horse-breaker’s intentions. Puppies, again, are much inferior to men in intelligence and power of expression; and yet they learn to run in circles and turn somersaults and do many other tricks in the same way; for when they obey they get something that they want, and when they are careless, they are punished. And men can be made more obedient by word of mouth merely, by being shown that it is good for them to obey. But in dealing with slaves the training thought suitable for wild animals is also a very effective way of teaching obedience; for you will do much with them by filling their bellies with the food they hanker after. Those of an ambitious disposition are also spurred on by praise, some natures being hungry for praise as others for meat and drink. Now these are precisely the things that I do myself with a view to making men more obedient; but they are not the only lessons I give to those whom I want to appoint my bailiffs. have other ways of helping them on. For the clothes that must provide for my workpeople and the shoes are not all alike. Some are better than others, some worse, in order that I may reward the better servant with the superior articles, and give the inferior things to the less deserving. For I think it is very disheartening to good servants, Socrates, when they see that they do all the work, and others who are not willing to work hard and run risks when need be, get the same as they. For my part, then, I don't choose to put the deserving on a level with the worthless, and when I know that my bailiffs have distributed the best things to the most deserving, I commend them; and if I see that flattery or any other futile service wins special favor, I don't overlook it, but reprove the bailiff, and try to show him, Socrates, that such favoritism is not even in his own interest.'"

XIV. "'Now, Ischomachus,' said I, 'when you find your man so competent to rule that he can make them obedient, do you think him a perfect bailiff', or does he want anything else, even with the qualifications you have mentioned?'

"'Of course, Socrates,' returned Ischomachus, 'he must be honest and not touch his master's property. For if the man who handles the crops dares to make away with them, and doesn't leave enough to give a profit on the undertaking, what good can come of farming under his management?'

"'Then do you take it on yourself to teach this kind of justice too?'

‘Certainly: I don’t find, however, that all readily pay heed to this lesson. Nevertheless I guide the servants into the path of justice with the aid of maxims drawn from the laws of Draco and Solon.

For it seems to me that these famous men enacted many of their laws with an eye on this particular kind of justice. For it is written: “thieves shall be fined for their thefts” and “anyone guilty of attempt shall be imprisoned if taken in the act, and put to death.” The object of these enactments was clearly to make covetousness unprofitable to the offender. By applying some of these clauses and other enactments found in the Persian king’s code, I try to make my servants upright in the matters that pass through their hands. For while those laws only penalize the wrongdoer, the king’s code not only punishes the guilty, but also benefits the upright. Thus, seeing that the honest grow richer than the dishonest, many, despite their love of lucre, are careful to remain free from dishonesty. And if I find any attempting to persist in dishonesty, although they are well treated, I regard them as incorrigibly greedy, and have nothing more to do with them.

On the other hand, if I discover that a man is inclined to be honest not only because he gains by his honesty, but also from a desire to win my approbation, I treat him like a free man by making him rich; and not only so, but I honor him as a gentleman. For I think, Socrates, that the difference between ambition and greed consists in this, that for the sake of praise and honor the ambitious are willing to work properly, to take risks and refrain from dishonest gain.’”

XV. Well, well, I won’t go on to ask whether anything more is wanting to your man, after you have implanted in him a desire for your prosperity and have made him also careful to see that you achieve it, and have obtained for him, besides, the knowledge needful to ensure that every piece of work done shall add to the profits, and, further, have made him capable of ruling, and when, besides all this, he takes as much delight in producing heavy crops for you in due season as you would take if you did the work yourself. For it seems to me that a man like that would make a very valuable bailiff Nevertheless, Ischomachus, don’t leave a gap in that part of the subject to which we have given the most cursory attention.’

“‘Which is it?’ asked Ischomachus.

“‘You said, you know, that the greatest lesson to learn is how things ought to be done; and added that, if a man is ignorant what to do and how to do it, no good can come of his management.’

“Then he said, ‘Socrates, are you insisting now that I should teach the whole art and mystery of agriculture? ‘

“‘Yes,’ said I; ‘for maybe it is just this that makes rich men of those who understand it, and condemns the ignorant to a life of penury, for all their toil.’

“‘Well, Socrates, you shall now hear how kindly a thing is this art. Helpful, pleasant, honorable, dear to gods and men in the highest degree, it is also in the highest degree easy to learn. Noble qualities surely! As you know, we call those creatures noble that are beautiful, great and helpful, and yet gentle towards men.’

“‘Ah, but I think, Ischomachus, that I quite understand your account of these matters—I mean how to teach a bailiff; for I think I follow your statement that you make him loyal to you, and careful and capable of ruling and honest. But you said that one who is to be successful in the management of a farm must learn what to do and how and when to do it. That is the subject that we have treated, it seems to me, in a rather cursory fashion, as if you said that anyone who is to be capable of writing from dictation and reading what is written must know the alphabet. For had I been told that, I should have been told, to be sure, that I must know the alphabet, but I don’t think that piece of information would help me to know it. So too now; I am easily convinced that a man who is to manage a farm successfully must understand farming, but that knowledge doesn’t help me to understand how to farm. Were I to decide this very moment to be a farmer, I think I should be like that doctor who goes round visiting the sick, but has no knowledge of the right way to treat them. Therefore, that I may not be like him, you must teach me the actual operations of farming.’

“‘Why, Socrates, farming is not troublesome to learn, like other arts, which the pupil must study till he is worn out before he can earn his keep by his work. Some things you can understand by watching men at work, others by just being told, well enough to teach another if you wish. And I believe that you know a good deal about it yourself, without being aware of the fact. The truth is that, whereas other artists conceal more or less the most important points in their own art, the farmer who plants best is most pleased when he is being watched, so is he who sows best. Question him about any piece of work well done: and he will tell you exactly how he did it. So farming, Socrates, more than any other calling, seems to produce a generous disposition in its followers.’

“‘An excellent preamble,’ I cried, ‘and not of a sort to damp the hearer’s curiosity. Come, describe it to me, all the more because it is so simple to learn. For it is no disgrace to you to teach elementary lessons, but far more a disgrace to me not to understand them, especially if they are really useful.’”

XVI. “‘First then, Socrates, I want to show you that what is called the most complicated problem in agriculture by the authors who write most accurately on the theory of the subject, but are not practical farmers, is really a simple matter. For they tell us that to be a successful farmer one must first know the nature of the soil.’

“‘Yes, and they are right,’ I remarked; ‘for if you don’t know what the soil is capable of growing, you can’t know, I suppose, what to plant or what to sow.’

“‘Well then,’ said Ischomachus, ‘you can tell by looking at the crops and trees on another man’s land what the soil can and what it cannot grow. But when you have found out, it is useless to fight against the gods. For you are not likely to get a better yield from the land by sowing and planting what you want instead of the crops and trees that the land prefers. If it happens that the land does not declare its own capabilities because the owners are lazy, you can often gather more correct information from a neighboring plot than from a neighboring proprietor. Yes, and even if the land lays waste, it reveals its nature. For if the wild stuff growing on the land is of fine quality, then by good farming the soil is capable of yielding cultivated crops of fine quality. So the nature of the soil can be ascertained even by the novice who has no experience of farming.’

Well, I think I am now confident, Ischomachus, that need not avoid farming from fear of not knowing the nature of the soil. The fact is, I am reminded that fishermen, though their business is in the sea, and they neither stop the boat to take a look nor slow down, nevertheless, when they see the crops as they scud past the farms, do not hesitate to express an opinion about the land, which is the good and which is the bad sort, now condemning, now praising it. And, what is more, I notice that in their opinion about the good land they generally agree exactly with experienced farmers.’

“‘Then, Socrates, let me refresh your memory on the subject of agriculture; but where do you wish me to begin?

For I am aware that I shall tell you very much that you know already about the right method of farming.'

"'First, Ischomachus, I think I should be glad to learn, for this is the philosopher's way, how I am to cultivate the land if I want to get the heaviest crops of wheat and barley out of it.'

"'Well, you know, I take it, that fallow must be prepared for sowing?'

"'Yes, I know.'

"'Suppose, then, we start ploughing in winter?'

"'Why, the land will be a bog!'

"'How about starting in summer?'

"'The land will be hard to plough up.'

"'It seems that spring is the season for beginning this work.'

"'Yes, the land is likely to be more friable if it is broken up then.'

"'Yes, and the grass turned up is long enough at that season to serve as manure, but, not having shed seed, it will not grow. You know also, I presume, that fallow land can't be satisfactory unless it is clear of weeds and thoroughly baked in the sun? '

"'Yes, certainly; that is essential, I think.'

"'Do you think that there is any better way of securing that than by turning the land over as often as possible in summer? '

"'Nay, I know for certain that if you want the weeds to lie on the surface and wither in the heat, and the land to be baked by the sun, the surest way is to plough it up at midday in midsummer.'

"'And if men prepare the fallow by digging, is it not obvious that they too must separate the weeds from the soil?'

"'Yes, and they must throw the weeds on the surface to wither, and turn up the ground so that the lower spit1 may be baked.'"

XVII. "'You see, then, Socrates, that we agree about the fallow.'

"'It does seem so, to be sure.'

"'And now as to the time for sowing, Socrates. Is it not your opinion that the time to sow is that which has been invariably found to be the best by past experience, and is universally approved by present practice? For as soon as autumn ends, all men, I suppose, look anxiously to God, to see when he will send rain on the earth and make them free to sow.'

"'Yes, Ischomachus, all men have made up their minds, of course, not to sow in dry ground if they can help it, those who sowed without waiting to be bidden by God having had to wrestle with many losses.'

"'So far, then,' said Ischomachus, 'all the world is of one mind.'

"'Yes,' said I, 'where God is our teacher we all come to think alike. For example, all agree that it is better to wear warm clothes in winter, if they can, and all agree on the desirability of having a fire, if they have wood.'

"'But,' said Ischomachus, 'when we come to the question whether sowing is best done early or very late or at the mid-season, we find much difference of opinion, Socrates.'

"'And God,' said I, ' does not regulate the year by fixed laws; but in one year it may be advantageous to sow early, in another very late, in another at mid-season.'

"'Then do you think, Socrates, that it is better to select one of these times for sowing, whether you sow much or little, or to begin at the earliest moment and continue sowing to the latest?'

"'For my part, Ischomachus, I think it is best to sow for succession throughout the season. For in my opinion it is much better to get enough food at all times than too much at one time and not enough at another.'

"'Here again, then, Socrates, pupil and teacher are of one opinion; and, moreover, you, the pupil, are first in stating this opinion.'

"'Well now, is casting the seed a complicated problem?'

"'By all means let us take that also into consideration, Socrates. I presume that you know as well as I that the seed must be cast by the hand?'

"'Yes, I have seen it.'

"'Ah,' he said, 'but some men can cast evenly, and some cannot.'

"'Then sowers no less than lyre-players need practice, that the hand may be the servant of the will.'

"'Certainly. But suppose that some of the land is rather light and some rather heavy? '

"'What do you mean by that? ' I interrupted.

' By "light" do you mean "weak," and by "heavy," "strong"?'

"'Yes, I do; and I ask you whether you would give the same quantity of seed to both kinds, or to which you would give more? '

"'Well, my principle is this: the stronger the wine, the more water I add; the stronger the bearer, the heavier the burden put on his back; and if it is necessary to feed others, I should require the richest men to feed the greatest number. But tell me whether weak land, like draught animals, becomes stronger when you put more corn into it.'

"'Ah, you're joking, Socrates,' he said, laughing, 'but allow me to tell you that, if after putting in the seed you plough it in again as soon as the blade appears when the land is obtaining plenty of nourishment from the sky, it makes food for the soil, and strengthens it like manure. If, on the other hand, you let the seed go on growing on the land until it is boiled, it's hard for weak land to yield much grain in the end. It's hard, you know, for a weak sow to rear a big litter of fine pigs.'

"'Do you mean, Ischomachus, that the weaker the soil the less seed should be put into it? '

"'Yes, of course, Socrates; and you agree when you say that your invariable custom is to make the burden light that is to be borne by the weak.'

"'But the hoers, now, Ischomachus, why do you put them on the corn?'

"'I presume you know that in winter there is a heavy rainfall?'

"'Of course.'

"'Let us assume, then, that part of the corn is waterlogged and covered with mud, and some of the roots are exposed by flooding. And it often happens, you know, that in consequence of rain weeds spring up among the corn and choke it.'

"'All these things are likely to happen.'

"'Then don't you think that in such circumstances the corn needs prompt succor?'

"'Certainly.'

"'What should be done, do you think, to succor the part that is under the mud? '

"'The soil should be lifted.'

"'And the part that has its roots exposed? '

"'It should be earthed up.'

"'What if weeds are springing up, choking the corn and robbing it of its food, much as useless drones rob bees of the food they have laid in store by their industry?'

"'The weeds must be cut, of course, just as the drones must be removed from the hive.'

"'Don't you think, then, that we have good reason for putting on men to hoe?'

"'No doubt; but I am reflecting, Ischomachus, on the advantage of bringing in an apt simile. For you roused my wrath against the weeds by mentioning the drones, much more than when you spoke of mere weeds.'"

XVIII. "'However,' I continued, 'after this comes reaping, I fancy. So give me any information you can with regard to that too.'

"'Yes—unless I find that you know just what I do about that subject too. You know, then, that the corn must be cut.'

"'I know that, naturally.'

"'Are you for standing with your back to the wind when you cut corn, or facing it?'

"'Not facing it, no! I think it is irritating both to the eyes and to the hands to reap with cornstalks and spikes blowing in your face.'

"'And would you cut near the top or close to the ground? '

"'If the stalk is short, I should cut low down, so that the straw may be more useful; but if it is long, I think it would be right to cut in the middle, in order that the threshers and winnowers may not spend needless trouble on what they don't want. I imagine that the stubble may be burnt with advantage to the land, or thrown on the manure heap to increase its bulk.'

"'Do you notice, Socrates, that you stand convicted of knowing just what I know about reaping too?'

"'Yes, it seems so; and I want to know besides whether I understand threshing as well.'

"'Then you know this much, that draught animals are used in threshing?'

"'Yes, of course I do; and that the term draught animals includes oxen, mules and horses.'

"'Then do you not think that all the beasts know is how to trample on the corn as they are driven?'

"'Why, what more should draught animals know?'

"'And who sees that they tread out the right corn, and that the threshing is level, Socrates?'

"'The threshers, clearly. By continually turning the untrodden corn and throwing it under the animal's feet they will, of course, keep it level on the floor and take least time over the work.'

"'So far, then, your knowledge is quite as good as mine.'

"'Will not our next task be to clean the corn by winnowing, Ischomachus?'

"'Yes, Socrates; and tell me, do you know that if you start on the windward side of the floor, you will find the husks carried right across the floor? '

"'It must be so.'

"'Is it not likely, then, that some will fall on the grain? '

"'Yes, it is a long way for the husks to be blown, right over the grain to the empty part of the floor.'

"'But what if you start winnowing against the wind? '

"'Clearly the chaff will at once fall in the right place.'

"'And as soon as you have cleaned the corn over one half of the floor, will you at once go on throwing up the rest of the chaff while the corn lies about just as it is, or will you first sweep the clean corn towards the edge, so as to occupy the smallest space?'

"'Of course I shall first sweep the clean corn up, so that my chaff may be carried across into the empty space, and I may not have to throw up the same chaff twice.'

"'Well, Socrates, it seems you are capable of teaching the quickest way of cleaning corn.'

"'I really wasn't aware that I understood these things; and so I have been thinking for some time whether my knowledge extends to smelting gold, playing the flute, and painting pictures. For I have never been taught these things any more than I have been taught farming; but I have watched men working at these arts, just as I have watched them farming,'

"'And didn't I tell you just now that farming is the noblest art for this among other reasons, because it is the easiest to learn?'

"'Enough, Ischomachus; I know. understood about sowing, it seems, but I wasn't aware that I understood.'"

XIX. However, is the planting of fruit trees another branch of agriculture? 'I continued.

"'It is, indeed,' answered Ischomachus.

"'Then how can I understand all about sowing, and yet know nothing of planting?'

"'What, don't you understand it?'

"'How can I, when I don't know what kind of soil to plant in, nor how deep a hole to dig, nor how broad, nor how much of the plant should be buried, nor how it must be set in the ground to grow best? '

"'Come then, learn whatever you don't know. I am sure you have seen the sort of trenches they dig for plants.'

"'Yes, often enough.'

"'Did you ever see one more than three feet deep?'

"'No, of course not—nor more than two and a half.'

"'Well, did you ever see one more than three feet broad?'

"'Of course not, nor more than two feet.'

"'Come then, answer this question too. Did you ever see one less than a foot deep?'

"'Never less than a foot and a half, of course. For the plants would come out of the ground when it is stirred about them if they were put in so much too shallow.'

"'Then you know this well enough, Socrates, that the trenches are never more than two and a half feet deep, nor less than a foot and a half.'

"'A thing so obvious as that can't escape one's eyes.'

"'Again, can you distinguish between dry and wet ground by using your eyes?'

"'Oh, I should think that the land round Lycabettus and any like it is an example of dry ground, and the low-lying land at Phalerum and any like it of wet.'

"'In which then would you dig the hole deep for your plant, in the dry or the wet ground? '

"'In the dry, of course; because if you dug deep in the wet, you would come on water, and water would stop your planting.'

"'I think you are quite right. Now suppose the holes are dug; have you ever noticed how the plants for each kind of soil should be put in? '

"'Oh, yes.'

"'Then assuming that you want them to grow as quickly as possible, do you think that if you put some prepared soil under them the cuttings will strike sooner through soft earth into the hard stuff, or through unbroken ground?'

"'Clearly, they will form roots more quickly in prepared soil than in unbroken ground.'

"'Then soil must be placed below the plant?'

"'No doubt it must.'

"'And if you set the whole cutting upright, pointing to the sky, do you think it would take root better, or would you lay part of it slanting under the soil that has been put below, so that it lies like a gamma upside down? '

"'Of course I would; for then there would be more buds underground; and I notice that plants shoot from the buds above ground, so I suppose that the buds under the ground do just the same; and with many shoots forming underground, the plant will make strong and rapid growth, I suppose.'

"'Then it turns out that on these points too your opinion agrees with mine. But would you merely heap up the earth, or make it firm round the plant?'

"'I should make it firm, of course; for if it were not firm, I feel sure that the rain would make mud of the loose earth, and the sun would dry it up from top to bottom; so the plants would run the risk of damping off through too much water, or withering from too much heat at the roots.'

"'About vine planting then, Socrates, your views are again exactly the same as mine.'

"'Does this method of planting apply to the fig too? ' I asked.

"'Yes, and to all other fruit trees, I think; for in planting other trees why discard anything that gives good results with the vine?'

"'But the olive—how shall we plant that, Ischomachus?'

"'You know quite well, and are only trying to draw' me out again. For I am sure you see that a deeper hole is dug for the olive (it is constantly being done on the roadside); you see also that all the growing shoots have stumps adhering to them; and you see that all the heads of the plants are coated with clay, and the part of the plant that is above ground is wrapped up.’

“‘Yes, I see all this.’

“‘You do! Then what is there in it that you don’t understand? Is it that you don’t know how to put the crocks on the top of the clay, Socrates? ‘

“‘Of course there is nothing in what you have said that I don’t know, Ischomachus. But I am again set thinking what can have made me answer ‘No’ to the question you put to me a while ago, when you asked me briefly, Did I understand planting? For I thought I should have nothing to say about the right method of planting. But now that you have undertaken to question me in particular, my answers, you tell me, agree exactly with the views of a farmer so famous for his skill as yourself! Can it be that questioning is a kind of teaching, Ischomachus? The fact is, I have just discovered the plan of your series of questions! You lead me by paths of knowledge familiar to me, point out things like what I know, and bring me to think that I really know things that I thought I had no knowledge of,’

“‘Now suppose I questioned you about money,’ said Ischomachus, f whether it is good or bad, could I persuade you that you know how to distinguish good from false by test? And by putting questions about flute-players could convince you that you understand flute-playing; and by means of questions about painters and other artists—’

“‘You might, since you have convinced me that understand agriculture, though I know that I have never been taught this art.’

“‘No, it isn’t so, Socrates. I told you a while ago that agriculture is such a humane, gentle art that you have but to see her and listen to her, and she at once makes you understand her. She herself gives you many lessons in the best way of treating her. For instance, the vine climbs the nearest tree, and so teaches you that she wants support. And when her clusters are yet tender, she spreads her leaves about them, and teaches you to shade the exposed parts from the sun’s rays during that period. But when it is now time for her grapes to be sweetened by the sun, she sheds her leaves, teaching you to strip her and ripen her fruit. And thanks to her teeming fertility, she shows some mellow clusters while she carries others yet sour, so saying to you: Pluck my grapes as men pluck figs,—choose the luscious ones as they come.’”

XX. “And now I asked, How is it then, Ischomachus, if the operations of husbandry are so easy to learn and all alike know what must needs be done, that all have not the same fortune? How is it that some farmers live in abundance and have more than they want, while others cannot get the bare necessaries of life, and even run into debt?’

“‘Oh, I will tell you, Socrates. It is not knowledge nor want of knowledge on the part of farmers that causes one to thrive while another is needy. You won’t hear a story like this running about: The estate has gone to ruin because the sower sowed unevenly, or because he didn’t plant the rows straight, or because someone, not knowing the right soil for vines, planted them in barren ground, or because someone didn’t know that it is well to prepare the fallow for sowing, or because someone didn’t know that it is well to manure the land. No, you are much more likely to hear it said: The man gets no corn from his field because he takes no trouble to see that it is sown or manure. Or, The man has got no wine, for he takes no trouble to plant vines or to make his old stock bear. Or, The man has neither olives nor figs, because he doesn't take the trouble; he does nothing to get them. It is not the farmers reputed to have made some clever discovery in agriculture who differ in fortune from others: it is things of this sort that make all the difference, Socrates. This is true of generals also: there are some branches of strategy in which one is better or worse than another, not because he differs in intelligence, but in point of carefulness, undoubtedly. For the things that all generals know, and most privates, are done by some commanders and left undone by others. For example, they all know that when marching through an enemy's country, the right w*ay is to march in the formation in which they will fight best, if need be. Well, knowing this, some observe the rule, others break it. All know that it is right to post sentries by day and night before the camp; but this too is a duty that some attend to, while others neglect it. Again, where will you find the man who does not know that, in marching through a defile, it is better to occupy the points of vantage first? Yet this measure of precaution too is duly taken by some and neglected by others. So, too, every one will say that in agriculture there is nothing so good as manure, and their eyes tell them that nature produces it. All know exactly how it is produced, and it is easy to get any amount of it; and yet, while some take care to have it collected, others care nothing about it. Yet the rain is sent from heaven, and all the hollows become pools of water, and the earth yields herbage of every kind which must be cleared off the ground by the sower before sowing; and the rubbish he removes has but to be thrown into water, and time of itself will make what the soil likes. For every kind of vegetation, every kind of soil in stagnant water turns into manure.

"'And again, all the ways of treating the soil when it is too wet for sowing or too salt for planting are familiar to all men—how the land is drained by ditches, how the salt is corrected by being mixed with saltless substances, liquid or dry. Yet these matters, again, do not always receive attention. Suppose a man to be wholly ignorant as to what the land can produce, and to be unable to see crop or tree on it, or to hear from anyone the truth about it, yet is it not far easier for any man to prove a parcel of land than to test a horse or to test a human being? For the land never plays tricks, but reveals frankly and truthfully what she can and what she cannot do. I think that just because she conceals nothing from our knowledge and understanding, the land is the surest tester of good and bad men. For the slothful cannot plead ignorance, as in other arts: land, as all men know, responds to good treatment. Husbandry is the clear accuser of the recreant soul. For no one persuades himself that man could live without bread; therefore if a man will not dig and knows no other profit-earning trade, he is clearly minded to live by stealing or robbery or begging—or he is an utter fool.

"'Farming,' he added, 'may result in profit or in loss; it makes a great difference to the result, even when many laborers are employed, whether the farmer takes care that the men are working during the working hours or is careless about it. For one man in ten by working all the time may easily make a difference, and another by knocking off before the time; and, of course, if the men are allowed to be slack all the day long, the decrease in the work done may easily amount to one half of the whole. Just as two travelers on the road, both young and in good health, will differ so much in pace that one will cover two hundred furlongs to the other's hundred, because the one does what he set out to do, by going ahead, while the other is all for ease, now resting by a fountain or in the shade, now gazing at the view, now wooing the soft breeze; so in farm work there is a vast difference in effectiveness between the men who do the job they are put on to do and those who, instead of doing it, invent excuses for not working and are allowed to be slack.

In fact, between good work and dishonest slothfulness there is as “wide a difference as between actual work and actual idleness. Suppose the vines are being hoed to clear the ground of weeds: if the hoeing is so badly done that the weeds grow ranker and more abundant, how can you call that anything but idleness?’

“‘These, then, are the evils that crush estates far more than sheer lack of knowledge. For the outgoing expenses of the estate are not a penny less; but the work done is insufficient to show a profit on the expenditure; after that there’s no need to wonder if the expected surplus is converted into a loss. On the other hand, to a careful man, who works strenuously at agriculture, no business gives quicker returns than farming. My father taught me that and proved it by his own practice. For he never allowed me to buy a piece of land that was well farmed; but pressed me to buy any that was uncultivated and unplanted owing to the owner’s neglect or incapacity. “Well farmed land,” he would say, “costs a large sum and can’t be improved;” and he held that where there is no room for improvement there is not much pleasure to be got from the land: landed estate and livestock must be continually coming on to give the fullest measure of satisfaction. Now nothing improves more than a farm that is being transformed from a wilderness into fruitful fields. I assure you, Socrates, that we have often added a hundredfold to the value of a farm. There is so much money in this idea, Socrates, and it is so easy to learn, that no sooner have you heard of it from me than you know as much as I do, and can go home and teach it to someone else, if you like. Moreover, my father did not get his knowledge of it at secondhand, nor did he discover it by much thought; but he would say that, thanks to his love of husbandry and hard work, he had coveted a farm of this sort in order that he might have something to do, and combine profit with pleasure. For I assure you, Socrates, no Athenian, I believe, had such a strong natural love of agriculture as my father.’

“Now on hearing this I asked, ‘Did your father keep all the farms that he cultivated, Ischomachus, or did he sell when he could get a good price?’

“‘He sold, of course,’ answered Ischomachus, ‘but, you see, owing to his industrious habits, he would promptly buy another that was out of cultivation.’

“‘You mean, Ischomachus, that your father really loved agriculture as intensely as merchants love corn. So deep is their love of corn that on receiving reports that it is abundant anywhere, merchants will voyage in quest of it: they will cross the Aegean, the Euxine, the Sicilian sea; and when they have got as much as possible, they carry it over the sea, and they actually stow it in the very ship in which they sail themselves. And when they want money, they don’t throw the corn away anywhere at haphazard, but they carry it to the place where they hear that corn is most valued and the people prize it most highly, and deliver it to them there. Yes, your father’s love of agriculture seems to be something like that.’

“‘You’re joking, Socrates,’ rejoined Ischomachus; ‘but I hold that a man has a no less genuine love of building who sells his houses as soon as they are finished and proceeds to build others.’

“‘Of course; and I declare, Ischomachus, on my oath that I believe you, that all men naturally love whatever they think will bring them profit.’”

XXI. “‘But I am pondering over the skill with which you have presented the whole argument in support of your proposition, Ischomachus. For you stated that husbandry is the easiest of all arts to learn, and after hearing all that you have said, I am quite convinced that this is so.’

“‘Of course it is,’ cried Ischomachus; ‘but I grant you, Socrates, that in respect of aptitude for command, which is common to all forms of business alike—agriculture, politics, estate-management, warfare—in that respect the intelligence shown by different classes of men varies greatly. For example, on a man-of-war, when the ship is on the high seas and the rowers must toil all day to reach port, some boatswains can say and do the right thing to sharpen the men’s spirits and make them work with a will, while others are so unintelligent that it takes them more than twice the time to finish the same voyage. Here they land bathed in sweat, with mutual congratulations, boatswain and seamen. There they arrive with a dry skin; they hate their master and he hates them. Generals, too, differ from one another in this respect. For some make their men unwilling to work and to take risks, disinclined and unwilling to obey, except under compulsion, and actually proud of defying their commander: aye, and they cause them to have no sense of dishonor when something disgraceful occurs. Contrast the genius, the brave and scientific leader: let him take over the command of these same troops, or of others if you like. What effect has he on them? They are ashamed to do a disgraceful act, think it better to obey, and take a pride in obedience, working cheerfully, every man and all together, when it is necessary to work. Just as a love of work may spring up in the mind of a private soldier here and there, so a whole army under the influence of a good leader is inspired with love of work and ambition to distinguish itself under the commander’s eye. Let this be the feeling of the rank and file for their commander; and I tell you, he is the strong leader, he, and not the sturdiest soldier, not the best with bow and javelin, not the man who rides the best horse and is foremost in facing danger, not the ideal of knight or targeteer, but he who*can make his soldiers feel that they are bound to follow him through fire and in any adventure. Him you may justly call high-minded who has many followers of like mind; and with reason may he be said to march "with a strong arm" whose will many an arm is ready to serve; and truly great is he who can do great deeds by his will rather than his strength.

"'So too in private industries, the man in authority—bailiff or manager—who can make the workers keen, industrious and persevering—he is the man who gives a lift to the business and swells the surplus. But, Socrates, if the appearance of the master in the field, of the man who has the fullest power to punish the bad and reward the strenuous workmen, makes no striking impression on the men at work, I for one cannot envy him. But if at sight of him they bestir themselves, and a spirit of determination and rivalry and eagerness to excel falls on every workman, then I should say: this man has a touch of the kingly nature in him. And this, in my judgment, is the greatest thing in every operation that makes any demand on the labor of men, and therefore in agriculture. Mind you, I do not go so far as to say that this can be learnt at sight or at a single hearing. On the contrary, to acquire these powers a man needs education; he must be possessed of great natural gifts; above all, he must be a genius. For I reckon this gift is not altogether human, but divine—this power to win willing obedience: it is manifestly a gift of the gods to the true votaries of prudence. Despotic rule over unwilling subjects they give, I fancy, to those whom they judge worthy to live the life of Tantalus, of whom it is said that in hell he spends eternity, dreading a second death.'"

# XENOPHON’S BANQUET

I. To my mind it is worth while to relate not only the serious acts of great and good men but also what they do in their lighter moods. I should like to narrate an experience of mine that gives me this conviction.

It was on the occasion of the horse-races at the greater Panathenaic games; Callias, Hipponicus’ son, was enamored, as it happened, of the boy Autolycus, and in honor of his victory in the pancratium had brought him to see the spectacle. When the racing was over, Callias proceeded on his way to his house in the Peiraeus with Autolycus and the boy’s father; Niceratus also was in his company. But on catching sight of a group comprising Socrates, Critobulus, Hermogenes, Antisthenes, and Charmides, Callias bade one of his servants escort Autolycus and the others, and himself going over to Socrates and his companions, said, “This is an opportune meeting, for I am about to give a dinner in honor of Autolycus and his father; and I think that my entertainment would present a great deal more brilliance if my dining-room were graced with the presence of men like you, whose hearts have undergone philosophy’s purification, than it would with generals and cavalry commanders and office-seekers.”

“You are always quizzing us,” replied Socrates; “for you have yourself paid a good deal of money for wisdom to Protagoras, Gorgias, Prodicus, and many others, while you see that we are what you might call amateurs in philosophy; and so you feel supercilious toward us.”

“Yes,” said Callias, “so far, I admit, I have been keeping you ignorant of my ability at profound and lengthy discourse; but now, if you will favor me with your company, I will prove to you that I am a person of some consequence.”

Now at first Socrates and his companions thanked him for the invitation, as might be expected, but would not promise to attend the banquet; when it became clear, however, that he was taking their refusal very much to heart, they went with him. And so his guests arrived, some having first taken their exercise and their rub-down, others with the addition of a bath. Autolycus took a seat by his father's side; the others, of course, reclined.

A person who took note of the course of events would have come at once to the conclusion that beauty is in its essence something regal, especially when, as in the present case of Autolycus, its possessor joins with it modesty and sobriety. For in the first place, just as the sudden glow of a light at night draws all eyes to itself, so now the beauty of Autolycus compelled every one to look at him. And again, there was not one of the onlookers who did not feel his soul strangely stirred by the boy; some of them grew quieter than before, others even assumed some kind of a pose. Now it is true that all who are under the influence of any of the gods seem well worth gazing at; but whereas those who are possessed of the other gods have a tendency to be sterner of countenance, more terrifying of voice, and more vehement, those who are inspired by chaste Love have a more tender look, subdue their voices to more gentle tones, and assume a supremely noble bearing. Such was the demeanor of Callias at this time under the influence of Love; and therefore he was an object well worth the gaze of those initiated into the worship of this god.

The company, then, were feasting in silence, as though some one in authority had commanded them to do so, when Philip the buffoon knocked at the door and told the porter to announce who he was and that he desired to be admitted; he added that with regard to food he had come all prepared, in all varieties—to dine on some other person's,—and that his servant was in great distress with the load he carried of—nothing, and with having an empty stomach. Hearing this, Callias said, “Well, gentlemen, we cannot decently begrudge him at the least the shelter of our roof; so let him come in.” With the words he cast a glance at Autolycus, obviously trying to make out what he had thought of the pleasantry. But Philip, standing at the threshold of the men’s hall where the banquet was served, announced: “You all know that I am a jester; and so I have come here with a will, thinking it more of a joke to come to your dinner uninvited than to come by invitation.”

“Well, then,” said Callias, “take a place; for the guests, though well fed, as you observe, on seriousness, are perhaps rather ill supplied with laughter.”

No sooner were they engaged in their dinner than Philip attempted a witticism, with a view to rendering the service that secured him all his dinner engagements; but on finding that he did not excite any laughter, he showed himself, for the time, considerably vexed. A little later, however, he must try another jest; but when they would not laugh at him this time either, he stopped while the dinner was in full swing, covered his head with his cloak, and lay down on his couch. “What does this mean, Philip?” Callias inquired. “Are you seized with a pain?” Philip replied with a groan, “Yes, Callias, by Heaven, with a severe one; for since laughter has perished from the world, my business is ruined. For in times past, the reason why I got invitations to dinner was that I might stir up laughter among the guests and make them merry; but now, what will induce any one to invite me? For I could no more turn serious than could become immortal; and certainly no one will invite me in the hope of a return invitation, as every one knows that there is not a vestige of tradition of bringing dinner into my house.” As he said this, he wiped his nose, and to judge by the sound, he was evidently weeping. All tried to comfort him with the promise that they would laugh next time, and urged him to eat; and Critobulus actually burst out into a guffaw at his lugubrious moaning. The moment Philip heard the laughter he uncovered his head, and exhorting his spirit to be of good courage, in view of approaching engagements, he fell to eating again.

II. When the tables had been removed and the guests had poured a libation and sung a hymn, there entered a man from Syracuse, to give them an evening's merriment. He had with him a fine flute-girl, a dancing-girl—one of those skilled in acrobatic tricks,—and a very handsome boy, who was expert at playing the cither and at dancing; the Syracusan made money by exhibiting their performances as a spectacle. They now played for the assemblage, the flute-girl on the flute, the boy on the cither; and it was agreed that both furnished capital amusement. Thereupon Socrates remarked: "On my word, Callias, you are giving us a perfect dinner; for not only have you set before us a feast that is above criticism, but you are also offering us very delightful sights and sounds."

"Suppose we go further," said Callias, "and have some one bring us some perfume, so that we may dine in the midst of pleasant odors, also."

"No, indeed!" replied Socrates. "For just as one kind of dress looks well on a woman and another kind on a man, so the odors appropriate to men and to women are diverse. No man, surely, ever uses perfume for a man's sake. And as for the women, particularly if they chance to be young brides, like the wives of Niceratus here and Critobulus, how can they want any additional perfume? For that is what they are redolent of, themselves. The odor of the olive oil, on the other hand, that is used in the gymnasium is more delightful when you have it on your flesh than perfume is to women, and when you lack it, the want of it is more keenly felt. Indeed, so far as perfume is concerned, when once a man has anointed himself with it, the scent forthwith is all one whether he be slave or free; but the odors that result from the exertions of freemen demand primarily noble pursuits engaged in for many years if they are to be sweet and suggestive of freedom.”

“That may do for young fellows,” observed Lycon; “but what of us who no longer exercise in the gymnasia? What should be our distinguishing scent?”

“Nobility of soul, surely!” replied Socrates.

“And where may a person get this ointment?”

“Certainly not from the perfumers” said Socrates.

“But where, then?”

“Theognis has said:

‘Good men teach good; society with bad
Will but corrupt the good mind that you had.’”

“Do you hear that, my son?” asked Lycon.

“Yes, indeed he does,” said Socrates; “and he puts it into practice, too. At any rate, when he desired to become a prize-winner in the pancratium, He availed himself of your help to discover the champions in that sport and associated with them; and so, if he desires to learn the ways of virtue, he will again with your help seek out the man who seems to him most proficient in this way of life and will associate with him.”

Thereupon there was a chorus of voices. “Where will he find an instructor in this subject?” said one. Another maintained that it could not be taught at all. A third asserted that this could be learned if anything could.

“Since this is a debatable matter,” suggested Socrates, “let us reserve it for another time; for the present let us finish what we have on hand. For I see that the dancing girl here is standing ready, and that some one is bringing her some hoops."

At that, the other girl began to accompany the dancer on the flute, and a boy at her elbow' handed her up the hoops until he had given her twelve. She took these and as she danced kept throwing them whirling into the air, observing the proper height to throw them so as to catch them in a regular rhythm.

As Socrates looked on he remarked: "This girl's feat, gentlemen, is only one of many proofs that woman's nature is really not a whit inferior to man's, except in its lack of judgment and physical strength. So if any one of you has a wife, let him confidently set about teaching her whatever he would like to have her know."

"If that is your view, Socrates," asked Antisthenes, "how' does it come that you don't practice what you preach by yourself educating Xanthippe, but live with a wife who is the hardest to get along with of all the women there are—yes, or all that ever were, I suspect, or ever will be?"

"Because," he replied, "I observe that men who wish to become expert horsemen do not get the most docile horses but rather those that are high-mettled, believing that if they can manage this kind, they will easily handle any other. My course is similar. Mankind at large is what I wish to deal and associate with; and so I have got her, well assured that if I can endure her, I shall have no difficulty in my relations with all the rest of human kind."

These words, in the judgment of the guests, did not go wide of the mark.

But now there was brought in a hoop set all around with upright swords; over these the dancer turned somersaults into the hoop and out again, to the dismay of the onlookers, who thought that she might suffer some mishap. She, however, went through this performance fearlessly and safely.

Then Socrates, drawing Antisthenes’ attention, said: “Witnesses of this feat, surely, will never again deny, I feel sure, that courage, like other things, admits of being taught, when this girl, in spite of her sex, leaps so boldly in among the swords!”

“Well then,” asked Antisthenes, “had this Syracusan not better exhibit his dancer to the city and announce that if the Athenians will pay him for it he will give all the men of Athens the courage to face the spear?”

“Well said!” interjected Philip. “I certainly should like to see Peisander the politician learning to turn somersaults among the knives; for, as it is now, his inability to look spears in the face makes him shrink even from joining the army.”

At this point the boy performed a dance, eliciting from Socrates the remark, “Did you notice that, handsome as the boy is, he appears even handsomer in the poses of the dance than when he is at rest?”

“It looks to me,” said Charmides, “as if you were puffing the dancing-master.”

“Assuredly,” replied Socrates; “and I remarked something else, too,—that no part of his body was idle during the dance, but neck, legs, and hands were all active together. And that is the way a person must dance who intends to increase the suppleness of his body. And for myself,” he continued, addressing the Syracusan, I should be delighted to learn the figures from you,’*

“What use will you make of them?” the other asked.

“I will dance, forsooth.”

This raised a general laugh; but Socrates, with a perfectly grave expression on his face, said: “You are laughing at me, are you? Is it because I want to exercise to better my health? Or because I want to take more pleasure in my food and my sleep? Or is it because I am eager for such exercises as these, not like the long-distance runners, who develop their legs at the expense of their shoulders, nor like the prize-fighters, who develop their shoulders but become thin-legged, but rather with a view to giving my body a symmetrical development by exercising it in every part? Or are you laughing because I shall not need to hunt up a partner to exercise with, or to strip, old as I am, in a crowd, but shall find a moderate-sized room large enough for me (just as but now this room was large enough for the lad here to get up a sweat in), and because in winter I shall exercise under cover, and when it is very hot, in the shade? Or is this what provokes your laughter, that I have an unduly large paunch and wish to reduce it? Don’t you know that just the other day Charmides here caught me dancing early in the morning?”

“Indeed I did,” said Charmides; “and at first I was dumbfounded and feared that you were going stark mad; but when I heard you say much the same tiling as you did just now, I myself went home, and although I did not dance, for had never learned how, practiced shadow-boxing, for I knew how to do that.”

“Undoubtedly,” said Philip; “at any rate, your legs appear so nearly equal in weight to your shoulders that I imagine if you were to go to the market commissioners and put your lower parts in the scale against your upper parts, as if they were loaves of bread, they would let you off without a fine.”

“When you are ready to begin your lessons, Socrates,” said Callias, “pray invite me, so that I may be opposite you in the figures and may learn with you.”

“Come,” said Philip, “let me have some flute music, so that I may dance too.”

So he got up and mimicked in detail the dancing of both the boy and the girl. To begin with, since the company had applauded the way the boy’s natural beauty was increased by the grace of the dancing postures, Philip made a burlesque out of the performance by rendering every part of his body that was in motion more grotesque than it naturally was; and whereas the girl had bent backward until she resembled a hoop, he tried to do the same by bending forward. Finally, since they had given the boy applause for putting every part of his body into play in the dance, he told the flute girl to hit up the time faster, and danced away, flinging out legs, hands, and head all at the same time; and when he was quite exhausted, he exclaimed as he laid himself down: “Here is proof, gentlemen, that my style of dancing, also, gives excellent exercise; it has certainly given me a thirst; so let the servant fill me up the big goblet.”

“Certainly,” replied Callias; “and the same for us, for we are thirsty with laughing at you.”

Here Socrates again interposed. “Well, gentlemen,” said he, “so far as drinking is concerned, you have my hearty approval; for wine does of a truth ‘moisten the soul’ and lull our griefs to sleep just as the mandragora does with men, at the same time awakening kindly feelings as oil quickens a flame. However, I suspect that men’s bodies fare the same as those of plants that grow in the ground. When God gives the plants water in floods to drink, they cannot stand up straight or let the breezes blow through them; but when they drink only as much as they enjoy, they grow up very straight and tall and come to full and abundant fruitage. So it is with us. If we pour ourselves immense draughts, it will be no long time before both our bodies and our minds reel, and we shall not be able even to draw breath, much less to speak sensibly; but if the servants frequently 'besprinkle' us—if I too may use a Gorgian expression—with small cups, we shall thus not be driven on by the wine to a state of intoxication, but instead shall be brought by its gentle persuasion to a more sportive mood."

This resolution received a unanimous vote, with an amendment added by Philip to the effect that the wine-pourers should emulate skilful charioteers by driving the cups around with ever increasing speed. This the wine-pourers proceeded to do.

III. After this the boy, attuning his lyre to the flute, played and sang, and won the applause of all; and brought from Charmides the remark, "It seems to me, gentlemen, that, as Socrates said of the wine, so this blending of the young people's beauty and of the notes of the music lulls one's griefs to sleep and awakens the goddess of Love."

Then Socrates resumed the conversation. "These people, gentlemen," said he, "show their competence to give us pleasure; and yet we, I am sure, think ourselves considerably superior to them. Will it not be to our shame, therefore, if we do not make even an attempt, while here together, to be of some service or to give some pleasure one to another?"

At that many spoke up: "You lead the way, then, and tell us what to begin talking about to realize most fully what you have in mind."

"For my part," he answered, "I should like to have Callias redeem his promise; for he said, you remember, that if we would take dinner with him, he would give us an exhibition of his profundity."

"Yes," rejoined Callias; "and I will do so, if the rest of you will also lay before us any serviceable knowledge that you severally possess."

"Well," answered Socrates, "no one objects to telling what he considers the most valuable knowledge in his possession."

"Very well, then," said Callias, "I will now tell you what I take greatest pride in. It is that I believe I have the power to make men better."

"How?" asked Antisthenes. "By teaching them some manual trade, or by teaching nobility of character?"

"The latter, if righteousness is the same thing as nobility."

"Certainly it is," replied Antisthenes, "and the least debatable kind, too; for though courage and wisdom appear at times to work injury both to one's friends and to the state, righteousness and unrighteousness never overlap at a single point."

"Well, then, when every one of you has named the benefit he can confer, I will not begrudge describing the art that gives me the success that I speak of. And so, Niceratus" he suggested, "it is your turn; tell us what kind of knowledge you take pride in."

"My father was anxious to see me develop into a good man," said Niceratus, "and as a means to this end he compelled me to memorize all of Homer; and so even now I can repeat the whole Iliad and the Odyssey by heart."

"But have you failed to observe," questioned Antisthenes, "that the rhapsodes, too, all know these poems?"

"How could I," he replied, "when I listen to their recitations nearly every day?"

"Well, do you know any tribe of men," went on the other, "more stupid than the rhapsodes?"

"No, indeed," answered Niceratus; "not I, I am sure."

"No," said Socrates; "and the reason is clear: they do not know the inner meaning of the poems. But you have paid a good deal of money to Stesimbrotus, Anaximander, and many other Homeric critics, so that nothing of their valuable teaching can have escaped your knowledge. But what about you, Critobulus?" he continued. "What do you take greatest pride in?"

"In beauty," he replied.

"What?" exclaimed Socrates. "Are you too going to be able to maintain that you can make us better, and by means of your beauty?"

"Why, otherwise, it is clear enough that I shall cut but an indifferent figure."

"And you, Antisthenes," said Socrates, "what do you take pride in?"

"In wealth," he replied.

Hermogenes asked him whether he had a large amount of money; he swore that he did not have even a penny.

"You own a great deal of land, then?"

"Well, perhaps it might prove big enough," said he, "for Autolycus here to sand himself in." "It looks as if we should have to hear from you, too. And how about you, Charmides?" he continued. "What do you take pride in?"

"My pride," said he, "on the contrary, is in my poverty."

"A charming thing, upon my word!" exclaimed Socrates. "It seldom causes envy or is a bone of contention; and it is kept safe without the necessity of a guard, and grows sturdier by neglect!"

"But what of you, Socrates?" said Callias. "What are you proud of?"

Socrates drew up his face into a very solemn expression, and answered, "The trade of procurer." After the rest had had a laugh at him, "Very well," said he, "you may laugh, but I know that could make a lot of money if I cared to follow the trade."

"As for you," said Lycon, addressing Philip, "it is obvious that your pride is in your jesting."

"And my pride is better founded, I think," replied Philip, "than that of Callippides, the actor, who is consumed with vanity because he can fill the seats with audiences that weep."

"Will you also not tell us, Lycon," said Antisthenes, "what it is that you take pride in?"

"Don't you all know," he answered, "that it is in my son here?"

"And as for him," said one, "it is plain that he is proud at having taken a prize."

At this Autolycus blushed and said, "No, indeed, not that."

All looked at him, delighted to hear him speak, and one asked, "What is it, then, Autolycus, that you are proud of?" and he answered,

"My father," and with the words nestled close against him.

When Callias saw this, "Do you realize, Lycon," said he, "that you are the richest man in the world?"

"No, indeed," the other replied, "I certainly do not know that."

"Why, are you blind to the fact that you would not part with your son for the wealth of the Great King?"

"I am caught." was the answer, "red-handed; it does look as if I were the richest man in the world."

"What about you, Hermogenes?" said Niceratus. "What do you delight in most?"

"In the goodness and the power of my friends," he answered, "and in the fact that with all their excellence they have regard for me."

Thereupon all eyes were turned toward him, and many speaking at once asked him whether he would not discover these friends to them; and he answered that he would not be at all loath to do so.

IV. At this point Socrates said: "I suspect that it remains now for each one of us to prove that what he engaged himself to champion is of real worth."

"You may hear me first," said Callias. "While I listen to your philosophical discussions of what righteousness is, I am all the time actually rendering men more righteous."

"How so, my good friend?" asked Socrates. "Why, by giving them money."

Then Antisthenes got up and in a very argumentative fashion interrogated him. "Where do you think men harbor their righteousness, Callias, in their souls or in their purses?"

"In their souls," he replied.

"So you make their souls more righteous by putting money into their purses?"

"I surely do."

"How?"

"Because they know that they have the wherewithal to buy the necessities of life, and so they are reluctant to expose themselves to the hazards of crime."

"And do they repay you," he asked, "the money that they get from you?"

"Heavens, no!" he replied.

"Well, do they substitute thanks for money payment?"

“No, indeed, nor that either,” he said. “On the contrary, some of them have an even greater dislike of me than before they got the money.”

“It is remarkable,” said Antisthenes, looking fixedly at him as though he had him in a corner, “that you can make them righteous toward others but not toward yourself.”

“What is there remarkable about that?” asked Callias. “Do you not see plenty of carpenters, also, and architects that build houses for many another person but cannot do it for themselves, but live in rented houses? Come now, my captious friend, take your medicine and own that you are beaten.”

“By all means,” said Socrates, “let him do so. For even the soothsayers have the reputation, you know, of prophesying the future for others but of not being able to foresee their own fate.”

Here the discussion of this point ended.

Then Niceratus remarked: “You may now hear me tell wherein you will be improved by associating with me. You know, doubtless, that the sage Homer has written about practically everything pertaining to man. Any one of you, therefore, who wishes to acquire the art of the householder, the political leader, or the general, or to become like Achilles or Ajax or Nestor or Odysseus, should seek my favor, for I understand all these things.”

“Ha!” said Antisthenes; “do you understand how to play the king, too, knowing, as you do, that Homer praised Agamemnon for being both goodly king and spearman strong ‘?”

“Yes, indeed!” said he; “and I know also that in driving a chariot one must run close to the goalpost at the turn and

‘Himself lean lightly to the left within
The polished car, the right-hand trace-horse goad,

Urge him with shouts, and let him have the reins.’

And beside this I know something else, which you may test immediately. For Homer says somewhere:

‘An onion, too, a relish for the drink.’

Now if some one will bring an onion, you will receive this benefit, at any rate, without delay; for you will get more pleasure out of your drinking.”

“Gentlemen,” said Charmides, “Niceratus is intent on going home smelling of onions to make his wife believe that no one would even have conceived the thought of kissing him.”

“Undoubtedly,” said Socrates. “But we run the risk of getting a different sort of reputation, one that will bring us ridicule. For though the onion seems to be in the truest sense a relish, since it adds to our enjoyment not only of food, but also of drink, yet if we eat it not only with our dinner but after it as well, take care that some one does not say of us that on our visit to Callias we were merely indulging our appetites.”

“Heaven forbid, Socrates!” was the reply. “I grant that when a man is setting out for battle, it is well for him to nibble an onion, just as some people give their game-cocks a feed of garlic before pitting them together in the ring; as for us, however, our plans perhaps look more to getting a kiss from some one than to fighting.”

That was about the way the discussion of this point ended.

Then Critobulus said: “Shall I take my turn now and tell you my grounds for taking pride in my handsomeness?”

“Do,” they said.

“Well, then, if I am not handsome, as I think I am, you could fairly be sued for misrepresentation; for though no one asks you for an oath, you are always swearing that I am handsome. And indeed I believe you; for I consider you to be honorable men. But, on the other hand, if I really am handsome and you have the same feelings toward me that I have toward the one who is handsome in my eyes, I swear by all the gods that I would not take the kingdom of Persia in exchange for the possession of beauty. For as it is, I would rather gaze at Cleinias than at all the other beautiful objects in the world. I would rather be blind to all things else than to Cleinias alone. I chafe at both night and sleep because then I do not see him; I feel the deepest gratitude to day and the sun because they reveal Cleinias to me. We handsome people have a right to be proud of this fact, too, that whereas the strong man must get the good things of his desire by toil, and the brave man by adventure, and the wise man by his eloquence, the handsome person can attain all his ends without doing anything. So far as I, at least, am concerned, although I realize that money is a delightful possession, I should take more delight in giving what I have to Cleinias than in adding to my possessions from another person's; and I should take more delight in being a slave than in being a free man, if Cleinias would deign to be my master. For I should find it easier to toil for him than to rest, and it would be more delightful to risk my life for his sake than to live in safety. And so, Callias, if you are proud of your ability to make people more righteous, I have a better right than you to claim that I can influence men toward every sort of virtue. For since we handsome men exert a certain inspiration upon the amorous, we make them more generous in money matters, more strenuous and heroic amid dangers, yes, and more modest and self-controlled also; for they feel abashed about the very things that they want most. Madness is in those people, too, who do not elect the handsome men as generals; I certainly would go through fire with Cleinias, and

I know that you would, also, with me. Therefore, Socrates, do not puzzle any more over the question whether or not my beauty will be of any benefit to men. But more than that, beauty is not to be contemned on this ground, either, that it soon passes its prime; for just as we recognize beauty in a boy, so we do in a youth, a full-grown man, or an old man. Witness the fact that in selecting garland-bearers for Athena they choose beautiful old men, thus intimating that beauty attends every period of life. Furthermore, if it is pleasurable to attain one's desires with the good will of the giver, I know very well that at this very moment, without uttering a word, could persuade this boy or this girl to give me a kiss sooner than you could, Socrates, no matter how long and profoundly you might argue."

"How now?" exclaimed Socrates. "You boast as though you actually thought yourself a handsomer man than me."

"Of course," was Critobulus's reply; "otherwise I should be the ugliest of all the Satyrs ever on the stage."

Now Socrates, as fortune would have it, really resembled these creatures.

"Come, come," said Socrates; "see that you remember to enter a beauty contest with me when the discussion now under way has gone the rounds. And let our judges be not Alexander, Priam's son, but these very persons whom you consider eager to give you a kiss."

"Would you not entrust the arbitrament to Cleinias, Socrates?"

"Aren't you ever going to get your mind off Cleinias?" was the rejoinder.

"If I refrain from mentioning his name, do you suppose that I shall have him any the less in mind? Do you not know that I have so clear an image of him in my heart that had I ability as a sculptor or a painter I could produce a likeness of him from this image that would be quite as close as if he were sitting for me in person?”

“Why do you annoy me, then,” was Socrates’ retort, “and keep taking me about to places where you can see him in person, if you possess so faithful an image of him?”

“Because, Socrates, the sight of him in person has the power to delight one, whereas the sight of the image does not give pleasure, but implants a craving for him.”

“For my part, Socrates,” said Hermogenes, “I do not regard it as at all like you to countenance such a mad passion of love in Critobulus.”

“What? Do you suppose,” asked Socrates, “that this condition has arisen since he began associating with me?”

“If not, when did it?”

“Do you not notice that the soft down is just beginning to grow down in front of his ears, while that of Cleinias is already creeping up the nape of his neck? Well, then, this hot flame of his was kindled in the days when they used to go to school together. It was the discovery of this that caused his father to put him into my hands, in the hope that I might do him some good. And without question he is already much improved. For awhile ago he was like those who look at the Gorgons—he would gaze at Cleinias with a fixed and stony stare and would never leave his presence; but now I have seen him actually close his eyes in a wink. But to tell you the truth, gentlemen,” he continued, “by Heaven! it does look to me—to speak confidentially—as if he had also kissed Cleinias; and there is nothing more terribly potent than this at kindling the fires of passion. For it is insatiable and holds out seductive hopes. For this reason I maintain that one who intends to possess the power of self-control must refrain from kissing those in the bloom of beauty.”

“But why in the world, Socrates,” Charmides now asked, “do you flourish your bogeys so to frighten us, your friends, away from the beauties, when, by Apollo! I have seen you yourself,” he continued, “when the two of you were hunting down something in the same book-roll at the school, sitting head to head, with your nude shoulder pressing against Critobulus’s nude shoulder?”

“Dear me!” exclaimed Socrates. “So that is what affected me like the bite of a wild animal! And for over five days my shoulder smarted and I felt as if I had something like a sting in my heart. But now, Critobulus,” said he, “in the presence of all these witnesses I warn you not to lay a finger on me until you get as much hair on your chin as you have on your head.”

Such was the mingled raillery and seriousness that these indulged in.

But Callias now remarked, “It is your turn, Charmides, to tell us why poverty makes you feel proud.”

“Very well,” said he. “So much, at least, every one admits, that assurance is preferable to fear, freedom to slavery, being the recipient of attention to being the giver of it, the confidence of one’s country to its distrust. Now, as for my situation in our commonwealth, when I was rich, I was, to begin with, in dread of some one’s digging through the wall of my house and not only getting my money but also doing me a mischief personally; in the next place, I knuckled down to the blackmailers, knowing well enough that my abilities lay more in the direction of suffering injury than of inflicting it on them. Then, too, I was for ever being ordered by the government to undergo some expenditure or other, and I never had the opportunity for foreign travel.

Now, however, since I am stripped of my property over the border and get no income from the property in Attica, and my household effects have been sold, I stretch out and enjoy a sound sleep, I have gained the confidence of the state, I am no longer subjected to threats but do the threatening now myself; and I have the free man's privilege of going abroad or staying here at home as I please. People now actually rise from their seats in deference to me, and rich men obsequiously give me the right of way on the street. Now I am like a despot; then I was clearly a slave. Then I paid a revenue to the body politic; now I live on the tribute that the state pays to me. Moreover, people used to vilify me, when I was wealthy, for consorting with Socrates; but now that I have got poor, no one bothers his head about it any longer. Again, when my property was large, either the government or fate was continually making me throw some of it to the winds; but now, far from throwing anything away (for I possess nothing), I am always in expectation of acquiring something."

"Your prayers, also," said Callias, "are doubtless to the effect that you may never be rich; and if you ever have a fine dream you sacrifice, do you not, to the deities who avert disasters?"

"Oh, no!" was the reply; "I don't go so far as that; I hazard the danger with great heroism if I have any expectation of getting something from some one."

"Come, now, Antisthenes," said Socrates, "take your turn and tell us how it is that with such slender means you base your pride on wealth."

"Because, sirs, I conceive that people's wealth and poverty are to be found not in their real estate but in their hearts. For I see many persons, not in office, who though possessors of large resources, yet look upon themselves as so poor that they bend their backs to any toil, any risk, if only they may increase their holdings; and again I know of brothers, with equal shares in their inheritance, where one of them has plenty, and more than enough to meet expenses, while the other is in utter want. Again, I am told of certain despots, also, who have such a greedy appetite for riches that they commit much more dreadful crimes than they who are afflicted with the direst poverty. For it is of course their want that makes some people steal, others commit burglary, others follow the slave trade; but there are some despots who destroy whole families, kill men wholesale, oftentimes enslave even entire cities, for the sake of money. As for such men, I pity them deeply for their malignant disease; for in my eyes their malady resembles that of a person who possessed abundance but though continually eating could never be satisfied. For my own part, my possessions are so great that I can hardly find them myself; yet I have enough so that I can eat until I reach a point where I no longer feel hungry and drink until I do not feel thirsty and have enough clothing so that when out of doors I do not feel the cold any more than my superlatively wealthy friend Callias here, and when I get into the house I look on my walls as exceedingly warm tunics and the roofs as exceptionally thick mantles; and the bedding that I own is so satisfactory that it is actually a hard task to get me awake in the morning. If I ever feel a natural desire for converse with women, I am so well satisfied with whatever chance puts in my way that those to whom I make my addresses are more than glad to welcome me because they have no one else who wants to consort with them. In a word, all these items appeal to me as being so conducive to enjoyment that I could not pray for greater pleasure in performing any one of them, but could pray rather for less—so much more pleasurable do I regard some of them than is good for one. But the most valuable parcel of my wealth I reckon to be this, that even though some one were to rob me of what I now possess, I see no occupation so humble that it would not give me adequate fare. For whenever I feel an inclination to indulge my appetite, I do not buy fancy articles at the market (for they come high), but I draw on the store-house of my soul. And it goes a long way farther toward producing enjoyment when I take food only after awaiting the craving for it than when I partake of one of these fancy dishes, like this fine Thasian wine that fortune has put in my way and am drinking without the promptings of thirst. Yes, and it is natural that those whose eyes are set on frugality should be more honest than those whose eyes are fixed on money-making. For those who are most contented with what they have are least likely to covet what belongs to others. And it is worth noting that wealth of this kind makes people generous, also. My friend Socrates here and I are examples. For Socrates, from whom I acquired this wealth of mine, did not come to my relief with limitation of number and weight, but made over to me all that I could carry. And as for me, I am now niggardly to no one, but both make an open display of my abundance to all my friends and share my spiritual wealth with any one of them that desires it. But—most exquisite possession of all!—you observe that I always have leisure, with the result that I can go and see whatever is worth seeing, and hear whatever is worth hearing and—what I prize highest—pass the whole day, untroubled by business, in Socrates' company. Like me, he does not bestow his admiration on those who count the most gold, but spends his time with those who are congenial to him."

Such was the thesis maintained by Antisthenes. "So help me Hera," commented Callias, "among the numerous reasons I find for congratulating you on your wealth, one is that the government does not lay its commands on you and treat you as a slave, another is that people do not feel resentful at your not making them a loan."

“Do not be congratulating him,” said Niceratus; “because I am about to go and get him to make me a loan—of his contentment with his lot, schooled as I am by Homer to count

‘Sev’n pots unfired, ten talents’ weight of gold,
A score of gleaming cauldrons, chargers twelve,’

weighing and calculating until I am never done with yearning for vast riches; as a result, some people perhaps regard me as just a bit fond of lucre.”

A burst of laughter from the whole company greeted this admission; for they considered that he had told nothing more than the truth.

“Hermogenes, it devolves on you,” some one now remarked, “to mention who your friends are and to demonstrate their great power and their solicitude for you, so that your pride in them may appear justified.”

“Very well; in the first place, it is clear as day that both Greeks and barbarians believe that the gods know everything both present and to come; at any rate, all cities and all races ask the gods, by the diviner’s art, for advice as to what to do and what to avoid. Second, it is likewise manifest that we consider them able to work us good or ill; at all events, every one prays the gods to avert evil and grant blessings. Well, these gods, omniscient and omnipotent, feel so friendly toward me that their watchfulness over me never lets me out of their ken night or day, no matter where I am going or what business I have in view. They know the results also that will follow any act; and so they send me as messengers omens of sounds, dreams, and birds, and thus indicate what ought to do and what I ought not to do. And when I do their bidding, I never regret it; on the other hand, I have before now disregarded them and have been punished for it.”

"None of these statements," said Socrates, "is incredible. But what I should like very much to know is how you serve them to keep them so friendly."

"A very economical service it is, I declare!" responded Hermogenes. "I sound their praises,—which costs nothing; I always restore them part of what they give me; I avoid profanity of speech as far as I can; and I never wittingly lie in matters wherein I have invoked them to be my witnesses."

"Truly," said Socrates, "if it is conduct like this that gives you their friendship, then the gods also, it would seem, take delight in nobility of soul!" Such was the serious turn given to the discussion of this topic.

When they got around to Philip, they asked him what he saw in the jester's profession to feel proud of it.

"Have I not a right to be proud," said he, "when all know that I am a jester, and so whenever they have a bit of good fortune, give me hearty invitations to come and join them, but when they suffer some reverse, run from me with never a glance behind, in dread that they may be forced to laugh in spite of themselves?"

"Your pride is abundantly justified," said Niceratus. "In my case, on the contrary, those friends who enjoy success keep out of my way, but those that run into some mishap reckon up their kinship to me on the family tree, and I can't get rid of them."

"No doubt," said Charmides; and then, turning to the Syracusan, "What is it that you are proud of? The boy, I suppose?"

"Quite the contrary," was the reply; "I am instead in extreme apprehension about him. For I understand that there are certain persons plotting his undoing."

On receiving this information, “Good Heavens!” exclaimed Socrates; “what wrong do they imagine your lad has done them that is grave enough to make them wish to kill him?”

Syr. “It is not killing him that they desire; oh, no! but to persuade him to sleep with them.”

Soc. “Your belief, then, if I mistake not, is that if this happened, he would be undone?”

Syr. “Aye, utterly!”

Soc. “Do you not then sleep in his bed yourself?

Syr. “Most certainly, all night and every night.”

Soc. “Marry, you are in great luck to be formed of such flesh that you are unique in not corrupting those that sleep with you. And so you have a right to be proud of your flesh if of nothing else.”

Syr. “And yet that is not the basis of my pride.”

Soc. “What is, then?”

Syr. “Fools, in faith. They give me a livelihood by coming to view my marionettes.”

“Ah!” ejaculated Philip; “that explains the prayer I heard you uttering the other day, that wherever you were the gods would grant you an abundant harvest of grain but a crop-failure of wits!”

“Good!” said Callias. “And now, Socrates, what can you advance in support of your pride in that disreputable profession that you mentioned?”

“Let us first,” said he, “come to an understanding on the functions that belong to the procurer. Do not hesitate to answer all the questions I ask you, so that we may know our points of agreement. Is that your pleasure?” he asked.

“Certainly,” was their reply; and when they had once started with “certainly,” that was the regular answer they all made to his questions thereafter.

Soc. “Well, then, you consider it the function of a good procurer to render the man or the woman whom he is serving attractive to his or her associates?”

All. “Certainly.”

Soc. “Now, one thing that contributes to rendering a person attractive is a comely arrangement of hair and clothing, is it not?”

All. “Certainly.”

Soc. “This, also, we know, do we not, that it is in a man’s power to use the one pair of eyes to express both friendship and hostility?”

All. “Certainly.”

Soc. “And again, it is possible to speak both modestly and boldly with the same voice?”

All. “Certainly.”

Soc. “Moreover, are there not words that create ill feeling and others that conduce to friendliness?”

All. “Certainly.”

Soc. “Now the good procurer would teach only the words that tend to make one attractive, would he not?”

All. “Certainly.”

Soc. “Which one would be the better?” he continued, “the one who could make people attractive to a single person or the one who could make them attractive to many?”

This question brought a division; some said, “Clearly the one who could make them attractive to a great many”; the others merely repeated,

All. “Certainly.”

Remarking that they were all of one mind on this point as on the others, he went on:

Soc. “If a person could render people attractive to the entire community, would he not satisfy the requirements of the ideal procurer?”

“Indubitably,” they all said.

Soc. “And so, if one could produce men of this type out of his clients, he would be entitled to feel proud of his profession and to receive a high remuneration, would he not?”

All agreeing on this point, too, he added,

Soc. “Antisthenes here seems to me to be a man of just that sort.”

Antisthenes asked, “Are you resigning your profession to me, Socrates?”

“Assuredly,” was the answer. “For I see that you have brought to a high state of perfection the complementary trade.”

“What is that?”

“The profession of go-between,” he said.

Antisthenes was much incensed and asked, “What knowledge can you possibly have of my being guilty of such a thing as that?”

“I know several instances,” he replied. “I know that you acted the part between Callias here and the scholar Prodicus, when you saw that Callias was in love with philosophy and that Prodicus wanted money. I know also that you did the same for Hippias, the Elean, from whom Callias got his memory system; and as a result, Callias has become more amorous than ever, because he finds it impossible to forget any beauty he sees. And just recently, you remember, you introduced the stranger from Heraclea to me, after arousing my keen interest in him by your commendations. For this I am indeed grateful to you; for I look upon him as endowed with a truly noble nature. And did you not laud Aeschylus the Phleiasian to me and me to him until you brought us to such a pass that in mutual yearning, excited by your words, we went coursing like hounds to find each other? It is the witnessing of your talent at achieving such a result that makes me judge you an excellent go-between. For the man who can recognize those who are fitted to be mutually helpful and can make them desire one another's acquaintance, that man, in my opinion, could also create friendship between cities and arrange suitable marriages, and would be a very valuable acquisition as friend or ally for both states and individuals. But you got indignant, as if you had received an affront, when I said that you were a good go-between."

"But, indeed, that is all over now," he replied; "for with this power mine I shall find my soul chock-full of riches."

And so this round of discourse was brought to a close.

V. Callias now said, "Critobulus, are you going to refuse to enter the lists in the beauty contest with Socrates?"

"Undoubtedly!" said Socrates; "for probably he notices that the procurer stands high in the favor of the judges."

"But yet in spite of that," retorted Critobulus, "I do not shun the contest. So make your plea, if you can produce any profound reason, and prove that you are more handsome than I. Only," he added, "let some one bring the light close to him."

"The first step, then, in my suit," said Socrates, "is to summon you to the preliminary hearing; be so kind as to answer my questions."

"And you proceed to put them."

"Do you hold, then, that beauty is to be found only in man, or is it also in other objects?"

Crit. “In faith, my opinion is that beauty is to be found quite as well in a horse or an ox or in any number of inanimate things. I know, at any rate, that a shield may be beautiful, or a sword, or a spear.”

Soc. “How can it be that all these things are beautiful when they are entirely dissimilar?”

“Why, they are beautiful and fine,” answered Critobulus, “if they are well made for the respective functions for which we obtain them, or if they are naturally well constituted to serve our needs.”

Soc. “Do you know the reason why we need eyes?”

Crit. “Obviously to see with.”

“In that ease, it would appear without further ado that my eyes are finer ones than yours.”

Crit. “How so?”

Soc. “Because, while yours see only straight ahead, mine, by bulging out as they do, see also to the sides.”

Crit. “Do you mean to say that a crab is better equipped visually than any other creature?”

Soc. “Absolutely; for its eyes are also better set to insure strength.”

Crit. “Well, let that pass; but whose nose is finer, yours or mine?”

Soc. “Mine, I consider, granting that Providence made us noses to smell with. For your nostrils look down toward the ground, but mine are wide open and turned outward so that I can catch scents from all about.”

Crit. “But how do you make a snub nose handsomer than a straight one?”

Soc. “For the reason that it does not put a barricade between the eves but allows them unobstructed vision of whatever they desire to see; whereas a high nose, as if in despite, has walled the eyes off one from the other."

"As for the mouth," said Critobulus, "I concede that point. For if it is created for the purpose of biting off food, you could bite off a far bigger mouthful than I could. And don't you think that your kiss is also the more tender because you have thick lips?"

Soc. "According to your argument, it would seem that I have a mouth more ugly even than an ass's. But do you not reckon it a proof of my superior beauty that the River Nymphs, goddesses as they are, bear as their offspring the Seileni, who resemble me more closely than they do you?"

"I cannot argue any longer with you," answered Critobulus; "let them distribute the ballots, so that I may know without suspense what fine or punishment I must undergo. Only," he continued, "let the balloting be secret, for I am afraid that the 'wealth' you and Antisthenes possess will overmaster me."

So the maiden and the lad turned in the ballots secretly. While this was going on, Socrates saw to it that the light should be brought in front of Critobulus, so that the judges might not be misled, and stipulated that the prize given by the judges to crown the victor should be kisses and not ribbons. When the ballots were turned out of the urn and proved to be a unanimous verdict in favor of Critobulus, "Faugh!" exclaimed Socrates; "your money, Critobulus, does not appear to resemble Callias's. For his makes people more honest, while yours is about the most potent to corrupt men, whether members of a jury or judges of a contest."

VI. At this some of the company urged Critobulus to take his kisses, the reward of victory; others advised him to get the consent of the young people's legal guardian; and others indulged in other badinage. But even then Hermogenes kept silent. And Socrates, calling him by name, inquired, “Hermogenes, could you define ‘convivial unpleasantness’ for us?”

“If you ask me what it actually is,” he answered, “I do not know; but I am willing to tell you what I think it is.”

Soc. “Very well, tell us that.”

Herm. “My definition of ‘convivial unpleasantness’ is the annoying of one’s companions at their drink.”

Soc. “Well, do you realize that at the present moment you conform to the definition by annoying us with your taciturnity?”

Herm. “What! while you are talking?”

“No, but in the intervals.”

“Why, don’t you see that a person could not insert even a hair in the interstices of your talk, much less a word?”

“Callias,” said Socrates, appealing to him, “could you come to the rescue of a man hard put to it for an answer?”

“Yes, indeed,” said he: “we are absolutely quiet every time the flute is played.”

Hermogenes retorted, “Is it your wish that I should converse with you to the accompaniment of a flute, the way the actor Nicostratus used to recite tetrameter verses?”

“In Heaven’s name, do so, Hermogenes,” urged Socrates. “For I believe that precisely as a song is more agreeable when accompanied on the flute, so your discourse would be embellished somewhat by the music, especially if you were to gesticulate and pose, like the flute-girl, to point your words.”

“What is the tune to be,” asked Callias, “when Antisthenes here gets some one at the banquet cornered in an argument?”

“For the discomfited disputant,” said Antisthenes, “I think the appropriate music would be a hissing.” The Syracusan, seeing that with such conversation going on the banqueters were paying no attention to his show, but were enjoying one another’s company, said spitefully to Socrates, “Socrates, are you the one nick-named the ‘Thinker’?”

“Well, isn’t that preferable,” he rejoined, “to being called the ‘Thoughtless’?”

“Yes, if it were not that you are supposed to be a thinker on celestial subjects.”

“Do you know,” asked Socrates, “anything more celestial than the gods?”

Syr. “No; but that is not what people say you are concerned with, but rather with the most unbeneficial things.”

Soc. “Even granting the expression, it would still be the gods that are my concern; for (1) they cause rain under the heavens and so are beneficial? and (2) they produce light, also under the heavens, and are thus again beneficial. If the pun is strained,” he added, “you have only yourself to blame for it, for annoying me.”

Svr. “Well, let that pass. But tell me the distance between us in flea’s feet; for people say that your geometry includes such measurements as that.”

At this Antisthenes said to Philip: “You are clever at hitting off a person’s likeness; wouldn’t you say that our friend here resembles one with a penchant for abuse?”

“Yes, indeed,” came the answer; “and I see a resemblance in him to many another kind of person, too.”

“Nevertheless,” interposed Socrates, “do not draw the comparison, lest you take on a similar likeness to one stooping to abuse.”

“But suppose I am likening him to all the upright, the very elite; then I should deserve to be compared to a eulogist, rather than to a detractor.”

“Ah, you resemble the latter right now, for you are asserting that every one is better than he.”

“Would you have me compare him to those who excel him in villainy?”

“No, not those, either.”

“What, to no one?”

“No; don’t compare him to any one in any particular.”

“But if I hold my peace, I do not understand how I am going to render services suitable to such a fine dinner.”

“That is easily effected,” said Socrates, “if you will be reticent on matters that should not be talked about.”

Thus was quenched this bit of convivial unpleasantness.

VII. Then some among the rest of the banqueters kept urging Philip to go on with his comparisons, while others opposed. As the clamor rose to some height, Socrates once more interposed, saying: “Since we all want to talk, would this not be a fine time to join in singing?” And with the words he began a song. When they had finished, a potter’s wheel was brought in for the dancing-girl on which she intended performing some feats of jugglery.

This prompted Socrates to observe to the Syracusan: “Sir, it is quite probable that, to use your words, I am indeed a ‘thinker’; at any rate, I am now considering how it might be possible for this lad of yours and this maid to exert as little effort as may be, and at the same time give us the greatest possible amount of pleasure in watching them,— this being your purpose, also, I am sure. Now, turning somersaults in among knives seems to me to be a dangerous exhibition, which is utterly out of place at a banquet. Also, to write or read aloud on a whirling potter's wheel may perhaps be something of a feat; yet I cannot conceive what pleasure even this can afford. Nor is it any more diverting to watch the young and beautiful going through bodily contortions and imitating hoops than to contemplate them in repose. For it is of course no rare event to meet with marvels, if that is what one's mind is set on. He may marvel at what he finds immediately at hand,—for instance, why the lamp gives light owing to its having a bright flame, while a bronze mirror, likewise bright, does not produce light but instead reflects other things that appear in it; or how it comes about that olive oil, though wet, makes the flame higher, while water, because it is wet, puts the fire out. However, these questions also fail to promote the same object that wine does; but if the young people were to have a flute accompaniment and dance figures depicting the Graces, the Horae, and the Nymphs, I believe that they would be far less wearied themselves and that the charms of the banquet would be greatly enhanced."

"Upon my word, Socrates," replied the Syracusan, "you are quite right; and I will bring in a spectacle that will delight you."

VIII. So the Syracusan withdrew amid applause. Socrates now opened up another new topic for discussion. "Gentlemen," said he, "it is to be expected of us, is it not, when in the presence of a mighty deity that is coeval with the eternal gods, yet youngest of them all in appearance, in magnitude encompassing the universe, but enthroned in the heart of man,— I mean Love,—that we should not be unmindful of him, particularly in view of the fact that we are all of his following? For I cannot name a time when I was not in love with some one, and I know that Charmides here has gained many lovers and has in some instances felt the passion himself; and Critobulus, though even yet the object of love, is already beginning to feel this passion for others. Nay, Niceratus too, so I am told, is in love with his wife and finds his love reciprocated. And as for Hermogenes, who of us does not know that he is pining away with love for nobility of character, whatever that may be? Do you not observe how serious his brows are, how calm his gaze, how modest his words, how gentle his voice, how genial his demeanor? That though he enjoys the friendship of the most august gods, yet he does not disdain us mortals? Are you the only person, Antisthenes, in love with no one?"

"No, by Heaven!" replied he; "I am madly in love—with you."

And Socrates, banteringly, pretending to be coquettish, said: "Don't pester me just now; I am engaged in other business, as you see."

"How transparent you are, sir procurer of your own charms," Antisthenes rejoined, "in always doing something like this; at one time you refuse me audience on the pretext of your divine sign, at another time because you have some other purpose in mind."

"In Heaven's name, Antisthenes." implored Socrates, "only refrain from beating me; any other manifestation of your bad temper I am wont to endure, and shall continue to do so, in a friendly spirit. But," he went on, "let us keep your love a secret, because it is founded not on my spirit but on my physical beauty. But as for you, Callias, all the city knows that you are in love with Autolycus, and so, I think, do a great many men from abroad. The reason for this is the fact that you are both sons of distinguished fathers and are yourselves in the public eye. Now, I have always felt an admiration for your character, but at the present time I feel a much keener one, for I see that you are in love with a person who is not marked by dainty elegance nor wanton effeminacy, but shows to the world physical strength and stamina, virile courage and sobriety. Setting one's heart on such traits gives an insight into the lover's character. Now, whether there is one Aphrodite or two, 'Heavenly' and 'Vulgar,' I do not know; for even Zeus, though considered one and the same, yet has many by-names. I do know, however, that in the case of Aphrodite there are separate altars and temples for the two, and also rituals, those of the 'Vulgar' Aphrodite excelling in looseness, those of the 'Heavenly' in chastity. One might conjecture, also, that different types of love come from the different sources, carnal love from the 'Vulgar' Aphrodite, and from the 'Heavenly' spiritual love, love of friendship and of noble conduct. That is the sort of love, Callias, that seems to have you in its grip. I infer this from the noble nature of the one you love and because I see that you include his father in your meetings with him. For the virtuous lover does not make any of these matters a secret from the father of his beloved."

"Marry," said Hermogenes, "you arouse my admiration in numerous ways, Socrates, but now more than ever, because in the very act of flattering Callias you are in fact educating him to conform to the ideal."
